TAX REFORM ACT OF 1969

MONDAY, SEPTEMBER 22, 1969

U. S. SENATE,
COMMITTEE ON FINANCE,
Washington, D.C.

The committee met, pursuant to recess, at 10 a.m., in room 2221, New Senate Office Building, Senator Herman E. Talmadge presiding.

Present: Senators Long (chairman), Anderson, Gore, Talmadge, Hartke, Harris, Byrd Jr. of Virginia, Williams of Delware, Curtis, Miller, Jordan of Idaho, and Fannin.

Senator TALMADGE. The committee will come to order.

This morning the subject before the committee is the tax treatment of farm losses and hobby farmers. We will also take testimony on the revisions proposed by the House tax reform bill in the taxation of cooperative enterprises and their patrons.

Because we have an unusually long list of witnesses to hear today, I am going to urge that each witness make a special effort to avoid duplicating testimony that has already been given to the committee. I urge that witnesses summarize their statements as expeditiously as possible so that the work of the committee might move forward.

Our first witness this morning is Mr. George Meany, president of the AFL-CIO.

I might say for the record that Mr. Meany's testimony does not deal with farm losses. Indeed, his statement barely touches on the subject.

Mr. Meany, we are happy to see you with us this morning. You may proceed as you see fit.

STATEMENT OF GEORGE MEANY, PRESIDENT OF THE AMERICAN FEDERATION OF LABOR AND CONGRESS OF INDUSTRIAL ORGANIZATIONS; ACCOMPANIED BY ANDREW J. BIEMILLER, DIRECTOR OF THE DEPARTMENT OF LEGISLATION, AFL-CIO; AND NATHANIEL GOLDFINGER, DIRECTOR OF THE DEPARTMENT OF RESEARCH, AFL-CIO

Mr. MEANY. Thank you.

My name is George Meany and I am president of the American Federation of Labor and Congress of Industrial Organizations.

The 13.5 million members of the unions of the AFL-CIO are, almost without exception, taxpayers. They pay their taxes regularly, payday after payday, through the payroll withholding program. They are loyal Americans; they appreciate the value of government, the services of government, the need for paying for government.

They are willing to pay their fair share.

But they are tired of having to pay the share of other Americans. Specifically, they are tired of paying the share of those Americans whose incomes are greater and whose taxes are lower—the "loophole set" in today's society.

So it is on behalf of the largest organized group of taxpayers in America that the AFL-CIO appears here today as advocates of tax justice. We do not have tax justice today and we will not achieve it under the House bill. And the administration's proposals bear no resemblance at all to tax justice.

The Federal tax system is rigged against those whose livelihood comes from the work they do. It is rigged in favor of those whose income results from investments.

This unfair rigging results from the fact that a triple standard is applied to income taxed by the Federal Government.

One standard applies to wages, salaries, and other forms of so-called ordinary income. This income is taxed in full and, for workers, the tax is regularly deducted from their paychecks.

A second standard applies to income from stocks, real estate, and other so-called capital assets sold at a profit. Only half of such income is taxed. And under present law the tax can never be more than 25 percent—even for those in the very top tax brackets.

A third standard is applied to certain forms of income which never even appear on the tax form, such as the interest on State and local bonds, or the income that is washed out by phantom, nonexistent costs as oil depletion, fast depreciation writeoffs, and bookkeeping farm losses. This type of income completely escapes taxation.

The wealthier you are, the greater are the opportunities to take advantage of these preferentially taxed or untaxed forms of income.

This triple standard will not be ended through reforms that eliminate or curb some relatively obscure tax dodges affecting a handful of people. Nor will it be ended merely by ensuring that those of extreme wealth and ability-to-pay are called upon to make some contribution to the Federal Treasury.

The now infamous 21 persons, for example, who paid no taxes at all on their incomes of $1 million and over, have become a symbol. And, I fear, too many have addressed themselves only to this symbol. Tax measures to insure that those with astronomically high incomes merely pay some taxes to the Federal Government falls far short of justice.

Justice can only come when:

The completely impoverished are removed from the tax rolls.

There is a meaningful reduction in the relative tax burdens of low- and middle-income families.

The loopholes of special tax privilege for wealthy families and businesses are eliminated.

The single most costly loophole and the one that is the prime culprit of unfairness is the capital gains loophole.

This is not a loophole which applies only to a handful. It is not a loophole which reduces anyone's taxes to zero. And its effect on the tax structure does not give rise to tax evasion horror stories that can be dramatically illustrated through the media.

Yet, because of the half tax on capital gains and the zero tax on such gains passed on at death, some $30-40 billion escapes the tax base, resulting in an annual Treasury revenue loss of over $10 billion.

And it is a tax preference that says, in effect, the more wealth and income you have, the more opportunities you should be allowed to avoid a fair share of taxes.

The AFL–CIO has continually pointed to this loophole as the major flaw in the tax system. The Treasury study published last February confirms this, saying that the special treatment accorded capital gains is the "most important factor in reducing the tax rates of those with high incomes."

We see no justice to a tax provision which says that a married taxpayer with $8,000 in capital gains income should pay a tax of $354 while a married taxpayer, with the same amount of wage income, should pay $1,000.

We also recommend taxation of the $15 billion in capital gains that is passed on annually to heirs without even being mentioned on the income-tax form.

Under the House action, some of the capital gains loopholes would be trimmed. The House would eliminate the 25 percent maximum and would extend the holding period for long-term capital gains from 6 months to 1 year.

Even with these improvements, capital gains would still remain as the prime factor in eroding the fairness of the tax structure, for unearned income would still be preferentially taxed. And, what is worse the administration has proposed to weaken even these modest reforms.

If the tax structure is to meet America's standards of fair play, loophole closing must be broad-gaged and substantial. On April 1, 1969, before the House Ways and Means Committee, the AFL–CIO presented a program which we believe would achieve tax justice—a program which would generate some $15 to 17 billion in federal revenues from substantial loophole closing, provide relief to those of low and moderate and middle incomes, and allow some $8 to $10 billion to fully fund existing Federal programs geared to meeting domestic needs.

Against that background, we think the House bill merits commendation, for:

1. The working poor are relieved of any Federal tax obligation.
2. The hard-working, tax-paying low- and middle-income Americans, who have been forced to bear far more than their just share of the tax burden, have been given a modicum of relief.
3. The single most inflationary pressure in the economy, the 7 percent investment credit to business, has been eliminated.
4. Some of the loopholes and gimmicks in the tax structure, designed to provide special, unfair tax bonanzas for the very wealthy, have been trimmed, although not eliminated.

We urge the Senate to improve upon the House action and to reject all proposals, including those of the administration, which would move the tax structure still further away from America's standards of fair play.

Specifically, we urge the Senate to:

1. Close the capital gains loophole, ending the major tax preference for unearned income.

There cannot be tax justice as long as unearned income is half-taxed while earned income is taxed in full.

The modest changes recommended by the House are welcome but not enough and the administration would largely undo the positive action taken by the House.

2. Put an end to the tax abuses of the oil, gas, and other mineral industries.

Again the measures taken by the House are welcome ones. They would reduce the depletion allowance, eliminate depletion on foreign oil and gas wells, place a limit on the amount of exploration expenses that can be immediately written off, and end some other abuses such as the carved-out production payment.

Nevertheless, of the total revenue that escapes taxation due to the activities of these industries, only one-third would be recorded by the House action.

We recommend the complete elimination of these abuses.

3. Eliminate the maximum-tax provision.

Under the maximum-tax provision contained in the House bill the top tax rate on earned income would be 50 percent.

This proposal would benefit only those with incomes above $50,000. It would serve to provide an uncalled-for tax bonanza of $100 million to top corporate executives, doctors, lawyers, and others whose income comes from astronomically high fees and salaries.

The administration has strongly endorsed this proposal. It reflects a cynical philosophy that if taxes on the wealthy are cut, they will not try so hard to find loopholes. Such a philosophy makes a mockery of tax-reform efforts. We cannot subscribe to it and we strongly condemn it.

4. Strengthen the minimum-tax provisions of the House bill.

The so-called limit on tax preferences—LTP—proposed by the House and the weaker version offered by the administration are prime examples of reforms addressed solely to symbols.

Both the House and the administration versions would limit the amount of certain types of income that can be completely tax exempt to no more than half of total income plus $10,000. Thus, the more the income you have, the more can be tax free.

What is more, if you fail to shelter all your income in 1 year, you can keep trying for another 5.

Under the House bill, though a wealthy individual affected by the LTP would by no means pay his fair share of taxes, he would pay some.

Under the administration proposals, since State and local bond interest would not be recognized as income under the LTP, some wealthy individuals would still escape scot free and pay no taxes at all.

The AFL-CIO has proposed a 25 percent tax on exempt income in excess of $10,000 for individuals and $25,000 for corporations—regardless of the amount of the taxpayer's ordinary income.

5. Strengthen and improve other measures contained in the House bill.

For example:

Interest on State and local bonds should be taxed in full with the Federal Government guaranteeing the bonds and providing an interest subsidy to insure that the fiscal powers of the State and local governments are not damaged.

Instead of the hobby farm loophole-closing proposals suggested by the House and the administration, the loss-limit approach contained in S. 500 should be adopted. This procedure was recommended by Senator Metcalf and endorsed by a bipartisan group of 26 Senators. This approach is specifically tailored to the tax-loss farmer and insures that legitimate farm operators will not be penalized.

The income-averaging formula should not be liberalized to include capital gains unless the preferential treatment accorded such gains is eliminated.

Interest deductions on bonds used to finance corporate mergers and acquisitions should be completely disallowed.

All rapid depreciation on real estate should be disallowed, except for low- and moderate-income housing.

Accelerated depreciation on regulated utilities should not be allowed unless the tax benefits flow through to the consumer.

Finally, the Senate should provide more substantive relief to those whose incomes are moderate and whose tax burdens are unnecessarily severe.

Tax relief and tax justice do not necessarily go hand-in-hand. The equity in the tax structure can be as badly damaged by tax cuts as it can by tax increases or the addition of new loopholes and gimmicks.

Under the House-passed bill this concept was partially recognized. Though all groups would receive relief, a significant proportion of the relief would flow to low- and middle-income taxpayers.

Under the changes proposed by the administration needed relief for those just above the Government-defined poverty threshold and those in the middle-income brackets would be cut back, the State gasoline-tax deduction would be disallowed, and a tax cut would be given to corporations.

Under the House proposals, $4 billion in tax relief is provided through the low income allowance and standard deduction increases. These primarily benefit low- and middle-income taxpayers. Another $4.5 billion is granted through across-the-board rate cuts. Over half of this relief goes to taxpayers with incomes of $15,000 or over.

The administration agrees with the House on cutting the taxes of the wealthy, but says it goes too far when it would cut taxes for those of low and modest incomes. In addition, claims the Treasury, corporate taxes should be cut $1.6 billion.

We endorse the House proposals to increase the low-income allowance to a flat $1,100. In addition, we endorse the House proposals to increase the standard deduction to 15 percent and $2,000.

We do not agree with the general rate reductions recommended by the House and the administration; and certainly there is no justification for a reduction in corporate taxes.

Instead we recommend a reduction in the tax rates that apply to the first $8,000 of everyone's taxable income for married individuals and the first $4,000 for single individuals.

The rate changes we propose and their effect are shown on tables that we will present to the committee along with this statement.

Our relief proposals would result in the same revenue loss as that proposed by the House. They would cost roughly $600 million more than proposed by the administration—an amount that could easily be made up by, for example, eliminating the maximum-tax provision, effectively closing the hobby-farm gimmick, and adopting a meaningful minimum tax.

Mr. Chairman, we urge that this committee bring the Federal income tax into line with what it is supposed to do—tax income in accordance with ability to pay. That is tax justice.

(The charts accompanying Mr. Meany's statement follow:)

TABLE I.—*AFL–CIO proposed changes in income tax rates*

The rate changes would be as follows:
The 14% rate should be cut to 9%.
The 15% rate should be cut to 13%.
The 16% rate should be cut to 15%.
The 17% rate should be cut to 16%.
The 19% rate should be cut to 18%.
All other rates would remain the same.

Under this procedure, every taxpayer would receive a tax reduction. But, the individual with a taxable income of $100,000 would get the same tax break as the $8,000 man. With the rate structure recommended by the House, a married individual whose taxable income is $100,000 would receive a $3,600 cut while the $8,000 married individual would have his taxes reduced by only $80. Under the AFL–CIO proposal both would receive a cut of $130.

TABLE II.—FEDERAL INCOME TAX BURDEN

PRESENT LAW COMPARED WITH HOUSE REFORM BILL, TREASURY PROPOSALS, AND AFL-CIO PROPOSALS—MARRIED COUPLE, 2 DEPENDENTS

	Total tax				Tax reduction		
Wage or salary income	Present law	House reform bill	Treasury proposals	AFL-CIO proposals	House	Treasury	AFL-CIO
$3,000	0	0	0	0			
$4,000	$140	$65	$81	$45	$75	$59	$95
$5,000	290	200	253	155	90	37	135
$7,500	687	576	616	526	111	71	161
$10,000	1,114	958	1,012	908	156	102	206
$12,500	1,567	1,347	1,447	1,300	220	120	267
$15,000	3,062	1,846	1,951	1,822	216	111	240
$20,000	3,160	2,968	2,968	3,030	192	192	130
$25,000	4,412	4,170	4,170	4,282	242	242	130
$50,000	13,388	12,604	12,604	13,258	784	784	130
$100,000	37,748	34,892	34,892	37,618	2,856	2,856	130

Note: Assumes deductions equal to 10 percent of income, minimum standard deduction (low-income allowance) or standard deduction—whichever is greater. Table takes into account the rate cutting, standard deduction changes, and low-income allowance proposed by the House, the Treasury and the AFL-CIO. Surtax excluded.

Source: AFL-CIO Research Department, September 1969.

The CHAIRMAN. Thank you, Mr. Meany. We are always pleased to have you here with our committee.

Senator Williams?

Senator WILLIAMS. No questions.

The CHAIRMAN. Senator Gore?

Senator GORE. Mr. Meany, I agree with many of the recommendations you have made, because of the progress that labor has made in organization, technical skill and productivity. Labor is now, I am pleased to say, middle income. It seems to me that the middle-income group, with annual earnings of from $7,000 to $15,000, constitute the group for whom the bill provides the least amount of equity.

Instead of the rate changes which the bill contains and which you suggest (I would prefer those you suggest to those contained in the bill) I have thought the fairest tax reduction would be to provide an increase in the personal exemption for each taxpayer and each of his dependents, because this would provide tax relief to those needing it most; those with the largest number of children to feed and educate.

I would like your reaction to this.

Mr. MEANY. We could go along with your proposal. However, we would prefer the approach suggested in our prepared statement.

Senator GORE. I would like to ask your view with respect to one other item.

When you were testifying about the capital gains tax rate, you said, "While earned income remains fully taxed." However, you later referred to the 50 percent ceiling. Now if earned income is to be given a tax preference, do you think we should start at the top?

Mr. MEANY. You mean remove the ceiling?

Senator GORE. If we are to give a preference for earned income above $50,000, what is the justification for refusing a tax preference to earned income below $50,000?

Mr. MEANY. I do not think there is any justification.

Senator GORE. You said in your statement that "The wealthier the individual the more attractive the tax loophole." As a matter of fact one must have either large wealth or large income to take advantage of any tax preference; is that not true?

Mr. MEANY. That is basically true. If you do not have the income you do not have to worry about taxes, but what we say is that the wealthier the person the more opportunities there are to escape taxation through these different devices.

Senator GORE. What opportunity do you see for a tax loophole for a man earning $100 a week, and having the taxes withheld out of each check?

Mr. MEANY. I don't see any.

Senator GORE. Where is there any loophole?

Mr. MEANY. None at all.

Senator GORE. Whereas a man with a $50,000 income can look about and find some preferential tax treatment areas.

Mr. MEANY. Tax exempts, real estate with fast depreciation writeoff. The ordinary wage earning taxpayer does not have any of those opportunities. He just pays his taxes through the withholding and that is that, and this, of course, is really the gist of our whole position.

There are many angles to this, but the basis of our whole position is the lack of what we call tax justice.

Senator GORE. Thank you, Mr. Chairman.

The CHAIRMAN. Senator Curtis?

Senator CURTIS. Mr. Meany, I agree with the position on some of these matters. We are running a $6 billion deficit this year, and I do not feel that at this time we can adopt the 50 percent ceiling, nor do I feel that we can reduce the corporate levy, but I want to ask you about a couple of others. Do you favor the provisions of the House bill which tax the investment income of fraternities?

Mr. MEANY. The investment income of fraternities?

Senator CURTIS. Yes, sir.

Mr. MEANY. I think fraternities should pay their share the same as any other group.

Senator CURTIS. There are tax exempt organizations that——

Mr. Meany. On anything that is not related to their activities, and this would include fraternities and labor unions and any other group that is tax exempt, that income should be taxed.

Senator Curtis. I am talking about their tax-exempt income which would be interest dividends and the like.

Mr. Meany. That would be unrelated to their direct activities, and I think it should be taxed.

Senator Curtis. I am not sure that it is unrelated. I am quite intimately acquainted with one fraternity that has built up a fund. They use it all or 90 percent of it for loans for houses on college campuses thereby releiving the taxpayers of that much. Those loans earn interest. Under this bill—they have 10 percent otherwise——

Mr. Meany. If it is related to their normal activities in whatever field they are in it should not be taxed. If it is unrelated we say it should.

Senator Curtis. The House taxes their investment income. Do you support that or not?

Mr. Meany. If it is on unrelated business income, we say yes. I have not read the House bill. Do you mind letting Mr. Goldfinger reply?

Senator Curtis. No; I will be happy.

Mr. Goldfinger. Senator, our view, as President Meany indicated, is that the unrelated investment income of fraternal organizations and all other kinds of organizations including trade unions should be taxable, should be subject to taxes.

Senator Curtis. That is not my question. We understand that if a labor union buys a bank, the bank pays taxes as do other banks. That is the unrelated income. I am talking about the investment income that the organization itself has. The House bill imposes a tax on the investment income of fraternities. Do you have a position on that?

Mr. Meany. Without regard to what the income is used for, my position would be it should be taxed, unless it is used for the specific fraternal purposes of that organization. You say it is used——

Senator Curtis. It is not taxed as unrelated business. It is the investment income in their central treasury.

Mr. Meany. I would like to give that a little study, that specific question.

Senator Curtis. Now tax-exempt beneficial societies. According to the House bill are taxed on exempt income. Do you favor that?

Mr. Meany. No.

Senator Curtis. Investment income, according to the House bill, is tax that accrues to tax-exempt social clubs. Do you favor that?

Mr. Meany. No.

Senator Curtis. Take, for instance, Shrine, which operates some 12 or 14 hospitals for crippled children.

Mr. Meany. That is different than what you have just previously asked.

Senator Curtis. They have some investment income. Under the House bill it is taxable. Do you favor that?

Mr. Meany. No.

Senator Curtis. Do you favor—I gather from your answer—you are not in accord with the House bill taxing this investment income. Do you favor taxing labor unions on their investment income?

Mr. Meany. Yes; not related to their regular activities.

Senator CURTIS. No, no; that was not my question. I understand that if a labor union buys a bank, that the bank pays taxes. If the labor union has some money in the till, and it is either drawing interest from a bank, a savings and loan, or it is in securities. Should it be taxed?

Mr. MEANY. No.

Senator CURTIS. Are you at liberty to tell me how much investment income the labor unions have?

Mr. MEANY. I haven't any idea. I have no way of knowing, and I would not have any way of finding out.

Senator CURTIS. Now let me ask you something else. What percent of the compensation to labor, which enjoys the benefit of organized labor, collective bargaining, what percent of that compensation is fringe benefits?

Mr. MEANY. I do not know.

Senator CURTIS. Can your staff supply that?

Mr. MEANY. We might give you an approximate figure.

Mr. GOLDFINGER. It is somewhere in the area of 20–25 percent, sir.

Senator CURTIS. About 20 or 25 percent?

Mr. GOLDFINGER. Yes.

Senator CURTIS. What percent of fringe benefits are taxable under our revenue laws and what percent are not?

Mr. GOLDFINGER. To my knowledge, sir, they are all taxed when they are received. Some of these forms of fringe benefits are deferred payments, such as pension plans and pension money, and are subject to taxation when received. They are not ——

Senator CURTIS. Now the individual who operates a cobbler's shop for himself repairing shoes, unless he can qualify for an elaborate pension plan to set up and get some lawyers and tax accountants to set it up, if he makes some money and puts it in the savings and loan for a rainy day for his old age, he is taxed on that as he earns, is he not?

Mr. GOLDFINGER. Yes.

Mr. MEANY. He has another alternative.

Senator CURTIS. He is taxed on it as he earns it, is he not?

Mr. MEANY. If he puts it in a savings and loan, yes.

Senator CURTIS. Regardless of what he does. Isn't the earnings of an individual such as a shoe repair man operating on his own, his earnings are taxed as he earns them, is that right?

Mr. MEANY. I do not think he understands the question. You had better try again.

The CHAIRMAN. I must remind the audience that they are here as spectators and they are not here as a gallery to indicate approval or disapproval of any answer of the witnesses.

Senator CURTIS. Can your staff answer that?

Mr. MEANY. If he sets it aside separately, it is not taxed until he gets it. If he does not, he puts it in a savings and loan, it is taxed as of the time it is paid.

Senator CURTIS. I understand that he can go through a rather difficult and complex procedure and qualify for H.R. 10 benefits, but it is quite difficult for the individual of modest income to do that.

Now assuming that he has not, he pays taxes on it, as he earns it, if his few dollars in the savings and loan draw some interest, that is taxable, is it not?

Mr. MEANY. That is right.

Senator CURTIS. I am not suggesting that our pension plan tax laws be changed. But tax equality as the term implies, it is treating everyone alike who faces a similar circumstance. In reference to my question whether or not fringe benefits were taxed, your reply was they were taxed when they were received. Now that means this. That as a result of negotiations or otherwise, if employees are granted a retirement fund, the company or the employer pays into that fund and of course that is the tax deduction to the company and not taxed, is that correct?

Mr. GOLDFINGER. Yes.

Senator CURTIS. And the pension fund, if it earns interest, dividends or other capital gains, they are not taxed, isn't that right? But the recipient receives the taxes or pays taxes when he draws that retirement money some years later?

Mr. MEANY. Yes.

Senator CURTIS. I think it is a good system. What makes up to the 20 or 25 percent fringe benefits that are not taxed at the time besides retirement?

Mr. GOLDFINGER. That is about the only form that I can think of. There are probably medical insurance contributions and other things of that sort, but vacation pay is something that is taxed at the time that it is received. That would be during the year. Shift differentials are taxed when they are received.

Senator CURTIS. If as a result of negotiations the employer provides hospital and medical insurance as a fringe benefit, that is not taxed to the worker currently, is it?

Mr. MEANY. No.

Senator CURTIS. And it is your position that investment income not by an unrelated business but held by the unions should not be taxed?

Mr. MEANY. That is right.

Senator CURTIS. I cannot quarrel with your position. I do hope that we will not get involved in one group against another group, and these principles that you have come out for in reference to this group will not be applied to other groups.

That is all, Mr. Chairman.

The CHAIRMAN. Gentlemen, I am going to ask the committee to agree to a limitation on interrogating this witness. George Meany speaks for many millions of workers and I can understand why everyone would like to interrogate him on matters that interest them. But we started a procedure a while back which will make it impossible to hear other witnesses and some of them also represent a great number of the people. I am going to urge members that we limit ourselves. Let us say to about 7 minutes each on the first interrogation of this witness. Then, if anyone wants to ask any further questions I will arrange for one of our secretaries to meet with them in our conference room here, and they can interrogate Mr. Meany at length, and I am sure he would be glad to respond.

Senator Talmadge?

Senator TALMADGE. Mr. Meany, as I understood your testimony, you suggested a substitute or alternative plan from the minimum income tax proposal of the House bill?

Mr. MEANY. Yes.

Senator TALMADGE. What was that, please?

Mr. MEANY. We suggested that this provision of the House bill be strengthened by imposing a 25 percent minimum tax on exempt income in excess of $10,000 for individuals, and in excess of $25,000 for corporations regardless of the amount of the taxpayer's ordinary income.

Senator TALMADGE. In other words, your proposal is that, if an individual has more than $10,000 in income, regardless of its source, you would tax it at 25 percent.

Mr. MEANY. No, no, no. Outside of his regular, ordinary income.

Senator TALMADGE. Exclusive of his ordinary income. What would that be? His wages, salary?

Mr. MEANY. We say that we want 25 percent tax on the exempt income in excess of $10,000 for an individual, regardless of how much ordinary income he has, and the same thing for corporations, only it is in excess of $25,000.

Senator TALMADGE. In other words, above the normal deductions?

Mr. MEANY. That is right.

Senator TALMADGE. Do you know how much revenue that would bring in?

Mr. MEANY. We have some figures on all of these items, Senator. Mr. Goldfinger I think can give them to you.

Senator TALMADGE. How does that compare with the House bill?

Mr. GOLDFINGER. This would be substantially greater than the House bill. We can submit our estimates.

Mr. MEANY. We have estimates on all of these. We do not have them here.

Senator TALMADGE. You will submit that for the record, Mr. Meany?

Mr. MEANY. Yes.

Senator TALMADGE. Thank you very much.

(The information to be furnished for inclusion in the record follows:)

The revenue gains from AFL-CIO proposed 25% tax on *exempt* income in excess of $10,000 for individual or $25,000 for corporations would be $1.5 billion.

Exempt income is defined as:

(1) The excluded one-half of capital gains.

(2) State and local bond interest.

(3) Depletion taken after the cost of the property has been written off.

(4) The difference between the cost and the market value of property donated to charity.

(5) Depreciation on real estate taken in excess of straightline, except for low and moderate income housing.

The CHAIRMAN. Senator Miller?

Senator MILLER. Good morning, Mr. Meany.

Mr. MEANY. Good Morning.

Senator MILLER. May I ask what the position of the AFL-CIO was on the investment tax credit when it was originally proposed?

Mr. MEANY. The original granting. We were opposed to it.

Senator MILLER. What is your position now with respect to its repeal?

Mr. MEANY. We feel it should be repealed.

Senator MILLER. You have indicated that you wish to do away with capital gains?

Mr. MEANY. That is right.

Senator MILLER. I have almost come to think that the capital gains provisions were calculated to encourage people to invest capital, and that unless we have an investment of capital, our capitalistic system will go by the board, and that the capital is necessary in order to provide plant and equipment, in order to have job opportunities.

Mr. MEANY. Senator, you are not going to argue with me on that.

Senator MILLER. I want to ask you the question how would the capital formation occur in your thinking if the capital gains provision of the tax law were done away with?

Mr. MEANY. I think the investment would still be attractive. I am all for investment, because this is one of the things that makes our system work, but I do not think that if you took away this tax preference you would substantially discourage investment.

Senator MILLER. Do you think it would encourage investments to go overseas, over to England, for example, where they do not even have a tax on capital gains?

Mr. MEANY. Well, I do not know whether it would go overseas or not. I cannot answer that.

Senator MILLER. If you were persuaded that this is what would happen, and if you were persuaded that there would be a slowdown on construction if this were done——

Mr. MEANY. We undoubtedly would take another look at it.

Senator MILLER. Yes. I must tell you that while I have some reservations about some of the capital gains provisions that are proposed, I am deeply concerned that if we should just automatically repeal them, without more that we could have a drying up of capital which we deeply need in order to get into construction, in order to preserve our balance of payments, in order to encourage overseas investors to come into the United States, instead of having investors in the United States go over to Europe and other countries.

Let me ask you another question. I am not trying to get political, but I want to raise a point. It is my understanding that you supported Vice President Humphrey for the Presidency, is that correct? I think that is public record. Were you familiar with the fact that Vice President Humphrey, during the Presidental campaign, advocated that the percentage depletion provisions of the Internal Revenue Code be left alone?

Mr. MEANY. No; I am not aware of that, no. I listened to a lot of his statements, his speeches, but I do not recall that.

Senator MILLER. As I recall, it was in Business Week or one of the business publications where the positions of the two candidates were set forth, and they both were opposed to the repeal of the 27½ percent or a reduction of the 27½-percent depletion for oil and gas.

My recollection is that Vice President Humphrey premised his position on the theory that if this were done it would increase consumer prices. Do you think that this percentage depletion reduction is not going to affect consumer prices?

Mr. MEANY. I do not know, Senator, whether it is or not, but I know that the depletion allowance is very, very unfair, at least from my point of view, it is unfair, and I certainly will not change my idea just because Vice President Humphrey thinks differently.

Senator MILLER. I understand that. I would not expect you to. But I call your attention to his position, because I do think that it should carry some weight with you. There is a great fear on the part of many knowledgeable people that a change in this is going to result in an increase in consumer prices, and I know you are very much opposed to that too, and if you came to the conclusion that an arbitrary attack upon percentage depletion would in fact result in an increase in consumer prices, would that cause you to think this thing over a little more?

Mr. MEANY. I doubt it. I doubt it because I would have to have that demonstrated quite forcefully before I would change my mind. I think it is a tax gimmick that is unfair, and I think it should be done away with.

Senator MILLER. Let me ask you this. Let us take two corporations both oil corporations. One corporation, A, has $1 million in percentage depletion. Corporation B also has $1 million in percentage depletion. Corporation A takes that $1 million and plows it back into exploration and development of petroleum resources which redound to the benefit of the people of the country. Corporation B does not do that. Corporation B pays that out as dividends to stockholders. Do you think both corporations should be treated exactly alike?

Mr. MEANY. No, no; I do not. I think there should be some provision for the corporation that plows it back in for development.

Senator MILLER. Thank you very much.

The CHAIRMAN. Senator Jordan?

Senator JORDAN. Mr. Meany, under your AFL-CIO proposed changes in income tax rates, where you suggest that the 14-percent rate should be cut to 9 percent, the 15-percent rate cut to 13 percent, the 16-percent rate to 15 percent, the 17-percent rate to 16 percent, the 19-percent rate to 18 percent, how much revenue do you calculate would be lost under this proposal as compared to the present law, first, and secondly as compared to the House bill?

Mr. MEANY. The same as the House bill. I do not have the figures, Senator. We have put a price tag on all of these things but unfortunately I do not have it here. Mr. Goldfinger says it would be the same as the House bill.

Senator JORDAN. The proposed rate changes that you suggest would result in the same revenue income?

Mr. MEANY. As the House bill.

Senator JORDAN. As the House bill?

Mr. MEANY. Yes.

Senator JORDAN. No change. If you do find there is a change, will you supply that for the record?

Mr. MEANY. Yes.

Senator JORDAN. Thank you.

The CHAIRMAN. Senator Byrd?

Senator BYRD. Thank you, Mr. Chairman.

Mr. Meany, like you I feel it is very important that in a democracy that there be tax justice. I do not like the idea of persons in this country earning more than $200,000 paying no tax. I think all individuals who earn significant income should pay a tax. The problem as I see it that faces the Congress is how to tighten the so-called loopholes without penalizing a large segment of our population. I speak now of the colleges, hospitals and churches, and State and local governments.

I think that your testimony brings out interesting points. Some of your proposals I am sympathetic to. Some I am not too sympathetic toward. I have made no commitment, however, on any part of the tax bill.

There is one aspect that I find particularly interesting. I agree with you thoroughly that industrial development bonds should not be tax exempt. In regard to State and municipal bonds, this presents, as I see it, a real dilemma, because if we change the tax status of State and municipal bonds, and I do not say at this point whether it should or should not be changed, but if we do, that inevitably will increase the cost of local and State government, which means that every taxpayer in every country and every city and every State in the Union will feel the effect of it.

Now I notice in your testimony that you make a proposal which I do not recall ever seeing proposed before, and that is that the Federal Government should guarantee, should guarantee the State and local bonds.

Mr. MEANY. Guarantee the principal of the bonds.

Senator BYRD. Guarantee the principal of the bonds and pay——

Mr. MEANY. An interest subsidy.

Senator BYRD (continuing). One-third of the interest on these bonds. May I ask you this. How extensive is this? What is the total of State and local bonds now outstanding?

Mr. MEANY. The total amount? I do not know.

Mr. GOLDFINGER. We have worked this out, Senator, and we have come to the conclusion that there would be a gain of revenue.

Senator BYRD. My question is this. What is the total amount of State and local bonds outstanding?

Mr. GOLDFINGER. Offhand I do not know. We probably have it in the lengthy statement.

Senator BYRD. I can give you the answer. The answer is that at the end of 1969 it is estimated that there will be $140 billion in State and local bonds outstanding. As I understand your proposal, you would have the Federal Government guarantee all of these State and local bonds, am I correct in that assumption?

Mr. MEANY. That is right.

Senator BYRD. Aren't you asking that the Federal Government undertake a very severe task when it begins to guarantee State and local bonds?

Mr. MEANY. Yes; I think that is quite a job for them, but I think it should be done. After all, Senator, I think there is a factor here that you are perhaps disregarding, and that is that even though there may be some sound reasons from the point of view of State and local problems to have these bonds tax exempt, the average citizen of this country resents very much the fact that certain people get the benefit of this unearned income and pay no taxes on it. This has a tendency really to break down the morale of the people, and that certainly is a factor to be considered.

Senator BYRD. I concur in that statement. I do not defend that. I concur in what you say in that regard about morale. But these same people, including myself who feel that way, may not want the Federal Government guarantee the State and local bonds, and pay one-third of the interest on the State and local bonds. Where does the Federal

Government get the money to do that? It gets the money out of the taxpayer's pocket. That is the only place it can get it——

Mr. MEANY. That is right.

Senator BYRD (continuing.) From your members and every wage earner.

Mr. MEANY. And it would get some of that money from people who are not now paying taxes.

Senator BYRD. I just feel that this one proposal of yours that I have never seen advocated before. It is one of the most far-reaching proposals I think that has been presented to the Congress in a long time. I am glad to get your——

Mr. MEANY. I think the President has come up with a proposal for sharing the taxes with the State and local governments.

Senator BYRD. That is entirely different from taking over and assuming the $140 billion in bonds. My time has expired and I thank you, Mr. Meany.

The CHAIRMAN. Senator Fannin?

Senator FANNIN. Thank you, Mr. Chairman.

Mr. Meany, we share your concern over the equitable treatment of earned income, and we are concerned about loopholes, but we are also concerned about jobs. Have you considered how many jobs would be eliminated if all your recommendations were enacted?

Mr. MEANY. We feel that there would not be any elimination of jobs.

Senator FANNIN. Don't you think that is a little farfetched to say that they would not be eliminated, when we are going to take investment capital away?

Mr. MEANY. I have heard this argument about proposals that we make eliminating jobs for many years. We have been told for 30 years now every time we discuss wage and hour legislation that it is going to eliminate jobs but it never has eliminated jobs.

Senator FANNIN. I certainly question that.

Mr. MEANY. I think you are selling the American economy—the whole system—short if you think that by setting up a system of tax justice, where everyone would be paying his fair share, that this would eliminate jobs.

Senator FANNIN. Don't you think it has eliminated jobs that we have exported? Let us take the automotive industry.

Mr. MEANY. I think this is a problem and it is a problem for Congress about the export of jobs. I do not think anything we do on the tax situation is going to change that. The American corporations are exporting jobs quite rapidly right now.

Senator FANNIN. But only to become competitive in many of the foreign countries. That is why this is done.

Mr. MEANY. Well, be that as it may. Do you mean competitive in bringing down the standard of life?

Senator FANNIN. No, I certainly do not, but the consideration given by other countries. For example, there is no capital gains tax, in Canada, nor as brought out by Senator Miller, in the European countries.

Mr. MEANY. Isn't there anything Congress can do about that?

Senator FANNIN. Certainly Congress can do something about it. They can give greater incentive to hold industries in this country and to make us more competitive. Look at what has happened in the automotive industry and the electronic industry as a result of Japanese competition. I am vitally concerned about that, and I think you should be. I hope you consider that matter. It is I think of vital importance to us all.

Mr. MEANY. Mr. Senator, I do not think you are going to get the Americans and the average American trade unionist to consider competing with Hong Kong wages or wages that a lot of corporations are paying down on the Mexican border.

Senator FANNIN. I am talking about making it more enticing to our American industry to work with the labor unions, and to have a better competitive position with which to face the other nations of the world.

Now you know as far as world markets are concerned, we have lost out tremendously percentagewise in the last few years.

Mr. MEANY. Well, the best customer of the American corporations over the years, and I think statistics will prove this, is the American worker, the American citizen here at home, and I do not think, no matter what way you approach this, that the American worker is going to compete with 20 and 25 cents an hour wages in South America or in Africa or in the Far East.

Senator FANNIN. He can better compete if we have modernized equipment, if we have the capital investments that will make that possible. But to go on to another subject which Senator Curtis discussed with you, it is my understanding that all labor unions are now exempt from taxation under 501(c) of the Internal Revenue Code. I think you agree that that is right. What sort of union income would be included within the exemption? Would this include dues collected, interest on bonds, stock dividends and other investments of the unions? Are these all included?

Mr. MEANY. Yes.

Senator FANNIN. So we do have a situation where the unions are being given I think special treatment. H.R. 13270 in its present form would penalize foundations from engaging in political activities, including the sponsorship of voter registration drives.

I have introduced an amendment to this bill which would deny tax-exempt status to labor unions which engage in political activities. Do you see any objection to this measure?

Mr. MEANY. You mean political activities in Federal elections? We are barred from that now.

Senator FANNIN. Well, it would include activities in all elections.

Mr. MEANY. But we are not barred from using our money for voter registration drives, and we thought that was something everybody wanted. We want higher voter participation on the part of the people, and this is really a bipartisan, nonpartisan activity.

Senator FANNIN. Well, that is questionable but nevertheless——

Mr. MEANY. You would try to stop that?

Senator FANNIN. I am asking you a question. This bill, H.R. 13270, which you strongly support, and even want to go further than it does in this area would penalize foundations for engaging in political activities, including the sponsorship of voter registration drives. Do you agree with this provision? In other words, turnabout is fair play?

Mr. MEANY. I want to look at that bill again. I do not think there is a complete bar.

Senator FANNIN. Sir?

Mr. MEANY. I do not think there is a complete bar in that bill. I would have to look that up.

Senator FANNIN. I think you had better read it then and have your people look into it.

Mr. MEANY. All right.

Senator FANNIN. Further pursuing Senator Byrd's line of questioning about subsidizing and guaranteeing municipal bonds, how would this be controlled? Just to give you an illustration, some bonds now are not salable, but of course would be with the guarantee of the Federal Government. In many instances perhaps these bonds should not be issued, but what control would you have over this? Isn't that leaving your financing just wide open?

Mr. MEANY. Surely the Federal Government would set up some standards by which it would guarantee municipal bonds. It would not guarantee them indiscriminately no matter what the features of them were.

Senator FANNIN. How about the outstanding?

Mr. MEANY. How about what?

Senator FANNIN. The outstanding bonds? What would be your point as far as the outstanding bonds?

Mr. MEANY. We are talking about bonds from now on. We are not talking about the outstanding bonds.

Senator FANNIN. But I think in your testimony you considered that all issues would be approved whether or not needed.

Mr. MEANY. All future issues, yes.

Senator FANNIN. Whether or not needed?

Mr. MEANY. Whether what?

Senator FANNIN. Whether or not needed. In other words, I am questioning you as to how this could ever be controlled.

Mr. MEANY. I think it can be controlled by the Federal Government setting up standards.

Senator FANNIN. Then you would have them subsidized and then controlled?

Mr. MEANY. Yes.

Senator FANNIN. As to what is done in the local communities?

Mr. MEANY. That is right.

Senator FANNIN. And the States and all. Then is there any need for——

Mr. MEANY. I do not know that it would necessarily mean that they would control everything done by the local governments. I think setting up standards is one thing and controlling is another.

Senator FANNIN. How would you handle the interest on outstanding bonds? You are going to subsidize the interest on the bonds that are going to be issued now. What about the bonds on outstanding issues?

Mr. MEANY. We would not touch them at all.

Senator FANNIN. You would not, but they are touched by this bill.

Mr. MEANY. They are?

Senator FANNIN. Oh, yes. They are tax exempt, and so they are affected by the bill.

Mr. MEANY. You mean the outstanding bonds?

Senator FANNIN. Yes, the outstanding bonds.

Mr. MEANY. That is not our proposal.

Senator FANNIN. They are included in some of the stipulations, sir; as far as taxes are concerned, tax preferences and all, they are affected.

My time is up, Mr. Meany, but I wish you would look into some of these problems.

Mr. MEANY. I certainly will look at that one.

Senator FANNIN. I hope you will take a look at the effect that this would have on jobs and our competitive position with other countries also, the number of people that would be eliminated if all your recommendations were enacted. I think it would be disastrous.

Mr. MEANY. Well, we do not agree with that.

The CHAIRMAN. Senator Hansen?

Senator HANSEN. Thank you, Mr. Chairman.

Mr. Meany, did I understand you to say it was your feeling that the proposals you have made would be prespective in nature, that they should apply to bond issues that are yet to be made?

Mr. MEANY. Yes.

Senator HANSEN. And it should not refer to those which are already on the books? I think Senator Byrd spoke about there being some $140 billion worth of bonds now outstanding. As I understand your proposal it would exempt that $140 billion worth of bonds?

Mr. MEANY. Well, the people who bought them bought them under the conditions which now prevail and we think that should prevail as far as those bonds are concerned.

Senator HANSEN. Would it be your feeling generally that this legislation should be prospective in nature rather than retroactive?

Mr. MEANY. I do not think the legislation should be retroactive if that is what you mean.

Senator HANSEN. That is what I mean.

I have no further questions, Mr. Chairman.

The CHAIRMAN. Mr. Meany, I would like to just ask one or two questions of you. I personally have always had some doubts about the wisdom of this investment tax credit, and I think that your organization probably did, too. At first I was willing to go along with part of it and then later on part of the rest of it. It occurred to me later on that the credit may have been providing too big an incentive at a time when money was tight, and I advocated that it be repealed well before the administration—at that time of President Johnson—agreed it ought to be repealed. I wanted to relieve the tight money situation as I do now. The repeal of the investment tax credit involves about $3 billion.

The one thing you have to give it credit for is that it really did stimulate a lot of investments.

From the point of view of a lot of business people at that time it had the effect of cutting the effective tax rate from 50 percent down to 36 percent if they could fully utilize the investment tax credit of 7 percent.

Of course, you are well aware of the fact that a tax credit of 7 percent is just like a deduction of 14 percent if the tax rate is 50 percent.

Now this accelerated depreciation thing started out under President Eisenhower, and it was made more liberal under the succeeding administrations. Capital gains had always been one of the things that business people looked for. I understand on Manhattan most rich people are not much interested in investing their money in something unless they can find some way to make a capital gain out of it, either in whole or in part. And I see that you would like to eliminate percentage depletion entirely.

Would it not seem to you that if we strike at all those items, I think they would total about $4.5 billion right there, and you take the other so-called incentive items that are justified on the basis that they would be incentive to invest money to do something constructive, it would add up to about $3.5 billion of tax incentive provisions that would be removed from law.

Would it not seem to you that that would discourage a lot of people from investing money in things that give labor good jobs?

Mr. MEANY. Well, I answered that before, Senator. I do not think so. I think the investments would still be attractive, despite these so-called sweetners.

The CHAIRMAN. I am just familiar with one phase of it. I know you feel strongly about it. In a small way I am in the oil business. My family owned a piece of property. We were willing to put up our money if we could find somebody else. Just the talk of change in this matter has made it so that nobody else was interested in going in. The impression that I gained is that independents were getting out of the business in droves the way it was, and that this change would accelerate that trend.

Now, of course, if we drill a well, we are going to pay the regular wages, and those are good wages, whether we find oil or not. We do not mind paying the union scale of wages. We hope to finish ahead, and if we have to pay a lot of wages that is all right with us. But we would like some hope of making our money back and winding up with a profit by the time the thing is all over with.

Now if you have literally hundreds of people getting out of that business the way it is now, and frankly I regard myself as one of those people——

Mr. MEANY. Getting out of the oil business?

The CHAIRMAN. Yes, sir, they are not drilling any more wells at all. There are a lot of people who have already quit. Now, why would not the elimination of the oil depletion allowance, and also taking away or compromising their intangible drilling cost provisions make a lot of people having doubt about it decide that that was the straw that broke the camel's back to say "Well, we just will not drill any more. Let us just get out of this business"?

Mr. MEANY. Well, that means we would have to put our cars up. There would not be any gasoline for our cars.

The CHAIRMAN. Well, it would put a lot of people out of work, I would think.

Mr. MEANY. I do not think so. I think the incentive for profit is still there, and I do not know who you mean is going out of business.

The CHAIRMAN. Now, Mr. Meany, I——

Mr. MEANY. Humble has not got out of the business, Standard Oil of New Jersey has not gone out of the business.

The CHAIRMAN. Mr. Meany, you are the first person I have heard advocating cutting the depletion allowance who did not couple that with the proposition that you ought to bring all your oil in from overseas, which means that you would hire Arabs, you would hire Spicks, you would hire various and sundry people to produce that oil but you would not be producing it here. You would be hauling it in from overseas.

Mr. MEANY. Irrespective of the depletion allowance, if oil companies can make more money by bringing it from overseas I suppose they would bring it from overseas, without regard to whether depletion allowance is there or not.

The CHAIRMAN. I am one of those fellows who has been trying to fix it up so they produce it here rather than bring it in from there. Over a period of time I suspect that has been part of the problem.

Mr. MEANY. As Senator Miller said, shouldn't there be some line drawn between those who put this money back into new ventures to try to provide new jobs, and others who just pay it out in dividends?

The CHAIRMAN. Well, I would ask you a question. We tell a man, "If you will go out and find some oil, or any other fuel, we will give you a liberal depletion allowance." That is h's incentive to do it.

Now, after he fulfills his end of the bargain why should we take it away from him? Why would you want to change it in the middle of the game after a fellow has gone out, relying upon that incentive, and performed on it?

Mr. MEANY. Well, I would be quite happy to set 27½ phased out over the years, little by little.

Senator GORE. Good, that is a deal.

The CHAIRMAN. May I say that is a generous concession.

Senator Anderson?

Senator ANDERSON. In this morning's mail there is a letter from a customer who wants to talk about bonds. He suggests that there are bonds he can dispose of which have three different charges: 8 percent note April 15; 7¼ percent note due in November, and 7½ during the coming year. Don't you think that is a pretty high rate of interest?

Mr. MEANY. I did not get the question.

Senator ANDERSON. The interest rate on bonds. Eight percent note, 7¼ percent note, and 7½ percent note. I think that interest is outrageous, don't you?

Mr. MEANY. I think interest rates generally are outrageous today. Certainly they are outrageous from the point of view of the ordinary home buyer. I would be happy to hear more about that because we have people who would like to buy their own homes, but the interest cost on the purchase of a new home is getting up near 9½ or 10 percent, when you figure the rate of interest at 7½, and then they add on points for this and that.

Senator ANDERSON. It is frightening. It has stopped home ownership to a great degree. I just hope that there will be lower interest rates in the future.

Mr. MEANY. We would like to see the interest rates come down.

The CHAIRMAN. Senator Williams?

I am going to let each Senator have one round. Senator Williams did not ask any questions, and so I am going to give him the opportunity now.

Senator Harris has shown up meanwhile and he will be covered by those same rules.

Senator WILLIAMS. I just want to clarify one point. As I understand it in your testimony and from questions, you have recommended that capital gains be taxed on the same basis as earned income, is that correct?

Mr. MEANY. Yes.

Senator WILLIAMS. Now one of the arguments that I have heard made, and I am wondering if you subscribe to it, is suppose Mr. X buys 100 shares of a bank stock. The dividends are taxed at regular income. Is it your theory that the appreciation in the bank stock is largely the result of undistributed income, the accumulation of it, which when he sells the stock he gets that as an appreciation? Is that the basis of suggesting that it be taxed as regular income?

Mr. MEANY. That is one of the bases. The general basis is as I stated in my testimony, that the fellow who works with his hands and draws a salary, he has got to pay on his income. Why shouldn't the others pay on their income?

Senator WILLIAMS. Now if a labor union owns a bank, the bank is taxed the same corporate rates as any other industry. Now if the labor union is buying that bank, and the bank distributes about half of its earnings, the other half builds up equity. If that union sells that stock later should they be taxed at capital gains—since it is a delayed payment of accumulated earnings—the same as you are proposing for individuals?

Mr. MEANY. If everybody else would have to pay it, why not the labor union.

Senator WILLIAMS. That is what I was asking.

Mr. MEANY. Yes.

Senator WILLIAMS. That answers the question. Thank you. You would have no objections to the bill being so amended?

Mr. MEANY. No.

Senator WILLIAMS. Thank you.

The CHAIRMAN. Senator Harris?

Senator HARRIS. I do not have any questions, Mr. Chairman, except to say that I have studied your testimony, Mr. Meany, and I appreciate the thrust of it and the influence that you have been generally on the side of tax reform and tax relief.

The CHAIRMAN. Senator Metcalf, a former member of this committee, has been sitting here with us. If you want to ask a question or two go ahead.

Senator METCALF. I am delighted that he is supporting the bill that I am going to testify to next.

The CHAIRMAN. Senator Cooper, do you have any questions?

Well, let me say if there are other members who want to interrogate Mr. Meany further I think he might make himself available to you to ask a few questions in our conference room. If someone wants to request that privilege, I would ask the witness to cooperate. Otherwise, we are going to excuse Mr. Meany. We have had him here for an hour and 15 minutes and we have many other important witnesses here.

Thank you very much, Mr. Meany, Mr. Biemiller and your able associate. We appreciate very much your being here to explain your views on behalf of your great organization.

Next we would like to hear from the Honorable Lee Metcalf, former member of this committee, and Senator from the State of Montana.

(George Meany's prepared statement follows:)

STATEMENT OF GEORGE MEANY, PRESIDENT, AMERICAN FEDERATION OF LABOR AND CONGRESS OF INDUSTRIAL ORGANIZATIONS

SUMMARY

My name is George Meany and I am president of the American Federation of Labor and Congress of Industrial Organizations.

The 13.5 million members of the unions of the AFL-CIO are, almost without exception, taxpayers. They pay their taxes regularly, payday after payday, through the payroll withholding program. They are loyal Americans; they appreciate the value of government, the services of government, the need for paying for government.

They are willing to pay their fair share.

But they are tired of having to pay the share of other Americans. Specifically, they are tired of paying the share of those Americans whose incomes are greater and whose taxes are lower—the "loophole set" in today's society.

So it is on behalf of the largest organized group of taxpayers in America that the AFL-CIO appears here today as advocates of tax justice. We don't have tax justice today and will not achieve it under the House bill. And the Administration's proposals bear no resemblance at all to tax justice.

The federal tax system is rigged against those whose livelihood comes from the work they do. It is rigged in favor of those whose income results from investments.

This unfair rigging results from the fact that a triple standard is applied to income taxed by the federal government.

One standard applies to wages, salaries, and other forms of so-called ordinary income. This income is taxed in full and, for workers, the tax is regularly deducted from their paychecks,

A second standard applies to income from stocks, real estate, and other so-called capital assets sold at a profit. Only half of such income is taxed. And under present law the tax can never be more than 25%—even for those in the very top tax brackets.

A third standard is applied to certain forms of income which never even appear on the tax form, such as the interest on state and local bonds, or the income that is washed out by phantom, nonexistent costs as oil depletion, fast depreciation writeoffs, and bookkeeping farm losses. This type of income completely escapes taxation.

The wealthier you are, the greater are the opportunities to take advantage of these preferentially taxed or untaxed forms of income.

This triple standard will not be ended through reforms that eliminate or curb some relatively obscure tax dodges affecting a handful of people. Nor will it be ended merely by ensuring that those of extreme wealth and ability-to-pay are called upon to make *some* contribution to the federal Treasury.

The now infamous 21 persons, for example, who paid no taxes at all on their incomes of $1 million and over, have become a symbol. And, I fear, too many have addressed themselves only to this symbol. Tax measures to ensure that those with astronomically high incomes merely pay *some* taxes to the federal government fall far short of tax justice.

Justice can only come when:

- The completely impoverished are removed from the tax rolls.
- There is a meaningful reduction in the relative tax burdens of low and middle-income families.
- The loopholes of special tax privilege for wealthy families and businesses are eliminated.

The single most costly loophole and the one that is the prime culprit of unfairness is the capital-gains loophole.

This is not a loophole which applies only to a handful. It is not a loophole which reduces anyone's taxes to zero. And its effect on the tax structure does not give rise to tax-evasion horror stories that can be dramatically illustrated through the media.

Yet, because of the half tax on capital gains and the zero tax on such gains passed on at death some $30-$40 billion escapes the tax base, resulting in an annual Treasury revenue loss of over $10 billion.

And it is a tax preference that says, in effect, the more wealth and income you have, the more opportunities you should be allowed to avoid a fair share of taxes.

The AFL-CIO has continually pointed to this loophole as the major flaw in the tax system. The Treasury study published last February confirms this, saying that the special treatment accorded capital gains is the "most important factor in reducing the tax rates of those with high incomes."

We see no justice to a tax provision which says that a married taxpayer with $8,000 in capital-gains income should pay a tax of $354 while a married taxpayer, with the same amount of wage income, should pay $1,000.

We also recommend taxation of the $15 billion in capital gains that is passed on annually to heirs without even being mentioned on the income tax form.

Under the House action, some of the capital-gains loopholes would be trimmed. The House would eliminate the 25% maximum and would extend the holding period for long-term capital gains from six months to one year.

Even with these improvements, capital gains would still remain as the prime factor in eroding the fairness of the tax structure, for unearned income would still be preferentially taxed. And, what is worse the Administration has proposed to weaken even these modest reforms.

If the tax structure is to meet America's standards of fair play, loophole closing must be broad-gauged and substantial. On April 1, 1969, before the House Ways and Means Committee. The AFL-CIO presented a program which we believe would achieve tax justice—a program which would generate some $15–17 billion in federal revenues from substantial loophole-closing, provide relief to those of low and moderate and middle incomes, and allow some $8–10 billion to fully fund existing federal programs geared to meeting domestic needs.

Against that background, we think the House bill merits commendation, for:

1. The working poor are relieved of any federal tax obligation.

2. The hard-working, tax-paying low- and middle-income Americans, who have been forced to bear far more than their just share of the tax burden, have been given a modicum of relief.

3. The single most inflationary pressure in the economy, the 7% investment credit to business, has been eliminated.

4. Some of the loopholes and gimmicks in the tax structure, designed to provide special, unfair tax bonanzas for the very wealthy, have been trimmed, although not eliminated.

We urge the Senate to improve upon the House action and to reject all proposals, including those of the Administration, which would move the tax structure still further away from America's standards of fair play.

Specifically, we urge the Senate to:

1. *Close the capital-gains loophole, ending the major tax preference for unearned income.*—There cannot be tax justice as long as unearned income is half-taxed while earned income is taxed in full.

The modest changes recommended by the House are welcome but not enough and the Administration would largely undo the positive action taken by the House.

2. *Put an end to the tax abuses of the oil, gas and other mineral industries.*—Again the measures taken by the House are welcome ones. They would reduce the depletion allowance, eliminate depletion on foreign oil and gas wells, place a limit on the amount of exploration expenses that can be immediately written off, and end some other abuses such as the carved-out production payment.

Nevertheless, of the total revenue that escapes taxation due to the activities of these industries, only one-third would be recovered by the House action.

We recommend the complete elimination of these abuses.

3. *Eliminate the maximum-tax provisions.*—Under the maximum-tax provision contained in the House bill the top tax rate on earned income would be 50%.

This proposal would benefit only those with incomes above $50,000.

It would serve to provide an uncalled-for tax bananza of $100 million to top corporate executives, doctors, lawyers and others whose income comes from astronomically high fees and salaries.

The Administration has strongly endorsed this proposal. It reflects a cynical philosophy that if taxes on the wealthy are cut, they won't try so hard to find loopholes. Such a philosophy makes a mockery of tax-reform efforts. We cannot subscribe to it and we strongly condemn it.

4. *Strengthen the minimum-tax provisions of the House bill.*—The so-called Limit on Tax Preferences (L.T.P.) proposed by the House and the weaker version offered by the Administration are prime examples of reforms addressed solely to symbols.

Both the House and the Administration versions would limit the amount of certain types of income that can be completely tax-exempt to no more than half of total income plus $10,000. Thus, the more the income you have, the more can be tax-free.

What's more, if you fail to shelter all your income in one year, you can keep trying for another five.

Under the House bill, though a wealthy individual affected by the L.T.P. would by no means pay his fair share of taxes, he would pay some.

Under the Administration proposals, since State and local bond interest would not be recognized as income under the L.T.P., some wealthy individuals would still escape scot-free and pay no taxes at all.

The AFL-CIO has proposed a 25% minimum tax on exempt income in excess of $10,000 for individuals and $25,000 for corporations—regardless of the amount of the taxpayer's ordinary income.

5. *Strengthen and improve other measures contained in the House bill.*—For example:

—Interest on State and local bonds should be taxed in full with the Federal Government guaranteeing the bonds and providing an interest subsidy to ensure that the fiscal powers of the State and local governments are not damaged.

—Instead of the Hobby Farm loophole-closing proposals suggested by the House and the Administration, the lost-limit approach contained in S. 500 should be adopted. This procedure was recommended by Senator Metcalf and endorsed by a bipartisan group of 26 Senators. This approach is specifically tailored to the tax-loss farmer and ensures that legitimate farm operators will not be penalized.

—The income-averaging formula should *not* be liberalized to include capital gains unless the preferential treatment accorded such gains is eliminated.

—Interest deductions on bonds used to finance corporate mergers and acquisitions should be completely disallowed.

—All rapid depreciation on real estate should be disallowed, except for low- and moderate-income housing.

—Accelerated depreciation on regulated utilities should not be allowed unless the tax benefits flow through to the consumer.

Finally, the Senate should provide more substantive relief to those whose incomes are moderate and whose tax burdens are unnecessarily severe.

Tax relief and tax justice do not necessarily go hand-in-hand. The equity in the tax structure can be badly damaged by tax cuts as it can by tax increases or the addition of new loopholes and gimmicks.

Under the House-passed bill this concept was partially recognized. Though all groups would receive relief, a significant proportion of the relief would flow to low- and middle-income taxpayers.

Under the changes proposed by the Administration needed relief for those just above the government-defined poverty threshold and those in the middle-income brackets would be cut back, the state-gasoline-tax deduction would be disallowed, and a tax cut would be given to corporations.

Under the House proposals, $4 billion in tax relief is provided through the low income allowance and standard deduction increases. These primarily benefit low- and middle-income taxpayers. Another $4.5 billion is granted through across-the-board rate cuts. Over half of this relief goes to taxpayers with incomes of $15,000 or over.

The Administration agrees with the House on cutting the taxes of the wealthy, but says it goes too far when it would cut taxes for those of low and modest incomes. In addition, claims the Treasury, corporate taxes should be cut $1.6 billion.

We endorse the House proposals to increase the low-income allowance to a flat $1,100. In addition, we endorse the House proposals to increase the standard deduction to 15% and $2,000.

We do not agree with the general rate reductions recommended by the House and the Administration; and certainly there is no justification for a reduction in corporate taxes.

Instead we recommend a reduction in the tax rates that apply to the first $8,000 of everyone's taxable income for married individuals and the first $4,000 for single individuals.

The rate changes we propose and their effect are shown on the attached tables.

Our relief proposals would result in the same revenue loss as that proposed by the House. They would cost roughly $600 million more than proposed by the Administration—an amount that could easily be made up by, for example, eliminating the maximum-tax provision, effectively closing the hobby-farm gimmick, and adopting a meaningful minimum tax.

Mr. Chairman, we urge that this committee bring the federal income tax into line with what it's supposed to do—tax income in accordance with ability-to-pay. That's tax justice.

TABLE I.—*AFL–CIO proposed changes in income tax rates*

The rate changes would be as follows:

The 14% rate should be cut to 9%.
The 15% rate should be cut to 13%.
The 16% rate should be cut to 15%.
The 17% rate should be cut to 16%.
The 19% rate should be cut to 18%.
All other rates would remain the same.

Under this procedure, every taxpayer would receive a tax reduction. But, the individual with a taxable income of $100,000 would get the same tax break as the $8,000 man. With the rate structure recommended by the House, a married individual whose taxable income is $100,000 would receive a $3,600 cut while the $8,000 married individual would have his taxes reduced by only $80. Under the AFL–CIO proposal both would receive a cut of $130.

TABLE II.—FEDERAL INCOME TAX BURDEN

PRESENT LAW COMPARED WITH HOUSE REFORM BILL, TREASURY PROPOSALS, AND AFL-CIO PROPOSALS—MARRIED COUPLE, 2 DEPENDENTS

	Total tax				Tax reduction		
Wage or salary income	Present law	House reform bill	Treasury proposals	AFL-CIO proposals	House	Treasury	AFL-CIO
$3,000	0	0	0	0			
$4,000	$140	$65	$81	$45	$75	$59	$95
$5,000	290	200	253	155	90	37	135
$7,500	687	576	616	526	111	71	161
$10,000	1,114	958	1,012	908	156	102	206
$12,500	1,567	1,347	1,447	1,300	220	120	267
$15,000	2,062	1,846	1,951	1,822	216	111	240
$20,000	3,160	2,968	2,968	3,030	192	192	130
$25,000	4,412	4,170	4,170	4,282	242	242	130
$50,000	13,388	12,604	12,604	13,258	784	784	130
$100,000	37,748	34,892	34,892	37,618	2,856	2,856	130

Note: Assumes deductions equal to 10 percent of income, minimum standard deduction (low-income allowance) or standard deduction—whichever is greater. Table takes into account the rate cutting, standard deduction changes, and low-income allowance proposed by the House, the Treasury and the AFL–CIO. Surtax excluded.

STATEMENT

The federal income tax structure is unjust. Events of recent months have made this fact increasingly clear to all reasonably informed citizens.

In 1967, the most recent date for available information, the taxes paid by millionaires averaged only 25% of their total income. Twenty-one of these millionaires and 134 other persons whose reported incomes exceeded $200,000 paid not one cent in federal income taxes.

In that same year, 2¼ million taxpayers whose incomes fell below the government's definition of poverty paid $100 million in income taxes. And the married wage earner, with an income of $8,000, paid $1,000 in income taxes—12½ percent.

The federal tax structure is rigged against wages and salaries—against income from work. It is rigged in favor of unearned income.

This unfair rigging results from the fact that a triple standard is applied to income taxed by the federal government.

One standard applies to wages, salaries and other forms of so-called ordinary income. This income is taxed in full, and for workers the tax is regularly deducted through payroll withholding.

A second standard applies to income from stocks, real estate and other so-called capital assets sold at a profit. Only half of such income is taxed. And under present law the tax can never be more than 25%—even for those in the very top tax brackets.

A third standard is applied to certain forms of income which never even appear on the tax form, such as the interest on state and local bonds or the income that is washed out by phantom, nonexistent costs as oil depletion, fast depreciation write-offs, and bookkeeping farm losses. This type of income completely escapes taxation.

Thus:

● Income gains from the sale of stock or other property, held for more than six months, are taxed at only half the regular tax rate—with a top maximum rate of 25%. Moreover, when stock or other property is passed on to heirs at death, the increased value of the property from the date of purchase is not subject even to this much-reduced capital gains tax.

● Income from interest payments on state and local bonds is completely exempt from federal taxation.

● Sizable portions of the income from oil and gas properties and a large number of minerals never enter the tax stream because nonexistent "depletion" expenses are written off.

● Much of the income from real estate escapes taxation since it is written off as depreciation. Such income is not only exempt from taxation but, since it is considered a write-off cost. it provides an additional tax shelter for the wealthy because it is deducted from other taxable income.

● Because of the little-known unlimited-charitable-contribution-deduction special privilege, many wealthy individuals and businesses use the disquise of philanthropy to avoid paying any tax at all.

● Tax-exempt family foundations can be set up so wealthy families can control their fortunes in perpetuity without paying taxes.

● Wealthy nonfarmers can invest in farm operations which yield imaginary losses that can be charged off against their high nonfarm incomes.

● Business deducts 7% of the cost of new equipment and machinery from its tax bill—as a special tax credit. And, they can deduct it again as part of depreciation.

As a result of these and other inequities, an unduly large part of the burden of running the Federal government is heaped upon the shoulders of those who can afford it least.

These facts are generally known. They are causing an alarming erosion of public confidence in the tax structure and in the fairness of the federal government as well. And since Americans expect so much from their tax structure—national defense, public facilities and services, grants-in-aid to the States and local governments—these inequities in the tax structure undermine public support for much-needed expansion of government services—Federal, State and local—for a growing, urban population.

It is for these reasons ,the AFL–CIO is seeking tax justice. To us, there is a critical distinction between tax reform and tax justice, and recent events have made it imperative that this distinction be clearly set forth.

The now infamous 21 persons, for example, who paid no taxes at all on their incomes of $1 million and over have become a symbol. And too many have addressed themselves only to this symbol. Tax measures that eliminate or curb some obscure tax dodges or that ensure that those with astronomically high incomes merely pay *some* taxes to the Federal Government, fall far short of a just and equitable Federal income tax structure.

Justice can only come about if each taxpayer bears his rightful share of the burden of operating our government.

This will only happen when:

1. The impoverished are completely removed from the tax rolls.
2. There is a meaningful reduction in the relative tax burdens of low- and middle-income families.
3. The loopholes of special tax privilege for wealthy families and businesses are eliminated.

This is not now the case. Although the situation would improve if the House-passed Tax Reform Act becomes law, justice would still not be achieved. Moreover, the Administration would undo much of the good proposed by the House and would add additional inequities to the tax structure.

A major point here is that there are loopholes and there are loopholes.

There are some, like the unlimited-charitable-contribution gimmick, which enable a handful of multimillionaires to pay little or no taxes even though they make more in a year than the average worker makes in a lifetime.

This type of gimmick is an unconscionable flaw in our tax laws and it lends itself to horror stories of tax avoidance.

It should be ended. Both the House bill and the Administration recommend its termination. Ending it would add a measure of justice to the tax structure. But closing this loophole will do little in the way of eliminating the basic structural flaws in the system that cost billions upon billions in Federal revenues and serve to pull the entire structure away from principles of progressive taxation of income based on ability-to-pay.

In contrast, the single most costly loophole and the prime culprit in the unfair way in which our tax system is rigged is the capital-gains loophole.

This is not a loophole which applies only to a handful. It is not a loophole which reduces anyone's taxes to zero. And its effect on the tax structure does not give rise to tax-evasion horror stories that can be dramatically illustrated through the media.

Yet, because of the half tax on capital gains and the zero tax on such gains passed on at death, some $30–40 billion escapes the tax base, resulting in an annual Treasury revenue loss of over $10 billion.

And it is a tax preference that says, in effect, the more wealth and income you have, the more opportunities you should be allowed to avoid a fair share of taxes. Such gains come about through buying stocks, real estate, and other assets cheap and selling them dear. It is therefore a game for those who have wealth.

The effect of the half tax on capital gains on the entire tax structure was made alarmingly clear in the Treasury study presented to the Ways and Means Committee last February. The study showed, for example, that the capital-gains provisions alone compressed the tax-rate schedule down to a point where those with $1 million-and-over annual incomes paid an average tax rate of less than 33%. (See Table 4)

The AFL-CIO has continually pointed to this loophole as the major flaw in our tax system. The Treasury confirms this and claims that the special treatment accorded capital gains is the "most important factor in reducing the tax rates of those with high incomes."

We have proposed the elimination of this loophole. We see no justice to a tax provision which says that a married taxpayer with $8,000 in capital-gains income should pay a tax of $354 while a married taxpayer with the same amount of wage income would be taxed at $1,000.

We have also recommended taxation of the $15 billion in capital gains that is passed on annually to heirs without even being mentioned on the income-tax form.

As a result of the House-passed bill, some of the capital-gains abuses would be trimmed. The House would eliminate the 25% maximum and extend the holding period for long-term capital gains from six months to one year.

Even with these improvements, capital gains would still remain as the prime factor in eroding the fairness of the tax structure, for unearned income would still be preferentially taxed. Moreover, the Administration has proposed to undo even these modest improvements.

Thus, if the tax structure is to meet America's standards of fair play, loophole closing must be broad-gauged and substantial. The gimmicks that give rise to the evasion horror stories must be eliminated, but loophole closing also must be addressed to the costly and disruptive preferences that cause the burden of the Federal income tax to fall on those least able to bear it.

On April 1, 1969, before the House Ways and Means Committee the AFL-CIO presented a program which would achieve tax justice—a program which would generate some $15–17 billion in Federal revenues from substantial loophole-closing, provide relief to those of low and moderate and middle incomes, and allow some $8–10 billion to fully fund existing Federal programs geared to meeting domestic needs.

The House of Representatives has taken a major step in this direction. Unfortunately it has not gone far enough and the Administration's recommendations, if adooted, would undo many of the forward measures proposed by the House and aud additional inequities.

The House tax-reform measure merits commendation, for:

1. The working poor would be relieved of any Federal tax obligation—a measure long sought by the AFL-CIO.

2. The hard-working, tax-paying low- and middle-income Americans, who have been forced to bear far more than their just share of the tax burden, would be given a modicum of relief. This is a move toward a long-time goal of the AFL-CIO.

3. The single most inflationary pressure in the economy—the 7% investment credit to business—would be eliminated. The AFL-CIO has always opposed this device.

4. Some of the loopholes and gimmicks in the tax structure, designed to provide special, unfair tax bonanzas for the very wealthy in the nation, would be trimmed, although not eliminated. It has long been the AFL-CIO position that special tax privileges to the few best able to pay their fair share of taxes are completely unfair and must be eliminated. That remains our position.

We urge the Senate to improve upon the House action and to reject all proposals, including those of the Administration, which would move our tax structure still further away from America's standards of fair play.

Specifically, our recommendations are:

1. *The Senate should close the capital-gains loophole, ending the major tax preference for unearned income.*—The preferential half-tax rate which applies to capital gains and the zero tax that applies to such gains when passed on at death are the most disruptive elements in our tax structure. Indeed, there cannot be tax justice as long as unearned income is half-taxed while earned income is taxed in full.

The modest changes recommended by the House are welcome. Extending the holding period to one year and eliminating the 25% maximum are steps toward justice. Nevertheless the preferential one-half tax would not be changed and the Administration proposals, if adopted, would largely undo the positive action taken by the House.

2. *The Senate should put an end to the tax abuses of the oil, gas and other mineral industries.*—Again the measures taken by the House are welcome ones. They would reduce the depletion allowance, eliminate depletion on foreign oil and gas wells, place a limit on the amount of exporation expenses that can be immediately written off, and end some other abuses such as the carved-out production payment.

Nevertheless, of the total revenue that escapes taxation due to the activities of these industries, only one-third would be recovered by the House action.

The AFL-CIO recommends the complete elimination of these abuses.

3. *The Senate should eliminate the maximum-tax provision.*—Under the maximum-tax provision, the top tax rate on ordinary income would be 50%.

This proposal would benefit only those with incomes above $50,000. It would serve to provide an uncalled-for tax bonanza to top corporate executives, doctors, lawyers and others whose income comes from astronomically high fees and salaries.

The Administration has strongly endorsed this proposal. It is a proposal which reflects the cynical philosophy that if you cut the taxes on the wealthy, they won't try so hard to find loopholes. Such a philosophy makes a mockery of tax-reform efforts. We cannot subscribe to it, and we condemn it.

4. *The Senate should strengthen the minimum-tax provisions of the House bill.*—The so-called Limit on Tax Preferences (L.T.P.) proposed by the House and the weaker version offered by the Administration are prime examples of reforms addressed solely to symbols.

Both the House and the Administration versions would limit the amount of certain types of income that can be completely tax-exempt to no more than half of total income plus $10,000. Thus, the more the income you have, the more can be tax-free.

What's more, the amounts of tax-exempt income disallowed under the L.T.P. formula can be carried forward for five years. In other words, if you fail to shelter all your income in one year, you can keep trying for another five.

Under the House bill, though a wealthy individual taxed under the L.T.P. would by no means pay his fair share of taxes, he would pay some.

Under the Administration proposals, since state and local bond interest would not be recognized as income under the L.T.P., some wealthy individuals would still escape scot-free and pay no taxes at all.

The AFL-CIO proposed a 25% minimum tax on exempt income in excess of $10,000 for individuals and $25,000 for corporations—regardless of the amount of the taxpayer's ordinary income.

As part of the minimum-tax approach, both the House and the Administration have recommended what is called an Allocation of Deductions provision. Individuals with substantial amounts of tax-free income would be required to allocate itemized personal deductions between tax-free income and taxable income. This is a desirable provision, but various phase-in periods and exceptions recommended by the House and the Administration would blunt its effectiveness. Moreover, neither the House nor the Administration would extend this provision to corporations.

Under present law, those who receive tax-exempt income derive a double benefit. The income never appears on the tax return; hence no tax is paid. Secondly, personal or non-operating business deductions can be deducted in full from taxable income.

The AFL–CIO recommends that before such deductions are permitted, since they are designed to define ability-to-pay, total income (taxable and exempt income) should be taken into account: Thus, individuals with excluded income, as defined below, in excess of $10,000, should be required to allocate certain personal deductions in line with the ratio their adjusted gross income bears to adjusted gross income *plus* exempt income. The deductions that should be allocated are: interest and tax payments, casualty losses, charitable contributions, medical expenses, and cooperative housing expenses. Allocation formula should be as follows:

$$\text{Deductions} \times \frac{\text{Adjusted Gross Income}}{\substack{\text{AGI Plus Exempt Income}\\ \text{Minus \$10,000}}} = \text{Allowable Deductions}$$

Excluded income which would cause deduction to be allocated should include the following:

1. One-half of capital gains.
2. State and local bond interest.
3. Depletion taken after the cost of the property has been written off.
4. The difference between the cost and the market value of property donated to charity.
5. Depreciation on real estate taken in excess of straight-line, except for low- and moderate-housing.

Corporations with excluded income, as defined above, in excess of $25,000 should be required to allocate non-operating expense deductions between net profit from operations and excluded income.

The allocation formula should be as follows:

$$\substack{\text{Non-operating}\\ \text{Deductions}} \times \frac{\text{Net Operating Profit}}{\substack{\text{Net Operating Profit}\\ \text{Plus Exempt Income}\\ \text{Minus \$25,000}}} = \substack{\text{Allowable Non-operating}\\ \text{Deductions}}$$

The AFL-CIO further recommends that deductions disallowed under the allocation formula should be taken into account under the AFL-CIO proposed minimum tax. The disallowed deductions should be added to the $10,000 ($25,000 for corporations) of exempt income that would not be affected by the minimum tax.

5. *The Senate should strengthen and improve other measures contained in the House bill.*

For example:

—Interest on state and local bonds should be taxed in full with the federal government guaranteeing the bonds and providing an interest subsidy to assure that the fiscal powers of the state and local governments are not damaged.

—Instead of the Hobby Farm loophole-closing proposals suggested by the House and the Administration, the loss-limit approach contained in S. 500 should be adopted. This procedure was recommended by Senator Metcalf and endorsed by a bipartisan group of 26 Senators. This approach is specifically tailored to the tax-loss farmer and ensures that legitimate farm operators will not be penalized.

—The income-averaging formula should *not* be liberalized to include capital gains unless the preferential treatment accorded such gains is eliminated.

—Interest deductions on bonds used to finance corporate mergers and acquisitions should be completely disallowed.

—All rapid depreciation on real estate should be disallowed, except for low- and moderate-income housing.

—Accelerated depreciation on regulated utilities should not be allowed unless the tax benefits flow through to the consumer.

Of equal importance, the Senate should provide more substantive relief to those whose incomes are moderate and whose tax burdens are unnecessarily severe.

Tax relief and tax justice do not necessarily go hand-in-hand. The equity in the tax structure can be as badly damaged by tax cuts as it can by tax increases or the addition of new loopholes and gimmicks.

Under the House-passed bill this concept was partially recognized. Though all groups would receive some relief through the combination of changes in the low-income allowance, the standard deduction and the rate reductions, a significant proportion of the relief recommended by the House would flow to low- and middle-income taxpayers.

Under the changes proposed by the Administration, needed relief for those just above the government-defined poverty threshold and those in the middle-income brackets would be cut back; the state-gasoline-tax deduction would be disallowed, and a tax cut would be given to corporations.

Under the House proposals, $4 billion in tax relief is provided through the low-income allowance and the standard-deduction increases. Another $4.5 billion is granted through rate cuts.

The first two relief proposals—the low-income allowance and standard-deduction provisions—provide 90% of the tax relief or $3.6 billion to those with incomes of $15,000 or less. The Administration would cut back on both of these forms of tax relief.

But the House rate cuts which in the main benefit higher income groups would remain intact. Specifically, of the $4.5 billion relief recommended through rate cutting, over half flows to the 10% of taxpayers with incomes of $15,000 or over. On top of this the Administration would provide a $1.6 billion tax cut to corporations.

In basic terms, the Administration agrees with the House when the House wishes to cut the taxes of the wealthy. But the Administration says the House goes too far when it suggests cutting taxes for those of low and modest incomes—instead, claims the Treasury, corporate taxes should be cut.

We endorse the House proposals to increase the low-income allowance to a flat $1,100. In addition, we endorse the House proposals to increase the standard deduction to 15% and $2,000.

We do not agree with the general rate reductions recommended by the House and the Administration; nor do we feel there is any justification for a reduction in corporate taxes.

Instead of the general rate reductions proposed by the House and the $1.6 billion corporate rate cut, we recommend a reduction in the tax rates that apply to the first $8,000 of everyone's taxable income for married individuals and the first $4,000 for single individuals.

The rate changes would be as follows:

The 14% rate should be cut to 9%.
The 15% rate should be cut to 13%.
The 16% rate should be cut to 15%.
The 17% rate should be cut to 16%.
The 19% rate should be cut to 18%.
All other rates would remain the same.

Under this procedure, every taxpayer would receive a tax reduction. But, the individual with a taxable income of $100,000 would get the same tax break as the $8,000 man. Under the rate structure recommended by the House, a married individual whose taxable income is $100,000 would receive a $3,600 cut while the $8,000 married individual would have his taxes reduced by only $80. The AFL-CIO proposal would grant both a cut of $130 (see Table 2).

Under the AFL-CIO proposals, the net revenue loss would be approximately the same as that proposed by the House. It would be roughly $600 million more than proposed by the Administration—an amount that could easily be made up, for example, by eliminating the maximum-tax provision, effectively closing the hobby-farm gimmick, and adopting a meaningful minimum tax.

We want to reemphasize that the complete loophole-closing programs we have urged would leave many billions of dollars which could be used for funding the social and economic programs which the Congress has enacted in recent years.

The objective of tax justice is an ambitious one. But it is long overdue and critically urgent. There is no longer time for pause, delay, gestures or tokens.

Only twice since its inception in 1913 has the federal tax structure been revised. And these two revisions—in 1939 and 1954—were, according to a former Commissioner of Internal Revenue, only "faceliftings."

The tax system must now provide for the interests and needs of a nation of over 200 million people who are demanding more and better public facilities. Yet many of the flaws that have existed since the federal government first began to tax incomes still exist and many new ones have been added.

The costs of government are not being shared fairly. An unwarranted limitation is placed on the effectiveness of tax policy in promoting broad goals of balanced economic growth and full employment and public confidence is decaying.

When tax revenues are to be spent, the legislative and executive branches appropriately study and evaluate every outlay of public funds to assure that national interests will be forwarded and priorities balanced. Yet, on the revenue-raising side, tax policy is all too frequently considered only in terms of need for more dollars or fewer dollars.

The temporary surtax, adopted in 1968, is a prime example. A flat percentage tax on top of the existing tax is a fair way to divide the burden of an increase in taxes—but only if the original burden is fair.

Since a tax on a tax cannot be collected if no taxes are paid, those who are rich enough to avoid their fair share of taxes through capital gains, depletion, accelerated depreciation, tax-exempt interest and other tax-escape routes, pay no surtax on such exempt income. Because of this, others pay more and the basic inequities are compounded.

What is more, many of the inequities cause the taxation system to run in direct opposition to the objectives sought through public tax-spending programs.

For example:

● While the nation is being burdened with inflationary pressures and high interest rates, the task of easing these burdens is made more difficult by the tax system. Privileges such as the 7% investment credit and accelerated depreciation on real estate fuel the fires of the only source of inflationary demand in the national economy—business investment in plants, machines and equipment.

● $935 million in federal funds are being spent on low- and moderate-income housing; yet $800 million worth of tax loopholes go to real-estate operators constructing motels, office buildings, plants and high-rise, high-rent apartment complexes.

● $4.5 billion is spent to "stabilize farm incomes"; yet wealthy nonfarmers are encouraged, through the tax system, to disrupt and distort the farm economy.

● The large and growing concentrations of wealth and economic power are a source of growing national concern; yet the income-tax system allows $15 billion in appreciated assets to accumulate and be transferred to heirs without ever entering the tax base. At the same time, tax-exempt status is given to certain types of family foundations set up for avoiding taxes and perpetuating control of family and industrial financial dynasties. Eight million dollars are spent enforcing antitrust laws; yet the tax system provides incentives for those who would merge and "conglomerate."

● Oil, gas and other depletion allowances are justified largely on the basis of encouraging development of domestic productive capacity; yet similar tax benefits flow to those bolstering the productive capability of foreign nations.

● Some $25 billion in federal categorical grant-in-aid funds will go to the states and localities in 1969; yet the amount of federal money available to hard-pressed state and local governments is diluted by allowing interest on state and local bonds to go tax-free, since this exemption costs the Treasury more than the states and municipalities gain.

● The nation is committed to alleviating the plight of its 25 million poor; yet many of these families today pay federal income taxes while many of the wealthiest legally ignore the federal tax collector.

Though the case for reform is compelling and perhaps conclusively demonstrated by these incongruities and paradoxes, there is another too frequently overlooked aspect.

Federal income taxes are not the only taxes Americans must pay. In fact, though federal income-tax revenues have grown and still loom largest among the taxes paid by most individuals, state and local taxes have grown at a far faster pace. What's more, the increases in state and local taxes have in the main resulted from levies on property and sales to consumers which take their toll from those whose ability to pay taxes is the least.

The 1969 *Economic Report of the President* showed that the combined federal, state and local tax systems converge in such a manner as to redistribute income "away from the poor." At the same time, those of modest and middle incomes are bearing a disproportionately high share of the tax burden while those with wealth and ability-to-pay escape their fair share.

Thoroughgoing federal income-tax loophole closing and reform would make a substantial contribution toward compensating for the unfair manner in which the burden of other taxes fall.

Furthermore, it is the federal income-tax system that most states look upon as the standard for a good and fair way to allocate the costs of public services. A number of states that do use income taxes use the federal definitions and standards as models for their own systems, and three states now "piggyback" their taxes directly upon the federal taxes that their residents must pay.

Yet, as the inequities in the federal system grow and become more and more notorious, the basic principles of taxation based on income and ability-to-pay become suspect and fair-minded state and local legislators find it increasingly difficult to convince those they represent of the advantages of fair taxation methods.

CLOSING THE LOOPHOLES

Capital gains

The capital-gains route is, according to the Treasury, the most important factor in reducing the tax rates of those with high incomes.

In examining the tax returns of all those with incomes of over $100,000, the Treasury shows that this group shelters $3.8 billion from the tax base through this loophole—nine times the amount this group shelters through tax-exempt interest, 36 times the amount this group shelters through the unlimited-charitable-contribution loophole, 54 times the amount this group shelters through tax-loss farming.

Under present law, when certain so-called "capital" assets are sold, the profit is taxed at only one-half the rates that apply to ordinary income. And, the tax rate cannot exceed 25% regardless of the amount of the seller's total income. Capital assets under the Internal Revenue Code consist of property such as corporate stocks, vacant land, and other assets not held for use in the taxpayer's trade or business.

In addition, profits from the sale of many other assets—although not defined by the Code as capital assets—can also receive this same privileged preferential tax treatment. Profits from the sale of livestock used for draft, dairy or breeding; real estate used in a trade or business; royalties from sales of timber, iron ore, and coal deposits can all qualify for the preferential treatment as capital gains as can gains on sales of business machinery and equipment.

What's more, the capital-gains-tax escape route combines neatly with many other avoidance schemes, stimulating their use and compounding the tax benefits. Accelerated depreciation on real estate—a loophole which permits postponement of taxes and creates opportunities for tax-loss gimmickry—also paves the way for converting what would be ordinary rental income into capital gains. The depletion allowances for mineral industries, in themselves an unconscionable gimmick for deducting nonexistent expenses, also serve as the vehicle whereby ordinary income is unjustifiably converted to capital gains.

Another major leak in the tax system, according to the Treasury Department, results from the fact that large amounts of capital gains "fall completely outside the income system," since capital gains on assets transferred at death or by charitable donation go tax-free. The Treasury estimates that $15 billion of capital gains in 1967 were not taxed at all, through this escape route. If an individual holds an appreciated asset till he dies, the appreciation is not subject to the income tax. If an individual or corporation donates appreciated property to a charitable organization, the appreciation is never taxed—and the full appreciated value can be deducted from other income.

For example, if a taxpayer donates $1,000 work of stock which cost him $100, he pays no tax on the $900 of appreciated value and is permitted to deduct the full value ($1,000) from his income. If he were in the 50% bracket, this gift of an asset which cost him $100 would save him $500 in taxes. If he sold the assets, included half the capital gain in his income, and then contributed the $1,000 in cash, his net tax saving would have been only $275. If the $900 appreciation were taxed at ordinary rates rather than the 25% maximum capital-gains rate, the donation of this asset that cost $100 would have only yielded a net tax saving of $50.

Moreover, under certain circumstances it is possible for an individual to actually improve his after-tax position by giving away rather than selling an asset.

In testifying before the House Ways and Means Committee, Professors Martin David and Roger Miller of the University of Wisconsin said:

"The American public has every right to ask what positive justification exists for the failure to collect $15–20 billion of revenue, for the 'tax expenditure' created by the capital gains provisions. No concrete research indicates that this tax expenditure has contributed to our economic growth; no one has defended this system who does not himself have a vested interest in its preservation; any tax lawyer or tax economist will confess that these provisions are the ulcer that is primarily responsible for rotting out the taxing power of our nominal tax rates. The dishonesty sanctioned by the capital gains provisions is the first step to a taxing system, such as Italy's, where it is known that open collusion exists between taxpayers and tax accountants to defraud the government."

The modest reforms recommended by the House are welcome. Extending the holding period to one year and eliminating the 25% maximum are steps toward justice. Nevertheless the preferential one-half tax would not be changed nor would gains passed on to heirs be subject to income tax. The Administration proposals, if adopted, would largely undo the positive action taken by the House.

To close this loophole, the AFL–CIO urges adoption of the following proposals:

1. Elimination of preferential tax treatment of capital gains for both individuals and corporations. Such gains should be taxed at regular tax rates. At the same time, the present income-averaging provisions should be broadened to include capital gains.

The approximate revenue gain from the AFL–CIO proposal would be $6–7 billion. The House bill would raise $810 million and the Administration, $600 million.

2. Capital gains on property transferred at death.

All appreciation (difference between original cost and market value) should be taxed in full on transfer at death. The tax rate should apply to all appreciation occurring after date of enactment; one-half the tax rate should apply to all gains occurring between an appropriate date such as January 1, 1950, and the date of enactment.

The tax should be allowed as a deduction for estate-tax purposes. It should not apply on transfers between the decedent and spouse nor to estates valued at less than $60,000.

To prevent "forced" sales of assets, appropriate installment-payment procedures should be adopted.

The approximate revenue gain under the AFL–CIO proposals would be $3–4 billion. Neither the House nor the Administration made proposals in this area.

Depletion

Oil, gas and other mineral-extraction industries are allowed to take deductions for depletion. In principle, depletion for extractive firms is akin to the depreciation allowance taken by other industries and is geared to permit the gradual write-off of capital cost over the life of the investment.

However, the percentage-depletion deduction formula is based on income; it has no relationship to the amount of investment. Moreover, unlike depreciation the annual deduction from income never stops—it continues *even after the cost of the investment has been fully written off.*

On top of this, certain exploration and development expenditures are immediately tax-deductible (for other industries such expenditures would have to be amortized over a period of years) which means a major part of the investment of many companies has already been written off—yet the depletion allowance is not changed.

As a result, according to Treasury estimates, oil, gas and other depletion deductions average twelve times the deduction that would be allowed if the deductions were based on actual costs. In the petroleum industry, for example, 90% of the depletion deductions taken are "excessive." In other words, these firms are legally deducting nonexistent costs.

The percentage-depletion formula allows mineral operators to deduct amounts ranging from 5% (gravel, sand and clay) up to 27.5% (in the case of oil) of the gross income from the property—regardless of the amount of investment. The amount that can be deducted is limited to 50% of net income which means, in many cases, that only half the net income generated from the property is subject to tax.

In addition, there are other gimmicks used by mineral industries to circumvent the modest limitations that do exist on the depletion deduction. The carved-out production payment, for example, is in actuality a loan. The proceeds, however, are treated as income in the year received, thereby boosting the depletion deduction that can be taken. When paid off, the loan is considered an expense. These transactions are timed to generate tax advantages which the Treasury estimates cost $200 million in lost revenues.

And again, these abuses become magnified and compounded by providing opportunities for individuals, corporations and their stockholders to defer taxes, convert ordinarily taxable income to preferentially taxed capital gains, and traffic in tax-loss gimmickry by writing off imaginary losses against other income.

According to the Treasury, the 1968 revenue loss due to excess percentage depletion and the immediate write-off of development costs was as follows:

	Millions
Excess depletion:	
To corporations	$1,100
To individuals	200
Expensing capital costs:	
To corporations	240
To individuals	60
Total	1,600

The two most frequently offered justifications for the tax incentives granted these industries are: (1) special incentives are needed because these businesses are risky, and (2) these resources must be developed domestically for strategic considerations. Yet, risk is certainly not unique to mineral development and many other industries are as strategic or more so. What's more, the fact that percentage depletion is also allowed to companies developing the mineral capabilities of foreign nations hardly squares with the notion of developing a domestic productive base.

The most dramatic testimonial to the fallacy of these arguments, however, was contained in a study done under contract with the Treasury by the Consad Research Corporation of Pittsburgh. This study viewed the $1.6 billion tax incentive appropriately in terms of a federal subsidy, since this is the amount of tax revenue the nation loses as a result of the special privileges. The study showed that this $1.6 billion subsidy led to additional national mineral resources valued in the market at only $150 million. Every dollar in federal tax forgiveness yielded 9c worth of additional reserves.

And, according to the Treasury's analysis of the Consad study, the depletion allowance encourages excessive drilling and inefficient production methods and discourages research into other potential fuel sources.

The House reform measures would reduce the depletion allowance, eliminate depletion on foreign oil and gas wells, place a limit on the amount of exploration expenses that can be immediately written off, and end some other abuses such as the carved-out production payment.

Nevertheless, of the total revenue that escapes taxation due to the activities of these industries, only one-third would be recovered by the House action.

The AFL–CIO recommends that deductions for depletion should not be permitted to be taken after the cost of the property has been fully written off.

The approximate revenue gain under our proposals would be $1.5 billion. The House action and the Administration proposals would raise $600 million.

Interest on State and local bonds

The interest paid to holders of state and local bonds is completely tax-exempt and never even appears on the income-tax form.

The Treasury estimates that state and local governments save $1.2 billion in interest expense, since the tax-exempt privilege enabled them to sell these bonds at less than market rates of interest. And the Treasury loses $1.8 billion in revenue. The balance—$600 million—goes as tax benefits to the wealthy individuals and commercial banks holding most of the bonds.

Since the Treasury loses more than the state and local governments gain, the tax-exempt privilege is a wasteful, as well as back-door, method of providing aid to state and local governments. Moreover, this tax-free interest erodes the equity of the income-tax system since the tax advantages benefit only the wealthy. The Treasury notes that tax-free income from state and local bonds is the second most important factor (capital gains is first) in reducing the taxes of those individuals with incomes of over $100,000 per year.

In 1968, for example, the average yield on high-grade municipal bonds was 4.51% and top-rate (Aaa) corporate bonds was 6.18%. The tax-exempt status compensates for the lower rate only for those in tax brackets of 27% and higher—the rates which apply to married persons with taxable incomes in excess of $16,000 per year.

To illustrate, if a married person with taxable income of about $8,000 (22% bracket) bought a high-rated tax-exempt municipal rather than a corporate bond, he would lose $1.67 in interest on every $100 invested and save $1.36 in taxes, suffering a net loss of 31c for each $100 invested. On the other hand, for someone in the $100,000-or-over bracket the $1.67 in interest lost saves him $3.83 in taxes—thus, a net gain of $2.16 on each $100 invested in tax-exempt bonds.

Also the benefits of the tax forgiveness to state and local governments often run counter to the needs and objectives of most subsidies. Since the amount of debt most state and local governments can issue is tied to property values, it is the richer areas of the nation that rely heaviest on debt financing. Thus, the wealthier areas get the largest tax-forgiveness subsidies. Similarly, the bonds issued by the smaller, less affluent governments generally are low-"rated" or not "rated" at all by the investment analysts. Consequently, these bonds are considered riskier and, if they are to compete in the bond market, the poorer governments must bear higher interest costs.

On top of this, there has been a rapid growth in the proportion of municipal bonds held by commercial banks. In 1961 these banks purchased 56% of the state and local debt, and in 1967 roughly 90% of the net purchases were attributed to commercial banks. This has resulted in an erratic market for municipal securities, since these banks switch their investment portfolios back and forth in response to demand for business loans.

In time of tight money and rising business loans, commercial banks reduce purchases of municipals and may, in fact, sell them, thereby limiting the market and driving up the interest rates that municipalities must pay. Such developments require states and localities to pay higher and higher interest rates, in order to market their bonds.

A June 1968 study by the Federal Reserve Bank of Philadelphia notes: many bankers have ". . . begun to view municipals as a secondary reserve subject to liquidation when funds are needed for other purposes." A year later *Business Week* magazine stated: "Indeed, municipal bond rates have been streaking up for weeks as commercial banks turned from major buyers of tax-exempt issues into substantial sellers."

Hence, in many ways the interest rates a municipality must pay on its debt (and the amounts of taxes its citizens must pay as a result) are at the mercy of the commercial banks and the bond raters.

What's more, many state and local governments have abused the tax-exempt privilege by issuing so-called industrial development bonds. These tax-exempt bonds have been used to build factories for private industry—sometimes to the corporations' exact specifications. In this manner, a number of states have pirated firms from other areas, using their federal subsidy for the private benefit of wealthy corporations.

Under the Tax Reform Act passed by the House, state and local governments would be given a choice between floating taxable or tax-exempt bonds. If they choose the former, they will receive a federal subsidy.

The Administration is against this proposal.

The AFL–CIO recommends that all interest on state and local debt securities issued after the date of enactment (following an appropriate transition period) should be subject to the income tax. The federal government should guarantee the bonds and pay the issuing state or local government an amount equal to one-third of the interest cost on such taxable issues. No federal guarantee or interest-rate subsidy should be permitted for industrial development bonds, regardless of the amount of the issue.

There would be a net revenue gain, after taking into account the cost of the subsidy and the guarantee, of approximately $100 million under our proposal. The net revenue gain under the House proposal would be small. The Administration would keep the present system.

Real estate

A host of special tax-forgiveness provisions apply to real estate. Taken by themselves, these privileges are hardly justifiable but, when manipulated and combined, they result in unconscionable tax-avoidance opportunities for wealthy real-estate operators, investors, and speculators.

The major tax-escape route is the special accelerated-depreciation deduction. Under these fast write-off formulas, the cost of new buildings can be deducted from income at twice normal or "straight-line rates" and the cost of used buildings can be charged off at 1½ times normal depreciation rates. In the case of a new building with a 40-year estimated life, the result is that about 23% of its cost can be deducted from income during the first five years of the property's life. For a used building, 17% of the investment can be written off in the first five years.

The following table shows the effects of the special depreciation formulas compared to the "straight-line" method which apportions the depreciation deduction equally over the useful life of the asset:

[In percent]

	Building with a 40-year life			
Cumulative total	Straight-line	200-percent-declining-balance	Sum-of-the-years-digits	150-percent-declining-balance
1 year	2.5	5.0	4.8	3.7
2 years	5.0	9.8	9.6	7.4
3 years	7.5	14.3	14.3	10.8
4 years	10.0	18.5	18.8	14.2
5 years	12.5	22.6	23.2	17.4
10 years	25.0	40.1	43.3	31.7
20 years	50.0	64.0	74.4	53.4

Since depreciation write-offs are considered a cost, these fast write-offs and other costs are subtracted from rental income and the income tax, if any, is paid on the remainder. Often there is no income at all, or even a reported loss in the early years of ownership, as a result of accelerated depreciation.

Technically, the fast write-off provisions mean that tax liabilities are deferred—in principle, the lower taxes in the early life, due to excess deductions, will be made up later, as smaller deductions are permitted. To this extent, the excess depreciation results in an interest-free, no-strings federal loan to the real-estate operator.

But the accelerated-depreciation special privilege also paves the way for other tax gimmickry. First, a good part of the excessive depreciation deductions are never returned to the tax base, because the property is sold long before the depreciation deduction runs out. And a good part of that which is eventually taxed is taxed at only half the usual rate, and never more than 25%, since it is considered a capital gain.

Combining these advantages with "leverage"—much debt, little equity—the infamous real-estate tax shelter is created. The excessive depreciation plus interest charges on the debt result in large bookkeeping tax losses. These phantom losses are in turn washed out against an individual's other income, sheltering it from the federal tax. To take full advantage of this, many high-income individuals join together into syndicates. These syndicates buy or develop high-depreciation property that will show a loss which can be applied to the wealthy investors' other income. What's more, when the properties approach a point when a profit might be shown (depreciation and interest become less than rental income), the property is then sold or refinanced, starting the cycle all over again.

A Treasury study of 19 investors, exploiting the real-estate shelter, showed that the group had a combined income of $2.7 million from their major economic activities. But, since they made investments in real estate, they were able to "shelter" (remove from their otherwise taxable income) $1.5 million and cut their tax bill by more than half.

The average investor in this group, according to the Treasury, had an income of $141,000 from his other interests. He sheltered $77,500 of this from the Internal Revenue Service by his real-estate investments, and his paper real-estate "losses" saved him $45,000 in taxes.

The Treasury also traced the activities of one real-estate investor over a seven-year period. This operator had a seven-year income of over $7.5 million. Yet, because of real-estate depreciation deductions, he paid the same effective tax rate on his total income as a married wage earner with two children and an annual income of $10,000.

Moreover, real-estate operators can unfairly lighten their share of taxes through reporting capital gains in installments, exchanging appreciated property tax-free, and through complicated mortgage-refinancing arrangements. Again, these are all games open only to those with wealth. And, this real-estate gimmickry:

1. Costs hundreds of millions of dollars in terms of federal revenues foregone—expenditures or subsidies granted through the tax system. Nonhousing, fast depreciation, alone, accounts for a revenue loss of $960 million.

2. Runs in direct opposition to meeting one of our most serious national needs. These privileges serve to channel resources into luxury housing and away from the much-needed improvements and additions to the housing available for those with low and moderate incomes. The Treasury estimates that, of the total tax benefits flowing to real-estate operators, only $50 million went to those investing in low- and moderate-income facilities.

The House bill would limit double depreciation to residential property. Depreciation write-offs for commercial and industrial real estate would be limited to 150% of normal. The House bill provides a five-year write-off for expenditures for the rehabilitation of buildings for low-cost rental housing. The Administration supports the House proposals.

The AFL–CIO recommends that all depreciation in excess of straight-line should be disallowed on all real estate except low- and moderate-housing.

Approximate revenue gain, under the AFL–CIO proposal would be approximately $1.5 billion. The House and Administration proposals would raise about $1 billion.

Tax havens for wealthy farm investors

Under the Internal Revenue Code there are special tax-accounting privileges for farmers—privileges which were developed to ease the bookkeeping chores of ordinary farmers.

However, these accounting privileges are being manipulated to provide windfall tax benefits to wealthy individuals and corporations who operate or invest in farms in order to get tax losses. These losses are not true losses; nevertheless they can be deducted from the wealthy investor's nonfarm income, sheltering it from the federal income tax.

Though most businesses use the "accrual" method of accounting, since it is the most accurate way to reflect the true income of the business, farmers are permitted to choose between use of the accrual method or the "cash" method. Using the cash method, inventories are ignored. The growth in inventories is not balanced off against other costs. Put another way, costs that reflect the building up of an asset (inventories) are deducted from otherwise taxable income, but there is no corresponding adjustments made for increase in the value of the asset (inventory). As a result, certain farm operators abuse this privilege by carefully mismatching costs and the income generated by these costs, to their tax advantage.

Losses, which under normal (accrual) accounting procedures would result in gains, are created which, in turn, are used to "shelter" the wealthy investor's nonfarm income from his taxable income.

What's more, since many of these "paper" losses actually reflect increases in investment, income taxes that should be paid annually at ordinary rates are postponed until the sale of the inventory at which time the tax is cut in half because capital-gains rates apply. Under these circumstances it is possible for the tax-deductible costs of raising an animal to *exceed* the taxable gain even though the animal is sold at a profit.

For example, a cash-basis farmer spends $200 over a three-year period in raising a cow and charges the $200 off over the period as an expense. He then sells the cow for $250. His real profit on the transaction was $50; yet, since the entire $250 is considered as capital gains, only half of the $250 ($125) must be reported as taxable income. As a result, he reports $125 in income and deducts $200 in expenses over the three-year period—his tax returns show a $75 loss on a transaction which in actuality yielded a profit of $50.

Under normal accounting techniques, the $200 spent in raising the cow would have been treated as an increase in inventory and would not have resulted in a deductible expense. Upon the sale of the cow, the capital gain would have been $50 and one-half of it, or $25, would enter his taxable income. Hence the "accrual" farmer would have reported $25 in income (although it was really $50) and no deducrions. The "cash" farmer reported income of $125 and expenses of $200.

Moreover, the definition of what are capital assets (and therefore subject to capital-gains tax rates) is stretched considerably, to the advantage of certain farmers. The Internal Revenue Code, for example, treats livestock used for draft dairy or breeding purposes as depreciable capital assets.

Through the use of "leveraging" (much borrowing—little cash investment), the advantages of these special privileges are compounded. The combined effects of interest charges on the money borrowed for the farm investment and the operating losses, that are so easily shown through cash accounting, result in phenomenal phantom tax losses, which are washed out against the other income of wealthy farm investors, sheltering it from taxation.

Some insight into how these special privileges are utilized by the wealthy can be found in the annual income-tax return data published by the Internal Revenue Service.

In 1967, for example, there were over 1 million tax returns filed showing net farm losses, and almost 2 million reporting a net gain. For those taxpayers with adjusted gross income *under* $50,000, the number of returns showing profits from farm operations exceeded the number showing losses, by rather substantial amounts. The overwhelming majority of actual, operating farmers were in this group.

However, where adjusted gross incomes were over $50,000, *more* returns showed losses than gains. In the $1,000,000-and-over income group, only 12 returns showed profits—totaling $74,000—compared to 101 returns claiming losses—totaling $7.6 million. (See Table 5.)

Obviously, "nonfarmers" are investing in farms solely for tax purposes. As a consequence, these nonfarmers compete unfairly with legitimate farmers. They distort the farm economy by bidding up the price of farmland and forcing ordinary farmers to compete in the market with those who are totally indifferent to whether they receive a fair price for the product or not.

The Treasury estimates an annual tax loss of some $800 million due to the farm loopholes. By placing a $15,000 limit, just on the amount of phantom tax loss that can be applied against other income, some $145,000,000 in revenue could be recouped.

Both the House and the Administration recommend trimming this abuse.

Though the Administration would go further than the House, the basic approach is the same and little would be done to curb the tax-loss farm abuses. What's more, under the House and Administration recommendations there is a possibility that some legitimate farmers would be penalized.

The AFL–CIO recommends enactment of the loss-limit approach contained in S. 500. This procedure was recommended by Senator Metcalf and endorsed by a bipartisan group of 26 Senators. This approach is specifically tailored to the tax-loss farmer and ensures that legitimate farm operators will not be penalized.

Under this approach, each dollar of nonfarm income over $15,000 would reduce the amount of farm loss that can be deducted from nonfarm income by $1. This provision would not apply to farm losses resulting from taxes, interest, casualty, drought, and sale of farm property. This provision would not apply to farmers using the accrual method of accounting.

The approximate revenue gain under our proposal would be $145 million. The House would raise $20 million; the administration $50 million.

Tax-exempt foundations

The tax-exempt status granted to certain foundations represents one of the most glaring examples of how a well-intentioned, seemingly desirable, tax privilege can become twisted.

As a nation, we recognize that philanthropy is desirable and it should be encouraged. In line with this reasoning, individuals are permitted, within certain limits, to deduct from their taxable income, contributions to organizations established for religious, charitable, scientific, educational and similar purposes. Likewise, the federal government grants tax-exempt status to the organizations receiving the contributions.

Granting special tax privileges for such contributions or to such institutions raises the same fundamental question as in all tax-forgiveness schemes. The government is relinquishing funds it would otherwise be entitled to, and therefore others must pay a higher share of the costs of government. Thus, where there is tax foregiveness, there must also be an assurance that the nation's interests are being served.

Recent investigations into certain tax-exempt foundations—non-profit organizations set up and supported by wealthy families or individuals—have raised some serious doubts as to whether appropriate purposes are in fact being fulfilled and the nation's interest is being served.

Tax-exempt foundations have grown phenomenally—new ones are cropping up at the rate of some 2,000 per year. The assets of the larger foundations have recently been estimated at some $20 billion, and each of the 27 largest foundations has assets worth $100 million or more.

The philosophy underlying the private foundations, according to a foundation spokesman is "the systematic use of private funds for public purposes." Unfortunately, the studies of the activities of tax-exempt foundations done by the House Committee on Small Business have shown that in many cases the opposite situation prevails. That is, public funds are being systematically used for private purposes.

Family foundations frequently are used as a means whereby the wealthy can avoid income, gift and inheritance taxes, yet maintain control over wealth. When families donate company stock to private family-run foundations, family control over the business can be assured from generation to generation, while inheritance taxes are avoided. The donor can control the management of the foundation—appointing relatives, rewarding friends and employees. The foundation provides the conduit for donations which reduce the taxes on his business income.

Furthermore, this control can be parlayed to a point where the foundation is used to promote the foundation owner's other business interests. Practices have been uncovered which can be questioned on the basis of unfair competition, conflict of interest, self-dealing, "insider" arrangements to affect stock prices, and so forth.

Foundations, for example, can lend money to the founder, his family, or the family business at preferential interest rates, thus supplying venture capital for the donor's other interests. The Subcommittee's studies noted situations, where suppliers and buyers have made sizeable contributions to foundations, controlled by customers, indicating underhanded pricing deals. What's more, these organizations can enter into deals, whereby through intricate tax maneuvering, they can buy a business, invest none of their own money and pay the seller more than the market value of the business. On top of this, the deal can be set up as an installment purchase, permitting the seller to convert what should have been ordinary income into preferentially taxed capital gains.

A Prentice-Hall Executive Tax Report, for example, offers this advice:

> Have You Put a Price on Your Business? You may be able to double it—by selling to a Charity.
>
> Say you're planning to sell your business, and you think a fair price would be five times earnings. If the company earns, say, $101,500 after taxes ($200,000 before), you're probably figuring on selling for about $500,000. If that's the case, Stop Right There—you may be shortchanging yourself:
>
> That business could be worth $1,000,000 to a tax-exempt organization: An ordinary buyer is only interested in earnings after taxes—that's all he gets to see. But a tax-exempt buyer keeps a hundred cents on the dollar. So a fair price to a charity would be five times $200,000, or $1,000,000—twice what you figured!

Finally, the Report notes some "frosting on the cake" and cites a case where the seller maintained 48% ownership of the corporation "was active in management and drew a good salary."

Commenting on the abuses uncovered, a *New York Times* editorial added another dimension—that of the increased role of foundations in shaping national policy:

"Since almost everyone pays income taxes, the burden of exempting the income of the foundations is borne by the public at large. Yet the public is virtually powerless to influence the ways in which the foundations spend their tax-free dollars."

Generous tax treatment is appropriate for charitable organizations since private philanthropy is an important adjunct to public programs serving the goals of the nation. However, this special treatment is justifiable only if these organizations are in fact using the foundations, and their tax-exempt privilege, for the public good and not merely for the private advantage of a select well-heeled few.

The House-passed bill would substantially narrow the permissible activities of private foundations desiring to preserve their tax-exempt status. Limits would be placed on self-dealing between foundations and contributors, and provisions are recommended which would require distribution of their income over a period of time, limit their private business holdings, and make sure that investments of these organizations are not jeopardized by financial speculation. The House would also levy a 7.5% tax on the investment income of private foundations.

The Administration has, in the main, endorsed the House action. However, the Administration recommends a 2% levy on investment income rather than the 7½% rate recommended by the House.

The AFL–CIO recommends that:

(1) Financial transactions between a foundation and its founders, contributors, officers, directors or trustees should be prohibited.

(2) Foundations should be required to spend their incomes within one year of receipt.

(3) Foundations should not be permitted to own 20% or more of any business unrelated to their charitable function—a reasonable time should be allowed for presently organized foundations to comply with this provision.

(4) If a donor maintains control of a business or property after it is contributed, no donation deduction from taxes should be allowed until the foundation disposes of the property or the donor's control over the property ends.

(5) Foundation borrowing to buy investment properties should be prohibited. Foundation lending should be limited to appropriate charitable functions.

(6) A limitation, such as 40 years, should be placed on the life of foundations.

(7) Congress should carefully examine the problems posed by the actual operations of foundations and the need for some degree of federal regulation of the use of the tax-exempt funds of foundations.

Unlimited charitable-contribution deduction

The ordinary taxpayer cannot deduct charitable contributions that exceed 30% of his income. However, through use of a little-known loophole—the unlimited charitable-contribution deduction—about 100 of the nation's wealthiest families escape paying $25 million in taxes. Many of these families pay no federal income taxes at all.

Though the loophole alone yields tax benefits to some of the nation's wealthiest, the major part of the tax bonanza comes about through combining the unlimited-deduction gimmick with another loophole—that which permits the contribution deduction to be based on the appreciated value of assets (typically stocks) donated, not the cost. Hence, no tax—not even at privileged capital-gain rates—is ever paid on the appreciated value; yet the full amount is allowed as a deduction from income.

The unlimited-deduction privilege seems stringent in that it's only allowed if total contributions plus income taxes paid in eight out of the ten preceding years exceeds 90% of *taxable income*. However, these criteria are easily met by many wealthy individuals whose income comes from nontaxable sources. Thus many who rely upon state and local bond interest, or capital gains, or whose taxable income is "sheltered" by means of excessive depletion or depreciation deductions can easily give away large percentages of taxable income—since so little of their income is subject to tax.

The Treasury studied the 1964 tax returns of four wealthy "non-taxpayers" and found that each had a total income of between six and ten million dollars and a taxable income of zero. Their incomes came almost entirely from dividends and/or capital gains. Each gave away property close to, or in excess of, the *reported* adjusted gross income—property which was for the most part appreciated stocks, upon which no capital-gains tax was ever paid—and in each case, taxable income and income tax were $0.

As a result, a seemingly innocent and appropriate tax-forgiveness provision geared to encouraging philanthropy serves in the main to divert public revenues to private use. The public revenue cost is far out of proportion to the philanthropic goals forwarded, and the difference flows to a privileged few individuals of extreme wealth.

What is more, studies have shown that the charities supported by the contributions of the wealthy are generally quite different from those that receive the bulk of their contributions from the majority of the nation's taxpayers. And this evidence suggests that Congressional intent and the national interest in supporting charitable organizations is thwarted.

For example, a 1965 Treasury Department report showed that in the income classes under $20,000, over 80% of the contributions went to religious organizations and charities concerned with social welfare, such as the Community Chest and the Red Cross. In contrast, those in the over-$1,000,000 income class gave over two-thirds of their contributions to so-called "other organizations"—principally foundations. Religious and social-welfare organizations like the Community Chest received less than 10% of the wealthier group's philanthropy.

The House tax-reform bill would phase out the unlimited-charitable-contribution loophole over a five-year period. However, the House would also increase the general-charitable-contribution deduction from its current level of 20% or 30% (depending on type of organizations contributed to) to 50%. In the main, the Administration has endorsed these proposals.

The AFL–CIO recommends immediate repeal of the unlimited-charitable-contribution deduction. The approximate revenue gain under our proposal would be $50 million. Under the House and Administration proposals $20 million would be gained.

The 7% investment credit

The investment-credit tax privilege was added to the Internal Revenue Code in 1962 and liberalized in 1964. The privilege was enacted as an effort to spur the economy by encouraging business to invest in new machinery and equipment.

Under this provision, business firms are permitted to deduct from the federal income taxes owed an amount equal to 7% of the cost of new machinery and equipment. The full 7% can be deducted for firms with tax liabilities up to $25,000. If the tax liabilities are more than $25,000 the amount of credit that can be deducted is limited to one-fourth of their taxable income. In other words, the only limit on the credit is that it cannot reduce the firm's tax bill by more than 25%.

In effect then, the nation's taxpayers are picking up the tab so that a private firm can get a discount on the costs of its equipment.

What's more, prior to 1964, businesses had to deduct the credit from the cost of the investment before they were allowed to write off depreciation. This was changed in 1964 and currently the credit can be taken, *and* the full purchase price can be written off. Thus, more than 100% of the cost can be written off and, like the oil-depletion deduction, imaginary expenses are used to reduce taxable income.

The revenue cost of the credit, according to the Treasury, amounts to $3.3 billion at current levels of business profits and investment. This $3.3 billion tax forgiveness subsidy induces increased business investment and feeds the only major source of inflationary-demand pressure in 1969—while the entire national economy is burdened with tight money, unprecedented interest rates and other generally restrictive measures.

Both the House and the Administration recommend repeal of the credit. This is also the position of the AFL–CIO.

The approximate revenue gain would be $3.3 billion.

Multiple surtax exemptions

The corporate income tax is a two-step affair. The first $25,000 of profit is taxed at a rate of 22% and the remainder is taxed at 48% (excluding the temporary 10% surtax).

The exemption of the first $25,000 from the full corporate tax rate was made part of the Internal Revenue Code in order to help small corporations.

However, the intent of this provision has been thwarted by many large corporations, which have intentionally organized themselves into chains, to shelter much of their income from the full corporate rate.

Thus, by spinning off into subsidiaries, a corporation can reduce its taxes annually by $6,500 per subsidiary. A single corporation, for example, with a net profit of $1 million would pay a tax of $473,500. If the same corporation operated through 40 subsidiaries, each showing a profit of $25,000, the tax would be cut by more than half.

The Treasury estimates that the exemption results in a reduction of the tax rate on corporations generally from 48% to 45.8% and a revenue loss of approximately $1.8 billion. The combined effect of both the 7% investment credit and the $25,000 exemption brings the effective rate down to only 43.4% and the revenue loss to some $4–5 billion.

Moreover, this special privilege amounts to a tax incentive that encourages unsound corporate arrangements. It also adds an element of discrimination between those types of corporations that can easily be split up to take advantage of the special privilege and those that cannot.

As a result, a benefit intended to help small business also provides tax-windfall opportunities to large, highly profitable operations.

Both the House and the Administration recommend repeal of the multiple surtax exemption. This is also the position of the AFL–CIO.

Approximate revenue gain: $235 million.

Conglomcrates

The greatest wave of corporate mergers in American history is now rolling through the economy. This movement towards the concentration of economic power has been building up over the last 20 years. It obscures the peaks of the two previous corporate merger waves in 1899 and 1929. The number of mergers of mining and manufacturing companies zoomed from 219 in 1950 to 844 in 1960 to nearly 1,000 in 1966 and over 2,400 in 1968, according to the Federal Trade Commission.

Not only are the "bigs" taking over the "smalls", but the minows are swallowing whales, and the "bigs" are merging with other "bigs." Conglomerates marriages, with increasing frequency, involve partners with assets over $10 million. In 1966, there were 101 mergers involving an acquired company with assets in excess of $10 million. The Federal Trade Commission reported 192 such mergers in 1968, with assets of the acquired companies totaling $12.6 billion. The 200 largest companies acquired 70 firms in mergers in 1968, the FTC reported

As a result, one of every six firms that made Fortune Magazine's 1962 top-500 list has completely disappeared.

These conglomerate corporations grow in all directions, by acquiring companies in any industry or product-line, no matter how unrelated. They operate in all kinds of different industries and markets.

The great merger movement of recent years has brought an alarming increase in the concentration of economic power in the hands of the major corporations. In 1967, the 200 largest manufacturing corporations held nearly 59% of the total assets of all manufacturing corporations—up from about 48% in 1948. The 78 giant manufacturing corporations, with assets of $1 billion or more, held 43% of the assets of manufacturing corporations in 1968 and received 49% of the profits of all manufacturing corporations.

The concern is not with large conglomerate corporations merely because they are large. It is the effects which must be examined. The immediate questions concern plant closedowns and impacts on collective bargaining and the local community. Beyond this, what does the concentration of economic power do to the political system and economic system in terms of prices, competition, efficiency and inventiveness?

These questions go beyond those that can be answered through the tax structure. They involve the anti-trust laws and the operations of the Justice Department, as well as such other government agencies as the Federal Trade Commission and the Securities and Exchange Commission. Yet it is clear that there are tax inducements to those who would merge and the tax structure adds thrust tc the corporate take-over movement.

- By "swapping debt for equity" (offering bonds in exchange for stock) the acquiring firm has to pay bond interest rather than stock dividends. Interest is tax-deductible; dividends are not. Because of this tax advantage, the purchaser can offer a bond (debenture) supposedly valued at more than the stock, creating what has been labeled "funny money."

The seller also has a tax advantage since he pays no taxes on the transaction until the bond is paid off. Hence, it is the nation's taxpayers who are helping to finance the take-over.

- If the seller receives stock in the acquiring firm in exchange for his old stock, the transaction, under most circumstances, is tax-free. Of the 352 major acquisitions that took place in 1967 and 1968, some 90% were tax-free. The "new" firms were valued in the stock market at $3 billion higher than the pre-merged firms; yet no taxes were paid.
- The tax-loss "carry-over" provisions in the Internal Revenue Code lead to anomalous situations, where a firm showing a loss becomes a more desirable partner for a merger than a profitable one. And again the nation's taxpayers are the losers. If a firm has losses, it pays no taxes. If the firm merges with a profitable firm, its losses can be washed out against the acquiring firm's otherwise taxable income. And, of course, other tax loopholes can be called into play to create phantom losses and situations similar to the tax havens built by wealthy real-estate speculators and tax-loss farmers.

Moreover, other business tax privileges—as the 7% investment credit, for example, and accelerated depreciation—help to provide many corporations with unreasonably large amounts of cash (depreciation allowances plus retained profits) after payment of taxes and dividends to stockholders. The cash is thus available for such ventures as those involved in the sharp rise of foreign investment and buying out other firms.

The House bill would curtail some of the financial manipulations that encourage the rise of corporate mergers and the spread of conglomerates. The AFL-CIO agrees with these proposals. Most important, under the House action (supported by the Administration), limitations would be placed on the amount of interest deductions allowed on debt used to finance corporate mergers and acquisitions.

The AFL-CIO recommends that such interest deductions be completely disallowed. Furthermore, the AFL-CIO recommends a thorough investigation be conducted to determine the extent to which the federal tax structure contributes to the alarming trend of corporate mergers and acquisitions.

Among the tax provisions that should be examined are those which permit:

1. Capital-gains taxes to be paid in installments when stock is exchanged for debt securities.
2. Tax-free exchanges on corporate stock transfers made for purposes of mergers and acquisitions.
3. Corporations to "carry over" the operating and capital losses of an acquired firm.

In addition, the penalty tax provisions applying to excessive amounts of retained profits should be made workable in the light of recent experience.

OTHER HOUSE PROPOSALS

The House bill includes other improvements which we consider steps toward tax justice and which we support. Among these are:

1. Liberalization of moving expense deductions.
2. Tightening of the deferred-compensation loophole.
3. Limiting the tax advantages of foreign investment income.
4. Requiring financial institutions to shoulder more of the tax burden.
5. Eliminating special tax breaks for stock dividends.

TABLE 1.—FEDERAL INCOME TAX BURDEN

PRESENT LAW COMPARED WITH HOUSE REFORM BILL, TREASURY PROPOSALS, AND AFL-CIO PROPOSALS—MARRIED COUPLE, 2 DEPENDENTS

Wage or salary income	Total tax				Tax reduction		
	Present law	House reform bill	Treasury proposals	AFL-CIO proposals	House	Treasury	AFL-CIO
$3,000	0	0	0	0			
$4,000	$140	$65	$81	$45	$75	$59	$95
$5,000	290	200	253	155	90	37	135
$7,500	687	576	616	526	111	71	161
$10,000	1,114	958	1,012	908	156	102	206
$12,500	1,567	1,347	1,447	1,300	220	120	267
$15,000	2,062	1,846	1,951	1,822	216	111	240
$20,000	3,160	2,968	2,968	3,030	192	192	130
$25,000	4,412	4,170	4,170	4,282	242	242	130
$50,000	13,388	12,604	12,604	13,258	784	784	130
$100,000	37,748	34,892	34,892	37,618	2,856	2,856	130

Note: Assumes deductions equal to 10 percent of income, minimum standard deduction (low-income allowance) or standard deduction—whichever is greater. Table takes into account the rate cutting, standard-deduction changes, and low-income allowance proposed by the House, the Treasury, and the AFL-CIO. Surtax excluded.

TABLE 2.—EFFECT OF AFL-CIO-PROPOSED REDUCTION IN 1ST 5 TAX BRACKET RATES TO 9 PERCENT, 13 PERCENT, 15 PERCENT, 16 PERCENT, AND 18 PERCENT ON MARRIED TAXPAYER FILING JOINT RETURN

Taxable income[1]	Present Federal income tax	Tax under AFL-CIO proposal	Tax reduction	Tax reduction as a percentage of present tax (percent)
$1,000	$140	$90	$50	35.7
$2,000	290	220	70	24.1
$3,000	450	370	80	17.8
$5,000	810	710	100	12.3
$7,500	1,285	1,160	125	9.7
$10,000	1,820	1,690	130	7.1
$12,500	2,385	2,255	130	5.5
$15,000	3,010	2,880	130	4.3
$20,000	4,380	4,250	130	3.0
$35,000	9,920	9,790	130	1.3
$50,000	17,060	16,930	130	.8

[1] Wage and salary income less personal exemptions and deductions.

Note: Figures exclude 1968 surtax and do not take into account additional relief measures which would increase the standard deduction and provide a low-income allowance.

TABLE 3.—IMPACT OF FEDERAL, STATE, AND LOCAL TAXES, FAMILY OF 4, 1963-68

				Change in net income after taxes (in percent)		
Wage or salary income	Decrease in Federal income tax	Increase in OASDHI	Increase in State and local taxes	Federal income taxes only	Federal income and OASDHI	Federal income, OASDHI, State, and local
$1,000		$7.75	$89		−0.9	−14.2
$2,000		15.50	110		−.8	−7.9
$3,000	$60.00	23.25	132	+2.0	+1.3	−3.9
$5,000	130.00	46.00	168	+2.8	+1.9	−2.2
$7,500	139.50	156.00	182	+2.1	−.3	−3.4
$10,000	174.45	169.20	245	+2.0	0	−3.1
$12,500	216.50	169.20	290	+2.0	+.5	−2.6
$15,000	270,35	169.20	317	+2.1	−.8	−1.9
$20,000	403.00	169.20	368	+2.5	+1.5	−.9
$35,000	943.40	169.20	567	+3.6	+3.0	+.9

Note: State and local taxes were estimated by the AFL-CIO Research Department. These estimates were based upon Council of Economic Advisers studies for 1965 and Bureau of Census State and local tax data for 1963, 1965, and 1968. Federal income taxes based on family of 4, using the minimum standard deduction where applicable and assuming deductions equal to 10 percent of income for all other groups.

TABLE 4.—RETURNS WITH TAXABLE INCOME 1966 EFFECTIVE TAX RATES

	Percent of effective tax rate—	
Adjusted gross income (thousands)	On present law taxable income	On taxable income including excluded half of capital gains[1]
$0 to $5	15.3	15.0
$5 to $10	16.4	16.2
$10 to $20	18.1	17.8
$20 to $50	24.0	22.8
$50 to $100	35.8	32.6
$100 to $200	45.6	37.8
$200 to $500	52.3	37.9
$500 to $1,000	55.3	35.8
$1,000 and over	55.5	32.7

[1] These effective rates are actually overstated—particularly in the upper brackets—because other forms of exempt income, such as interest from State and local bonds are not taken into account in this table. For example, the Treasury Department estimates that the effective tax rate on total income for nearly ⅗ of those with adjusted gross incomes of $1,000,000 and over is 30 percent or less—4 percent of this group pay an effective tax rate of 5 percent or less.

TABLE 6.—ILLUSTRATION OF AFL-CIO 25 PERCENT TAX ON EXEMPT INCOME AND ALLOCATION OF DEDUCTIONS PROPOSALS ON A TAXPAYER (ACTUAL CASE) WITH OVER $1,000,000 OF INCOME AND AN EFFECTIVE TAX RATE OF 0.03 PERCENT (ACTUAL CASE CITED BY TREASURY DEPARTMENT)

	Actual	Proposed
A. Application of allocation of deductions proposal:		
Reported adjusted gross income	$679,405	$679,405
Less personal exemption	−600	−600
Less itemized deductions	−676,419	−357,352
Taxable income	2,386	321,453
Income tax	383	210,507
B. Application of 25-percent tax on exempt income:		
Total excluded income:		
Excluded capital gains		605,313
Excess depreciation on real estate		11,141
Total		616,454
Less $10,000		−10,000
Less disallowed deductions ($676,419−$357,352)		−319,067
Exempt income subject to 25-percent tax		287,387
25-percent tax on exempt income		71,847
Add tax on taxable income after deductions allocated		210,507
Income tax	383	282,354
Income tax as percent of total income	0.03	21.8

[1] Computed as follows:

Adjusted gross income	$679,405
Add excluded capital gains	605,313
Add excess depreciation on real estate [a]	11,141
Total income	1,295,859

Deductions $\times\frac{\$679,405}{\$1,295,859-\$10,000}$=$357,352 allowable deductions.

[a] Actual loss reported was $22,283—analysis assumes only ½ of this loss due to excessive depreciation.

Note: 1968 surtax excluded.

TABLE 7.—ESTIMATED FEDERAL REVENUE GAINS RESULTING FROM MAJOR AFL-CIO LOOPHOLE-CLOSING PROPOSALS

Loophole-closing proposals	Approximate revenue gain (in millions of dollars)
1. Elimination of preferential tax treatment of capital gains	6,000-7,000
2. Taxation of gains on property transferred at death	[1] 3,100–[2] 4,200
3. Disallowance of depletion after investment fully written off	1,500
4. Elimination of tax-exempt State and local bond interest and inclusion of Federal subsidy and loan guarantee	100
5. Elimination of 7-percent investment credit	3,300
6. Elimination of accelerated depreciation on real estate except for low- and moderate-income housing	1,500
7. Limitation of farm-loss deductions	145
8. Elimination of unlimited charitable-contribution deduction	50
9. Elimination of corporate multiple surtax exemption	235
Total	15,930-18,030
10. Allocation of deductions [3]	250
11. 25-percent minimum tax on exempt income [3]	1,500
Total	1,750

[1] If taxed at current capital-gains rates.
[2] If taxed at full rates.
[3] Proposal would not apply if loopholes eliminated.

STATEMENT OF HON. LEE METCALF, A U.S. SENATOR FROM THE STATE OF MONTANA; ACCOMPANIED BY STEVE KOPLAN

Senator METCALF. I have with me Mr. Steve Koplan who has been helpful with me working on this and on other tax legislation. I am very grateful to return to this committee and I appreciate this opportunity to testify for legislation that would remove inequities between those who depend on farming and ranching for their livelihood and the comparative few who now distort the farm economy by taking unfair advantage of farm accounting rules.

Rules originally intended to ease the bookkeeping chores of legitimate farmers and ranchers are being used by both corporations and individuals to create artificial farm losses that are then used to reduce the amount of taxes they would otherwise have to pay on substantial amounts of nonfarm income.

My bill, S. 500, would eliminate that problem by limiting to $15,000 or to the amount of special deductions listed in my bill, whichever is higher, the amount by which a farm loss may be used to offset nonfarm income. Special deductions are those that would be allowed to someone whether or not he was in farming or because it is the type of deduction clearly beyond the taxpayer's control. I am referring to such things as taxes, interest, abandonment or theft of farm property, fire, storm or other casualty, losses and expenses from drought, and recognized losses from sales, exchanges, and involuntary conversions of farm property.

Neither the House-passed bill nor the administration's proposal contain a comparable provision to protect the legitimate farmer and rancher from being penalized for having incurred an economic agricultural farm loss in a given year.

My bill also provides safeguards to protect those just starting out in farming as well as those who might find themselves in a loss situation in a given year, not by design for tax purposes but rather by chance.

This is accomplished by the provision that allows any disallowed loss to be carried back 3 years and forward 5 years against past or future farm income.

The problem with the approach recommended by the administration and now contained in the House-passed bill except for different dollar exclusions is that it allows the tax-dodge farmer to defer any recognized capital gains while at the same time he is allowed to continue using the full amount of his artificial losses as an offset against nonfarm income year after year. This is what the National Livestock Tax Committee had to say about the excess deductions account approach when its representatives testified before the House Ways and Means Committee in 1963, and I quote:

> We cannot say whether it would work or would not, but it is the most modest approach that has come to our attention.

With proper tax planning, the balance in an excess deduction account, EDA, can be substantially reduced before the taxpayer decides he is ready to recognize long-term capital gains. Such a proposal will not remove any of the incentive from existing clients of cattle management firms such as Oppenheimer Industries.

While I am on the subject of that particular firm, I should mention that last week my office requested an opportunity to examine a representative sample of that firm's advertising brochures. At first the request was granted. However, before the material could be sent to me, I was informed that on direct orders from the Bonaparte of Beef himself, Gen. Harold L. Oppenheimer, no material would be forthcoming.

I suggest that this committee make a similar request of General Oppenheimer before concluding consideration of the farm tax problem.

(Subsequent to the above discussion regarding Oppenheimer Industries, Senator Metcalf submitted the following information:)

U.S. SENATE,
Washington, D.C., October 3, 1969.

HON. RUSSELL LONG,
Chairman,
Senate Finance Committee,
U.S. Senate,
Washington, D.C.

DEAR CHAIRMAN LONG: When I testified before your Committee on the problem of tax-dodge farming, I mentioned that my office had requested an opportunity to examine a representative sample of the advertising brochures of Oppenheimer Industries. I further informed the Committee that I was advised that on direct orders from General Harold L. Oppenheimer, my request was denied. I then suggested that your Committee make a similar request of General Oppenheimer before consideration of the farm tax problem.

Apparently representatives of Oppenheimer Industries were present when I testified because the next day General Oppenheimer's Washington representative circulated to members of your Committee the very materials I had been denied.

Because of the relevance of certain of those materials to any consideration of this problem and to avoid any criticism that there has been biased analysis on my part, I request that this letter together with the document entitled, "An Introduction To Cattle Ownership And Its Benefits," and General Oppenheimer's message contained in his corporation's Annual Report for fiscal year ended January 31, 1969, be printed in their entirety as a part of the hearing record.

Very truly yours,

LEE METCALF.

Enclosure.

OPPENHEIMER INDUSTRIES, INC.—AN INTRODUCTION TO CATTLE OWNERSHIP AND ITS BENEFITS

Federal tax laws favor cattle *if* you pick the right kind and stick to the rules. Herds of beef cows top the list. When you buy them, you become a farmer and can keep your books on the cash basis. You put in dollars that depreciate or are deductible. You take out capital gains.

As in oil exploration, you are better off if you are presently paying high income taxes, say, 60% or better. This makes every ingoing $1.00 cost you 40¢. Unlike oil, you never get a dry hole. Your returning dollars are taxed at only 25% making them worth 75¢.

To take advantage of this favorable atmosphere you might raise your own cattle herds. This creates management headaches, however, and could require lots of your time for supervision. Your best bet is to hire qualified executive managers to run your cattle business for you.

Let's see how this works:

1. *Buying the Cattle.*—Your managers select grade cows and yearlings. "Grade" means they are the normal commercial stock you see around the West and not expensive "registered" show animals. Your cattle may be on two or more ranches, to give you dispersion. These are regular Western cattle ranches and *do not belong to the managers.* You get a bill of sale on the cattle, backed up by a registered brand.

2. *Terms of the Purchase.*—Cash *can* be paid, and it generally earns you a 10% discount. Most buy for a low downpayment (10%), and give their 90% non-recourse note for the balance. If you do this, you are required to prepay your feed bill and the breeding fee one year, as well as the interest on your note.

3. *Manager's Fee.*—Setting up your business and acquiring your cattle is complicated if done properly. An initial fee ranging from 8½% to 5¾% (depending on the number of head purchased) times the gross cost of the cattle is charged. This also entitles you to the ultimate sale of your business without further charge. Year-to-year as you continue to own the business, you also pay a mangement charge again ranging from 8½% to 5¾%, this time computed against the annual operating expense (roughly equal to a real estate agent's fee for managing a building).

4. *An Example (Starting November 15):*

(a) Cost of 400 cows at $225	$90,000
(b) Downpayment (percent)	10
(c) Equity	9,000
(d) Interest on $81,000 note at 7 percent	5,700
(e) Year's feed bill paid at start of contract at $50	20,000
(f) Year's breeding fee paid at start of contract at $8	3,200
(g) Manager's initial fee plus regular management fee at 7½ percent ($6,750 plus $2,170)	8,900
(h) Cash due Nov. 15 to carry for 1 year	46,800

5. *Initial Tax Situation.*—Your herd is an asset and depreciates. Like other personal property, you are entitled (if you file a joint return) to a special 20% depreciation on the first $20,000 of initial purchase. You also get 150% declining balance depreciation. All expenses are deductible when paid. Here's how the above example would work out still assuming November 15th purchase date):

(a) Cash requirement (from above)		$46,800
(b) Expenses paid at start	$37,800	
(c) Depreciation	5,300	
(d) Deductions		43,100
(e) Percent deductible		90

Now, when all this is complete, you will be in the cattle business for as long as you wish to stay. Your managers take care of all the records and physical operation, sending you a steady stream of recommendations and reports including your year end income tax results (Schedule F, Form 1040). When the next November rolls around, your herds on the different ranches are rounded up, counted, and culls (unfit animals) sent to market. Calves are weaned, with steers being sold and heifers retained to grow into cows and build up the herd size. Before sale calves are weighed and the rancher is paid a bonus (usually $10 to $15 per head) if good results were obtained. But, if the operation is below average, he pays *you* a penalty. In other words, you pay only for what you get.

At this point, you have completed one annual cycle running from November to November. *Most* of your expenses (approximately 80%) were paid the previous year at the start of the cattle maintenance contracts. The rest (approximately 20%) are paid as the cattle are rounded up. Now, a second annual cycle begins. Again you (a) pay for feed and breeding fees for the second contract year, (b) pay interest in advance on your note, and (c) pay the management fee. For the second *calendar* year, it would look something like this:

(a) Interest	$4,100
(b) All expenses paid to:	
(1) Settle expiring maintenance contracts	6,400
(2) Prepay new (2d-year) contracts	30,700
(c) Cash outlay for expense	41,200
(d) Proceeds from steer calf sales	19,200
(e) Cash due second Nov. 15 to carry for another year	22,000

Your tax situation for the second calendar year would show net expenses of $22,000 and depreciation of $21,000, for a total of $43,000. However, it is normal to make an amortization payment the second year equal in size to the depreciation. You would actually contribute the principal ($21,000) and money to pay the expenses ($22,000) for a total of $43,000. Against this you would have a matching $43,000 of deductions.

How long do you keep the herd? *As long as it serves a purpose for you.* It is an excellent estate planning device, and some herds are retained indefinitely for that purpose. If you have an unexpected change of heart or circumstances, you can sell at any time with reasonable notice. The minimum holding period to qualify for capital gain is 12 months, but you might have to pay an ordinary tax anyway unless you can convince your IRS agent that you really intended to keep them longer.

Let's say you decided at the end of five years sell your cattle business. You did, but only broke even. What have you accomplished? Something like this:

(a) You sold your herd for $225,000, paid your taxes (capital gain on herd, ordinary on calf crop), came out with			$150,000
(b) You had contributed, *in increments*		$225,000	
(c) Your deductions were	$228,000		
(d) Your tax bracket was (percent)	70		
(e) You had tax savings of		$160,000	
(f) Giving and after-tax cost of			$65,000
(g) For a profit of 130 percent			$85,000

Here are some other things that could have happened:

1. *High market prices.*—You might have had an economic profit as high as 25 percent, making the after-tax profit 200 percent or better.

2. *Low market prices.*—Economically, you might lose up to half of your cash, reducing your after-tax profit to a nominal amount.

3. *Reduced tax bracket.*—Your personal income circumstances may change, making tax shelter less attractive and creating after-tax losses should the cattle market go down.

4. *Changes in field operation.*—Calf production and operating expenses can be higher or lower, affecting the outcome. Over a period of time, however, the averages are reliable.

When you decide to sell your herd, you may do so for cash. You may also sell on installments over a two-year period. You get a 10% premium from the buyer when you accept installments. Herds are generally sold in the Fall. Sales could require up to 90 days to accomplish in full. Purchasers are other individuals and partnerships such as yourself, ranchers, cattle order buyers, etc. Parts of your herd can be sold outright at central markets such as Omaha or Kansas City.

Our company has been handling these cattle businesses as agents and managers for nearly 15 years. We operate on a nationwide basis, and our reputation can be verified by bank inquiry or Dun & Bradstreet reports. You can have a specific program for your examination by calling or writing our Sales Manager at 1808 Main Street in Kansas City, Missouri (A.C. 816; VI 2-6925).

Please Note.—All information furnished above is approximate and has been over-simplified for the purpose of clarity and understanding. While considered reliable, it is subject to change. Interpretation may also be different. Those intending to start a cattle business should first confer with their attorney or accountant.

MESSAGE FROM THE CHAIRMAN OF THE BOARD

In our fiscal year ending 31 January 1969 earnings before income taxes were $683,966 as compared to $269,253 the previous year. After taxes they were $339,227 as compared to $159,180. On the shares outstanding on 31 January the earnings per share were $2.13 before taxes and $1.06 after taxes as compared to $.85 and $.50 the preceding year. Subsequent to the close of the fiscal year but before the printing of this report a 10% stock dividend was issued. In addition, differing from previous years, we diluted our per share earnings with the number of shares set aside for employee options even though such options were neither exercised nor assigned. Adding the 10% dividend shares and 52,470 shares from the unissued stock options we arrive at a figure of $1.78 per share before taxes and $.88 per share after taxes. The comparisons are shown later in this report.

In addition to doubling its after tax earnings despite the new surtax, your Company significantly reoriented its business during fiscal 1969. Increased emphasis is being put on rural land brokerage and development, agricultural consulting, and on feeder cattle transactions over the running of breeding herds on contract. Income derived from rural land brokerage and management increased from $86,000 in 1968 to $551,000 in 1969. As a percentage of total gross revenue the change was from 2% to 20%. Feeder income increased from $94,000 to $286,000 and its percentage of gross from 6% to 11%.

Over the past six months a substantial portion of the time of the executive staff of your Company has been tied up in working with the livestock industry to fight hostile legislation aimed at removing the tax incentives encouraging urban risk capital to invest in American agriculture. The current Treasury proposal on farm taxation, which we think has little chance of passing, would only hurt the breeding herd end of our business, not affecting the deductibility of expenses but increasing the portion of eventual herd sales that would be ordinary income instead of capital gain.

While the breeding herd portion of the business provides a decreasing but still substantial percentage of our total gross revenue, it should be noted that it creates a disproportionately large portion of our gross expenses. Should the unlikely event occur that the present Treasury proposal be passed intact, the adverse effect on our net income might be of modest proportions.

Other major developments during the year: (1) Approximately 150,000 square feet of additional land was acquired in the downtown Kansas City area, much of it adjacent to our existing holdings in the proposed urban renewal area, south of the new Crosstown Freeway, which is nearing completion. (2) An office was opened in Calgary, Canada to line up local feedlots to service our customers. It is believed that relatively lower grain prices in Canada will enable us to provide very competitive contracts. Numerous inquiries have been received from European and Latin American corporations for Canadian cattle. (3) The Oppenheimer-Janss Realty Corporation was set up in Sun Valley, Idaho with your Company having a 45% interest, to specialize in ranch brokerage and agricultural land development in the Idaho, Nevada, and Montana areas. The other principal stockholder is Mr. William Janss, the Chairman of the Board of the Janss Corporation of Los Angeles, California. (4) At the end of the year we obtained the management of a substantial portion of the land and cattle holdings formerly owned by the Kern County Land Company of California.

At the moment discussions are being conducted by various of our clients and several major ranch ownerships on the merger of their holdings into a very large public corporation that will be one of the principal land owning entities in the United States. In the event this should occur, it is believed that your Company will be employed to handle its agricultural and land development affairs.

Senator METCALF. Yesterday in the Sunday Post appeared another ad from the Chateau Briand Ranches, Inc., offering managed breeding herds of purebred Charolais cattle as tax sheltered investment programs exclusively for the high-tax bracket investor. It might be well to have a copy of their current prospectus before the committee to find out what they are doing. Apparently they are not very much afraid of what this committee is going to do as a result of this hearing, because they took quite an ad in yesterday's paper.

Instead of catching the tax-dodge farmer with his hand in the cookie jar by limiting premature deductions each year, the EDA approach lets him put us, that is Uncle Sam, in the position of having to refill an empty cookie jar. Revenue figures provide some insight into the comparative effectiveness of the House bill, the administration proposal and S. 500. My bill would affect about 14,000 individual tax returns, and would raise about an additional $205 million a year from these individuals.

The House bill would affect about 3,000 returns and when fully operative raise an additional $25 million annually. These revenue estimates do not include comparative figures for corporations. I can only imagine the amount by which the gap between the two bills would widen even further. The administration has estimated its fourth of September proposal would apply to 9,300 individuals, and raise $50 million annually. I am puzzled by that revenue estimate, since that was the same estimate used when Treasury officials testified before the House Ways and Means Committee last April.

The April proposal contained a much lower dollar exclusion in its EDA provision. I suggest that this committee ask Secretary Kennedy to explain how he was able to come up with the same revenue estimate earlier this month on substantially higher exclusion figures.

I do not quarrel with the administration's comment on the House bill. On the fourth of September Treasury officials termed the dollar exclusions contained in the tax reform bill so high as to render it ineffective.

Mr. Chairman, I was going to conclude my testimony at this time, but after I read some of the statements that have been or are about to be presented, very graciously given to me by the committee, I have a couple of comments because some of those people are going to testify a little later today.

I do not mind losing a fair fight, but it is inexcusable to find inaccurate descriptions of my bill being presented to this committee at this late date. I refer first to the fifth of September when Assistant Secretary of the Treasury Edwin Cohen appeared before this committee and he was specifically asked by Senator Hartke what was wrong with S. 500.

> Well, suppose, as Senator Gore said a short while ago, there were an actual economic loss of $50,000. Suppose there is an economic loss from tornados, floods, low prices, drought, any number of factors. Why should we disallow a true economic loss to the farmer or should we disallow it in any event at strictly $15,000 a year?

Now that answer completely ignores the specific safeguards in my bill to protect economic agricultural losses. I have already described these in more detail in my full statement. But I find Mr. Cohen's answer somewhat ironic, since it is the Treasury's proposal that fails to distinguish between true economic losses and artificially created ones. The EDA approach looks only to dollar figures, not to the nature of the deduction that generates the loss.

Turning next to today's prepared testimony of the National Livestock Tax Committee, I found at page 47 that under my bill, and I quote:

> Farm loss deductions would be restricted or totally denied to farmers or ranchers who are not on a proper accrual method of accounting and who had nonfarm income in excess of $15,000.
>
> Legitimate farmers or ranchers who earned $30,000 of nonfarm income would have all farm losses disallowed.

Again the fact that my bill applies only to artificial losses is completely ignored. No mention is made of the fact that my bill, and it is the only bill, takes into account a taxpayer's economic agricultural losses.

Next there is the following statement contained on page 10 of the statement of the American Horse Council, and I quote:

> The Metcalf Bill (S. 500) applies to any farmer who does not adopt the accrual method and capitalize all costs which can now be expensed or capitalized at the taxpayer's option. Farmers who do not comply with these conditions would lose their right to offset farm losses against nonfarm income on a dollar-for-dollar basis to the extent that nonfarm income exceeded $15,000. Thus, a farmer having a $30,000 nonfarm income, could deduct no farm losses against his nonfarm income.

Now that statement completely ignores the fact that my bill contains a provision to carry back 3 years and forward 5 years against past or future farm income, the disallowed portion of a farm loss in a given year. So in addition to safeguarding against economic losses, my bill contains safeguards for those just getting into farming by providing them ample time to get their feet on the ground and turn an economic profit.

This provision also safeguards the taxpayer who finds himself in a loss situation in a given year by chance rather than by design, as I have already remarked. The bill does not require anyone to change his method of accounting. Ever since this bill was introduced 2 years ago, the main charge has been it would force the farmer to go into accrual accounting, and even in the statements today there are still charges to that effect.

Mr. Davenport, in the statement he submitted to the committee, points this out very clearly, that the real way to get at this is to remove the cash basis accounting system that has been to the benefit of the ordinary legitimate farmer.

I do not want to do that. I want only to correct abuses that have grown up, and at the same time, continue the cash basis system for the benefit of legitimate farmers and ranchers.

My bill merely provides the tax dodge farmer wit h the option to report his income the way he would in any other kind of business, or be covered by the bill. And by tax dodge farmers, I mean people who do not depend on farming for their livelihood, but depend on it rather as a primary device to reduce taxes on their nonfarm income.

I intend to comment further, of course, on today's statements when I have an opportunity to review the hearing record before this bill is reported.

For example, one witness testifies or implies that if you favor my bill you are opposed to rural electrification, soil conservation, and motherhood. However, to conserve this committee's time, I will discuss the opposition's testimony in further comments on the Senate floor.

As this committee knows, I am concerned with many tax problems, some of which have been discussed today; co-op, capital gains, tax exempt securities, depletion allowance, Mr. Chairman, and others; and I hope that I will have an opportunity to discuss those matters, but this is a matter that I have worked on specially, and I feel that I should present my views to the committee.

Here is a unique opportunity to combine substantial revenue increases with substantial equity and tax justice by restoring healthy and fair competition to our farm economy. The House-passed bill can be amended and reshaped to serve as a meaningful vehicle for equitable and effective reform in this area.

Thank you very much, Mr. Chairman.

The CHAIRMAN. Senator Anderson?

Senator ANDERSON. Some of the objections are from ranch owners who have been involved in this for 50 to 100 years. You are not opposed to them; are you?

Senator METCALF. This bill protects the ranch owner who has been there for 50 to 100 years. The ranch owner who has been in my part of the country since it was settled more than 100 years ago, and his children when they inherit a ranch, have to pay an inheritance tax, for example, on this inflated tax value that has been created by eastern industrialists, Texas oilmen, local bankers, who buy farmland for hobby farming and tax shelter programs.

A legitimate rancher in the State of Montana or the State of New Mexico or anywhere in the West will not be affected by this bill. He will be helped because the price of land will be restored to its productive capacity and he will not have to compete with these tax dodgers who create an artificial loss on their beef or their orange groves or something of that sort, in order to reduce the taxes they would otherwise have to pay on their nonfarm income.

The CHAIRMAN. Senator Williams?

Senator WILLIAMS. Would you continue the present capital gains treatment for livestock, or would you repeal that?

Senator METCALF. Now that is a different proposition. With this section I am trying to continue the present capital gains treatment for livestock. When we come to livestock, when we come to the capital gains provision, I feel that maybe when we have a complete reform of it, capital gains would be affected to the regular farmer just the same as everything else, but what I am trying to do here is to say that when we do give the farmer a capital gains treatment, and we allow him a cash basis rather than accrual system of tax accounting, so that when he sells his crop off, whether it is calves or mature steers or something from an orange or citrus grove, he can take his capital gains. What I am trying to do is to keep nonfarmers from abusing that by creating artificial farm losses year after year.

Senator WILLIAMS. Livestock is the only type of farming operation which is subject to capital gains then?

Senator METCALF. No, orchards are.

Senator WILLIAMS. I am speaking of the Montana farming or Delaware farming. I do not think orchards would come in as real estate. They can charge off citrus groves for the land, sure. I was just asking for——

Senator METCALF. The question is without any change in our present structure, such as I have suggested here, should we remove the exception for livestock from recapture of capital gains. I say no. Someone else said in a statement that is filed today, that the way to correct this abuse is to go back to the accrual system for all farming.

I do not want to do that. I feel that the farmer needs this special benefit. The legitimate farmer needs cash basis accounting, but people who abuse these accounting rules by creating artificial farm losses to offset substantial amounts of nonfarm income, do not.

The CHAIRMAN. Senator Gore?

Senator GORE. Are you satisfied with the House bill?

Senator METCALF. No. I have submitted an amendment to the House bill that would replace the EDA provision, so that artificial farm losses over $15,000 could not be used to offset more than that amount of nonfarm income in a given year. That is to take care of the man who is working on a farm and has a part-time job in a town.

Above $15,000 nonfarm income you begin to phase out the otherwise allowable portion of an artificial farm loss on a dollar-for-dollar basis, so that someone with over $30,000 of nonfarm income could not use an artificial farm loss to offset nonfarm income in that year. I am not referring to farm losses that occur as a result of flood or drought or natural occurrences—they are not artificially created farm losses.

Senator GORE. As I listened to your statement, you seemed to place emphasis on economic loss. Would you mind explaining just what you mean by that?

Senator METCALF. Yes. I feel that when a farmer goes in, a livestock operator or any other farmer goes into a business and it costs him so much to grow a crop, raise some 2-year-olds or something of that sort and then sells them at a loss that is an economic loss and that is a legitimate farm loss, and you can take that loss against any other income. If a man had a $100,000 economic loss, he could take the whole amount. But he could not charge an artificial farm loss above $15,000 off against outside income in a given year.

Senator GORE. You confuse me a little about what kind of loss he could charge against income from other sources.

Senator METCALF. He could take the whole amount.

Senator GORE. He could take the whole amount?

Senator METCALF. If he were a broker and had an income let us say of $100,000 a year, if he were an oilman and had depletion allowance income of $100,000, he could charge the loss against the whole income.

Senator GORE. What kind of ——

Senator METCALF. And my bill is unique in that.

Senator GORE. What kind of losses would you deny him?

Senator METCALF. The prospectus of Black Watch Farms provides a splendid example.

I would like to make the prospectus of Black Watch Farms a part of the hearing record, Mr. Chairman, if there is no objection.

(The document referred to follows:)

STATEMENT OF TAX SHELTER

The tax advantages inherent in the cattle industry are unusual when compared with most other industries. For instance, although the life expectancy of purebred cattle is generally well over 10 years, particularly since such animals enjoy the benefits of unusual care, feeding and treatment, the Federal Internal Revenue Service permits depreciation that is based on an 8-year period. Under these circumstances, the entire sum paid for an Angus which is, for instance, 2 years old, may be depreciated for tax purposes in the remaining 6 years, and the sum paid for an Angus at age four may be depreciated in the remaining 4 years. Furthermore, since breeding cattle themselves are considered a capital asset, under certain interpretations, profit realized on their sale is considered long term capital gain.

There is still another tax advantage which is unique to this industry. Based on the cash method of accounting, which Black Watch Farms will adopt, when a calf is born, no capital asset is required to be recorded on the books and only at the time of sale is the required entry made. Therefore the only capital addition to the herd that can be made is through purchase of additional cattle or interests in other cattle and hence no tax is paid until time of sale.

It is the opinion of counsel, for the general partner, that the operations of Black Watch Farms will be taxed as a partnership.

TABLE OF TAX STATUS OF ANTICIPATED PARTNERSHIP DISTRIBUTIONS

Year	Anticipated cash distribution per $10,000 unit	Portion representing ordinary income	Portion representing return of capital	Portion representing term capital gain
1	$450	0	$450	0
2	900	0	0	$900
3	1,375	0	124	1,251
4	1,500	$13	0	1,487
5	1,500	13	0	1,487
6	1,500	13	0	1,487
7	1,500	13	0	1,487
8	1,500	13	0	1,487
9	1,500	13	0	1,487
10	1,500	13	0	1,487

This treatment of distributions for income tax purposes does not change the proportionate interest of each limited partner in the partnership property or in any future cash distributions to the partners. The tax shelter as estimated is subject to review by the Internal Revenue Service and applies only if the presently existing applicable sections of the U.S. Internal Revenue Code and Regulations are not repealed or materially amended.

ADDITIONAL POSSIBLE DISTRIBUTIONS

All income from Black Watch Farms which exceeds the amount necessary to pay distributions to limited partners at the rate of 15 percent per annum return on their investment capital, will be distributed in the ratio of 50 percent to the limited partners and 50 percent to the general partners.

Senator Metcalf. The kind of loss is where Oppenheimer Industries, and I guess this outfit that advertises in the Washington Post, gets someone to invest in a farm, and he pays an advance fee and converts taxes at ordinary income rates into eventual capital-gain rates. He does not sell his yearlings the first year; he sells them the second year, and he takes a loss, and he charges that off against his outside income, and charges fencing. Mr. Stevens charged an airstrip out in Montana and took a farm loss. Things of that sort have distorted the price of the——

Senator Gore. As I understand it then, you are suggesting that——

Senator Metcalf. In my prepared statement I have said that these artificial losses arise from deductions taken because of capital costs or inventory costs and represent an investment in farm assets rather than an amount actually lost. Usually the investment is ultimately sold as cattle are sold later, and taxed only at capital gains rates. Both the administration, the House, and I recognize the same problem. They approach it from the EDA account, but I approach it on an annual basis by limiting the amount of artificial losses that can be used to offset nonfarm income.

Senator GORE. Thank you, Senator.

I note you have given a great deal of study to this problem, and you have been a member of this committee, also a member of the House Ways and Means Committee, so you have had a great deal of experience. I am trying to discover the precise problem covered by your amendment.

As I understand the example you have given, you would deny to a man who purchases a horse or a cow or a sheep dog or any other four-footed animal the privilege of depreciating his investment. Is this correct?

Senator METCALF. No; that is not correct. Farm accounting grew up before we even had capital gains.

Senator GORE. I was asking you first about depreciation.

Senator METCALF. Let me tell you. So we said to the farmer, "Look, we are going to allow you to use the cash basis, and when you sell a flock of sheep or a herd of steers or something, you report your income, and we are not going to make you say I grew some here and I had a certain inventory this year and then I have to carry that over to next year," and so forth.

Then along came capital gains.

Senator GORE. Let me understand your problem. You say that the Congress provided that a farmer (to put it in farmers' language if I may) does not have income until he sells his pig or his calf or his horse; is that correct?

Senator METCALF. Yes. They said he did not have to keep an inventory from year to year like a man in a store, an industrialist.

Senator GORE. Do you wish to change that?

Senator METCALF. No, sir. I wish to keep that. That is just exactly what I wish to keep.

Senator GORE. Then you would apply that to all farmers?

Senator METCALF. All farmers. Everybody has the same privilege. I do not change that provision of the law. I think it grew up and it grew up well, and I am in favor of it.

Senator GORE. Then I do not quite get your point that——

Senator METCALF. If he takes a loss in 1 year or 2 years or 4 years, and takes a consistent loss——

Senator GORE. What kind of a loss?

Senator METCALF. He says, "Well, I did not sell my cattle," or he only sells part of them, or he lets them stay in. He continues to feed them.

Senator GORE. You would say to one farmer that he does not have an income until he sells it, but you say to the other that he does?

Senator METCALF. They all have an income when they sell it; but when they have outside income, and they take artificial losses, they cannot charge that artificial loss against their outside income. Now here are two farmers. One makes $50,000 a year from outside activities, and one has to live on the productive capacity of his farm. One has a tremendous competitive——

Senator GORE. That outside income does not necessarily have to be earned income; does it?

Senator METCALF. No.

Senator GORE. He could draw that from oil.

Senator METCALF. Dividends, oil wells, but under my bill, he cannot charge artificial farm losses off against it.

Senator GORE. Thank you. My time is up.

The CHAIRMAN. Senator Curtis?

Senator CURTIS. Senator, you referred to economic losses and artificial losses? What is an artificial loss?

Senator METCALF. An artificial loss is a loss that arises from deductions taken because of capital costs or inventory costs and thus usually represent an investment in farm assets rather than amounts actually lost. Usually the investment is sold and taxed only at lower capital gains rates. This is the technique—because of this special bookkeeping privilege that we lend farmers, the technique of the tax-dodge farmer is to convert ordinary income rates into capital gains rates.

Senator CURTIS. Soil and water conservation practices can be treated as a business expense under existing law. Do they fall under your definition of an artificial loss?

Senator METCALF. Some of them would fall under my definition.

Senator CURTIS. Some of them?

Senator METCALF. Some of them would fall under my definition of an artificial loss, if year after year soil conservation practices such as fencing, fertilizing and so forth, amounted to a reported agricultural loss on the farm that is charged off against outside income, and then at the end of the year, or the end of the period, they come in here and sell, get all that money back, but they pay capital gains of 25 percent instead of ordinary income rates of let's say 60 percent on that same income.

Senator CURTIS. Would you apply this across the board to everybody or just single out farmers.

Senator METCALF. No, the farmer has been singled out.

Senator CURTIS. No, no, he has.

Senator METCALF. I beg to differ with you, Senator. My proposal does not attack the legitimate farmer.

Senator CURTIS. Well, now, here. Do you propose that if someone owns a newspaper and runs it year after year at a loss that that be denied offsetting that loss against other income?

Senator METCALF. The newspaperman does not have the special tax accounting benefits that the farmer gets.

Senator CURTIS. Do you propose that if a newspaper is operated with no intention of making a profit by someone who has other income that the loss be denied?

Senator METCALF. When someone elects the special farm accounting system of the cash basis, which is only given to farmers, then I say that the farmer, the legitimate farmer, should be the only one that should have that benefit.

Senator Curtis. Does your bill call for denying the loss to a restaurant or a tearoom in a department store that is run year after year at intended loss, denying that loss to the department store against its other income?

Senator METCALF. My bill does not touch that.

Senator CURTIS. That is what I say. Your bill is the only bill——

Senator METCALF. There isn't any analogy Senator.

Senator CURTIS. Oh, yes, there is. Across the board in our economic life losses in one activity are offset against income in another activity, and the Treasury or no one else has come up with a proposal that affects anybody in this respect.

That is all, Mr. Chairman.

The CHAIRMAN. Senator Talmadge?

Senator TALMADGE. Mr. Chairman, Senator Metcalf, it is a pleasure indeed to welcome you back as a former member of this committee before us today. This morning a leading cattleman of my State came in the office. He is completely and utterly self-made. He started with nothing. He is one of the better Hereford breeders of the country. He happens to be incorporated at the present time. Last year I believe he had a three hundred thousand-odd dollar loss. How would your amendment affect that?

Senator METCALF. Is that loss to be charged off against outside income?

Senator TALMADGE. He is incorporated. He has no other income in the corporation except his farm operations.

Senator METCALF. It would not touch him.

Senator TALMADGE. Would not affect him at all?

Senator METCALF. Would not affect him at all.

Senator TALMADGE. Suppose he were not incorporated, would it affect him if he had no outside income?

Senator METCALF. No.

Senator TALMADGE. In other words, your amendment comes into play only if there is outside income involved?

Senator METCALF. Yes, sir. My amendment comes into play only if there is outside income of more than $15,000 offset by artificial agricultural losses.

Senator TALMADGE. And then what happens if he operates his farm at a loss for say 5 or 6 years? What happens to his farm situation at that time?

Senator METCALF. In which case, when he has outside income?

Senator TALMADGE. Yes. Say he has the $15,000 outside income, and maybe the price of cattle is quite cheap. You know, it has gone down from something like 35 cents to about 28 cents for prime steers in the last 6 or 8 months, so if the price stays down, he could lose money on his farming operation for several years. Would his farm loss, would he utilize that in any way in the future, or would he have to just take it as a permanent loss?

Senator METCALF. I tried to draw the bill and I think it does contain the provision that there is no penalty on a recognized loss, an unanticipated loss. Moreover, the disallowed portion of an artificial loss can be brought forward 5 years or back 3 years to offset past or future farm income.

Now if he has nonfarm income of between $15,000 to $30,000, he can offset artificial farm losses at a decreasing rate, because it is phased out. But if he has income, outside income of over $30,000 a year, we just say he is not in the legitimate farming business so he cannot charge any portion of an artificial loss off. A loss that occurs from drought or something of that sort, can be charged off against any amount of nonfarm income because something of that sort is not an artificial loss.

Senator TALMADGE. I think I know what you are trying to do, Senator Metcalf, and I applaud your efforts to eliminate these farm gimmicks. For instance there is the ad that you read in your testimony-in-chief, "Buy some cattle and lose some money and save yourself some taxes." I think everyone wants to eliminate that. But wouldn't you accomplish the same result by the depreciation features that are in the House bill, and its recapture provisions?

Senator METCALF. No.

Senator TALMADGE. Why wouldn't you?

Senator METCALF. I feel that the House bill features, regarding depreciation recapture and the holding period of livestock, in the first place will not remove the incentive from the very people that you are talking about, that we are trying to prevent from abusing a legitimate farm activity.

Senator TALMADGE. Let me see if I follow you. In the first place, they cannot depreciate the cattle unless they have held them one year from the time they should have been brought into service. Now normal breeding time of a heifer is certainly not earlier than 15 months, sometimes 18 months, and occasionally 2 years, so if they bought a heifer, say, that was 2 years old, they would have to hold that heifer for a year before they could sell her and take depreciation. When they took depreciation and sold the heifer, as I understand it, there would be a recapture provision in the House bill where they would make no profit whatever on the depreciation. Is that not correct?

Senator METCALF. Well, of course several other things enter into it. There is a tax-free loan as far as that amount of tax forgone is concerned. May I have your permission to read out of my full statement what Mr. Oppenheimer, who is the known expert on this, says about that very situation?

Senator TALMADGE. Certainly.

Senator METCALF. Elimination of the exception for livestock from the depreciation recapture rules was analyzed in detail several years ago by the president of Oppenheimer Industries, Gen. Harold L. Oppenheimer. He has authored three books for the cattle industry, "Cowboy Arithmetic," "Cowboy Economics," and "Cowboy Litigation." He said that:

> Members of Congress and officials of both the old and the new administrations have suggested that where accelerated depreciation is taken on any subsequent sale, the portion of the capital gain which represents the recovery of previously taken depreciation should be treated as ordinary income. This is essentially the system now used in Canada.
>
> This piece of legislation is undoubtedly going to get passed within the next year or so, although it was deleted by the House Ways and Means Committee from the 1964 tax bill. However, as far as breeding herds are concerned, this is a matter of relatively little significance.
>
> During the first two years of a purchased breeding herd the culls sold from the herd on a capital gains basis are very unlikely to exceed the depreciated value by more than a few hundred dollars. During the third and fourth years, this could be a matter of some importance in the sale of culls, but without an appreciable percentage effect on the overall picture. During the fifth year, most of the animals with an original capital base will have been sold and the herd will consist almost entirely of animals born to it at no cost basis, so the effect this legislation would achieve would then be zero.

Senator Talmadge. It seems to me though if you recapture depreciation, you would take the gimmick out of the tax dodge and thereby solve the problem.

Senator Metcalf. It still gives the tax-dodge farmers, this big operator that you and I are talking about, and that I am trying to eliminate, it still leaves him with the opportunity to determine when his artificial losses are going to be, and when he is going to use artificial losses against nonfarm income.

Senator Talmadge. Thank you, Senator. My time has expired. I appreciate very much your comments on this.

Senator Anderson. Senator Miller?

Senator Miller. Senator, you and I share a common objective in this area. As a background I would guess that what motivated both of us was the realization that the farm economy is at the bottom end of the economy. If the farm economy was sharing, the farm industry was sharing—fairly with segments of other industries I do not imagine we would be as concerned as we are, isn't that so?

Senator Metcalf. That is right. We need every bit of incentive to help the farmer.

Senator Miller. That is right, and there are two thrusts of your comments. One is that this so-called artificial farm loss deal results in increased real estate prices which aggravate farmers from the standpoint of property taxes and the like, and the other is that they have unfair competition when a farm loss writeoff taxpayer does not have to worry so much about the prices he receives because after all Uncle Sam is going to pick up 70 percent of the loss, or 70 percent of the reduced price, whereas the farmer who has to make it on his own is going to have to keep on fighting for the price, isn't that so?

Senator Metcalf. That is right. That is the most important impact of the legislation.

Senator Miller. That is what you are talking about, that this constitutes unfair competition. Now you did state, I believe, that the provision in your bill to recognize losses if they consist of losses attributable to drought and hardship and things of that nature is a unique feature of your bill, or that your bill is unique on that point?

Senator Metcalf. I did not compare it to your bill. I compared it to the administration bill and the House bill.

Senator Miller. Because as you know both——

Senator Metcalf. Because your bill does, yes.

Senator Miller. Do I understand that this 3-year carryback and 5-year carryover disallowed losses, that is, those that exceed $15,000, is to be applied against farm income only?

Senator Metcalf. Yes.

Senator Miller. Because, as I understand it, that was available against ordinary income. Suppose a farmer had $100,000 of wages or salary, and he had a farm loss of $25,000. He would be allowed to take $15,000 off that, against the $100,000, but the $10,000 that was not allowed could be carried over to apply against another year's $100,000 of outside income, is that correct?

Senator Metcalf. I do not think so. I am not quite sure. In the first place, if he had $100,000 outside income, the phaseout——

Senator Miller. And a loss of $25,000.

Senator METCALF. The phaseout provision would come into operation.

Senator MILLER. Well, let us just take 1968. He had $100,000 of outside income and $25,000 loss?

Senator METCALF. Yes.

Senator MILLER. He would be allowed to take off $15,000 against the $100,000?

Mr. KOPLAN. That would depend on the nature of the deduction that gave rise to the farm loss.

Senator MILLER. I am talking about the deductions that are not recognized in this case. I am not talking about drought losses or anything. I am just talking about ordinary farm loss. He does not sell off his inventory. He just went into the whole $15,000 expenses over income, I mean $25,000 of expenses over income. Now as I understand it, you will say to him $15,000 is OK but the other $10,000 is not OK, but you can carry it over, or carry it back?

Senator METCALF. There is carryback carryforward.

Senator MILLER. Now, my question is what do you do with it when you carry it back?

Senator METCALF. You use it against past and future farm income only.

Senator MILLER. And not against the $100,000 of salary. Let us just take the carryover to 1969 to keep it simple. In 1969 he had $100,000 of outside income, and his farm income was zero. He just broke even. what happens to that $10,000 that was carried over?

Senator METCALF. Nothing.

Mr. KOPLAN. It would still be carried forward again.

Senator MILLER. Until he had——

Mr. KOPLAN. But that is because the type of deduction or loss that is carried back or carried forward is only the artificial deduction or the artificial loss that we are talking about.

In other words, your casualty and your drought, your taxes and interest or your recognized losses on the sale or exchange of farm property, they do not get thrown into the carry-back, carry-forward provision. You are allowed to use them to the full extent against nonfarm income regardless of the amount of nonfarm income that you have.

Senator METCALF. But his question—if your question had $25,000 drought loss, he would take the whole $25,000.

Senator MILLER. I do not want to mix those side things in.

Senator METCALF. Then the answer is on next year it is no.

Senator MILLER. Where he has $25,000, you say we recognize $15,000 of that. There is an example, $15,000. So he can write the $15,000 off against his $100,000 salary, right? What is the $15,000 limit that you are talking about?

Senator METCALF. Then, of course, the phaseout provision from $15,000 to $30,000 would also come into effect in the example that you have given.

Senator MILLER. Let us just take one year, and he has got $25,000 of farm losses, his wages and his seed and all that, property taxes and interest?

Senator METCALF. He can only carry it forward or carry it back against farm income.

Senator MILLER. All right, but in that one year in which it was incurred, as I understand it, you say he can take $15,000 against nonfarm income?

Mr. KOPLAN. That is right, unless his nonfarm income is in excess of $30,000. When his nonfarm income is between $15,000 and $30,000, the Senator's bill has, as he has already described, a phaseout provision, so for every dollar of nonfarm income above $15,000 you subtract a dollar of what would otherwise be the allowable $15,000 artificial loss, so a fellow with nonfarm income above $30,000 with $15,000 of artificial losses in a given year would not be able to take any of those artificial losses in that year.

He would have to carry them back first and then forward against past and future farm income.

Senator MILLER. But up to $30,000 he could offset against nonfarm income?

Senator METCALF. But it would be phased out again, you know, the first dollar above $15,000 of nonfarm income.

Senator MILLER. But on the carryover there is no capability of offsetting this carryover loss again nonfarm income?

Senator METCALF. That is right.

Senator MILLER. You mentioned this. Do I understand that your bill exempts accrual basis farmers from its impact?

Senator METCALF. Yes, sir.

Senator MILLER. I have two questions on that. The first is wouldn't this have a tendency to encourage farmers to switch from the cash basis to the accrual basis to protect themselves against disallowance of farm losses?

Senator METCALF. A farmer that had no outside income would never have to be forced to change from one basis to another. It is only the tax-dodge farmer who has outside income of over $30,000 that might choose to go into the accrual basis or to the accrual reporting system in which case, of course, he could take all his losses and take his deductions just as in the example given by the Senator from Nebraska.

Senator MILLER. All right. Now, the second question is this. If you are going to exempt the accrual basis farmer, are you going to or don't you recognize that you have different methods of evaluating your inventory in the accrual basis of accounting, and if you are trying to put a stop to the conversion of ordinary losses into capital gain, you are not going to plug up the loophole very much with respect to the inventory valuation on a unit livestock basis. Now if you are going to have the farmer value his livestock on a fair market value basis, then you do not have a problem, but if he values it on the unit livestock price basis, all he has to do is to set unit values at an arbitrary, very low figure, and to that extent he will incur losses, and to that extent he is going to convert ordinary losses into capital gain. Now do you have any idea of how we can handle that problem, or could we cover it by exempting the accrual basis farmer who does not use the unit livestock price basis? Would that be your thought?

Senator METCALF. I did not have any thought. You just brought up a new subject. My problem is as you have outlined it, the problem that you and I are trying to reach is the fact that the farmer has been allowed a special accounting system, that system is being abused by tax-dodge farmers who create artificial farm losses to reduce the taxes they would otherwise have to pay on their nonfarm income.

Senator MILLER. We have the same objectives.

Senator METCALF. And you brought up a question that perhaps is not covered in here.

Senator MILLER. I do not want to belabor the question.

My time is up. But would you be good enough to give us a suggestion for the record on how to cover that problem?

Senator METCALF. I certainly shall. I will look at it.

Senator MILLER. Thank you very much for your testimony. I might say that you and I share a very common objective on this, and I applaud your position.

Senator METCALF. Thank you very much.

(Pursuant to the above discussion the following information was received by the committee:)

U.S. SENATE,
Washington, D.C. October 2, 1969.

Hon. RUSSELL B. LONG
Chairman, Senate Finance, Committee
Senate Office Building,
Washington, D.C.

DEAR CHAIRMAN LONG: When I testified before your Committee on September 22 in behalf of my tax-dodge farming amendment to H.R. 13270, I was asked by Senator Miller whether an accrual basis farmer using the unit livestock method could still create artificial farm losses by setting his unit values "at an arbitrary, very low figure . . ."

The unit-livestock-price method was incorporated in December 1944 into the regulations in order to obviate some of the difficulties encountered by livestock raisers in determining the price of their livestock. It is applicable only to livestock raised and to livestock purchased before maturity and raised to maturity. (Livestock purchased after maturity is to be included in inventory at cost when the unit-livestock method is used. However, draft, breeding or dairy animals purchased after maturity can, at the election of the livestock raiser, be either included in inventory or treated as depreciable capital assets.)

Under this method, the livestock is to be grouped by the raiser according to class and age. Thus, a cattle raiser might have separate classes of calves, steers, heifers and cows, and might have further classification into those for resale, those for breeding, and those kept for dairy purposes. He must divide these into age groups for calves, yearling steers, two-year-old steers, yearling heifers, two-year-old heifers, and mature animals. The selected unit livestock price figure for each class should represent the estimated average cost of raising the animal during the first year. At the close of the following year, the estimated cost of raising the animal for that year is added to the original unit livestock price. At the end of the next year, a further addition is made, until after three years, a flat sum for livestock of a particular class is arrived at and this price remains constant.

The fact that once established, the unit prices and classifications selected by the taxpayer cannot be changed without the approval of the Commissioner, could possibly result in a premature deduction of costs when costs are rising. In order to assure proper recognition of price increases, I would suggest that a provision be added to my bill that would enable the Secretary of the Treasury or his delegate in conjunction with the Department of Agriculture and local officials, to conduct an annual review of the propriety of existing estimated average costs.

I request that this letter appear in the hearing record at the conclusion of my testimony.

Very truly yours,

LEE METCALF.

Senator ANDERSON. Senator Harris?

Senator HARRIS. Senator, I, you know, share your desire to get at these people who arrange purposely for a farm loss in order to charge it against nonfarm income. Do you have any way to know what percentage of farm and ranch land is under their control or what percentage of the cattle market say these kind of people represent?

Senator METCALF. I do not know. I do not have that information. I have been informed by the staff of the Joint Committee on Internal Revenue Taxation that my bill would affect less than 2 percent of the taxable individual income tax returns reporting a net loss from farming. I base it on the available statistics of returns of individuals with nonfarm income rather than the amount of land that each person has.

Senator HARRIS. I know that you also are worried as I am that in the process we not hurt the legitimate farmer and rancher, and it has been said that with that amount involved, you are not talking about very much recaptured revenue, but perhaps a lot of extra accounting and other problems, tax problems for those who are legitimately in this business. How would you respond to that?

Senator METCALF. We are not touching those who are legitimately in this business. In fact, as the Senator from Iowa has indicated, the people that are legitimately in this business are suffering from higher taxes and greater adjacent land values as a result of distorted land prices, and are suffering from the unfair competition of people who can turn outside income coupled with artificial farm losses year after year into a tax profit, and so the other 98 percent of the farm returns that we are talking about are going to be benefited by this bill.

I said I think that my bill would affect 14,000 individual tax returns and bring in $205 million. I would hope that eventually my bill, Senator Miller's approach or something of that sort would result in having no tax revenue, because we would remove this distortion, and this kind of competition, from our farmers, and our livestock men.

Senator HARRIS. That is all I have.

The CHAIRMAN. Senator Jordan?

Senator JORDAN. Senator, I just have a very simple question, and I will relate an exact circumstance I am familiar with. A cattle rancher, you and I know can grow a catch crop every year, and it takes possibly 80 years to grow a crop of trees, but suppose that this cattle rancher once in 80 years sells the stumpage on his ranch for a capital gain. Can he offset the losses of his cattle operation against that capital gain?

Senator METCALF. I think both Senator Miller and I have exempted that type of income, timber and such sold off the land.

Senator JORDAN. All right. Now assume that the $100,000 of timber income is from a tract of land adjacent to the cattle operation but not used in connection with it?

Senator METCALF. No. If it is not used in connection with a farming operation, for instance, if the adjacent land had an oil well on it, and the income from the oil well, that would be nonfarm income.

Senator JORDAN. So in the one instance if the timber is cut, harvested on the land, it is used with the cattle operation, it is——

Senator METCALF. We specifically have taken care of that.

Senator JORDAN. But if it is adjacent to it, if it is over the fence, timberland upon which no cattle graze, you would not grant that exemption?

Senator METCALF. A lumber yard or, something of that sort, we do not grant it. That would be nonfarm income.

Senator JORDAN. Thank you.

The CHAIRMAN. Senator Fannin?

Senator FANNIN. Mr. Chairman, I have just two questions.

Senator Metcalf, I agree with your objective of protecting legitimate farmers, but I am just wondering how you determine who are legitimate farmers. According to your testimony this morning, I would think that when a farmer becomes successful and wants to diversify his investments, then he becomes illegitimate.

Senator METCALF. Golly, in Arizona and Montana you call a farmer illegitimate and you get into a shooting match.

Senator FANNIN. I don't know how else to say it. You say legitimate, but I am concerned because I am thinking of Arizona. I don't know about Montana, but we have farmers that over a period of years, their family and all, become successful and they certainly are entitled to diversify their investments.

Senator METCALF. But those successful farmers are the farmers that make a profit on their farm, year in and year out. They are not these men who take big artificial farm losses and try to offset them with outside income.

Senator FANNIN. I disagree with you on that. I think that we can prove that you are wrong in that respect as far as the risk involved in our State. I know you are covering drought and things of that nature, but you are not covering farming prices, you are not covering many of the problems that occur.

You, for instance, say that an airstrip is wrong; to have an airstrip.

Senator METCALF. I say that it is wrong to take some outside income from a Texas oil firm and build an industrial type fence and put "no trespassing" and "no hunting" every 200 yards around a 200,000 acre farm——

Senator FANNIN. But that isn't what you said. You were referring to an airstrip.

Senator METCALF. I referred to an airstrip that J. P. Stevens, the former Secretary of the Army, built on a farm in Montana, and he uses it for weekend recreation for people from his area, and he charges off artificial farm deductions, and I doubt if he has enough herefords on that farm to have a barbecue.

Senator FANNIN. Isn't that an exception? Senator, you are talking about covering all of the livestock people or the ranchers just because of one exception. There are exceptions.

Senator METCALF. No; 14,000 individual tax returns are what I am going to cover. Comparable statistics for corporations are not available.

Senator FANNIN. Wait a minute, you are talking about an airstrip. It is highly essential in my State to have an airstrip on a farm or to have it in a livestock operation.

Senator METCALF. I know wheat farmers, I know livestock operators, I know sheep farmers in my State that have built airstrips, but they don't build them because they are bankers or brokers who have outside income and went in and bought that farm so that they could have tax losses that they could use to reduce taxes they would otherwise have to pay at ordinary income rates.

Senator FANNIN. What I am concerned about, do you know of any other businesses that are being legislated against on the basis of your bill except these?

Senator METCALF. I don't know any other business, and this is what I told Senator Curtis, that has this special accounting advantage, and the only reason that I am trying to put this legislation in is because this accounting advantage that farmers have had, and I want them to keep, and they deserve, is being abused by people who are not legitimate farmers.

Senator FANNIN. But the thing about it, you are saying that as soon as a man becomes successful, then he is in trouble.

Senator METCALF. That is not right. What I am saying is when a man goes out and gets himself an oil well or makes himself $100,000 income, or is a downtown banker, and then goes out and pays twice as much as the productivity of the farm concerned, and takes artificial farm tax losses in order to offset his nonfarm income and by doing that changes his income tax bracket from 60 percent a year to at the most 25 percent, we should keep him out of the farming business.

Senator FANNIN. I am not arguing with you about your objectives. I am arguing with you about what you achieve and the effect it has on our livestock and farm economy.

Senator METCALF. The effect it will have on the livestock and the farm economy will be to restore the livestock and farm economy to the legitimate livestock operator.

Senator FANNIN. I can't understand your analogy there. It just doesn't apply to successful livestock, people who are successful farmers, because you would penalize them the same as you would somebody where you give an isolated example.

Senator METCALF. Successful livestock operators and successful farmers don't suffer tax losses year after year after year.

Senator FANNIN. When you say year after year, they don't have to before your bill would apply, it doesn't have to year after year after year after year.

Senator METCALF. They do. My bill doesn't affect an economic farm loss no matter what the income off the farm is. One of the men on the Ways and Means Committee asked me the same question. He said:

"This bill won't apply to my farm because I make a profit on my farm."

And as Stanley Surrey said when he testified a couple of years ago, he said it is a strange situation that the best businessmen in America, the highest paid lawyers in America, the best brokers in America, the minute they go into farming they lose more money than anybody else, and these are the kinds of men that it would apply to.

Senator FANNIN. I think that you are taking some examples that are, I don't say completely isolated, but I would just compare it in my own State as to what is actually happening. I think that is what we have to do. We have to consider what is happening. What exists in our States. And I don't know about Montana, but I certainly do know about Arizona, and I think this bill would be disastrous to my State, because you would be taking one group and legislating against them.

Senator METCALF. We have one group, and that is the farmer, and we have given him a preferred accounting system. We have already done that. And I want to continue to do that, but as a result of that preferred accounting system, Senator, we have abuses by other people coming in and using that to reduce taxes at ordinary income rates, and that is what I want to stop, and I think my bill, next Senator Miller's bill, next the administration bill, and last the House bill will help accomplish that.

Senator FANNIN. Of course, when you say what you are trying to accomplish, it is what is actually happening that I am concerned about.

Senator METCALF. I am telling you what is actually happening.

Senator FANNIN. If your bill is approved, I am thinking about the consequences.

My time is up but I certainly cannot follow your conclusions.

The Chairman. Senator Byrd.

Senator BYRD. Senator Metcalf—thank you, Mr. Chairman—a Virginia citizen came to my office and brought me his income tax returns, and asked me to take off some figures and then to put a question to you. I think he would qualify under your definition of being a legitimate farmer in that in 19 of the past 22 years he has made a profit. He lost money 3 years. Now as he did well in the farming business, he made investments, and he now has an outside income, and the outside income, while it varies from year to year, to simplify the matter I will just put it at $50,000.

Now in 1961 he had a net income from his farming operations of $30,000, and he added that to his 50 and paid a tax on $80,000. In 1962 he had an income from his farming operations of $12,000. In 1963 he had a net income from his farming operations of $15,000. In 1964 he had an income from his farming operations of $9,000.

In 1965 conditions were excellent and he had an income from his farming operations of $41,000. In each case, of course, he added that to his $50,000 of nonfarm income and paid a tax on the total.

Now we come to 1966, and this is the point that particularly interested him. As a result of a combination of factors, general marketing conditions, general weather conditions, the weather was too cold when it should have been cool and was too hot when it should have been warm, and a combination of factors, as a result of that he lost $60,000 in 1966.

Now, under your proposal, what would happen to that $60,000?

Senator METCALF. I think under $60,000, he could go back 3 years, and take it off. In 1963, 1964, and 1965 he had farm income in total of $65,000. He could charge it off against his farm profits and take it off, or if he didn't have enough 3 years back, and the next year he made say $15,000, he could go forward.

Senator BYRD. How would he pay a tax in 1966. He had outside income of $50,000 but lost $60,000 on his farming operation. What could he do then?

Mr. KOPLAN. Senator, from the way you described the deductions that generated that loss in 1966, they would seem to fall into the category of special deductions in the Senator's bill, and if that is so, then he could take the higher figure, either the $60,000 against his nonfarm income in that same year, because the way I understood you describe those deductions, they appear to be actual economic agricultural losses in 1966.

Senator BYRD. With marketing conditions being the number one.

Mr. KOPLAN. Well, if these are recognized losses on the sale or exchange of farm property and what have you, he could take all of it in that year and he won't even have to carry-back or carry forward.

Senator BYRD. In other words, your bill takes into consideration the general marketing conditions?

Mr. KOPLAN. Assuming that he has a recognized loss on the sale of his farm property. I mean like a piece of stock, nothing happens until you sell the stock.

Senator BYRD. This has nothing to do with capital gains at all. It is a general income.

Mr. KOPLAN. Right.

Senator BYRD. From general farming operations.

Mr. KOPLAN. Right.

Senator BYRD. There is no change of equity.

Mr. KOPLAN. Under the facts as you have described, I believe that he would be able to take it all off in 1966 against his—if it is not in the special deduction category, and the breakdown of that category is specifically listed in the bill, taxes, interest and what have you, when you add it all up if it is not in that category then he has the opportunity to carry-back and forward, but you raise a point. There is a provision in the bill that says that if you are reporting your income the way you would in any other kind of business, then the bill doesn't apply to you. That particular provision is in there as a relief measure, for the fellow who isn't satisfied with all of the safeguards that are in the bill, for example, he is not satisfied with the fact that there is a category for special deductions and if they add up to a higher figure he could take it all off, he is not satisfied with the fact that there is a carry back-carry forward provision in the bill, he is the one that Senator Metcalf describes as the tax dodge farmer, and that fellow is given this relief measure in the bill to either report his income the way he would in any other kind of business, rather than have the bill apply to him because he creates premature deductions at a time when there is no offsetting income.

Senator BYRD. Did I understand you to say though that your bill takes into consideration the general marketing conditions? If the price of hogs is 35 cents in one year and it drops to 21 cents the next year, then that is a special exemption is it?

Mr. KOPLAN. If he sells at 21 cents in that year, yes, because if those hogs cost him more than 21 cents that is a recognized loss on the sale of those hogs.

Senator METCALF. But when I first responded to your question, Senator, I am not sure when you say well, he saved his money and so he had an $80,000 income, $30,000 of which was from farming, and then he had $12,000, and you didn't tell me how much it was——

Senator BYRD. Just assume the outside to be 50.

Senator METCALF. Yes.

Senator BYRD. For the purposes of simplicity.

Senator METCALF. Well, just as again with the store with the teahouse that takes a loss, if he is on the accrual system and he pays taxes on the whole unit, he is in a different situation than if he is on the cash basis that we have especially allowed the farmer. So if he just lumps his whole income, outside income and farm income together, and uses inventories and so forth, he takes his losses every year. He is not affected by this legislation. That is what Senator Miller was pointing out, that we have excepted the accrual farm.

Senator BYRD. Assuming he is a legitimate farmer under the definition of a legitimate farmer, he makes money 19 years out of 22, he is a fairly good farmer if he can do that, not many I guess can do that, then he operates his farm the same as any other farmer operates his farm.

He calculates his earnings or his losses the same as any other farmer does, and then when he determines how much he earns on that farm operation, he adds that to his outside income. That doesn't put him on an accrual basis.

Senator METCALF. It does not. Then the response that we gave you, both Mr. Koplan and I, would be correct.

Senator BYRD. Thank you very much, Senator. Thank you, Mr. Chairman.

The CHAIRMAN. Senator Hansen.

Senator HANSEN. Thank you, Mr. Chairman.

I am very pleased to welcome my colleague from Montana here this morning. I served with him on a few other occasions, and I have great respect for him.

I want to clarify, if I can, Senator Metcalf, the concerns that have prompted your introducing the amendment that you have proposed. I understand that there are roughly around 3 million taxpayers in the farming business who report annually, and this figure has remained fairly constant. Does this check with the figures you get? And I understand from your testimony, your bill would affect about 14,000 individual tax returns and would raise an additional $205 million a year in tax revenue. Is that right?

Senator METCALF. According to the estimate that the staff of the Joint Committee on Internal Revenue Taxation have given me.

Senator HANSEN. Oh, I see.

Senator METCALF. It is from the Joint Committee.

Senator HANSEN. Do you agree with that?

Senator METCALF. I don't have any reason to disagree with it.

Senator HANSEN. What is the major purpose that you seek in proposing your amendment? Are you thinking about tax reform and tax relief?

Senator METCALF. I am thinking about tax equity.

Senator HANSEN. Tax equity.

Senator METCALF. And removal of unfair competition from the livestock and the farming industry, and removal of a serious distortion of farm prices which causes increased taxes and so forth of legitimate farmers above and beyond the productive capacity of those farms and ranches.

Senator HANSEN. You say a serious distortion of farm prices. Are you implying that the presence of this unfair competition has driven farm prices down?

Senator METCALF. No. It has driven the price of land in and around productive farms above the productive capacity of such a farm, so that if a young farmer, for example, wants to expand his farm, he has to pay sometimes twice as much for the land as it can produce, and so he can't go to a bank or an insurance company and say "Look, I would like to get a couple sections of land over here." He says, "Well, that land sold the other day to so and so from Texas, and how much am I going to have to pay for it?"

The banker says "Well, you will have to pay about the same amount per acre."

The young farmer says "I can't produce that. I can't make a profit on that basis on that land." And then it is completely distorted. Then the tax assessor comes through and says "Look, this land sold here, this land sold there, we will have to double your tax." And so a serious distortion of land values results.

Senator HANSEN. When you speak of a serious distortion of land values, I guess you are aware, if my arithmetic is correct, that if this bill would affect some 14,000 individuals, out of around 3 million, this would be about one out of every 214 persons.

Senator METCALF. Your arithmetic I know is better than mine, so if you have made the computation, that is right.

Senator HANSEN. Wouldn't guarantee it, but as I figure it, it comes to about one out of every 214. Now I can share your concern over the young man who would like to get into the ranching business. Obviously he would like to get into a profitable business just as cheaply as he could having in mind the least amount of necessary capital outlay. What would be the attitude of the other 213 persons in the business? Do you think they would like to see their land increase or decrease in value?

Senator METCALF. Legitimate farmers trying to keep their farming business productive want to keep this distortion of land value out of the farm economy.

Senator HANSEN. How did you find that out?

Senator METCALF. Well, I am just guessing just as you are. May I finish?

Senator HANSEN. Yes.

Senator METCALF. Maybe 14 or 15 who have their land for sale immediately are anxious to sell to these industries that are going into the area for the tax benefits they can have. Some of the people who are immediately inheriting the land, and want to get out of their father's farming business are anxious to sell.

But the one who inherits the land and has to pay an inheritance tax on the basis of a distorted value next door doesn't like it. The one who is going out and trying to expand his farm doesn't like it. The man who has to pay taxes on this distorted value doesn't like it. It is only the man who is trying to liquidate his ranch that thinks that that is a pretty good idea.

Senaor HANSEN. I would question that the typical rancher, who has had to go to a bank and ask for credit would like to see the price of real estate lowered materially. I know I have talked with a good friend of mine who makes appraisals for one of the major life insurance companies, and he cites me a considerable instance of people in the Nebraska, Colorado and Wyoming area near Cheyenne, who have asked for appraisals on their land, and invariably have made an application for increased loan backed up by the appreciated land values.

Now, would you suspect that any of those people would like to see a depreciation in land values?

Senator METCALF. They don't like to see a depreciation in land values if it is a depreciation in the productive capacity of their land, but those farmers, at least it has been my experience from insurance companies and lending agencies in Montana, those farmers can't get an appraisal on the basis of the productive capacity. They have to compete with substantial outside income so that they can convince others that they can pay off this extra amount of money that they are paying for others to enjoy a tax shelter.

Senator HANSEN. It has been proposed that for estate taxation purposes, evaluations be made on the basis of productive capacity rather than on real value. What is your feeling in this instance?

Senator METCALF. I think that it should be based on productive capacity; yes, sir.

Senator HANSEN. And not on actual value.

Senator METCALF. Not on a distorted value as a result of sales to tax-dodge farmers.

Senator HANSEN. May not a distorted value become actual value?

Senator METCALF. If it is on a productive capacity. Of course if it is in subdivisions or something like that, that is another matter. That is not a matter that enters into the proposition of this bill. This bill applies only to those people who are taking advantage of the special tax situation that the farmer has, and abuses it by covering substantial high nonfarm income, as this ad I have for high income people suggests, with a tax shelter.

Senator HANSEN. Thank you, Senator Metcalf.

My time is up.

Senator GORE. Since Senator Byrd responded to a request, I had a young man from a neighboring State the other day ask me to submit to you his problem and ask your reaction.

He has a farm which he obtained from his father. He made quite an investment, in brood mares, and some cows. He expects to lose money for the next 3 or 4 years. Hopefully eventually it will be profitable. He has fallen in love with a young lady who had inherited a building from her father that provides considerable rent; also she teaches. Her income is something in excess of $15,000, and he wants to know of you whether they should go ahead and get married or live in sin.

Senator METCALF. I would say that that young man, who is a very smart young man, will nail down that proposition right now and get married.

Senator GORE. Will you provide an amendment in your bill for him?

Senator METCALF. He will have the income anyway.

Senator GORE. I will not argue with you, Senator. There is a problem of tax shelter here with which the Congress must deal, but I think your contribution this morning and the questions indicate that we haven't found the proper and full answer yet. I thank you very much.

Senator METCALF. I do want to say, that every single farm organization is in favor of my bill. I hope, Mr. Chairman, that my other colleagues that follow me in support of other types of legislation will be treated better by the audience than I have been treated just in the last response.

(Senator Lee Metcalf's prepared statement and the text of his amendment follow:)

STATEMENT OF HON. LEE METCALF, A U.S. SENATOR FROM THE STATE OF MONTANA ON BEHALF OF HIS PROPOSAL TO ELIMINATE "TAX-DODGE" FARMING

SUMMARY

My bill, S. 500, would eliminate existing distortions in the farm economy by limiting to $15,000 or to the amount of "special deductions" listed in my bill, whichever is higher, the amount by which a "farm loss" may offset nonfarm income. Special deductions are those that would be allowed to someone whether or not he was in farming or because it is the type of deduction clearly beyond a taxpayer's control. I am referring to such things as taxes, interest, abandonment or theft of farm property, fire, storm, or other casualty, losses and expenses from drought, and recognized losses from sales, exchanges, and involuntary conversions of farm property. Neither the House-passed bill nor the Administration's proposal contain a comparable provision to protect the legitimate farmer and rancher from being penalized for having incurred an economic agricultural farm loss in a given year. My bill also provides safeguards to protect those just starting out in farming as well as those who might find themselves in a loss situation in a given year, not by design for tax purposes but rather by chance. This is accomplished by a provision that allows any disallowed loss to be carried back three years and forward five years against past or future farm income.

The problem with the approach recommended by the Administration and now contained in the House-passed bill except for different dollar exclusions is that it allows the tax-dodge farmer to defer any recognized capital gains while at the same time he is allowed to continue using the full amount of his artificial losses as an offset against nonfarm income year after year. By attempting to convert capital gains into ordinary income rather than nip the losses in the bud before the tax-dodge farmer can use them, both the House bill and the Administration allow offenders an easy out with just the proper amount of tax planning.

Revenue figures provide some insight into the comparative effectiveness of the House bill, the Administration's proposal, and S. 500. My bill would affect about 14,000 individual tax returns and would raise an additional $205 million a year from these individuals. The House bill would affect about 3,000 returns and when fully operative raise an additional $25 million annually. These revenue estimates do not include comparative figures for corporations. I can only imagine the amount by which the gap between the two bills would widen even further.

The Administration estimated its 4 September proposal would apply to 9,300 individuals and raise $50 million annually. The Administration has already admitted that although the House bill adopts the same approach, the dollar exclusions contained in the House bill are so high as to render it ineffective.

Here is a unique opportunity to combine substantial revenue increases with substantial equity by restoring healthy competition to our farm economy. The House-passed bill can be reshaped to serve as a meaningful vehicle for equitable and effective reform in this area.

STATEMENT

I appreciate the opportunity to testify for legislation that would remove inequities between legitimate farm operators and tax dodge farmers—people who engage in farming for the purpose of creating artificial losses which can be used to offset substantial amounts of their nonfarm income.

In the first session of the 90th Congress, I introduced S. 2613, to amend the Internal Revenue Code of 1954 to provide that farming losses incurred by persons who are not bona fide farmers may not be used to offset nonfarm income. When I ultimately decided upon the loss limitation approach as the best way to get at this problem, one of the sources of information I considered was an article written by Hendrik S. Houthakker, now a member of the Council of Economic Advisors. At the time that he wrote the article, Mr. Houthakker was engaged as a professor of Economics at Harvard. He concluded his article, which appeared in the January-February 1967 issue of Challenge, with the observation that "if this sacred cow is to be finally eliminated, the Internal Revenue Service may need some help from the Congress."

I found Mr. Houthakker's discussion of possible methods to get at this problem particularly stimulating. He stated as follows:

"If the tax laws are to be effective in this area, a more sophisticated definition of farmers is needed, or, alternatively, the offsetting of farm losses against other income should be restricted. But this restriction has to be introduced with due regard to the interests of genuine farmers.

"The best possibility would be to limit the farm loss deduction to, say, $10,000 in any one year, with provisions to carry larger losses backward or forward to be offset against earlier or later farm profits, but not against nonfarm income. In 1962 the taxpayers who claimed over $10,000 in farm losses had an average nonfarm income of about $50,000.

"Another possibility would be to treat as farmers only those who have derived a specified fraction of their income from farming during the past five years.

"Still another (similar to the Treasury proposal of 1963 which was rejected by Congress) would be to allow capital gains treatment only for the amount by which sales exceed deductions for farm losses in prior years. This proposal, however, would not deter those who do not take capital gains at all."

The 1963 Treasury proposal referred to by Mr. Houthakker is basically the same proposal as that suggested by Administration officials in their testimony before the House Ways and Means Committee on 22 April of this year and restated again but with higher dollar figures before this Committee on 4 September. This proposal which has come to be known as the Excess Deductions Account approach is now contained in the tax reform bill under review by this Committee.

In July of last year, both the Departments of Treasury and Agriculture issued highly favorable reports on S. 2613, the predecessor to my bill, S. 500, which I reintroduced with substantial bipartisan support in January of this year. Both of those reports endorsed the principle of my original bill but at the same time suggested constructive modifications which I incorporated in the bill which was introduced last Fall for discussion purposes and then reintroduced early this session.

In order for the record to be complete on this matter here are the constructive suggestions made by the Treasury Department in its report of 11 July 1968:

"As an alternative, we suggest placing a ceiling on the amount of nonfarm income which could be offset by farm losses in any one year. If there were excess farm losses, they could be carried backward and forward to offset farm income, but no other income, of other years. If part of a taxpayer's income for a year consists of capital gains, his carryover of excess farm deductions arising from the special farm accounting rules would not be permitted to offset it. On the other hand, the ordinary farmer incurring a loss would be protected under this approach in two ways: First, by allowing a limited deduction for farm losses, an ordinary farmer who must take part-time or seasonal employment to supplement his income in a poor year in his farm operations would not be deprived of his farm loss deductions. Second, the carryover and carryback provisions would be available to absorb large one-time losses. In other words, the provision would, in operation, only affect taxpayers with relatively large amounts of nonfarm income, that is, individuals who do not have to depend on their farm income for their livelihood.

"It is suggested that . . . corporations could be covered in the same manner as individual farmers and farms run by a partnership."

The Treasury Department concluded by suggesting that some kinds of farm expenses should be excepted from the disallowance provisions. Here is the reason for that suggestion:

"One category of farm expenses would include taxes and interest which are generally deductible whether or not they are attributable to an income producing activity. A second category would include casualty and abandonment losses and expenses and losses arising from drought. These events are generally not in the taxpayer's control and disallowance of the loss or expense could create an undue hardship to the taxpayer since they may be catastrophic. These same expenses and losses are now excluded from the operation of section 270 which excludes losses in connection with a hobby operation."

One additional suggestion made in the report was to provide "for an adjustment that would limit the measure of allowable farm deductions to the taxable one-half of capital gains." The reason for this suggestion was to prevent the taxpayer from receiving a double deduction against his capital gain farm income.

The suggestions contained in last year's Treasury and Agriculture reports together with those contained in Mr. Houthakker's article made a great deal of sense. For example, it was clear that all concerned agreed the most equitable and effective way to get at this problem is to limit the amount of farm losses that can be used as an offset against nonfarm income in any one year.

The problem which now exists is that liberal tax accounting rules designed for the benefit of the ordinary farmer are being manipulated by nonfarmers. These nonfarmers engage in farming for the purpose of creating artificial losses that they can use to reduce the taxes they would otherwise have to pay on high-bracket nonfarm income. The tax losses which these tax-dodge farmers show are not true economic losses. These so-called "tax losses" arise from deductions taken because of capital costs or inventory costs and thus usually represent an investment in farm assets rather than amounts actually lost. Usually, the investment is ultimately sold and taxed only at lower capital gains rates.

The deductions are set off against ordinary income, while the sale price of the resulting assets represents capital gain. The gain is then usually the entire sales price since the full cost of creating the asset has previously been deducted against ordinary income. In reporting on my original bill S. 2613, in July of 1968, the Treasury reviewed the two principal methods of accounting used in reporting business income for tax purposes. Generally speaking, those businesses which do not involve the production or sale of merchandise may use the cash method. Under that method, income is reported when received in cash or its equivalent, and expenses are deducted when paid in cash or its equivalent.

However, in businesses where the production or sale of merchandise is a significant factor, income can be properly reflected only by deducting the costs of merchandise in the accounting period in which the income from its sale is realized. This means that costs are recorded when incurred and sales when made, and costs attributable to unsold goods on hand at year's end are included in inventory. Under this method of accounting, the deduction of costs included in inventory must be deferred until the goods to which they relate are sold rather than being deducted wuen the costs are incurred. Thus, under this second method of accounting, income from sales of inventory and the costs of producing or purchasing such inventory are matched in the same accounting period. The end result in this type of business is a proper reflection of income.

The Treasury Department has historically permitted farmers to deviate from general accounting practices to spare the ordinary farmer the bookkeeping chores associated with inventories and accrual accounting. In addition the Treasury has in the case of some capital outlays permitted farmers to write them off as if they were current expenses.

On 5 February of this year, the House Ways and Means Committee published a study of needed areas for tax reform conducted by the Treasury Department during the last two years of the Johnson Administration. In discussing the effect that tax-dodge farmers have on the farm economy the study points out that "when a taxpayer purchases and operates a farm for its tax benefits, the transaction leads to a distortion of the farm economy. The tax benefits allow an individual to operate a farm at an economic breakeven or even a loss and still realize an overall profit. For example, for a top-bracket taxpayer, where a deduction is associated with eventual capital gains income, each dollar of deduction means an immediate tax savings of seventy cents"—or seventy-seven cents with the surtax—"to be offset in the future by only twenty-five cents of tax. This cannot help but result in a distortion of the farm economy, and it is harmful to the ordinary farmer who depends on his farm to produce the income needed to support him and his family.

"This distortion may be evidenced in a variety of ways: For one, the attractive tax benefits available to wealthy persons have caused them to bid up the price of farmland beyond the price which would prevail in a normal farm economy, and is harmful to the ordinary farmer who must compete in the marketplace with these wealthy farm owners who may consider a farm profit—in the economic sense—unnecessary for their purposes."

My bill would eliminate these distortions by limiting to $15,000 or to the amount of the "special deductions" listed in the bill, whichever is higher, the amount by which a "farm loss" may offset a taxpayer's nonfarm income. The $15,000 figure is reinforced by the following observation contained in Treasury's two-year study, and I quote: "If a taxpayer has more than $15,000 of nonfarm income, his primary source of livelihood is not likely to be his farming efforts, and, thus, he is not the type of farmer for whom the special accounting rules were devised." Generally, a farm loss would be the amount by which farm deductions exceeded farm income in any given year. For this purpose, as the 1968 Treasury report suggested, the untaxed one-half of long-term capital gains attributable to farm property would not be included in farm income. Farm deductions include all deductions that are attributable to the business of farming. If the taxpayer's nonfarm income is in excess of $15,000 in any given year, the limit on his deductible loss in that year would be reduced by one dollar for each dollar of such excess. However, economic losses are protected by providing that the $15,000 loss limitation will be raised to the amount of the taxpayer's special deductions if that amount is higher than $15,000.

When Assistant Secretary of the Treasury Edwin S. Cohen testified before this Committee on 5 September he referred to the fact my bill is now pending before this Committee. He was then asked by Senator Hartke and I quote: "What is wrong with that bill?" Answer by Mr. Cohen, "Well, suppose as Senator Gore said, a short while ago, there were an actual economic loss of $50,000, suppose there is an actual economic loss from tornado, floods, low prices, drought, any number of factors, why should we disallow a true economic loss to the farmer or where should we disallow it in any event at strictly $15,000 a year."

There are two observations I must make with respect to that answer. First, if there were an actual economic loss of $50,000 from tornado, floods, low prices, drought or any other factor beyond the control of the taxpayer under the provisions of my bill the entire amount of that economic loss could be used to offset nonfarm income. Assistant Secretary Cohen's answer simply demonstrated that he had never read my bill. My bill specifically takes into account the nature of the deductions that generate a loss in a given year. It provides that if the sum total of deductions paid or incurred in the business of farming and which are attributable to taxes, interest, the abandonment or theft of farm property, or losses of farm property arising from fire, storm, or other casualty, losses and expenses directly attributable to drought, and recognized losses from sales, exchanges and involuntary conversions of farm property—if any one or all of those deductions adds up to a figure that is higher than $15,000 then the taxpayer is allowed to use the higher figure as an offset against nonfarm income. An exception is made in my bill for such deductions since they are in general deductions which would be allowed to anyone holding farm property without regard to whether it was being used in farming or because it is the type of deduction that is clearly beyond the control of the taxpayer.

My second observation is that assuming an actual economic loss of $50,000 caused by any of the economic factors listed by Assistant Secretary Cohen, and assume one additional fact . . . that the taxpayer has an adjusted gross nonfarm income in excess of $25,000 in that same year, it is the Administration's proposal that would penalize the taxpayer for an economic loss. Although the loss could be used as an offset against nonfarm income the entire amount of that loss would have to be included in the Administration's excess deductions account. To the extent of the balance in that account, what would otherwise be a long-term capital gain from farming in a subsequent year would be converted into ordinary income. The House-passed bill would also attempt to recapture an economic loss by the same method but to a lesser degree because it only applies to that portion of a farm loss above $25,000 and then only if nonfarm adjusted gross income is above $50,000. When Assistant Secretary Cohen testified he observed that the dollar exclusions contained in the House-passed bill render the bill ineffective.

Getting back to the loss limitation approach, my bill adopts a suggestion made in both the 1968 Agriculture and Treasury reports as well as in Mr. Houthakker's article. If the farm loss in any given year is greater than the allowable amount, it would be carried backward three years and forward five years to offset farm income of those years. This safeguard is in the bill to protect new farmers who are sincerely interested in farming but who understandably might be unable to turn an economic profit in those years.

My bill also provides that a taxpayer may treat a nonfarm business as a part of his farming operation if it is related to and on an integrated basis with the farm business. Some recent inquiries about this provision indicate that there are those who would attempt to use it to offset some artificial farm losses arising from the farm tax accounting rules against income earned in another business. This provision is not intended to allow a business to be considered as related and conducted on an integrated basis with the farming operation unless it consists of the processing of a product raised in the farming operation. Furthermore, it is only equitable that to qualify to elect this provision, the sale of such processed product should produce a substantial portion of the total receipts of the over-all operation. Moreover, this provision is intended only for purposes of measuring the size of the "farm loss" to ascertain whether certain deductions are allowable. This provision is not meant to allow the nonfarm business to be treated as a farm operation for the purpose of adopting accounting methods, the filing of estimated tax returns, or the filing of final returns, aud the like.

The House-passed bill and the Administration's proposal both adopt the proposal contained in S. 500 which would exclude from the application of any limitation, the taxpayer who is willing to follow with respect to his farming income, accounting rules which apply generally to other taxpayers; that is if he uses inventories in determining taxable income and treats as capital items—but subject to depreciation in cases where other taxpayers would take depreciation—all expenditures which are properly treated as capital items rather than treating them as expenses fully deductible in the current year.

My bill has gained substantial bipartisan support in both the House and the Senate. Twenty-six other Senators, including three members of this Committee

(Senators Hartke, McCarthy, and Harris) are cosponsors of S. 500. At last count, the loss limitation approach contained in the bill had been specifically endorsed by members of at least thirty different Congressional delegations.

Aside from Congressional support the method of approach taken in S. 500 has the full support of all those who are sincerely interested in the working farmers of our Nation. For example, the National Farmers Union, the American Farm Bureau Federation, the National Grange, the National Farmers Organization, the National Council of Farmer Cooperatives, the National Association of Wheat Growers, the Cooperative League of the U.S.A., the National Association of Farmer Elected Committeemen, the Farmland Industries Cooperative, the Mid-Continent Farmers Association—formerly known as the Missouri Farmers Association, the Farmers Grain Dealers Association, the AFL–CIO, the Industrial Union Department of the AFL–CIO, the United Steelworkers, the South Texas Cotton and Grain Association, Inc., and the Amalgamated Meat Cutters and Butcher Workmen, have all called for a limit to be placed on the amount of artificial farm losses that can be used as an offset against nonfarm income.

Contrast this type of support with the testimony of the National Livestock Tax Committee before the House Ways and Means Committee some six years ago. This is what the National Livestock Tax Committee had to say about the excess deductions account approach in 1963 and I quote: "We cannot say whether it would work or would not, but it is the most modest approach that has come to our attention."

Well, that sort of grudging praise coming from an organization that has been fighting tax reform in this area every step of the way made be take a hard look at the EDA approach when I first considered ways to get at this problem without hurting the legitimate farmer.

The basic problem with the EDA approach is that it allows the tax-dodge farmer to defer any recognized capital gains until he chooses to sell and at the same time, allows him to continue along his merry way each year using artificial farm losses as an offset against nonfarm income. With proper tax planning the balance in the excess deductions account can be milked dry by the time the taxpayer decides he is ready to recognize long-term capital gains. Such a proposal will not remove any of the incentive from existing clients of cattle management firms such as Oppenheimer Industries. Instead of catching the tax-dodge farmer with his hand in the cookie jar by limiting premature deductions each year, the EDA approach lets the tax-dodge farmer put us in the position of having to refill an empty jar.

Farm operations carried on by corporations usually are not separately reported on the corporation tax return. Consequently, data concerning the number of corporations and revenue effect with respect to corporations could not be be determined with respect to either the EDA approach or the loss limitation approach.

However, I do have revenue figures that provide some insight into the comparative effectiveness of the House bill, the Administration's proposal, and S. 500. At my request the Chief of Staff of the Joint Committee on Internal Revenue Taxation, Laurence N. Woodworth, has provided me with the following statistics.

My bill would affect in the neighborhood of 14,000 individual tax returns. It is estimated that it would raise an additional $205 million a year from these individuals. The number of returns affected by the "Excess Deductions Account" provision of H.R. 13270 is estimated to be in the neighborhood of 3,000. By 1979 the estimated increase in tax liability under the farm provisions of the House bill are as follows: excess deductions account, $10 million; depreciation recapture, $5 million; holding period of livestock, $5 million; hobby losses, negligible; for a total of $20 million by 1979. It is estimated that sometime after 1979 the increase in tax liability ascribed to the excess deductions account provision would increase an additional $5 million. So we are talking in terms of increased revenue under the House-passed bill of $25 million a year as opposed to $205 million under S. 500. These revenue estimates do not include comparative figures for corporations. We can only leave to the imagination the amount by which the gap between the two bills would widen even further.

The Administration estimated on 4 September that its modified EDA rule "would apply to only 9,300 individuals" and that the long-range revenue effect of its farm loss provisions would be $50 million, still a far cry from the amount of revenue that could be raised by equitably and effectively dealing with this problem.

Elimination of the exception for livestock from the depreciation recapture rules was analyzed in detail several years ago by the President of Oppenheimer Industries, General Harold L. Oppenheimer. General Oppenheimer has been described by Time magazine as the "Bonaparte of Beef." He has authored three books for the cattle industry, Cowboy Arithmetic, Cowboy Economics and Cowboy Litigation. I have been informed by his Washington representative that a fourth book, Cowboy Politics is now in preparation. Here is what the General had to say in 1966 in his book, Cowboy Economics, about the depreciation recapture provision that has since been adopted in the House-passed bill:

"Members of Congress and officials of both the old and the new administrations have suggested that where accelerated depreciation is taken, on any subsequent sale, the portion of the capital gain which represents the recovery of previously taken depreciation should be treated as ordinary income. This is essentially the system now used in Canada.

"Evaluation. This piece of legislation is undoubtedly going to get passed within the next year or so, although it was deleted by the House Ways and Means Committee from the 1964 Tax Bill. However, as far as breeding herds are concerned, this is a matter of relatively little significance. During the first two years of a purchased breeding herd, the culls sold from the herd on a capital gain basis are very unlikely to exceed the depreciated value by more than a few dollars. During the third and fourth years, this could be a matter of some importance in the sale of culls but without an appreciable percentage effect on the overall picture. During the fifth year, most of the animals with an original capital base will have been sold and the herd will consist almost entirely of animals born to it at no cost basis, so the effect this legislation would achieve would then be zero."

General Oppenheimer's book, Cowboy Litigation, contains an interesting chapter, "Tax Play in Race Horses." Here are some of the observations contained in that chapter.

"The tax aspects of the horse business are unique, but in most instances, parallel the cattle business . . .

"Stud fees paid by the owner of a mare are currently deductible or they can be capitalized and depreciated over the life of the foal. Unless the breeder is in a loss position and concerned about a so-called hobby loss, it would be better to expense the fee . . .

"Depreciation can produce considerable tax benefits as with cattle . . .

"Animals held for breeding are treated the same as other livestock such as cattle . . .

"Continued losses are a problem and always subject to scrutiny. . . . Breeding, racing, and the showing of horses have always been suspect, particularly when conducted by a high-bracket taxpayer that endeavors to write the losses off against other income . . . As with cattle, the decision turns on the subjective motives and profit potential of the owner . . . Country estates and small operations are in the face suspect. The more attention paid to the business and the professional manner in which the business is operated are all plus factors."

I shall turn now to some of the more common allegations made by those who oppose my bill. For example, there are some who say that the bill would force farmers to use the accrual system of accounting; that the bill would prevent the successful farmer or rancher from engaging in nonfarm operations with outside income for fear of losing his right to deduct farm losses; that the bill would discourage the flow of outside money into ranching and farming operations and so on.

I have repeatedly denied these allegations. Statistics reveal that there are a comparatively few taxpayers who enter into farming as a tax-dodge device. The 32-page report, "Statistics of Income—1967, Preliminary, Individual Income Tax Returns," published on January 14 of this year reveals that for 1967 there were approximately 770 thousand taxable individual income tax returns filed that reported a net loss from farming. My bill would affect in the neighborhood of 14 thousand or slightly less than 2 percent of those returns. This is statistical evidence that my bill will only affect the tax-dodge farmers who are currently distorting the farm economy.

In discussing statistical evidence of this problem, the Treasury's two-year study, published on 5 February of this year, points out that a growing body of investment advisors is currently advertising that they will arrange farm investments for high-bracket taxpayers to enjoy deductions on dollars that are really spent to acquire capital assets. It is because of that kind of advertising that people are being drawn to farm "tax-loss" situations.

Just last year I saw an ad in a magazine called the Airline Pilot that read in part—"Own a citrus grove using tax dollars as your total investment, . . ." The ad was headed "Tax Shelters for 1968." You can pick up the Wall Street Journal on any given day and find ads of this type. For example, the other day I came across one that read in part: "Pistachio Nuts, The Green Nut with the Golden Future . . . Outstanding opportunity for land investment and Pistachio nut tree planting program . . . Most of growing costs deductible."

As I evaluated each of the proposals pending before this Committee, I must admit that I have become even more convinced that the fairest and most effective way to get at this problem is to adopt the loss limitation approach contained in S. 500. Here is a unique opportunity to scale down the long run revenue loss that results from the sum total of all the provisions of the 368-page House bill while at the same time we increase substantially the equity of our tax laws through a healthier farm economy.

[H.R. 13270, 91st Cong., first sess.]

[Amdt. No. 139]

IN THE SENATE OF THE UNITED STATES

August 13, 1969

Referred to the Committee on Finance and ordered to be printed

AMENDMENT

Intended to be proposed by Mr. Metcalf to H.R. 13270, an Act to reform the income tax laws, viz: Page 139, beginning with line 10, strike out all through line 6, page 152 (section 211 of the bill), and insert the following:

SEC. 211. FARM LOSSES.

(a) In General.—Part IX of subchapter B of chapter 1 (relating to items not deductible) is amended by adding after section 279 (added by section 411(a) of this Act) the following new section:

"SEC. 280. LIMITATION ON DEDUCTIONS ATTRIBUTABLE TO FARMING.

"(a) General Rule.—In the case of a taxpayer engaged in the business of farming, the deductions attributable to such business which, but for this section, would be allowable under this chapter for the taxable year shall not exceed the sum of—

"(1) the adjusted farm gross income for the taxable year, and

"(2) the higher of—

"(A) the amount of the special deductions (as defined in subsection (d) (3)) allowable for the taxable year, or

"(B) $15,000 ($7,500 in the case of a married individual filing a separate return), reduced by the amount by which the taxpayer's adjusted gross income (taxable income in the case of a corporation) for the taxable year attributable to all sources other than the business of farming (determined before the application of this section) exceeds $15,000 ($7,500 in the case of a married individual filing a separate return).

"(b) Exception for Taxpayers Using Certain Accounting Rules.—

"(1) In General.—Subsection (a) shall not apply to a taxpayer who has filed a statement, which is effective for the taxable year, that—

"(A) he is using, and will use, a method of accounting in computing taxable income from the business of farming which uses inventories in determining income and deductions for the taxable year, and

"(B) he is charging, and will charge, to capital account all expenditures paid or incurred in the business of farming which are properly chargeable to capital account (including such expenditures which the taxpayer may, under this chapter or regulations prescribed thereunder, otherwise treat or elect to treat as expenditures which are not chargeable to capital account).

"(2) TIME, MANNER, AND EFFECT OF STATEMENT.—A statement under paragraph (1) for any taxable year shall be filed within the time prescribed by law (including extensions thereof) for filing the return for such taxable year, and shall be made and filed in such manner as the Secretary or his delegate shall prescribe by regulations. Such statement shall be binding on the taxpayer, and be effective, for such taxable year and for all subsequent taxable years and may not be revoked except with the consent of the Secretary or his delegate.

"(3) CHANGE OF METHOD OF ACCOUNTING, ETC.—If, in connection with a statement under paragraph (1), a taxpayer changes his method of accounting in computing taxable income or changes a method of treating expenditures chargeable to capital account, such change shall be treated as having been made with the consent of the Secretary or his delegate and, in the case of a change in method of accounting, shall be treated as a change not initiated by the taxpayer.

"(c) CARRYBACK AND CARRYOVER OF DISALLOWED FARM OPERATING LOSSES.—

"(1) IN GENERAL.—The disallowed farm operating loss for any taxable year (hereinafter referred to as the 'loss year') shall be—

"(A) a disallowed farm operating loss carryback to each of the 3 taxable years preceding the loss year, and

"(B) a disallowed farm operating loss carryover to each of the 5 taxable years following the loss year,

and (subject to the limitations contained in paragraph (2)) shall be allowed as a deduction for such years, under regulations prescribed by the Secretary or his delegate, in a manner consistent with the allowance of the net operating loss deduction under section 172.

"(2) LIMITATIONS.—

"(A) IN GENERAL.—The deduction under paragraph (1) for any taxable year for disallowed farm operating loss carrybacks and carryovers to such taxable year shall not exceed the taxpayers' net farm income for such taxable year.

"(B) CARRYBACKS.—The deduction under paragraph (1) for any taxable year for disallowed farm operating loss carrybacks to such taxable year shall not be allowable to the extent it would increase or produce a net operating loss (as defined in section 172(c)) for such taxable year.

"(3) TREATMENT AS NET OPERATING LOSS CARRYBACK.—Except as provided in regulations prescribed by the Secretary or his delegate, a disallowed farm operating loss carryback shall, for purposes of this title, be treated in the same manner as a net operating loss carryback.

"(d) DEINITIONS.—For purposes of this section—

"(1) ADJUSTED FARM GROSS INCOME.—The term 'adjusted farm gross income' means, with respect to any taxable year, the gross income derived from the business of farming for such taxable year (including recognized gains derived from sales, exchanges, or involuntary conversions of farm property), reduced, in the case of a taxpayer other than a corporation, by an amount equal to 50 percent of the lower of—

"(A) the amount (if any) by which the recognized gains on sales, exchanges, or involuntary conversions of farm property which, under section 1231(a), are treated as gains from sales or exchanges of capital assets held for more than 12 months exceed the recognized losses on sales, exchanges, or involuntary conversions of farm property which under section 1231(a) are treated as losses from sales or exchanges of capital assets held for more than 12 months, or

"(B) the amount (if any) by which the recognized gains described in section 1231(a) exceed the recognized losses described in such section.

"(2) NET FARM INCOME.—The term 'net farm income' means, with respect to any taxable year, the gross income derived from the business of farming for such taxable year (including recognized gains derived from sales, exchanges, or involuntary conversions of farm property), reduced by the sum of—

"(A) the deductions allowable under this chapter (other than by subsection (c) of this section) for such taxable year which are attributable to such business, and

"(B) in the case of a taxpayer other than a corporation, an amount equal to 50 percent of the amount described in subparagraph (A) or (B) of paragraph (1), whichever is lower.

"(3) SPECIAL DEDUCTIONS.—The term 'special deductions' means the deductions allowable under this chapter which are paid or incurred in the business of farming and which are attributable to—

"(A) taxes,

"(B) interest,

"(C) the abandonment or theft of farm property, or losses of farm property arising from fire, storm, or other casualty,

"(D) losses and expenses directly attributable to drought, and

"(E) recognized losses from sales, exchanges, and involuntary conversions of farm property.

(4) FARM PROPERTY.—The term 'farm property' means property which is used in the business of farming and which is property used in the trade or business within the meaning of paragraph (1), (3), or (4) of section 1231(b) (determined without regard to the period for which held).

"(5) DISALLOWED FARM OPERATING LOSS.—The term 'disallowed farm operating loss' means, with respect to any taxable year, the amount disallowed as deductions under subsection (a) for such taxable year, reduced, in the case of a taxpayer other than a corporation, by an amount equal to 50 percent of the amount described in subparagraph (A) or (B) of paragraph (1), whichever is lower.

"(e) SPECIAL RULES.—For purposes of this section—

"(1) BUSINESS OF FARMING.—A taxpayer shall be treated as engaged in the business of farming for any taxable year if—

"(A) any deduction is allowable under section 162 or 167 for any expense paid or incurred by the taxpayer with respect to farming, or with respect to any farm property held by the taxpayer, or

"(B) any deduction would (but for this paragraph) otherwise be allowable to the taxpayer under section 212 or 167 for any expense paid or incurred with respect to farming, or with respect to property held for the production of income which is used in farming.

For purposes of this paragraph, farming does not include the raising of timber. In the case of a taxpayer who is engaged in the business of farming for any taxable year by reason of subparagraph (B), property held for the production of income which is used in farming shall, for purposes of this chapter, be treated as property used in such business.

"(2) INCOME AND DEDUCTIONS.—The determination of whether any item of income is derived from the business of farming and whether any deduction is attributable to the business of farming shall be made under regulations prescribed by the Secretary or his delegate, but no deduction allowable under section 1202 (relating to deduction for capital gains) shall be attributable to such business.

"(3) CONTROLLED GROUP OF CORPORATIONS.—If two or more corporations which—

"(A) are component members of a controlled group of corporations (as defined in section 1563) on a December 31, and

"(B) have not filed a statement under subsection (b) which is effective for the taxable year which includes such December 31,

each have deductions attributable to the business of farming (before the application of subsection (a)) in excess of its gross income derived from such business for its taxable year which includes such December 31, then, in applying subsection (a) for such taxable year, the $15,000 amount specified in paragraph (2)(B) of such subsection shall be reduced for each such corporation to an amount which bears the same ratio to $15,000 as the excess of such deductions over such gross income of such corporation bears to the aggregate excess of such deductions over such gross income of all such corporations.

"(4) PARTNERSHIPS.—A business of farming carried on by a partnership shall be treated as carried on by the members of such partnership in proportion to their interest in such partnership. To the extent that income and deductions attributable to a business of farming are treated under the preceding senence as income and deductions of members of a partnership, such income and deductions shall, for purposes of this chapter, not be taken into account by the partnership.

"(5) TWO OR MORE BUSINESSES.—If a taxpayer is engaged in two or more businesses of farming, such businesses shall be treated as a single business.

"(6) RELATED INTEGRATED BUSINESSES.—If a taxpayer is engaged in the business of farming and is also engaged in one or more businesses which are directly related to his business of farming and are conducted on an integrated basis with his business of farming, the taxpayer may elect to treat all such businesses as a single business engaged in the business of farming. An election under this paragraph shall be made in such manner, at such time, and subject to such conditions as the Secretary or his delegate may prescribe by regulations.

"(7) SUBCHAPTER S CORPORATIONS AND THEIR SHAREHOLDERS.—

"For a special treatment of electing small business corporations which do not file statements under subsection (b) and of the shareholders of such corporations, see section 1380.

"(f) REGULATIONS.—The Secretary or his delegate shall prescribe such regulations as may be necessary to carry out the purposes of this section."

(b) SUBCHAPTER S CORPORATIONS.—Subchapter S (relating to election of certain small business corporations as to taxable status) is amended by adding after section 1379 (as added by section 541(a) of this Act) the following new section:

"SEC. 1380. ELECTING SMALL BUSINESS CORPORATIONS ENGAGED IN BUSINESS OF FARMING.

"(a) SEPARATE APPLICATION TO FARMING INCOME AND DEDUCTIONS.—Under regulations prescribed by the Secretary or his delegate, an electing small business corporation which is engaged in the business of farming during its taxable year (other than a corporation which has filed a statement under section 280(b) which is effective for such taxable year), and the shareholders of such corporation, shall apply the provisions of sections 1373 through 1378, separately with respect to—

"(1) income derived from the business of farming by such corporation and deductions attributable to such business, and

"(2) all other income and deductions of such corporation.

In computing the taxable income and undistributed taxable income, or net operating loss, of such corporation with respect to the business of farming, no deduction otherwise allowable under this chapter shall be disallowed to such corporation under secton 280.

"(b) SHAREHOLLERS TREATED AS ENGAGED IN BUSINESS OF FARMING, ETC.—For purposes of section 280—

"(1) each shareholder of an electing small business corporation to which subsection (a) applies shall be treated as engaged in the business of farming,

"(2) the undistributed taxable income of such corporation which is included in the gross income of such shareholder under section 1373 and is attributable to income and deductions referred to in subsection (a)(1), and dividends received which are attributable to such income and deductions and are distributed out of earnings and profits of the taxable year as specified in section 316(a)(2), shall be trerted as income derived from the business of farming by such shareholder, and

"(3) the deduction allowable (before the application of section 280) to such shareholder under section 1374 as his portion of such corporation's net operating loss attributable to income and deductions referred to in subsection (a)(1) shall be treated as a deduction attributable to the business of farming.

"(c) SPECIAL RULES OF SECTION 280(e) APPLICABLE.—For purposes of this section, the special rules set forth in section 280(e) shall apply."

(c) CLERICAL AND CONFORMING AMENDMENTS.—(1) The table of section for part IX of subchapter B of chapter 1 is amended by adding at the end thereof the following new item:

"Sec. 280. Limitation on deductions attributable to farming."

(2) Section 172(l) is amended by adding at the end thereof the following new paragraph:

"(3) For limitations on deductions attributable to farming and special treatment of disallowed farm operating losses, see section 280."

(3) Section 381(c) is amended by adding at the end thereof the following new paragraph:

"(24) FARM OPERATING LOSS CARRYOVERS.—The acquiring corporation shall take into account, under regulations prescribed by the Secretary or his delegate, the disallowed farm operating loss carryovers under section 280 of the distributor or transferor corporation."

(4) The table of sections for subchapter S is amended by adding at the end thereof the following new item:

"Sec. 1380. Electing small business corporations engaged in business of farming."

(d) EFFECTIVE DATE.—The amendments made by this section shall apply to taxable years beginning after December 31, 1969, except that for purposes of applying section 280(c) of the Internal Revenue Code of 1954 (as added by subsection (a)) with respect to disallowed farm operating losses of any taxpayer for taxable years beginning after such date—

(1) such amendments shall also apply to the 3 taxable years of such taxpayer preceding the first taxable year beginning after such date, and

(2) in the case of a taxpayer to whom section 1380(b) of such Code (as added by subsection (b)) applies for any of his first 3 taxable years beginning after such date, section 1580 of such Code shall apply with respect to the electing small business corporation of which such taxpayer is a shareholder for the 3 taxable years preceding each such taxable year of such taxpayer, but only with respect to any such preceding taxable year for which the corporation was an electing small business corporation.

Senator ANDERSON. Senator Cooper.

STATEMENT OF HON. JOHN SHERMAN COOPER, A U.S. SENATOR FROM THE STATE OF KENTUCKY

Senator COOPER. Yes.

Mr. Chairman and members of the committee, it is my honor today to introduce to the committee the Governor of the Commonwealth of Kentucky, the Honorable Louie B. Nunn, now serving the second year of his 4-year term. We appreciate your waiting here. He will testify on a subject which is of concern to our State.

STATEMENT OF HON. LOUIE B. NUNN, GOVERNOR OF THE STATE OF KENTUCKY; ACCOMPANIED BY GEORGE A. SMATHERS, GENERAL COUNSEL, AMERICAN HORSE COUNCIL

Mr. SMATHERS. Mr. Chairman, may I say preliminarily that we had an agreement with the chairman and the staff that the American Horse Council* would have four witnesses, each one of which would testify not to exceed 10 minutes, and that we are, of course, very proud and happy to have as our first witness the distinguished Governor of Kentucky, Mr. Nunn.

Governor NUNN. Thank you Senator Cooper, Mr. Smathers, members of the committee. I appreciate this opportunity to appear before the committee, but more than that, the opportunity to listen to the various witnesses and the discussion this morning, particularly as it relates to the farm economy. As I listened, I was reminded of Mr. Butler, a farmer down in Kentucky and I think he would fall in the category of a "legitimate farmer." He had been farming for several years, when the county agent, under a State and Federal program, went out to advise him on how he could enhance his income. The agent suggested that he buy a herd of cattle and feed them out, which the farmer did.

*The prepared statement of the American Horse Council submitted by former Senator Thruston Morton and George Smathers appears at p. 2792.

Later, at a meeting that the county agent was conducting down at the local schoolhouse, he was explaining the programs and what they had meant to the farmers. He called on Mr. Butler to explain what his herd of cattle had meant to him.

The old farmer said that when he took into consideration the feed that he had raised, the feed that he bought, and the time that it took to care for them, that he figures he broke about even.

The county agent said "that is the trouble with you farmers—you didn't take into consideration, Mr. Butler, the fact that if you hadn't had that herd of cattle, you would have had to buy fertilizer for that east 40 acres. Since you used the manure, that saved you from spending money on fertilizer, and you should consider that as profit."

Mr. Butler said that he thought the farm situation had come to a sorry plight when you had to take your profit out in manure. [Laughter.]

My purpose in appearing before this committee is to present to you facts and statistics on this proposed legislation which would materially and adversely affect the economy of my own State and that of 26 other States that are involved in horse raising and breeding.

In addition to the 27 States to which I refer, I am sure that there will be other presentations that will be made to this committee on the effect that the legislation would have on them.

Realizing the importance and the significance of the proposed legislation, and the limited time resulting from the tremendous workload of this committee, my remarks shall be very brief and pointed.

Kentucky, as you know, has achieved the position of worldwide preeminence in thoroughbred, standard bred, and saddle bred, breeding and racing horses. While these endeavors are most drastically affected by the legislation that you now must consider, they are not the only areas about which we have the greatest concern. I would only point out in passing that my State ranks 10th in the production of cattle and dairy products, and certainly we all know that in every phase of the farm economy, it is suffering. Therefore my interest is not directed toward a single purpose.

Indeed, even though I may make frequent references to my own State, this legislation is of such wide geographical and economic concern that I am sure any number of Governors could and would appear before you if time permitted.

Let me make it abundantly clear that I am not here today to ask for special favors for Kentucky or for special treatment for the Kentucky horse industry. My purpose is to outline the importance of the horse industry of the United States and to help the members of this committee to weigh carefully the consequences of the various tax changes that have been proposed.

My statement is not mere conjecture or verbiage. It is based on statistics—statistics developed by the Spindletop Research, Inc., a not-for-profit independent research institute established to stimulate the economy and the industrial development of Kentucky and its regions.

I would point out that the Federal Government and many private enterprises have used Spindletop for research purposes.

The study is entitled "Economic Importance of the Horse Industry in the United States." The study was performed as a special public service in hopes of clarifying some of the questions and some of the misconceptions surrounding the horse industry. Attached to this statement and to be filed herewith is the complete text of the Spindletop Research report. (See p. 2755.)

When viewing the horse industry from the national standpoint, it is necessary to consider not only its economic importance but also its recreational and educational significance. Directly affected are those who engage in the commercial activity of the horse industry. This includes breeding, training, racing and showing, since people in these activities make their living directly from working on or with horses. In other words, horses are the tools of their trade.

Indirect commercial activities are conducted by the manufacturers and suppliers who furnish products and the professional people who furnish service for either commercial or recreational horses. Therefore the total horse population can be considered applicable to indirect commercial activity.

I would like to discuss briefly tourism. In some areas of the country, and especially in Kentucky, the tourist industry is considerably strengthened by the substantial number of visitors to our famous horse farms. Last year alone the tourist industry resulted in $43 million in direct taxes being paid into our State's economy. The horse industry was responsible either directly or indirectly for attracting more than 50 percent of this amount, and I want to pause here to say that there are other areas for tax consideration other than the Federal Government alone, because the States must have a source of revenue likewise.

The most difficult factor to measure in terms of the recreational aspect of the horse industry as it affects tourism is the potential number of people who come to the horsefarms, who go to horseshows, to racing and to rodeos. There are certainly many secondary factors that merit consideration, such as the extra time that the families spend in the State, the distance that they travel, to view participate in these activities, and the promotional value of the image created by the horse recreation activity More directly, the matter of commerce. In 1968 the horse population of the United States was estimated to be in excess of 6 million. Of this, 1.2 million horses were known to be registered. Of the registered horses, 832,000 were listed as recreational, and over 428,000 were listed for commercial purposes.

The labor utilized for commercial horses alone in the category of breeding, training, and showing amounts to more than 125,000 full-time jobs. In addition, there are between 25,000 and 33,000 full-time jobs in supportive services and supply industries for all horses, bringing a total of 150,000 full-time jobs with many more people employed throughout the year on a part-time basis, and much of this employment is in the agricultural sector.

The known total annual wages for this labor amounts to more than $727 million. Wages paid by service vendors and suppliers were approximately $250 million. Thus the proposed legislation would adversely affect total annual wages of $1 billion.

As to capital investment, total capital investment in breeding facilities and equipment is $543 million. An additional $79 million is invested in training, and $602 million in racetracks. The value of the commercial horse is $1.12 billion. This adds up to a total capital investment of $2.34 billion. Although substantial, this figure must be considered only a very conservative estimate, because there are many items as to which we were not able to get exact figures. This would have to do with horse trailers and other related industries.

Now as to land use and values. Land devoted to commercial horses used in 1968 amounted to more than 1.9 million acres, having a total value of $1.26 million. I would remind you that these values apply only to those portions of farms that are devoted to commercial horses.

The statistics make it abundantly clear that this extensive industry employs a large number of workers in agricultural type jobs, and further that the capital investment in facilities, equipment, and land represents major generators of economic activities.

Gentlemen, these facts are particularly significant when those of us charged with public responsibility face the multitude of contemporary problems with which we are expected to deal.

The horse industry provides jobs at a time when we are seeking solutions to unemployment.

As to State revenue, the horse industry generates substantial revenue directly to the States at a time when you are being asked to provide Federal revenue to the States. Last week at the Southern Governors' Conference I said that the States must commence to solve their own problems rather than looking to the Congress. The States cannot solve their problems without revenue any more than the Federal Government can solve the problems for the States without revenue.

In 1968 the total parimutuel revenue to all States amounted to $26.9 million. This combined with the almost $19 million in other taxes paid by racetracks brings the total tax from tracks and parimutuel betting to over $44 million.

Proponents of this legislation might argue that you are indirectly subsidizing this sector of the farm economy. If that argument be true, I would only say in response that subsidizing employment, encouraging industry, and supporting a viable revenue producing source certainly is far more preferable than subsidizing unemployment and nonproductivity.

I would also add that migration from the rural to the urban areas is considered a major problem in this country. This proposed legislation conceivably compounds that problem.

RECREATION AND SOIL CONSERVATION

In this period of urban sprawl and urban blight, it is gratifying to note that a substantial amount of land, much of it within easy commuting distance of our cities, has been set aside for horse industry activities. Land use for horses is generally well cared for, with good cover and with a minimum of eroding. In some parts of the country such land represents the only open space in the greenbelts that would otherwise be an endless sea of houses.

It is clear to me, coming as I do from a State having an unparalleled richness in scenic attractions, that the conservation and esthetic aspects of the horse industry have great intangible value. It is my sincere hope that changes in the tax structure will not result in fragmenting these farms or in drastically altering existing land use patterns.

Many Federal dollars are being invested in recreation. I think it is therefore significant that the number of horses used in recreation has increased considerably in the last decade.

Furthermore, Future Farmers of America, 4–H Clubs and other farm-oriented youth organizations are becoming increasingly engaged in horse projects. Thus it is clear that the success of many of these projects depends strongly on the availability of horses at a reasonable price.

To further demonstrate the recreational aspects of the industry, in 1967 the attendance at horse-racing events alone exceeded the attendance of all other professional or amateur sports.

In summary, I urge you to carefully reflect on the dimensions of this important industry that I have outlined to you today. I respectfully ask that you also consider the other factors which either have not been measured or are of an intanigible nature. These factors also substantially increase the economic impact and the other contributions of the horse industry to America.

I certainly want to salute you and your diligent efforts to find equitable means for sharing the burden of taxation, but by the same token I would urge you to take care that you do not throw out the baby with the wash water.

Senator ANDERSON. Will you be available this afternoon?

Governor NUNN. I can be available. However, there are others here who I am sure will be glad to answer any questions that I may not be able to answer. I will make myself available to the committee if it is their desire. If any member desires that I appear I will be glad to do so.

Senator ANDERSON. I think we can excuse you and we will return at 2:30 this afternoon.

(Gov. Louie B. Nunn's prepared statement with attachment follows:)

STATEMENT BY LOUIE B. NUNN, GOVERNOR, COMMONWEALTH OF KENTUCKY

SUMMARY

Proposed legislation before the Congress would have a detrimental effect on the national horse industry and thus would materially and adversely affect the economy of Kentucky as well as several other states, Governor Louie B. Nunn told the Senate Finance Committee.

Armed with a report from Spindletop Research, Inc., of Lexington, Kentucky, the Governor strongly implied that the impact of the many contributions of the horse industry would be significantly lessened should proposed legislation be approved.

He cited the following supportive evidence:

More than half of Kentucky's tourist industry, which last year contributed $43 million in tax revenue to the State, results directly or indirectly from the horse industry.

Labor utilized for commercial horses alone in the categories of breeding, training, racing and showing amounts to more than 125,000 full-time jobs.

Between 25,000 and 33,000 full-time jobs are created among the supportive services and supply industries for horses.

Known total annual wages for horse industry labor and related service and supply vendors amount to $1 billion.

Total capital investment in the commercial horse industry is $2.34 billion.

1.9 million acres of land valued at $1.26 billion is devoted to commercial horse uses.

The horse industry in 1968 generated $426.9 million directly to the states in revenue from pari-mutuel wagering and $18.9 million in other taxes paid by race tracks.

Recreation, conservation of aesthetic values and education are other facets of the horse industry important to any consideration of detrimental legislation.

"The horse industry provides jobs at a time when we are seeking solutions to unemployment. It generates substantial revenue directly to the states at a time when you are being asked to provide federal revenue to the states," Governor Nunn said.

"Let me make it abundantly clear to you that I am not here today to ask for special favors for Kentucky or for special treatment for the Kentucky horse industry," he added.

"At the same time, however, I would urge you to take care that you do not 'throw out the baby with the washwater'," Governor Nunn said.

STATEMENT

Mr. Chairman and members of the committee; I am Louie B. Nunn, Governor of the Commonwealth of Kentucky. My purpose for appearing before this distinguished Committee is to present facts and statistics on proposed legislation which would materially and adversely affect the economy of my own state and that of twenty-six (26) additional states that are involved in horse racing or breeding.

In addition to the 27 states to which I refer, others who will make presentations to this Committee no doubt will give further information as to how this proposed legislation would affect them.

Realizing the importance and the significance of the proposed legislation and the limited time resulting from the tremendous workload of this Committee, my remarks shall be brief and to the point.

Kentucky has achieved a position of worldwide preeminence in Thoroughbred, Standardbred, saddlebred and quarter-horse breeding and racing.

While these endeavors are most drastically affected by the legislation that you must now consider, they are not the only areas about which we have the greatest concern.

Other testimony no doubt will dwell on the detrimental effect that H.R. 13270 will have on the cattle industry and other phases of the suffering farm economy, but in passing, I would only relate that my state ranks 10th in the nation in the production of cattle and dairy products.

Therefore, my interest is not directod toward a single purpose. Indeed, even though I shall make frequent reference to my own state, this legislation is of such wide geographical and economic concern that I am sure any number of Governors could appear before you and many of them stand ready to do so if your time permits.

Let me make it abundantly clear to you that I am not here today to ask for special favors for Kentucky or for special treatment for the Kentucky horse industry.

My purpose is to outline the importance of the horse industry in the United States and to help the members of this Committee to weigh carefully the consequence of the various tax changes that have been proposed.

My statement is not mere conjecture or verbage. It is based on statistics developed by Spindeltop Research, Incorporated, a not-for-profit, independent research institute established to stimulate the economic and industrial development of Kentucky and its region.

Spindletop has engaged in many projects that relate to Kentucky's most important industries, as well as having done work for the federal government and many private enterprises.

The study entitled "Economic Importance of the Horse Industry in the United States" was performed as a special public service in hope of clarifying some of the questions and misconceptions surrounding the horse industry. Attached to this statement and to be filed herewith is the complete text of the Spindletop Research report.

When viewing the horse industry from a national standpoint, it is necessary to consider not only its economic importance, but also its recreational and educational significance.

Directly affected are those who engage in the commercial activity of the horse industry. This includes breeding, training, racing, and showing, since people in these activities make their living directly from working on or with horses. In other words, horses are the tools of their trade.

Indirect commercial activities are conducted by the manufacturers and suppliers who furnish products and by professional people who furnish services for either commercial or recreational horses.

Therefore, the total horse population can be considered applicable to indirect commercial activity.

TOURISM

Furthermore, in some areas of the country, especially in Kentucky, the tourist industry is considerably strengthened by substantial numbers of visitors to our famous horse farms.

Last year alone, the tourist industry resulted in $43 million dollars in direct taxes being paid into our state's economy. The horse industry was responsible, either directly or indirectly, for attracting more than fifty (50) per cent of this amount.

The most difficult factor to measure in terms of the recreational aspects of horses is the tourist potential for horse farms, horse shows, racing and rodeos.

There are certainly many secondary factors that merit consideration, such as the extra time that families spend in an area because of these attractions, the extra distance traveled to view or participate in these activities, and the promotional value of the image created by the horse recreation activities.

COMMERCE

In 1968, the total horse population of the United States was estimated to be in excess of six (6) million. Of this total, 1.2 million horses were known to be registered. Of the registered horses, 832 thousand were listed as recreational and over 428 thousand were listed for commercial purposes.

The labor utilized for commercial horses alone in the category of breeding, training, racing and showing amounts to more than 125 thousand full-time jobs.

In addition, there are between 25 thousand and 33 thousand full-time jobs in the supportive services and supply industries for all horses, bringing the total employment to more than 150 thousand full-time jobs, with many more persons employed throughout the year on a part-time basis. Much of this employment is in the agricultural sector.

The known total annual wages for this labor amounted to more than $727 million dollars.

Wages paid by service vendors and suppliers were approximately $250 million dollars. Thus, this proposed legislation would adversely affect total annual wages of $1 billion dollars.

CAPITAL INVESTMENT

Total capital investment in breeding facilities and equipment is $543 million dollars. An additional $70 million is invested in training, $602 million is invested in race tracks. The value of the commercial horse is $1.12 billion dollars.

This adds up to a capital investment of $2.34 billion dollars. Although substantial, this figure must be considered only a very conservative estimate, in as much as there are many items of equipment such as horse trailers which could not be estimated with any degree of precision.

LAND USE AND VALUES

Land devoted to commercial horse uses in 1968 amounted to more than 1.9 million acres having a total value of $1.26 billion dollars. I would remind you that these values apply only to those portions of farms that are devoted to commercial horses.

The statistics make it abundantly clear that this extensive industry employs a large number of workers in agricultural type jobs and further, that the capital investment in facilities, equipment and land represents major generators of economic activities.

Gentlemen, these statistics are particularly significant when those of us charged with public responsibility face the multitude of contemporary problems with which we are expected to deal.

The horse ind'ıstry provides jobs at a time when we are seeking solutions to unemployment.

STATE REVENUE

The horse industry generates substantial revenue directly to the states at a time when you are being asked to provide federal revenue to the states.

Last week at the Southern Governors' Conference, I said that the states must commence to solve their own problems rather than look to the Congress. The states cannot solve their problems without revenue any more than the federal government can solve the problems for the states without revenue. In 1968, the total pari-mutuel revenue to all states amounted to $426.9 million. This combined with the $18.9 million in other taxes paid by race tracks brings the total tax from tracks and pari-mutuel betting to $445.8 million.

Proponents of this legislation might argue that you are indirectly subsidizing this sector of the farm economy. If that argument be true, I would only say in response that subsidizing employment, encouraging industry and supporting a viable revenue-producing source certainly is far more preferable than subsidizing unemployment and nonproductivity.

I would also add that migration from the rural to the urban areas is considered a major problem in this country. This proposed legislation conceivably compounds the problem.

RECREATION AND CONSERVATION OF AESTHETIC VALUES

In this period of urban sprawl and urban blight, it is gratifying to note that a substantial amount of land . . . much of it within easy commuting distance of our cities . . . has been set aside for horse industry activities.

Land used for horses is generally well cared for, with good cover and a minimum of erosion. In some parts of the country, such land represents the only open space and "green belts" in what would otherwise be an endless sea of houses.

It is clear to me, coming as I do from a state having an unparalleled richness in scenic attractions, that the conservation and aesthetic aspects of the horse industry have great intangible value.

It is my sincere hope that changes in the tax structure will not result in fragmenting these farms, or in drastically altering existing land-use patterns.

Many federal dollars are being invested in recreation. It is therefore highly significant that the number of horses used in recreation has increased considerably in the last decade.

Horseback riding is a major outdoor recreation activity and even without being federally subsidized has contributed to the health and vitality of our citizens.

Furthermore, Future Farmers of America, 4–H Clubs and other farm-oriented youth organizations are becoming increasingly engaged in horse projects. Thus, it is clear that the success of many of these projects depends strongly on the availability of horses at reasonable prices.

To further demonstrate the recreational aspects of this industry, in 1967 the attendance at horse racing events alone exceeded the attendance at all other professional or amateur spectator sports.

There were 63.4 million spectators at horse races in America while only 43.4 million attended professional and college football games and 24.2 million attended all major league baseball games.

In summary, I urge you to carefully reflect on the dimensions of this important industry that I have outlined briefly today. I respectfully ask that you also consider the many other factors which either have not been measured or are by nature intangible.

Still, these factors, too, substantially increase the economic impact and other contributions of the horse industry to America.

I salute each of you for your diligent efforts to find equitable means for sharing the burden of taxation.

At the same time, however, I would urge you to take care that you do not "throw out the baby with the washwater."

19	Value of Recreation Horses in the United States in 1968	28
20	Summary of Findings	30-31

I. INTRODUCTION

The public's interest in all forms of recreation in the United States has expanded during the last ten years, primarily as a result of the rapid growth of income. Overlooked has been the growth in recreational activities associated with horses. Especially impressive has been the growth of activities utilizing western horses, such as horse shows, trail riding, contests, and other participatory events. Interest in the different breeds and all horse activities is evident in the rapid increase in horse registrations, in numbers and frequency of horse sales, in the rapid growth in sales volume of supplies and equipment, and the proliferation of firms established to supply and service horses. One of the more obvious indicators of interest in horses is the increase in the number of horse magazines and their circulation. The study includes data obtained from a survey of 75 horse periodicals, most of which have been operating less than 15 years.

The size, scope, and growth of the horse "industry" has been largely unnoticed by much of the nation. The fragmented, heterogeneous nature of horse activities has prevented horsemen from joining in a common effort to publicize the renewed and changed size of the horse industry and its importance to the economy of the nation.

The Commonwealth of Kentucky is internationally known for the high quality of its horses. This reputation results from two factors: favorable geography, and expert horsemen. People in Kentucky have long recognized the importance of horses to the economy of the state, and are interested in the growth and vitality of the horse industry.

Spindletop Research, Inc., a not-for-profit research institution established by the Commonwealth in 1961, is active in research efforts directed toward the growth and development of Kentucky. As a public service effort, it has undertaken this study of the effect that horses have upon the economy of the nation, and indirectly upon the state. The results of the study may help show the importance of horses to Kentucky and to the nation as a whole.

SCOPE OF WORK

A nationwide study of an economic activity in the entire country can be made by two methods: a study of the activity in individual states can be made, and the state totals added to give national results; or, the study can be made on a broad aggregate basis, without specific attention paid to any individual states. Since there have been no comprehensive, state-wide studies of horse activities, only the second alternative was possible, and the results obtained in this study are aggregate national figures. It includes no figures for individual states.

The bulk of the published work on horses relates to pari-mutuel racing and the distribution of racing income to the various participants. Most of the money at tracks becomes transfers between segments of the racing industry. To the extent that money transactions in racing, or in other commercial horse activities, affect the economy of the nation, they have been included in the study. The basic aim of the study was to estimate the resources used on horses. The final results show the total amount of three traditional economic resources--land, labor, and capital--that were used in the horse industry in one year, 1968. Nothing can be or has been said about earlier years, and no projections are shown for future years. However, the rapid increase in activities related to horses is obvious, and this growth can be expected to continue for some years after 1968.

PLAN AND METHOD

Horses are no longer used in any number for either transportation or power. Their sole purpose now is to provide recreation, either as commercial spectator recreation, or as non-commercial participatory recreation. For purposes of data collection and analysis, the study was divided into three areas of impact:

- Direct commercial
- Indirect commercial
- Recreation

Direct commercial activities are those in which the horse is the instrument of commerce: breeding, training, racing, showing, and rodeoing. People in these activities make their living directly from working on or with horses. These horses are the tools of the trade. Only a small fraction of the total horse population can be considered part of direct commercial activities.

Indirect commercial activities are conducted by manufacturers and suppliers who furnish products and by professional people who furnish services. People who supply goods and services for either commercial or recreation horses depend upon horses for their livelihood, so that the total horse population can be considered applicable to indirect commercial activities.

Recreation as an economic activity has been given attention here only in its role as a generator of economic activities. The end product of the horse industry is recreation in the form of viewing races, shows, and rodeos; and in owning and riding pleasure horses.

The lack of economic data on horse activities required that the bulk of the information be gathered from each different group or activity in the direct commercial sector and for several in the indirect sector. Nearly 800 questionnaires were mailed, including distribution to 20 separate activity groups. None of these surveys was scientific enough to determine the statistical limits and accuracy of the results. However, the data received from questionnaires from 17 breed registries did allow the findings to be within the limits of reasonable accuracy. The final results are shown as high estimates and low estimates, based upon assumed upper and lower numbers of horses. The low total is the critical total in the study and is presented here as a conservative figure. It was not possible to gather economic data on hundreds of known and unknown firms in the many indirect commercial activities. No attempt was made to sum all of each resource used nationally, but instead, unit resources used for each horse was determined on a limited basis. Once the resource requirements for each horse in each breed and direct commercial activity were determined, then the requirements were applied to the number of commercial horses in that breed and activity.

The determination of thoroughbred trainers' employment and wages can be given as an example. Returns from thoroughbred trainers indicate that as a general average, two men can take care of three horses in training. There are 40,000 to 46,000 thoroughbred horses in training; hence, training requires a minimum of 27,000 employees each year. At an annual average wage of $5,050, the total wage bill is $135,000,000. Employment, wages, and capital in each commercial activity were determined by this method.

II. THE HORSE POPULATION

The total number of horses in the United States has never been accurately determined, but it is likely that the horse population increased along with the increase in human population. The Census of Agriculture has reported the number of horses and mules on farms through 1959. The peak year was 1915, when 26 million were reported; the number has steadily declined since then (reflecting the mechanization of farming), and in 1959, it was 3.2 million. The last count by the Department of Agriculture was 3.0 million in 1960. The series was discontinued and was not reported in the 1964 census.

A count of non-farm horses in the United States has never been made, but the number must have declined after 1900 when automobiles became widely used. The horse population probably reached its lowest point during the 1955 to 1960 period, when the use of horses for transportation and power had practically stopped. Stimulated by the growth of personal income, more leisure time, and suburban living, the use of the horse for recreation probably began to increase during that same decade. The increase in recreation horses, and the accompanying stimulus to commercial horse activities, has gone practically unnoticed except by the people directly involved with horses.

The only current data available on numbers of horses come from the horse breed registries. They registered 143,035 horses in 1968, compared to 72,898 in 1960, an increase of 96 percent (see Table 1). All kinds of horse recreation have been increasing rapidly. Local horse shows, contests, trail rides, and horse club activities have increased along with the increase in registration. The registries estimate that there were 1.26 million horses alive on their books in 1968.*

The number of unregistered (grade) horses used on farms or for recreation in the United States in 1968 is not known. The surveys of horse population made by individual states (see Table 2) have shown that the total number of horses exceeded that shown by the last national census. These studies indicate that the growth in non-registered recreational horses is greater than the decline in farm horses. A conservative estimate of the total number of horses in the country is the combined number of registered horses in 1968,

*The number of Shetland ponies was not available and has not been included.

and the 1960 farm census number, or 1.2 million plus 3.0 million. A minimum probable total for 1968 is therefore 4.2 million horses. A conservative upper limit to the total number of horses might be 6.2 million, somewhat less than the 7.5 million estimate that the United States Department of Agriculture. A conservative estimate for the horse population in 1968 thus would range from 4.2 million to 6.2 million. Estimates of resource use with horses are based upon these upper and lower limits. These estimates of the horse populations assumed for this study are shown in Table 3. These assumptions imply an incomplete knowledge of the actual numbers of horses in this country.

III. COMMERCIAL HORSE ACTIVITIES

The major part of the resources used with horses in this country is in commercial activities; the remainder is associated with recreation activities and pleasure horses. The activities classified as commercial are breeding, training, showing, racing, and rodeoing, which comprise what could be called the horse industry. Firms and individuals who supply and serve horses do so for both the commercial horse industry and for recreation horses. The total resources directly engaged in the horse industry and in supplying and serving all horses represent the economic effort resulting from horses.

BREEDING HORSES

Commercial breeders hold the responsibility for continuing the blood lines for the horse and pony registries. Even the smallest breed registries have some horse breeders who depend upon commercial breeding for most of their livelihood. The number of these commercial breeders in each breed registry varies from the 40,000 in quarterhorse to the dozen or less in American Albinos.

Commercial breeding is characterized by a high investment in land, equipment, and bloodstock (horses). The total land and capital varies according to the breed of horse. A trade-off exists between the amount of land required and the total value of land; more expensive land will support more horses per acre, so that less total acreage is required.

The labor and equipment required will also vary, depending upon the breed and purpose of the horse, the geographical location of the land, and the size of the breeding operation. Information is not available, however, that would allow precise relationships to be established for these variables. The survey data on labor and equipment are good enough to furnish reasonable averages, but the quality of the data will not justify conclusions about whether or not economies of scale exist.

Source of Data

Data on land acreage, land and equipment values, employment, and wages were obtained from a mail survey of horse farms of the five largest breeds of horses. Both random and selected sampling were used, and more than 300 questionnaires were mailed to breeders in the United States. The response was close to 20 percent. This information was supplemented by a number of personal interviews with selected breeders.

Average horses/man and wages/man ratios were established from the returns for each breed, and the ratios applied to the reported number of commercial horses of that breed. The ratios, total employment, and total wage bill for breeding are shown in Table 4.

Part-time employees have been converted to full-time equivalents, and the employment shown is for 12 month employment, or man-years of work. Instead of being classified as number of employees, a better description might be the number of equivalent yearly jobs that were filled.

Average acres/horse ratios were determined and applied the same way to get the total land used and equipment required. Table 5 shows the factors used for land and equipment, the total land used, and the investment for land and equipment in breeding. The investment in commercial horses is shown in Table 6 (includes value of animals only).

TRAINING RACE HORSES

Training thoroughbred, standardbred, and quarterhorses for racing is carried on by a large number of individualistic, mobile, entrepreneurial types. Trainers employ nearly all of the vast "backstretch" labor at all 135 race tracks. The trainer and his entourage of stable hands and horses move from track to track with the changing racing schedule. Trainers tend to be either local or national, and the national trainers might be running horses at four or five tracks simultaneously.

The arrangement between trainers and owners is flexible, and two types prevail: the public trainers who takes horses from almost any owner, and the employee-trainer who trains the horses of one or two owners of large stables. Standardbred trainers most commonly drive in races in addition to training horses, so that the categories of trainer and trainer-driver have been determined.

Source of Data

Questionnaires were mailed to a selected sample of 120 small, medium, and large trainers in the United States. The response of nearly 10 percent was too small to furnish more than reasonable

averages for labor, wages, and investment in training. Knowledgeable racing people have known that training is highly labor intensive, and the survey confirms this general knowledge. Table 7 shows the ratios used and the total employment wages and investment for training.

Estimates for the number of trainers and their earnings were obtained from several sources. Although most trainers belong to trade groups, those organizations have very little information on the number or earnings of full-time trainers. The Horsemen's Benevolent Protective Association reports about 16,000 members who are trainers. The number of full-time trainers is estimated to be 10,000, and each earns an average of $10,0C0 a year. Trainer employment is also shown in Table 7.

RACING HORSES

There are 154 racing associations which conduct racing programs at 135 tracks in the United States. They vary in size from $6 million average daily bet at Aqueduct in New York, to $110,000 at the Fair, in Billings, Montana. Associations usually operate for two to six months and most tracks are closed the rest of the year. A number of tracks, such as Ak-Sar-Ben, in Omaha, remain open all year for racing and other uses.

Many track employees do not work full-time, although a sizeable number travel the track circuit and work much of the year. Employment at tracks varies with the day of the week, and peak employment is on Friday and Saturday.

Source of Data

Labor, wage, and investment information was obtained from a mail survey of 21 race tracks in the United States. A selected sample of three each of the small, medium, and large tracks, including harness, thoroughbred, and quarterhorse, provided detailed information on wages and employment. Replies were received from 19 of the tracks. Representative data on employment and wages by job classification allowed averages to be determined for "representative" tracks for each size on a race-day basis. The number of race days for each track size, multiplied by the representative track average, were grouped into three sizes according to average daily bet. Tables 8 and 9 show the number of tracks in each size, equivalent employment, and wages for thoroughbred and harness tracks.* Information on track investment, shown in Table 10, was much less complete, so that estimates of average track investment are not as accurate as track employment and wages.

*Thoroughbred tracks include quarterhorse data

Associated racing activity is shown in Table 11. Most tracks contract out their food service, and could not furnish information. The estimates shown were based upon a limited amount of data supplied by one of the major concessionaires.

The numerous other services at tracks also are furnished by outsiders. Totalisator, film patrol, photo finish, Telautograph, and automatic timer services are provided by dozens of firms, from whom wage and employment data could not be obtained. Several thousand employees and millions of dollars in wages are not included.

Thirty four racing commissions operate in the 30 states that permit pari-mutuel betting. The employment and wage data were solicited from each, and these totals also are shown in Table 11.

The number of jockeys and driver-trainers and their earnings were estimated from data published in The American Racing Manual and by the United States Trotting Association. Earnings were based upon minimum charges plus winnings. Data on quarterhorse jockeys came from the American Quarterhorse Association.

SHOWING HORSES

The number of shows in the United States has been increasing along with the increase in registered horses. Much of the show activity is recreational, and most horse shows have low employment. Many of the larger shows contribute to charity, but the total amount is not available. The minimum employment at nearly any show will be one or two judges for the length of the show. The larger shows, such as Pin Oak, in Houston, and Devon, in Pennsylvania, employ sizeable numbers of people during the show and have a full-time staff during most of the year. Few shows are this large, however. Even fewer shows own their own quarters; most lease space and employees from stadiums or arenas.

Shows are listed by the American Horse Association, or the breed registry, or by both. Eastern shows are generally larger than western shows, but there are fewer of them.

Source of Data

Questionnaires were sent to a selected sample of 12 eastern and 40 western small, medium, and large horse shows. In addition, personal interviews were conducted with the operators of four medium and large eastern shows not included in the sample. The personal

Source: Spindletop Research

interviews and small questionnaire response provided the basis for the wage and employment estimates for representative size of shows. The number, employment, and wage data are given separately for eastern and western shows in Tables 12 and 13.

RODEOS

The increase in the number of rodeos has also been substantial, following the general trend of increased recreation activities. Rodeos are similar to horse shows in their great number and variety. The Rodeo Cowboys Association and the International Rodeo Association list the rodeos in which their cowboy members are allowed to participate.

Each rodeo requires a minimum number of non-stock people, such as announcers, judges, clowns, ushers, and parking attendants. The stock contractor provides the animals and the stockmen to handle them. Rodeos vary in size from the Houston Livestock Show and Rodeo, put on for six days in the Astrodome, to one day performances in small towns.

Source of Data

A mail survey was made of eight small and medium rodeos. Personal interviews with several rodeo operators and stock contractors supplemented the survey. Information from these sources provided the basis for averages to be developed for two sizes of representative rodeos. The total number of rodeo days was applied to average daily employment and wages for each of the two sizes of rodeos. Total employment and wages are shown in Table 14.

IV. SUPPLIERS OF GOODS AND SERVICES TO HORSES

It is not practical nor necessary to separate the goods and services used by commercial horses from those used by recreation horses. Sales to recreation horses generate employment and wages, have an effect on the economy of the nation, and therefore should be included as part of the total impact from horses.

Suppliers of goods and services to horses are the most diverse of the horse related activities examined in this study. Little information could be obtained from the individual commercial service and supply firms, who often were unable or unwilling to furnish information.

SUPPLIES

Horses require a large variety of goods and materials for their upkeep, but the impact has been shown for only four categories of suppliers:

- Employment in retail feed sales
- Employment and wages in manufacturing saddles and harness
- Employment and wages in manufacturing drugs
- Employment and wages in manufacturing western horsemen's clothing

Estimates can be made for employment and wages in these categories, and they probably represent a large part of all supplies used. No estimates have been made for any other retail or wholesale acitivity, nor for feed manufacturing. The employment and wages for suppliers for these categories are shown in Table 15.

Data are not available on other horse products and services, such as horseshoes, sulkies, vans and trailers, feed supplements, and horse transportation.

Feed Retailing

The number of people employed and wages in retailing feed could not be determined directly; instead, an indirect method was used. It was assumed that commercial horses were fed a recommended diet

of corn, oats, and hay, and that non-commercial horses were fed a much lower volume of feed. The amount of feed going to non-commercial horses was based upon published survey data gathered from recreation horse owners. Sales/employee and wages/employee ratios from feed retailing were taken from the 1963 Census of Retailing, SIC 5962. Many feed stores handle a complete line of livestock feeds, but the assumption was made that the share of employees attributable to horses was directly related to the sales volume of horse feed. Figures shown are for the two assumed horse populations, 4.2 million and 6.2 million, and show upper and lower estimates of employment and wages.

Saddle and Harness Equipment

The only category horse products that is reported separately in the Census of Manufacturers is leather goods, saddles and harness, SIC 3109931. The employees and wages in manufacturing saddles and harness have been estimated using 1963 and 1967 census data. An upper and lower estimate were made and are shown in Table 15.

Horse Drugs and Medicine

The volume of medicine and drugs used on horses was determined directly from a questionnaire survey made of members of the American Association of Equine Practitioners. The value of sales was converted to manufacturing employees and wages using data taken from the 1967 Census of Manufacturers, SIC 2833. Figures have been shown for the two horse populations (see Table 15).

Western Clothing Manufacturing

The boom in western horse activities is reflected in the increased sales of western clothing. The employment and wages in manufacturing were determined indirectly. High and low estimates of sales were made from sales/advertising ratios in the clothing industry, using the value of 1968 advertising in the five main westerm magazines. Total sales figures were then converted to employment and wages using ratios taken from the 1967 Census of Manufacturers, SIC 232. High estimates were based on an assumed three cents per one dollar of sales, and low estimates on five cents per one dollar. Results are shown in Table 15.

SERVICES

Veterinary Medicine

The number of people working in equine practice was determined from the questionnaire survey of members of the American Association of Equine Practitioners. People who spend part of their time treating horses were converted to full time equivalents, or man-years. The employment and wages results are shown in Table 16.

Farriers

The number of farriers and their earnings were also determined indirectly. Owners of commercial horses shoe their horses more often, and pay more than do the owners of recreation horses. Estimates were made based upon the known average income and yearly shoeing capacity of farriers for each of the two classes of horses. The results shown are better described as average yearly farrier demand, instead of showing the actual supply of farriers. The upper and lower estimates shown in Table 16 are based upon the two estimates of horse population.

Publishing

Nearly 100 horse magazines were asked to furnish information on their employment, wages, and circulation. Their incomplete returns provided the basis for the estimates of total employment and wages for publications about the horse industry, shown in Table 16.

Horse Organizations

More than 100 horse organizations were asked to supply information on their employment and wages. The estimates shown in Table 16 are based upon the incomplete returns from these questionnaires.

V. TAX CONTRIBUTION FROM HORSES

Horse activities generate tax revenues similar to other kinds of commercial and recreational activities in the nation, with one important exception: states which permit pari-mutuel betting share in the earnings from horse racing. These earnings are a sizeable contribution to most states; New York alone received more than $155 million in 1968.

Only two types of tax revenue are shown in the study, land taxes and pari-mutuel horse racing taxes. Other tax figures were beyond the scope of this study. Racing taxes are taken from statistics furnished by the National Association of State Racing Commissioners. Real estate taxes were estimated, based upon an average of three cents per one hundred dollars of assessed value of land, and an assessment rate of 50 percent. The results are shown in Table 17.

VI. RECREATION FROM HORSES

Horses have contributed for years to spectator recreation at racing, but it has been only within the last ten years that they have contributed in a large way to participatory recreation. Not much direct data are available to show the increase in horse recreation, but indirect evidence confirms that growth has occurred in horse recreation. The increased number of horse magazines and their circulation, the increase in number of state breed registry organizations, the growth in the number of suppliers, and the growth in number of smaller horse shows reflect the increased interest in horses. In 1966, the American Quarterhorse Association approved 1239 shows; the number rose to 1416 in 1968. Riding at stables and in 4-H clubs has increased; trail riding is becoming a major sport.

Attendance information on horse races is reported yearly by the National Association of State Racing Commissions. The number of people attending horse races has been fairly stable during the last few years. During 1967, more than 63 million people went to see horses race. Table 18 shows that horse racing attracts considerably more people than any of the other popular professional spectator sports.

The estimated value of pleasure horses is shown in Table 19, based upon minimum and maximum numbers of horses.

VII. SUMMARY OF RESULTS

Resources used in the horse industry in the United States in 1968 are summarized in Table 20. These estimates are necessarily conservative because some known activities could not be included. The commercial sector, especially the employment and wage figures shown, are recognized to be understated by some amount. Despite this downward bias, the estimate of resource use presented here is considered to be a sufficiently accurate representation of the impact of horses on the economy of the country.

Table 20
Summary of Findings

I. HORSE POPULATION

Estimate of Non-Registered Horses		5,000,000*	3,000,000+

(Whereupon, at 12:55 p.m., the committee was recessed, to reconvene at 2:30 p.m., of the same day.)

AFTERNOON SESSION

Senator ANDERSON (presiding). Senator Smathers, will you introduce your people?

Mr. SMATHERS. Yes, sir.

Senator Anderson, the American Horse Council would like to present a statement for the record on behalf of former Senator Thruston Morton and myself as general counsel and ask that that be made part of the record.

Senator ANDERSON. Without objection it will be so done.

(The document follows:)

STATEMENT OF THE AMERICAN HORSE COUNCIL, INC.

SUMMARY

1. The American Horse Council, Inc., an organization of some 200,000 members, consisting of most of the major horse associations in the United States is unalterably opposed to the farm tax provisions contained in Sections 211, 212 and 213 of H.R. 13270.

2. These provisions, if enacted into law would constitute a serious threat to much of the $12 billion horse industry in America.

3. At stake in that industry are (a) the interests of the 187,000 young boys and girls in 4-H horse projects (b) the well being of thousands of horse breeders-farmers who have no special federal subsidies (c) the investment of capital in rural communities which has created many thousands of jobs for the people of these areas making it possible for them to stay out of our overcrowded cities (d) the horse racing industry which returned $427 million to the 30 states where parimutuel betting was in operation in 1968 and (e) the schools, scholarship programs, hospitals, police and fire protection, new parks and play grounds that these millions make possible.

4. Congress has always championed incentives for the farmer. Since 1915 it has fought for the right of farmers to use the simplified cash method of keeping books. As recently as 1962, Congress specifically exempted livestock from Section 1245—the depreciation recapture rule applicable to personal property.

A. The Horse Industry

It is estimated that there are approximately seven million horses in America. The industry has lived through a virtual revolution in the past 25 years. It has now become a major factor in our economy. According to the Department of Agriculture, horse owners spend $5 billion a year just for items such as feed, drugs and equipment.

Added to that are the moneys generated by breeding farms, payrolls for allied industries such as the manufacturers of saddles, horseshoes, trailers, boots, hats, etc. Additional millions are spent in travel costs to attend horse shows, racing, rodeos and other horse events. The Department of Agriculture has estimated the size of the total horse industry at $12 billion.

B. Contributions of the Horse Breeder

At the heart of this great industry is the breeder of horses. Without him, we would not have witnessed a five million head increase in the horse population in the last quarter century. And without his continuing operations in the future, the industry would slip back into the deteriorated condition it found itself in during the early 1940's.

Horse breeders are often glamorously portrayed as men of great wealth—owners of luxurious stables and million dollar studs.

On the contrary, the average breeder of horses—race horses, pleasure horses, quarter horses, trotting horses, children's ponies—this average breeder more closely fits the mold of the average farmer.

For in fact, the horse breeder is a farmer. The product of his work—like farmers who till the soil and those who breed livestock—is subject to all the vagaries of weather, market fluctuations and, perhaps most importantly, the unpredictability of his crop. One wrong decision during a four year interval can spell disaster for him, just as it can for other breeders of livestock. There's no sure way of knowing in advance which of his foals are going to fall victim to disease or injury or some late developing physical disability. In good times and bad, he has to continue to buy feed, fence posts and fertilizer.

The farmer who breeds horses doesn't enjoy price supports from the Federal Government; he doesn't share in incentive payments such as those afforded to the sheep industry; unlike the dairy and beef industries he has no protection from excessive foreign imports.

The horse breeder has asked for no subsidies from the Federal Government. And he has none. Yet, along with other farmers, he feels the pinch of the skyrocketing costs of farm production.

5. The problem arises today because much publicity has been focused upon what is said to be a great "loophole" in the law. Yet the proposed remedy contained in the farm provisions of H.R. 13270 would raise only $5 million in 1970. *This constitutes only 3/1000 of 1% of the $154 billion in taxes collected by the Federal Government last year. Furthermore for the past 3 years the number of returns showing farm losses declined at the rate of 25,000 each year.* The problem is thus insignificant compared to the overall problem of collecting billions in taxes and closing giant loopholes.

6. We believe the answer lies not in new legislation but in more strongly enforcing the present law such as Section 165 which prohibits the deduction of all farm losses unless a farm is being operated "for profit."

Thruston B. Morton, President, and George A Smathers, General Counsel, submit the following statement on behalf of the American Horse Council, Inc.

Statement

I. Introduction

The American Horse Council is an organization of some 200,000 people who have joined together in the common goal of promoting the interests of the burgeoning horse industry of our nation. It was formed to define and implement program to meet the immediate and long-range needs for the industry particularly those concerned with medical research; studies in regard to its economic impact and contribution; and familiarizing the government and the general public with the industry.

The cohesive factor in the membership of our organization is horse ownership and a direct interest in the horse industry; our ranks cut a wide swath across our country's economic scale, both individual and businesses. Among the associations that have joined in forming the Council are the American Andalusian Association; the American Hackney Horse Society; American Horse Shows Association, Inc.; American Quarter Horse Association; American Saddle Horse Breeders Association; Appaloosa Horse Club, Inc.; Arabian Horse Club Registry of America, Inc., Morgan Horse Club, Inc.; National Association of State Racing Commissioners; The Jockey Club; The Pinto Horse Association of America, Inc.; The United States Trotting Association; Thoroughbred Breeders of Kentucky, Inc.; and Thoroughbred Owners and Breeders Association.

The citizen who devotes his life and money to breeding horses is making a contribution to the well-being of rural America. He is providing jobs, purchasing power and healthy recreation for our people. He is supporting the 187,000 young boys and girls in 4–H horse projects. He has helped to transform dying rural areas into vibrant places to live and work and raise a family.

In the last several weeks, we have heard the term "outside capital" in farming maligned. It has been used interchangeably with "tax gimmickry". We need to remember what capital invested in horse breeding, pure bred livestock operations, and crop improvement has meant to communities where it has been invested.

Henry Matthiesson remembers. He and his father have been cattle farmers in the Blue Ridge Mountains for the past 43 years. He has seen new capital come on the land and make it better—better for farming and better for the people who live and work in the valley they call home. Here is the way the former president of the American Hereford Association described it to the Ways and Means Committee:

"I look back on the origins of the farming community in which I have lived. There are perhaps a half dozen large farms in the small valley today; this, in place of perhaps 20 or 25 farms forty years ago. Most of that land was in the hands of banks in those days, and lying unfarmed. Today, there are perhaps an average of four to six farm families working on *each* of those farms, making a regular, secure living, and these farms are responsible for much of the prosperity of business in the neighboring communities. Much of that valley was an overgrown wilderness, 'farmed out,' when we came there, with none of the modern machinery and know-how that is available to it today. Someone put money in it forty years ago, or it would *still* be marginal support. That application of capital did not wreck *that* farming community or drive people out of it, it preserved the community and the people and made it better."

C. The Horse Racing Industry

The owners and breeders of race horses are making a unique contribution to our economy. Like all other horsemen, they enjoy no federal subsidies. On the contrary, they are subsidizing substantial tax revenues in the 31 states where a parimutuel betting system is in operation.

In Illinois, for example, horse racing returned $40 million to the State treasury in 1968. In New Jersey the figure was $34.4 million; California $57.3 million; and New York $155.7 million.

These moneys support schools, scholarship programs, hospitals, police and fire protection, new parks and playgrounds. They help make the community a better place to live.

Take those millions out of a state's treasury and one of the three things must happen: Either state ad valorem taxes will have to go up; or the Federal Government will have to increase state aid programs; or the quality of life will suffer.

This state tax revenue is always substantially greater than the total purse winnings of horse owners and the income to race tracks combined. In thoroughbred racing last year, total tax revenue exceeded total purse distributions by $160 million.

The cost of maintaining all thoroughbreds in 1968 was greater than all purse distributions by approximately $193 million.

It is apparent then that the horse racing industry is largely subsidized by the owners. Because of their willingness to invest in such a high risk venture, state and local governments can do more for their people.

II. THE CONGRESS HAS ALWAYS SUPPORTED FARM INCENTIVES

Historically, the Congress of the United States has always recognized these values that farming and ranching contribute to the betterment of our society.

Congress has also long been aware that our oldest and largest industry has not yet found its place in the sun—that farming has not shared in the prosperity of our economy generally. Congress has, therefore, deliberately written into the law certain provisions which it felt were essential for the farming and ranching industries.

For example, after capital gains provisions were added to the Code in 1942, the Treasury Department, concerned as always only with the amount of revenue returned to the government, tried for nine years to exclude breeding livestock from property that would qualify for capital gains treatment.

Restrictive Rulings were issued by Treasury in 1944 and again in 1945. Notwithstanding a 1949 Court of Appeals decision to the contrary, Treasury persisted. However, the Conference Committee of the House and the Senate meeting on the Revenue Act of 1950 directed that the Treasury follow the Court's ruling.

The following year, in 1951, the Congress, after deliberation, specifically applied capital gains treatment to livestock held for 12 months or more for draft, dairy or breeding purposes.

When the Congress amended the so-called hobby law in 1954, it recognized that the provisions written into the original amendment ten years earlier could "penalize bona fide business and enterprises." The Congress excluded, therefore, certain costs from computing the basic $50,000 loss figure, among which were those costs that farmers have traditionally been permitted to expense or capitalize.

In 1960, Congress added soil and water conservation, and in 1962, land clearing, to those costs which a farmer can expense or capitalize.

Also in 1962, when Section 1245 was added to the Code, Congress deliberately provided that livestock would not be subject to the recovery of depreciation rules.

A. Cash Accounting

Perhaps in no other tax area has Congress demonstrated greater concern for the farmer than in its insistence down through the years that the farmer may use a cash method of accounting.

Congress has always recognized that the accrual accounting method would impose new and complex difficulties and significantly greater costs on the farmer who is already besieged with an almost untenable burden of ever higher production costs, and low prices for his product.

Congress has, therefore, always fought for the cash method for farmers to help him avoid the necessity of keeping elaborate books and records and the almost impossible burdens of maintaining inventories and properly allocating costs.

Farmers have historically managed their farm operations on a cash basis. The Congress has long recognized this practice as a fact, and 54 years ago, two years after adopting the Sixteenth Amendment to the Constitution, which authorized the personal income tax, approved the Treasury regulations authorizing the right of farmers to operate their farms on a cash basis.

In fact, up until 1958 the Treasury *required* farmers to use cash accounting, if they did not keep complete and precise records. Treasury Regulations further say that the farmer is among those taxpayers who are not expected to keep detailed books of account.

The Treasury Department recognizes the difficulties that an accrual system poses for the farmer. It has, for example, set out in the Regulations how gross profits of a farmer are to be ascertained.[1] It has permitted an exception to the general rule and allowed the farmer to inventory his animals held for draft, dairy and breeding purposes along with those held for sale.[2] It has provided special inventory valuation methods for farmers.[3]

For the past eighteen years, the Congress has steadfastly resisted numerous attempts by Treasury Department officials to require farmers to give up the cash method.

When Congress acted in 1951 to assure that breeding livestock could qualify for capital gains, the following language of the Ways and Means Committee Report was emphatic in its insistence that Treasury not force the farmer to give up the cash method:

"Your Committee believes that the term 'livestock' should be given a broad, rather than a narrow interpretation; *and that the gains from sale of livestock should be computed in accordance with the method of livestock accounting used by the taxpayer and presently recognized by the Bureau of Internal Revenue.*"

The Senate Finance Committee was also unequivocal in laying down guidelines it expected Treasury to follow:

"Your Committee believes that the gains from sales of livestock *should be computed in accordance with the method of livestock accounting used by the taxpayer and presently recognized by the Bureau of Internal Revenue.*"

Following this action by the Congress, the Secretary of the Treasury sent a letter to the then Chairman of the Senate Finance Committee, Senator Walter George of Georgia, requesting that the Congress approve legislation giving the Department the authority to require farmers to adopt the accrual method. Senator George and the Committee refused to accede to the Treasury request and took no action.

In the President's Tax Message to Congress in 1963, the matter was again brought up. The Treasury Department, in its appearance before the Ways and Means Committee that year, urged that farmers who made over $15,000 in nonfarm income be required to establish an "Excess Deductions Account," made up of farm losses less gains. Gain from the sale of capital assets would be treated as ordinary income to the extent of the amount in the account. The effect of this proposal would have been most onerous to the small cash method farmers.

The Treasury was once again notably unsuccessful in changing the long-held position of the Congress about this matter. The Ways and Means Committee refused to act.

III. THE PROBLEM TODAY

Today we find these farm tax provisions once again under attack. It is said that some people are abusing the law—that they are putting money into farming as a "tax gimmick"—scavenging, so to speak, on the cash accounting method and other provisions Congress has authorized to help the farmer.

It is being said that this constitutes a great "loophole" in the tax laws; that

[1] Sec. 1.61–4.

[2] Sec. 1.61–4(b)(7).

[3] Sec. 1.471–6. (A farmer on the cash method may not inventory; one on the accrual method must. (See 1.61–4(b)).

this so-called "loophole" should be closed not by attacking the "tax gimmick operator," but by changing the whole system of farm accounting which Congress has consistently fought to preserve.

At the outset, we should ask ourselves how big is this problem that some say requires extreme remedies in order to cure? The Federal Government collected a total of $154 billion in taxes last year. The largest estimate of revenue loss that this particular problem involves—$145 million—was made by Mr. Surrey. If we accept his estimate. it amounts to less than 1/10 of 1% of the total revenue collected. The spokesmen for the new Secretary of the Treasury estimate that his proposal to solve this problem would raise $10 million in 1970. This comes to less than 1/100 of 1% of the total revenue collected. The proposal passed by the House of Representatives would increase revenues by $5 million in 1970. This represents 3/1000 of 1% of the total revenue collected.

Furthermore, in the last three years the number of returns showing a farm loss declined at the rate of almost 25,000 each year.

We submit, therefore, that this is really an insignificant problem when compared with the overall problem of collecting billions in taxes and in closing giant loopholes. The Surrey proposed pointed to only 2,600 tax returns of wealthy people as the maximum that could be involved. We say could be, because no one has ever claimed that all of those are "tax gimmick" operators, rather than honest, hard-working farmers and ranchers who suffer losses in the legitimate pursuit of improving horse breeds or cattle breeds or crops.

A. What is the Answer?

But even if, out of three million farmers, these 2,600 were all violating the law—the question arises as to what we are going to do to stop it. Do we change the laws which Congress has insisted upon for the benefit of the farmer for 54 years? Do we thus jeopardize the already precarious position of agriculture? Has farming reached such a level of prosperity that we should take away any advantages it may presumably have? We don't think so. We believe that this Congress should and will think as have the other Congresses of the past; that is to say that this is a minor problem that the Treasury presents; that the farmer should not be pilloried and abused; that the law should remain as the Congresses of the past intended it to be.

We recognize that every law the Congress writes—and particularly tax laws—are in time circumvented and abused by a few of the astute and ill-intentioned operators. But we don't think, to quote the ancient aphorism, "we should burn down the barn to catch a few rats." We believe that the answer lies in enforcing the laws already on the books.

We believe that these people who allegedly engage in farming to scavenger on the traditional and essential farm provisions are not covered by the provisions of the law under which they operate. Most of them would fail the "intent tests" spelled out in Sections 1231(b)(3) and 165.[4] There is no doubt that the Treasury Department can move effectively against questionable farm losses. In fact, such losses are now being questioned by the Internal Revenue Service in 47 cases presently pending in the Tax and District Courts under Section 165.

Some of these "tax gimmick" operations are also subject to regulation as investment contracts by the Securities and Exchange Commission. The SEC has already asserted its authority in similar ventures involving beaver, mink and fox.

Therefore we believe it would be a far wiser course for the government to move vigorously under present law against violators of those laws. To change these laws, as proposed, would be to punish all three million farmers in America for the wrongdoing of a few.

IV. ALTERNATIVE REMEDIES ADVANCED TO MEET THE PROBLEM

Let us examine what is proposed as remedies for this problem:

A. *The Surrey proposal* would limit to $15,000 per year the amount of farm losses that could be offset against non-farm income by any farmer who did not adopt the accrual method and capitalize all costs which can now be expensed or capitalized at the taxpayer's option.

B. *The Metcalf Bill* (S. 500) also applies to any farmer who does not adopt the accrual method and capitalize all costs which can now be expensed or

[4] Under 1231(b)(3) livestock must be held for one year *for draft, dairy or breeding purposes.* If they are not held for *one of those purposes* they do not qualify for capital gains. Under Section 165 a farm must be operated "for profit" in order for losses to be deductible.

capitalized at the taxpayer's option. Farmers who do not comply with these conditions would lose their right to offset farm losses against non-farm income on a dollar-for-dollar basis to the extent that non-farm income exceeded $15,000. Thus, a farmer having a $30,000 non-farm income, could deduct no farm losses against his non-farm income.

C. *The Miller Bill* (S. 1560) simply disallows all farm losses, except those attributed to a casualty or research) to any farmer who does not derive at least ⅔ of his total net income from farming. It applies irrespective of whether the farmer is on the cash or accrual method.

D. *The Treasury Tax Reform Proposals of April 22, 1969*, would:

(1) Make the accrual method and capitalization of expenditures such as for soil and water conservation, fertilizer, and land clearing costs (which can now be expensed or capitalized) the standard for determining farm losses which must be included in the computation of "preferences" under the "Limit on Tax Preferences" proposal. Cash method farmers would have to recompute their losses on the accrual method and the difference would constitute "preferences." Farm capital gains could not offset farm losses in the determination of "preferences." (Under the "Limit on Tax Preferences" proposal, a taxpayer can claim certain exclusions and deductions now allowed in full, only to the extent that such "preferences" do not exceed 50% of his total income. In other words, such preferences would be taxable to the extent that they exceeded his income subject to tax from all other sources.)

(2) Livestock was excluded from the depreciation recovery provisions of Section 1245 when the law was enacted in 1962. This exception would be removed, meaning that gain on the sale of livestock to the extent of prior depreciation taken would be treated as ordinary income.

(3) The holding period for livestock *other than race horses* would be extended from the present one year to the shorter of two years or ⅔ of the expected useful life before sales could qualify for capital gains.

(4) Race horses would qualify for capital gains only if (a) "in the hands of a breeder" they had actually been bred or (b) they were used "in the racing business" for two or more years.

(5) Farmers on the cash method would have to establish an Excess Deductions Account (EDA). All losses in excess of $5,000 would go into the account. The account would be reduced by net ordinary farm income in subsequent years. The proceeds of the sale of capital assets would be treated as ordinary income to the extent of the amount in the account in the year in which the sale is made; for example, a taxpayer loses $100,000 in 1969. $95,000 goes into his EDA. In 1970 he sells off livestock which would ordinarily give him a capital gain of $200,000. $95,000 is treated as ordinary income and the $105,000 is capital gains.

(6) Under the Hobby Law (Section 270), certain deductions are disallowed when a taxpayer incurs net losses in excess of $50,000 for five consecutive years. Treasury recommended that the time period be changed to "any three of five consecutive years."

E. *The House-passed bill, sections 211, 212 and 213 of H.R. 13270, would provide as follows:*

(1) A new hobby loss provision (Section 270) would disallow the deduction of *all* legitimate expenses from any business activity carried on "without a reasonable expectation of profit."

Heretofore, the law has always been based upon the "intent" of the taxpayer to make a profit. Under this new provision, the IRS will be permitted to decide whether the taxpayer's *intention* was *reasonable*. This would be a dramatic departure in the law and one that would cause undue hardships, uncertainty, and necessitate costly and time-consuming litigation.

(2) An Excess Deductions Account (EDA) will be required to be established which will cause taxpayers to report as ordinary income what would otherwise be classified as capital gain. This change in the tax rate could be the difference between a 25% and a 70% bracket. All taxpayers who make in excess of $50,000 in non-farm income and whose farm losses exceed $25,000 will be required to establish an Excess Deductions Account. Losses in excess of $25,000 would be entered in the EDA. To the extent of the amount in the EDA, capital gains from the sale of farm assets would be treated as ordinary income. In effect, this could increase a horseman's taxes by almost 200% under the present law.

(3) Depreciation claimed for livestock would be "recaptured" when the animal is sold. Thus, gain on the sale of livestock would be treated as ordinary income rather than capital gain, to the extent of depreciation deductions previously claimed.

(4) Livestock would not qualify for capital gains treatment until it was held at least one year after the animal normally would have first been used for draft, dairy, breeding or sporting (such as horse racing) purposes.

F. *The Treasury Department proposed to the Senate Finance Committee on September 4, 1969 that the farm provisions of H.R. 13270 be amended as follows:*

(1) That the Excess Deductions Account rules apply to any farmer whose non-farm income exceeds $25,000 and whose farm losses exceed $15,000. In such a case, *all farm losses* should be included in the E.D.A.

(2) The term "profit" in the proposed new hobby loss provision should "be specifically defined to include not only immediate economic profit but also any reasonably anticipated long-term increase in the value of property."

V. THE PROPOSED REMEDIES WILL HURT THE AVERAGE FARMER

All of these proposals fall into the following categories:

(a) threat to the cash method of accounting;
(b) limitations on the option to expense or capitalize certain costs;
(c) restrictions on Section 270, the hobby law;
(d) limitations on non-farm income.

Let us look briefly at each of these categories.

(a) Our response to the attack upon *the cash method* farmer is that the issue for the past 20 years has been between the technicians down in the Treasury Department who obviously want to increase tax revenues, and the Congress of the United States which looks at the broad spectrum of what is best and, indeed, what is essential for America's three million farmers.

Congress has always put the welfare of the average farmer first in its deliberations. We don't believe the sordid story of a handful of tax dodgers is going to persuade the Congress that attacks upon the farm community and farm traditions are an appropriate response.

(b) The Surrey and Metcalf proposals provide that, in addition to giving up the cash method, farmers may *not* offset farm losses against non-farm income *unless* they also capitalize all costs which the Congress has heretofore permitted the farmer the option of either capitalizing or currently deducting. These include costs of soil and water conservation, fertilizer and land clearing.

The Treasury proposal calls these expenses "tax preferences" upon which it would place a 50% limitation.

Congress just added the soil and water conservation provision to the Code in 1954. The provision on fertilizer was added in 1960 and that with respect to land clearing in 1962. Have conditions for the farmer improved so much in the past seven years that these provisions are no longer needed by the farm community? It is impossible for us to believe that the Congresses of recent years who wrote these provisions into the law for the benefit of farmers were so ill-informed or short sighted.

(c) The present hobby law provides that if losses in a trade or business exceed $50,000 for five consecutive years, the individual's tax is re-computed for each of those years and limitations are placed on the amount of loss that can be deducted. In computing the $50,000 loss figure, certain deductions are exempted by law. For example, in 1954, Congress excluded from hobby loss computations those expenditures which may, at the taxpayer's option, either be capitalized or deducted when incurred.

The Surrey proposal called Section 270 "ineffectual." However, a few years ago, while teaching at Harvard, Mr. Surrey posed this question about Section 270:[6]

"*. . . how can it be withdrawn without affecting the genuine business activities of an individual with his finger in many pies, or those genuine activities carried on by individuals which generally show red figures for the initial years because of the nature of the business, such as horse breeding, fruit raising, mining or hotel operation or may suddenly show losses for several years due to adverse conditions . . .*"

Thus Mr. Surrey pointed a finger at the heart of this problem. It takes 3 to 7 years before new citrus trees begin to bear fruit. The cycle in purebred livestock operations is 5 years. There is a three year lapse from breeding until a race horse is even eligible to enter a purse race. All of these investments take time before they, hopefully, begin to show a profitable return.

[6] "Federal Income Taxation, Cases and Materials," Stanley S. Surrey and William C. Warren, The Foundation Press, Inc., 1955.

After 25 years experience with Section 270, including at least one relaxation of its potentially penal characteristics, we believe that the Congress will finally decide against tightening its restrictions. If the law were changed, as has been proposed, it is a certainty that many taxpayers, who are making great contributions to our people as a result of their research investments into the rural communities of America, will be driven out of these areas.

(d) The proposals that limit the right to deduct *farm losses* against non-farm income seriously damage and restrict the operations of the long-time genuine farmer.

In today's farm economy, the farmer is increasingly turning to off-the-farm supplementary income. In so doing, he is simply following the recommendation of the Farmers Home Administration, which, through its predecessor agency, began urging the farmer to diversify his farm operations when the agency first opened in 1933. For the past decade, the admonition has been to diversify not his farm but his source of income.

The success of these efforts is reflected in a recent address by Dr. M. L. Upchurch, Administrator of the Economic Research Service, U.S.D.A.:[6]

"Off-farm income has become an increasing factor in the life of farm families. *In 1967, the farm population got $13 billion net from farming and $10.7 billion from non-farm sources. On the average, each farm operator family received $4,526 net from farming, and $4,452 from non-farm sources. Non-farm income per farm family more than doubled between 1960 and 1967.*"

If this rate of increase continues in the future, and it will probably accelerate if tax incentives are granted for industry locating in rural areas, the non-farm income of the average farmer will exceed $15,000 in 13 years. If the Metcalf or Surrey proposals were adopted, the average of all three million farmers in America would then be forced to relinquish the cash accounting method they have been able to operate under since 1915 or be denied the right to offset farm losses against their non-farm income.

The strange anomaly of these proposals is that if the farmer proved to be more successful at farming than he was in his other business investments, he could continue to deduct all his business losses against his income from the farm. We believe that fairness and equity require that the principle should work equally in either direction.

VI. THE QUESTION OF LAND VALUES

The Surrey proposal states that "the price of farmland (is) beyond that which would prevail in a normal farm economy." In effect, it says the price of farmland is too high. Senator Metcalf acknowledged that his proposal would bring farmland prices down "in some areas."

We don't believe there is any citizen, either on or off the farm, who wants the land he presently owns to decline in value. With lower land value, the farmer who desires to expand into contiguous acreage, will have less collateral to offer Banks will be reluctant to loan money. The percentage of the selling price the farmer can get on a purchase money mortgage will decline. He will need more cash for a down payment. If he hasn't got it, and there's equity in his existing holdings, he can put up the land he already owns as collateral. But with declining values, it may not be enough, particularly if, like the average American, he already has that homestead under mortgage. He'll find the same problem when he wants a loan for new equipment, or operating capital.

The many farmers who have been able to sell out to land developers, pocket an amount of money they could never have realized from farming, and move further out into the country where they can and do buy more acreage at a fraction of the price they sold for, have not been heard to complain of increased land values. They can do a lot of things for their wives and children they otherwise could not have done. They can upgrade their total standard of living. They can be sure that their children get the best education.

One of the arguments used by the sponsors of these proposed changes is that outsiders with money come in and buy up land so that locals can't buy it. Surely there is little logic to this. The farmer who covets his neighbor's land does not want the value of *his land* to diminish. Surely he should realize that as all our people grow more affluent, have more leisure time, they will normally move back to the farms or ranches as a second home, and of course this increases the price of the land—his neighbor's and his own. This movement upward of land values, we submit, is desirable overall—surely it's better than a downward movement.

[6] Before the Annual Agriculture Outlook Conference, February 18, 1969.

To allege as some do that "outsiders," "tax avoiders" drive up the price of land and hurt the legitimate farmer, is to ignore the facts of our growing population, our growing wealth, our growing leisure time, our growing opportunities to enjoy the long-sought "country life."

VII. THE FARM COMMUNITY NEEDS OUTSIDE CAPITAL

Implicit in these proposed changes is the belief that outside capital which is good and desirable for all industries is somehow harmful to farming.

Completely overlooked are all the benefits that investment capital have meant to the farmer, the rural community and to the American people in general.

Outside capital built American agriculture. It made new technology possible. It has helped to produce the finest beef and the finest citrus of the world. It seems incomprehensible to suggest that we should, all of a sudden, stop our improvements in the food and nourishment we eat—any more than we should stop the investment of capital in the production of championship race horses which attracted over 65 million people to watch organized racing last year resulting in $427 million in state tax revenues to 30 states.

You can't breed an animal and raise a mature offspring ready for the track or the market overnight, anymore than you can plant a seedling and expect a crop the next day. All this takes time—and money. Farm research, like research in every other industry in America, is considered part of the overhead. It is not expected that research will immediately return a profit. But it is essential for the continued growth and development of the farm industry. Take the research dollars out of the space industry and we would never have put an American on the surface of the moon. Take research out of agriculture and the results will have a far more direct and immediate effect upon the pocketbooks and the dinner tables of all Americans. Take dollars away from rural communities and our rural citizens will be forced to move, in greater numbers, into our already overcrowded urban areas.

The Congress won't do that. As a matter of fact, it has numerous bills pending before it today to sweeten tax incentives for industry that move into rural areas. One of these is the Rural Job Development Act (S. 15) introduced by Senator Pearson and co-sponsored by 35 Senators. We don't think Congress really wants to *increase* incentives for all other rural industry and simultaneously *decrease* incentives for farming.

We applaud the purposes of S.15, but does it make sense to ask the Congress to establish new incentives for industries that move into rural communities and provide jobs, while, at the same time drive other businesses and individuals who are now supplying jobs out of our rural communities?

Our reading of Senator Pearson's bill leads us to believe that the incentives it calls for would be available to farm investors as well as investors in other rural industry. This is as it should be.

The Congress has already created a Small Business Investment Company, industry, to stimulate outside capital into small business. This industry has generous tax advantages which include the authority to write off certain capital losses against ordinary income. Perhaps a Small Farm Investment Act, with equally generous tax advantages, would portend an era of general prosperity for the farmer, especially the family farmer, that has somehow eluded all prior efforts.

VIII. CONCLUSIONS

The farming community today is beset with many problems. With production costs at an all-time record high and parity at only 73%, the farmer is getting far less of a return for his efforts than he deserves for having produced the best beef and pork and vegetables and citrus for the American family dinner table.

The farmer needs help. His industry needs stimulation. It needs innovation. It needs research, it needs capital—it needs money. Surely this is no time to be taking money *out* of the farm community.

Somehow, we need to extract the finest principles of other industries that have made this country the free enterprise model of the world, and apply them to a new revolution in agriculture that would truly benefit all the three million big and little farmers in America.

What the farmer doesn't need is further restrictions and encumbrances that would enevitably diminsh his opportunities to achieve success in his chosen field—what he needs is a greater opportunity to achieve a parity with the rest of our prosperous economy.

We don't believe that the farmer who happens to lose money should be identified with or bear the blame or suffer the consequences of a handful of people who are "tax gimmick operators."

It is they—and not the farmer—against whom action should be taken. There are laws on the books today to put the "tax dodger" out of business. Section 165 of the Internal Revenue Code prohibits the deduction of any losses from a farm that is not being operated for profit. If laws such as these were vigorously enforced, as they should be, we would not have to be considering ways to diminish the few incentives that the farmer, thanks to an understanding Congress, enjoys today.

Mr. SMATHERS. As our second witness, Mr. Chairman, I would like to call on Mr. Ed Honnen, who is the chairman of the American Horse Council. Mr. Honnen is a most interesting person, a genuine rancher, and farmer, and I think he has an accomplishment that nobody else in this room can claim. He is 70 years old, a member of the Rodeo Cowboys Association of America, and can still go out and in 9 seconds rope and throw down a steer.

Mr. Honnen, you just take off.

STATEMENT OF EDWARD H. HONNEN, CHAIRMAN OF THE TRUSTEES, AMERICAN HORSE COUNCIL

Mr. HONNEN. Thank you, George.

Gentlemen, it is an honor to be here. I appreciate the courtesy. I am a businessman from Denver, Colo., operating throughout Colorado. I have several ventures. I merchandise heavy construction equipment. I merchandise engines. I do some land development. I do some building construction, and I also have a horse ranch and racehorses.

All of these operations are run with the same endeavor, to make a profit. They are all run with the same type of bookkeeping. The energy and the effort and the business acumen that I possess is put into all of them equally, I have no problem with most of the ventures as far as the Internal Revenue is concerned, but I am continually challenged on the hobby provision, on the horse racing business.

To me this seems to be discrimination because it is not applied to my other businesses. My auditor tells me that if I have a loss in my engine merchandising business, that I could charge it against profits of my horse business, but I cannot charge off losses of my horse business against profit of my engine business.

I can see very little difference in this operation. Most of the challenging has been through the hobby provision of the present law. I believe that this hobby provision might have had some justification when it was enacted some 30 years ago, but today the horse industry is an entirely different setup.

We are at least a $7 billion industry today involved in many facets besides horse racing. The active participation of the numbers of horses in racing is minimal compared to the total number of horses.

I raise quarter horses, and we do a little racing of those horses, but the major part of our horses are used for utility purposes, recreation, youth activities, rodeo events, showing of horses, and as I say, to a minor extent, horseracing.

The U.S. Department of Agriculture alone is sponsoring through their Extension Service 210,000 horse projects with 4–H kids.

The American Quarter Horse Association alone has more than 1,100 youth shows, and I want to assure you that at these youth shows and at these 4–H projects I do not think that you will find any long-haired youth there. These are children that are gaining a wonderful experience in life from their association with horses.

In the horse industry we are talking about a minimum of 4 to 5 million horses. We are not only a heavy impact on the economy of this country, but we are also of great benefit to the social and the recreational welfare of our people.

To me I see no justification in crucifying an industry that is doing as much good for the United States as it is.

Under the present law of the hobby provision, we have learned to live with it. Ir my 18 years' experience in racing horses, I have been fortunate in being able to show a profit every 4 or 5 years, but it is still challenged each year.

This is a discriminatory clause. In the present legislation as proposed we have other measures in there that are of a similar discriminatory nature. The EDA is a method of bookkeeping that is adopted for people who keep their books on a cash basis that is definitely discriminatory and not applicable to other business.

The tightening and more severe provisions of the hobby provision are not applied in practice, to any other business.

Gentlemen, our business is normally a rather speculative business, a rather risky business, because we are dealing not only with the normal economics of a business but we are dealing with genetics, we are dealing with accidents, we are dealing with normal health catastrophes that we have in any animal industry, so rather than be abused, we should be assisted.

We should have some help from the Federal Government in developing an industry that is doing as much for the country as this is.

If you want to kill the horse industry, adopt the provisions in House bill 13270. If you want to bleed it to death, modify those provisions. But if you wish to help us, leave the statutes as they are, because I am sure that with the proper administration of the present laws, that we can weed out the violators, the loopholes that exist today.

Thank you.

The CHAIRMAN. Mr. Honnen, you said you would not see any long-haired youth at one of those quarterhorse shows?

Mr. HONNEN. Male youth I should have said.

The CHAIRMAN. That is why I started to correct you. You would have seen my daughter, because she loves horses, I bought her a $75 horse and she managed to win a fourth prize at somebody's show with a $75 horse. I bought a $500 horse, it darned near killed the judge kicking up in the air while she was trying to handle him, and then I decided why I would buy a better horse so I bought a $5,000 horse and now she has her place covered with trophies that she won with the better horse. But some farmer sold my daughter three horses. If it is that farmer you are supposed to be helping, all I can say is that there are three horses whose sales might have been in jeopardy.

I do not mind losing the money because it is fine for a young woman to get out and compete with other young women with horses. It is fine, and is the cleanest sport that there is so far as I know.

But I do not see how it is going to help farmers if we make it difficult for families to encourage their young people to buy horses and go out and compete. Do you see how it is going to help a farm?

Mr. HONNEN. It won't.

The CHAIRMAN. This is supposed to tax people out of the farming business so it will only be left for farmers. Well, if young people are not able to buy the horses, then how is that going to help the farmer?

Mr. HONNEN. It is not going to help him.

The CHAIRMAN. It seems to me as though the way it stands now, at least as far as this person is concerned, I would at least be encouraged to buy some horses for my children to go out and compete with. But if we are going to fix it so that in addition to what I lost I cannot deduct it as well, I would think that that hurts farmers, because they will have less sale for their horses.

I think you might also find that there will be a lot of farms up for sale, and whatever that farmer hopes to get for the farm he won't get because there will be nobody else except another farmer, who is just as poor as he is, available to buy the farm from him. So I would think when the farmer goes to sell his farm, or if he dies and the widow has to dispose of it, that there would be no market.

There would be plenty of farms on the market looking for buyers with no buyers to buy them.

Mr. HONNEN. If this provision goes through, my farm will be for sale, and I doubt if I will find a buyer for it either.

The CHAIRMAN. That is part of the problem it seems to me.

Do you want to present your other witnesses?

Mr. SMATHERS. No; we will have questions of this witness, if there are any.

The CHAIRMAN. Any further questions?

Mr. SMATHERS. Thank you, Mr. Chairman, and thank you, Mr. Honnen.

Our third witness is Mr. Harry Farnham, who is the president of the National Association of State Racing Commissioners, and I might add is the chairman of the Nebraska State Racing Commission.

Mr. Farnham, why don't you proceed.

STATEMENT OF HARRY J. FARNHAM, PRESIDENT, NATIONAL ASSOCIATION OF STATE RACING COMMISSIONERS

Mr. FARNHAM. Thank you, Senator.

Gentlemen, let me first apologize to you for having to speak to you today with a very hoarse voice. I hope you will bear with me.

With me today are two other commissioners, Mr. Newton Brewer, who is chairman of the Maryland State Racing Commission and Mr. John Bell, who is a member of the Kentucky State Racing Commission. They will be available for any questions that the Senators might have.

The National Association of State Racing Commissioners is composed of the commissioners from 30 States in the United States that have parimutuel racing. This covers harness racing, thoroughbred racing, quarter horse racing—all types of horseracing.

In each of these 30 States there are from one to nine members on the racing commission. In my State of Nebraska, it is a three-member commission, as it is in most States.

We have a membership of these State racing commissions of from 200 to 300 people, and our job is to regulate horse racing, which happens to be the No. 1 spectator sport in America.

Now the reason that I bring this up, gentlemen, is I think great significance must be placed on the fact that these racing commissioners have unanimously, without a single dissenting voice, expressed their opposition to the horse provisions in the legislation that is before this committee.

I am going to be very brief and just try to emphasize three points in connection with my formal statement that was given to you.

First, what weight should be given such a unanimous position taken by State racing commissioners. Well, I think a great deal, because we deal with the horse business, we deal with the matter of parimutuel racing every day of the year.

There is no element of self-interest involved.

As you know, the vast majority of State racing commissioners are paid nothing. They serve at the pleasure of their Governor. So I think that when a group of men like this take a position in unanimous opposition, that considerable weight should be given to it.

Now, secondly, just what is it that these racing commissioners oppose? What do they base their opposition on?

First of all, they feel very strongly that the legislation that is pending bfore you will seriously endanger the $300 million in direct parimutuel taxes that go into the State treasuries of the 30 States that have parimutuel racing.

These provisions would raise $5 million in revenue, but they would endanger $500 million worth of revenue to the States. If the damage this legislation did were to the extent of 20 percent each year, $100 million would be lost in direct tax revenue to the States, in order to close a supposed loophole that would bring in Federal tax money of $5 million.

Further, this revenue to the States costs less than 1 cent on the dollar to collect.

As Governor Nunn pointed out, this is a time in which we are attempting to restore the Federal-State balance and get more moneys back to the State. This could be a very serious blow to the resources of these 30 States.

Secondly, this $500 million per year that goes to the States in parimutuel taxation is but a drop in the bucket compared to the taxation that goes to the Federal Government and the State governments and the local subdivisions by reason of all of the activity and all of the property of this several billion dollar industry. Hence the tax loss can be phenomenal, and that is what the commissioners base their opposition on.

Now, why would this hurt?

The reason is that without the present system, there is nothing that will encourage investment. As a matter of fact, people have indicated their desire to leave the industry in droves, if such legislation as this is passed.

In the testimony this morning I kept hearing instances of extreme examples of where there had been some abuse. Someone else has said that if there are abuses, isolated abuses, that what is needed is a high-powered rifle, in order to take care of these, not a shotgun that is going to wipe out everybody in our industry.

This, gentlemen, summarizes the position of the National Association of State Racing Commissioners, and on their behalf we appreciate your allowing us to appear before you.

Mr. SMATHERS. Mr. Chairman, we have a letter here from Governor Buford Ellington, of Tennessee. He wanted to be here in person. Originally he thought he was going to be here and so stated, but something came up that prevented his coming, so I would like to read just a portion of the letter if I may.

> As Governor of Tennessee, I submit this statement to you in opposition to the farm tax law changes as proposed in H.R. 13270. If adopted, these restrictive measures will have a stifling effect on the livestock industry in my state and drastically discourage future growth in a segment of our agricultural economy that is having such a positive and greatly needed impact in rural areas.
>
> As one who was farm born and farm-reared in the rural South, I feel I am qualified to give testimony on this matter. I know and appreciate the farmer's problems and the very real and serious threat created by the provisions of this bill which are so harmful to his interests.

I am skipping down. He says:

> The livestock industry in Tennessee amounts to an annual sum in excess of $372 million. The future of cattle and horse raising is bright in my State, unless it is discouraged. Growth of livestock production has expanded the job opportunities in rural areas where jobs are most needed.
>
> My concern as Governor of Tennessee—

And I am skipping again—

> is that the proposed farm tax changes will discourage capital investment so vital to the health and growth of the livestock industry in our State. I have personally seen what new interest and new capital invested in capital in horse farms can do to revive declining agricultural economics. In particular, horse training and horse shows have opened new areas and have injected fresh capital and a vital ingredient into our rural economy.
>
> We need this income for our farmers. We need the jobs. We need the markets created for agricultural products.

Then I skip again:

> I urge you to abolish or to amend the discriminatory farm tax proposals contained in House Resolution 13270.

Mr. Chairman, I would like to make that letter in its entirety a part of the record.

(Gov. Buford Ellington's prepared statement follows:)

STATEMENT OF GOVERNOR BUFORD ELLINGTON OF TENNESSEE, SUBMITTED BY THE AMERICAN HORSE COUNCIL, INC.

As Governor of Tennessee, I submit this statement to you in opposition to the farm tax law changes as proposed in H.R. 13270. If adopted, these restrictive measures will have a stifling effect on the livestock industry in my state and drastically discourage future growth in a segment of our agricultural economy that is having such a positive and greatly needed impact in rural areas.

As one who was farm born and farm-reared in the rural south, I feel I am qualified to give testimony on this matter. I know and appreciate the farmer's problems and the very real and serious threat created by the provisions of this bill which are so harmful to his interests.

The State of Tennessee has many beautiful mountain ranges, but it also has great farmland areas. These rural areas have historically been the home of men and women of independent spirit, who have made the soil the source of their livelihood. We all want to preserve the time honored and basic occupation of farming. We all know that the technology of this age, and the rapid changes in farm production have brought depression to many formerly thriving areas of croplands. It has forced many of our citizens from the land, to seek jobs elsewhere. In recent years, there has been a decided development in new uses of this cropland, through production of horses and cattle. Livestock raising has always been an important part of the agricultural economy of Tennessee, but it has expanded into even greater significance in recent years. Tennessee-raised cattle are known throughout this land, wherever quality cattle are produced. And the famed Tennessee walking horse has become nationally popular, while other horse breeders are finding Tennessee's attractions encourrging to horse farming. The livestock industry in Tennessee amounts to an annual sum in excess of $372 million. The future of cattle and horse raising is bright in my state, unless it is discouraged. Growth of livestock production has expanded the job opportunities in rural areas where jobs are most needed.

We all know the problems of the crowded cities, made worse by the flow of the rural unskilled to the urban areas. Certainly, we should not discourage enterprise that has a tendency to bring jobs and opportunities to those rural residents, in their own environment.

My region of the United States, the south and mid-south, is undoubtedly more sensitive to the effects of laws which discourage rural development because they affect more of our area, more of our people, and more of our economy. We are necessarily becoming more mindful of preserving farm areas, not only for the sake of conservation, but because of the urgency of the economic situation. We need these rural lands for watersheds, for recreation, for limiting pollution, and for our own future. We should not discourage in any way their development as cattle and horse farms, for this form of agricultural pursuit is most compatible with sound conservation. The changes in this tax bill affecting farm taxes will discourage that development more, I believe, than many realize.

My concern, as Governor of Tennessee, is that the proposed farm tax changes will discourage capital investment so vital to the health and growth of the livestock industry in our state. I have personally seen what new interest and new capital invested in cattle and horse farms can do to revive declining agricultural economics. In particular, horse breeding, horse training, and horse shows have opened new areas and have injected fresh capital and a vital ingredient into our rural economy. We need this income for our farmers. We need the jobs. We need the markets created for agricultural products.

I appeal to this committee, to the Congress, to consider carefully changes in tax laws that can have a profoundly detrimental effect on our agricultural industry. I, too, favor tax reform and believe abuses of the farm tax laws should be corrected. But we cannot afford the price of threatening the economic health of an entire industry which contributes so much to our economy, and promises so much for the future. I urge you to abolish or amend the discriminatory farm tax proposals contained in H.R. 13270.

Mr. SMATHERS. Here is a statement from the New Jersey State Department of Agriculture, Governor Hughes who at one time thought he was coming down to testify. He had a number of things he wanted to testify about in this bill, and he finally decided to just send it in the form of a letter through his Department of Agriculture.

I skip through it again.

We have no doubt whatsoever, and there are leading representatives of the horse industry among us, who readily would attach to this that the restrictive and discriminatory provisions of H.R. 13270 will discourage and eventually put an end to the activities of those who are the mainstay of this industry in the State of New Jersey. Already representatives of every segment of the industry have expressed deep concern about this legislation, and more disturbing to us in New Jersey have made it clear that they could not carry on under the provisions of that bill.

To those who may be thinking that this after all really could not be too harmful to an industrial State like New Jersey, let us cite just a few statistics. We mentioned earlier that the horse industry is a vital part of the economy of our State. This is no exaggeration. Interestingly enough, as certain other agricultural endeavors have declined, the horse industry has grown, and each year plays a more important part in their economic development.

The New Jersey horse industry spends more than $1 billion a year in New Jersey. It pays several million dollars annually in municipal, in county and in State taxes. It provides jobs for an estimated 200,000 people in New Jersey.

In the 26 years that parimutuel betting has been in existence in New Jersey, our tracks have provided $491 million for the State treasury. Needless to say, there are many businesses which depend for their very existence or derive considerable income from the horse industry: feed companies, chemical companies, manufacturers of medicines, farm and equipment firms, and even the veterinaries medical professions are just a few of those further growth and economic vitality industries, and they are closely tied and depended upon the horse industry. The New Jersey experience alone would be tragic evidence of the millions wise and billions foolish revenue policies underlying the proposed farm tax changes in the bill now under consideration.

We urge the Senate Finance Committee to repeal them.

Mr. SMATHERS. Well, they have not yet been passed. It was signed by Mrs. Lawrence Yetter, Chairman of the New Jersey Equine Advisory Board, a part of the Department of Agriculture of New Jersey.

I would like to make that a part of the record, Mr. Chairman.

(The letter referred to follows:)

STATEMENT OF NEW JERSEY EQUINE ADVISORY BOARD

Millions wise and billions foolish.

Reasonable and knowledgeable men can so characterize the farm tax changes incorporated in HR-13270.

The Treasury Department's best estimates show an increase in tax revenue of only $5 million in the first year as a result of the proposed farm tax changes. By contrast, we should like to draw from our experience in New Jersey alone to demonstrate clearly that the proposed farm tax changes could jeopardize and ultimately destroy a vital and growing segment of our economy—the horse industry.

We have no doubt whatsoever—and there are leading representatives of the horse industry among us who readily would attest to this—that the restrictive and discriminatory provisions of HR-13270 will discourage and eventually put an end to the activities of those who are the mainstay of this industry in our State. Already, representatives of every segment of the industry have expressed deep concern about this legislation and, more disturbing to us in New Jersey, have made it clear that they could not carry on under the provisions of this bill.

To those who may be thinking that this, after all, really couldn't be too harmful to an industrial state like New Jersey, let us cite some statistics. We mentioned earlier that the horse industry is a vital part of the economy of our State. This is no exaggeration. Interestingly enough, as certain other agricultural endeavors have declined, the horse industry has grown in our State and each year plays a more important part in our economic development.

The New Jersey horse industry spends more than a billion dollars a year in New Jersey. It pays several million dollars annually in municipal, county, and State taxes. It provides jobs for an estimated 200,000 people.

In the 26 years that pari-mutuel betting has been in existence in this State, New Jersey tracks have provided $491,508,499 for the State Treasury.

There are eleven different breeds of horses in New Jersey. A partial survey taken by the New Jersey Department of Agriculture in 1961 shows that there were 18,271 horses and ponies in the State. That figure today exceeds 50,000.

Needless to say, there are many businesses which depend on their very existence or derive considerable income from the horse industry. Feed companies, chemical companies, manufacturers of medicines, farm and equipment firms, and even the veterinary medical profession are just a few whose future growth and economic vitality are closely tied in with that of the horse industry.

Nor can anyone overlook the social and cultural benefits from this industry. The growth of the industry has meant the preservation of open spaces which is so important to a rapidly developing state such as New Jersey and the horse plays a greater role each year in recreational activities of all of our citizens, especially our young people. In 1968, for example, there were 3,637 persons enrolled in 4–H projects in this State. This was an increase of 1,521 over 1963.

We believe that all of this is sufficient evidence that the horse industry is indeed a mainstay in the economic, social and cultural life of our State. Needless to say, we do have our problems—a number of obstacles which must be overcome to assure the vitality of this industry. Up until now, we have been firm in our resolve to overcome these problems and to continue to make an important contribution to the economic and social life of our State. However, the enactment of the legislation now under consideration would be so devastating as to bring an abrupt halt to the activities of those who contribute so much to the very existence of our industry. We contend, as we have said before, that this will have a serious impact on the economy of New Jersey. We are talking now not of a few farms, not of a few horsemen, but of the many millions in jobs and State revenue and in overall economic growth.

The New Jersey experience alone would be tragic evidence of the millions wise billions foolish revenue policies underlying the proposed farm tax changes in the bill now under consideration. We urge that these changes be repealed.

Mr. SMATHERS. Here is a summary of a letter from the Governor of the great State of Delaware. It says:

DEAR SENATOR LONG: "Since it is impossible for me to appear personally before you and your distinguished colleagues on Monday I wanted to provide a viewpoint that I hope can be made a part of your record. I am referring specifically to those portions of the House-passed tax reform bill that affect racing, particularly the so-called hobby loss feature. Admittedly I am not an expert on racing. I have, however, looked into this matter in some detail and have discussed it with persons who are extremely knowledgeable in this field, and I cannot but conclude that the provisions adopted by the House would strike a severe blow at one of our substantial sources of income.

There is much talk today about the sharing of revenues between the Federal and State governments. There is much talk also about the inability of our State governments to raise the funds needed to carry out essential programs and provide needed services. We certainly cannot afford to lose any major source of tax income.

The legislation at hand according to the best information that I can receive would seriously jeopardize the horse racing and breeding industries in Delaware. Last year the State of Delaware received nearly $4 million, out of a budget of under $200 million, in direct revenue from parimutuel horse racing. This represents an increase of 39.5 percent over the past ten years.

The thoroughbred breeding industry in our State is a fast-growing one. These farms and racing tracks provide employment for many of our citizens. They attract visitors to our State and in general provide many sources of income. The combined racing and breeding industries in Delaware represent an investment of approximately $10 million.

Today there is flat racing in Wilmington, Delaware, Philadelphia, Pennsylvania, New York State, Monmouth, New Jersey, trotting tracks are conducted at Wilmington, Atlantic City, New Jersey, and in Maryland and New York. These tracks are open six days a week and it takes a large number of horses to be able to meet the demand.

H.R. 13270 would have the effect of reducing the number of horses owned by those who supply the bulk of our race horses and thus would mean a worsening of the shortage that exists today. I am certain that you have heard or will hear from those much more familiar with the intricacies of this problem. My only desire is to inform the committee that provisions of the House-passed tax reform legislation would in my opinion be harmful to the State and to the people of Delaware.

Mr. SMATHERS. I would like to make that a part of the record, Mr. Chairman, if there is no objection.

(The document referred to follows:)

LETTER FROM GOV. RUSSELL W. PETERSON TO SENATOR RUSSELL B. LONG

SEPTEMBER 19, 1969.

Hon. RUSSELL B. LONG,
Chairman, Senate Finance Committee,
U.S. Senate, Washington, D.C.

DEAR SENATOR LONG: Since it is impossible for me to appear personally before you and your distinguished colleagues on Monday, September 22, I wanted to provide a viewpoint that I hope can be made part of your record.

I am referring specifically to those portions of the House-passed tax reform bill that affect racing, particularly the so-called "Hobby Loss" feature.

Admittedly I am not an expert on racing. I have, however, looked into this matter in some detail and have discussed it with persons who are extremely knowledgeable in this field. And I cannot but conclude that the provisions adopted by the House would strike a severe blow at one of our substantial sources of income.

There is much talk today about the sharing of revenues between the Federal and State governments. There is much talk also about the inability of our State governments to raise the funds needed to carry out essential programs and provide needed services. We certainly cannot afford to lose any major source of tax income.

The legislation at hand, according to the best information I have received, would seriously jeopardize the horse racing and breeding industries in Delaware. Last year the State of Delaware received nearly $4 million—out of a budget of under $200 million—in direct revenue from parimutuel horse racing. This represents an increase of 39.5 percent over the past 10 years.

The thoroughbred breeding industry in our State is a fast-growing one. These farms, and racetracks, provide employment for many of our citizens, attract visitors to our State and in general provide many sources of income. The combined racing and breeding industries in Delaware represent an investment of approximately $10 million.

Today there is flat racing in Wilmington, Delaware; Philadelphia, Pennsylvania; New York City; and Monmouth, New Jersey. Trotting races are conducted in Wilmington; Atlantic City, New Jersey; and in Maryland and New York. These racetracks are open six days a week, and it takes a large number of horses to be able to meet the demᵖnd.

H.R. 13270 would have the effect of reducing the number of horses owned by those who supply the bulk of our race horses and thus would mean a worsening of the shortage that exists today.

I am certain that you have heard or will hear from those much more familiar than I with the intricacies of this problem. My only desire is to inform the committee that provisions of the House-passed tax reform legislation would, in my opinion, be harmful to the State and people of Delaware.

Sincerely,

RUSSELL W. PETERSON, *Governor.*

The CHAIRMAN. Did you have further testimony?

Mr. SMATHERS. Yes, sir. I want to submit for the files of the committee a petition which has been signed by many people from all over the United States, from Georgia, Virginia, and every State in the Union for that matter, protesting this type of legislation. That petition was circulated by the publisher of Horse World magazine, it is too big and cumbersome to have in the record, but I would like to have it remain in the file if there is no objection.*

The CHAIRMAN. Could you just put in a nutshell why you think that this small revenue of $5 million would do very grievous harm to the industry. Now that is a very big industry, and you might explain just in a nutshell, Senator Smathers, why a tax hoping to raise only about $5 million a year will do very grievous injury to this industry?

Mr. SMATHERS. Mr. Chairman, I will be delighted to do that. On behalf of this horse council, may I first say this, before I address myself precisely to that question: there are 200,000 members of this American Horse Council. I have had the opportunity of talking and visiting with many of them, and I do not know any of them who approve total tax avoidance by people who make profits.

I think, and it has been my observation that these people also believe that everyone should pay a minimum tax. They do not have any sympathy whatever for the 155 people whom Secretary Joseph Barr last fall talked about who had incomes of over $200,000 and who paid no tax at all. Our members are not tax dodgers nor tax avoiders.

However, they firmly believe, and they are in the business, that if the provisions of this House bill are adopted, that it not only threatens the $12 billion horse industry, and that is the Department of Agriculture's figure as to how big it is, but it will be successful in destroying it.

At stake in this particular industry are the interests I might add here of 187,000 young boys and girls who are in 4H clubs today and who have horse projects, and we all know how sympathetic the Congress and particularly the Senate is to these kinds of 4H projects.

We also know that as to the well-being of thousands of horse breeder farmers who have no Federal subsidy, no special subsidy, it affects them, and it affects them very drastically. What I recall most vividly, Mr. Chairman, and which very seriously makes me have the greatest concern about what is going to happen if these provisions of the House bill should become law is that I have seen in my own State from the University of Florida, which was located in Gainesville down to Orlando in the early 1930's that area was a desolate land. It was too far north to be able to grow citrus effectively.

It was a wasteland. The sun would shine on it in the day and make it dry, and the winds would blow the sand away, and then the hurricane season would come along and wash it away and there was nothing there.

I drove over that 150-mile stretch many times when I was at the university going back to my hometown in Miami. However, along came this particular provision in 1943, which was adopted by Congress, under the leadership of this committee, at a time when Senator George of Georgia and Senator Milliken of Colorado, and other distinguished Senators of this great body, whom all of us admired were serving, and Bob Doughton from North Carolina was in the House Ways and Means

*The document referred to was made a part of the official files of the committee.

Committee. They provided some incentive for people to go into these desolate areas and invest their money, in order to try to rescue those areas so that they no longer would be nonproductive insofar as products were concerned, but nonproductive insofar as returning taxes were concerned.

The result was that people who did have money went into this area from Gainesville south, and they began to invest money into what was then very cheap land. We developed at the University of Florida something known as Tifton grass, some other type grasses, and they began to put it into the soil there and it began to make great grazing for cattle, and particularly for horses. Today, 30 years later, you can ride that same trip, and instead of seeing the desolation which once existed, no income returning to the counties or the cities in that area, today you see beautiful farmlands, many more people employed. The land is wealthy, beautiful Angus cattle and Hereford cattle and race horses of every description, and it is a lovely, beautiful productive area.

That has happened not only in Florida but in Delaware, in Louisiana, in Nebraska, in every State in the Union, and certainly here in Virginia and in Maryland and other States, and what has caused it has been the inducements to people who did have money, who were willing to invest their money into these otherwise nonproductive areas.

I would think that if we now change it around, and reverse the opinion of Senator George and others who sponsored this type and character of amendment, and took this provision away—which is what the House bill seeks to do, you are going to find these people just as you heard this gentleman right here say—"They can buy my ranch."

I have had letters and I have talked to the people in this area that I talked about, and without exception they say "We cannot afford to and we will not stay in the business and we will not provide that infusion of capital, and we will not be able to provide that employment and we will not be able to help that area grow as we have done."

Now, what this means, if this happens, Mr. Chairman, is we are going to not only lose the income to the cities and the counties and the State and so forth from that area, but we are going to hasten the migration of people from the rural communities into the cities. We aggravate the problem of the welfare rolls. We aggravate the problem of the ghettos. We aggravate the very problems on which we are spending lots of money and time to avoid today. It does not make a lot of sense to me to hear this or any other administration talk about the fact that they are considering giving a tax credit to business to go into these areas, to provide employment with one hand, and on the other hand to stamp it out, as this bill would do—not the administration, but as this bill would do—to stamp out that capital which is today providing employment in those areas.

Mr. Chairman and members of the committee, I submit to you that if ever there was an overkill bill, this is it. On page 71 of the House Ways and Means Committee report they say that $5 million is all that will be returned to the Government by closing this so-called loophole by 1971, and it is estimated that in 10 years, by 1979, they may get $20 million. When the States themselves derive $427 million from parimutuel racing alone it does not make sense to give up that or any part of that to get back $5 million. It does not make any sense to destroy what can be and is a $12 million business with something like 500,000 employed people in it, in order to get $5 million.

Mr. Chairman, we submit that this bill really does not make much sense in its present form. We beg the full and most prayerful consideration of the members of this committee, because we do think that if it were passed the way the House has proposed it, we are satisfied that it will cut the income from the farm areas. Everybody agrees, and as a matter of fact Senator Metcalf argues that he wants to get the land value down. I cannot help but say to him, you know in Florida the legislature every year appropriates $75 million to advertise our State. We beg people to come there, in order to raise the value of land, because those who have gotten it are better off. They can borrow more against the land. So I cannot understand the position of the Senator from Montana, who says, "We want to keep all these other people out with their money, because we want land cheap so that our fellows can buy it."

I say, Mr. Chairman, it will increase unemployment, if this bill is passed, if these House provisions are passed, it is going to deprive the States of income and revenue. It is going to eventually raise the price of beef, raise the price of cattle because there will be less cattle.

It is going to raise the price of orange juice and grapefruit juice and pecans and all the rest because there will not be any way for anybody to get in business.

This hobby loss bill says that if you lose more than $25,000 in 3 out of 5 years, you are presumed not to be in business with the reasonable expectation of making a profit. And the Internal Revenue can then take away all of your loss deductions. There is no way to make an orange tree grow to fruit-bearing stage in less than 5 years. There is no way you can grow a pecan grove in less than 11 years. So what it means is that if you keep the provisions as they are in this bill, that the people who now have the groves and the orchards, have got a real bounty. They really have it great, because there will be no new competition. Nobody else will be able to get into the business.

I do not think that is what is intended. I know it is not. But that is what will be the result. So, Mr. Chairman, we submit to you that we want this committee to give most prayerful consideration.

I will end with this: There is a section in the law right now, section 165, which provides that if they believe a man is in the farming business without the intention of making a profit, the Internal Revenue can disallow all his claimed deductions for losses. The best proof of it is that today, at this very moment, there are 45 cases in the Tax Court on this same problem.

If Internal Revenue is concerned about Mr. Stevens and his ranch out there in Montana or Mr. Oppenheimer's program, I submit that they already have the authority to eliminate any possible abuses through the active, vigorous enforcement of the laws that we have on the books today.

Thank you very much, Mr. Chairman.

The CHAIRMAN. One thing that some people ought to realize about any law is that the only way you can make money losing money under the tax laws is if you can deduct more than 100 percent of what you lose.

Now that is something you learn. I learned it by losing money. I lost money in farming, and believe you me I did not go into it with that intention. I just found how tough it is to make money out of it.

My impression has been that the people I know in Louisiana, and there have been some who had substantial money and went into horse racing, prize cattle, and things of that sort, did not go into it intending to lose money. They went into it planning to make money and they in fact had made money. But it took them a while to do it.

They not only made money for themselves but they made money for all their neighbors because they demonstrated that this thing would work. The fellows who started this—Louisiana being a State that produces some very fine race horses and that sort of thing—had to actually go in there and take a chance and they had to have a lot of money to do it with. But once they proved it could be done a lot of little fellows could get in and make money. But somebody had to be the icebreaker—somebody had to plough ahead and show that it could be done.

Those that did built a very driving prosperous industry.

Now some people might have thought they were crazy to do it, but they have quit losing money. They are doing very, very well as you have indicated. And I am not sure, as I say, that if those people were put out of the business that it would help the farmer that Senator Metcalf is complaining about. It seems to me that what it would do, by throwing all their stock on the market for sale, would be to depress the value of what every other farmer is holding.

I happen to have a piece of farm property. I could not make any money at it. Some other fellow is running cattle on it. I hope he makes something out of it. But if we fix it so that people cannot afford to go into business, then the land I hold is worth even less than it was before.

So it would seem to me as though the proposition where one thinks he is going to help the farmer who stays out there year in and year out, in the last analysis it squeezes the equity and value out of that man's farm and perhaps even livestock. He has less people to do business with, less people to sell, and the kind of venture capital that tends to make for new markets might not be available to him.

Mr. SMATHERS. Exactly, sir. I agree with you completely, Mr. Chairman.

The CHAIRMAN. Senator Anderson?

Senator ANDERSON. You mentioned that Senator George worked on this legislation.

Mr. SMATHERS. I was told by Mrs. Thompson of the staff that Senator George did; yes.

Senator ANDERSON. I thought it came from the Agriculture Committee of the Senate, of which I was a member.

Mr. SMATHERS. It was in the tax bill, Senator, I mean this provision.

Senator ANDERSON. I do not think it was.

Mr. SMATHERS. I beg your pardon?

Senator ANDERSON. I do not think it was. It was in the agriculture bill. There was a long plea that every cow would be terribly distressed. Now, this provision appears in your brief on page 12, section 270, "This would allow the deduction of all expenses from any business activity carried on without a reasonable expectation for profit." What is wrong with that?

Mr. SMATHERS. Well, we have in the law now that if they do not have a genuine intention of making a profit, that the Internal Revenue can disallow the deductions now. One of the problems with the reasonable expectation of profit is that it is attached to and tied up with a change in the amount. Where it used to be $50,000 a year that you could lose, they have reduced that to 25. They have reduced the 5-year period, in one of which you had to lose less than $50,000—they have reduced that now to 3 out of 5 years. You could not lose more than $25,000 in any 3 out of a 5-year period. So it is the combination of the reasonable expectation of profit and the $25,000 limitation and the further limitation and restriction of a 3-year period. So it is the combination of these three which we think would mean that nobody would invest in a new operation because they could not have a reasonable expectation of making it pay within 3 years.

Senator ANDERSON. A reasonable expectation of profit is not too difficult.

Mr. SMATHERS. Mr. Honnen wants to add something.

Senator ANDERSON. Don't you own cattle?

Mr. HONNEN. No, just horses.

Senator ANDERSON. No cattle?

Mr. HONNEN. No cattle at all, just horses.

Senator ANDERSON. Do you expect to make a reasonable profit from those?

Mr. HONNEN. Yes, definitely.

Senator ANDERSON. What is wrong with this legislation then?

Mr. HONNEN. I did not hear, sir.

Mr. SMATHERS. The problem is that you cannot start out a new operation and have any reasonable expectation of making it pay within 3 years.

Mr. HONNEN. There is a great deal of difference between the word "intent" and the words "reasonable expectation." I would like to cite a case that occurred with me last Saturday night. I participated in a race in Los Alamedos, Calif. in which there was a $100,000 purse.

Senator ANDERSON. That was a tiny purse.

Mr. HONNEN. It is pretty big to me.

Senator ANDERSON. I saw one of $160,000 the other day, one race.

Mr. HONNEN. My horse finished third in this race, and won $12,000 for it. If he had won the race by running 8 inches faster, I would have won $55,000. Now I could very easily have been in a 2-year loss bracket, so that this gain of $42,000 could have been the difference between putting me in a profit year and putting me into a loss year.

Now there is nobody who can deny my intent that I went out to try to win that race. I slept with that horse the night before. I nursed him all during the day. I tried to convey to him my desire to win. My intent could not be questioned. But when he went to the race track, the odds were 21-to-1 against him, so there was no reasonable expectation according to IRS that I had a chance to win.

Senator ANDERSON. You say you did have a reasonable intention. In the horse operation you did have a reasonable intent to make a profit, did you not?

Mr. HONNEN. Yes, definitely.

Senator ANDERSON. That is all this calls for.

Mr. HONNEN. But the decision is not being left under the law to me. The decision is being left to the IRS.

Senator ANDERSON. We find cases going to court all the time. This is nothing unusual. Do you really think you are trying to make a profit? That is all you have to do.

Mr. SMATHERS. The words are reasonable expectation rather than reasonable intent. He had an intent. But the Internal Revenue may say to him that is not a reasonable expectation.

Senator ANDERSON. Then he goes into court if he wants to and tries it?

Mr. SMATHERS. You can go to court, but nobody likes to go to court, Senator Anderson. I am sure you understand that.

Mr. HONNEN. I cannot afford to fight the Government.

Senator ANDERSON. Lots of people do.

Mr. HONNEN. They have got more money than I have got, Senator.

Mr. SMATHERS. And less brains.

Senator ANDERSON. I think it is too bad that you think it turns on that alone.

The CHAIRMAN. Senator Williams?

Senator WILLIAMS. Senator Smathers, I am delighted to welcome you back to the committee. I have listened with interest to your presentation. You were reviewing as I understand it the history of this industry over the past 30 or 35 years, how it has been progressively expanding. Has this growth rate and expansion rate been rather even and progressive since the so-called enactment of whatever it was in 1943?

Mr. SMATHERS. Senator Williams, the answer is I think it has grown more rapidly in recent years than it did in the 1940's or the middle 1950's. It may be, Mr. Honnen, do you have any comment to make?

Mr. HONNEN. I think the American quarter horse history is comparable with the normal history of other breeds. In 1941 we had a registry of about 580 horses. Today we have a registry of about 50,000. Now you can realize that in the increase those first foals that were brought out of these 586 horses of the original registry, half of them would be females, and in due time they would be producing colts, and half of that crop would be females and they would be producing colts, so the increase has been a normal genetic increase. Today we are raising 70,000 foals a year in the quarter horse registry alone, and this would easily be duplicated by the combination of the other registries besides all of the unregistered horses.

Senator ANDERSON. The point I am trying to bring out is that this has been a normal expected increase over this period of 30 or 35 years.

Mr. SMATHERS. I believe that is correct, Senator Williams.

Senator WILLIAMS. Well, Senator Anderson mentioned the fact that one of these bills originated in the Agriculture Department and I think the confusion is in this. In the first instance you are referring to the bill enacted by the Finance Committee but as I recall it, about 15 or 18 years ago there was a provision put in an Agriculture bill which extended capital gains provisions to livestock, and it is that new provision which there is some criticism about.

Since this growth of the industry has been over 30 to 35 years rather consistent, could it safely be said that the capital gains provision is not the basis of it? Would it not be wise to eliminate that provision which I think is the heart of the point where it is pointed out that men actually can, by charging off as normal income the costs on these farm operations, convert the profit to capital gains? That seems to be the problem.

Could we not solve that problem we just repeal this latter-day law, which was put in the Agriculture bill, and perhaps make a great step forward toward correcting this problem?

Mr. HONNEN. This is true under the old provision which was normal in a 6-months' period on capital gains. But by changing this law, as proposed, to make you hold an animal to acquire capital gains for a year beyond his eligible racing age, or beyond his age when he would normally be bred is the abusive and the discriminating part, because it is not used against any other industry.

Today the market for horses is basically on yearlings, because the big money and purses is in the futures which are 2-year-olds. So the breeder and the racer of the horse sells them as yearlings so the new owner will be able to get them in training and be able to compete in races as 2-year-olds.

Under the present proposed provision you could not sell that animal until he was a year after his 2-year-old age, which would be at the end of his 3-year-old year, the beginning of his 3-year-old year. The same way with breeding animals. You could not sell them until a year after they were of breeding age which normally with horses is 5 years old so you could not sell him until he started his 4-year-old year.

That means a breeder would have to maintain and hold on his farm these horses for an extra year and an extra 2 years on breeding animals in order to gain advantage of the capital gains there.

Senator WILLIAMS. The point that I am making is that up to about 16 or 18 years ago there was no capital gains provision no matter if you held him 20 years. You trace the growth of the industry, as I understood it, it has been rather systematic and just an average growth over a period of time so I am just asking the question perhaps this was an unnecessary addition to the tax law, and a provision which is not applicable to any other commodity that is produced on farms.

Mr. SMATHERS. I would like to say that you asked me did I know and I responded I did not know whether or not this had been a systematic growth over the years. As I started to say, and I am inclined to think that it has grown much greater in the last number of years as people have become more affluent, and we have more leisure time, as more and more people have gone to the races, there are more members of the Horse Council and everything else.

With respect to the elimination of this capital gain feature, I would certainly not recommend it as the solution to the problem of some abuse. I do not really believe that you should start discriminating in some respects on capital gain against the horse industry, or for that matter the farmer or anybody else.

We do not do it with stocks. You do not do it with bonds. You do not do it with any other kind of property. You have got a 6-months' holding period. You give them capital gain treatment at that point. I just do not understand why then we would say to the farmer to whom we have always given some special place in our economic system, why we say to him or a fellow who aspires to be a farmer, we are going to say we will discriminate against you by not allowing you the capital gain treatment that we allowed to the other people.

Senator WILLIAMS. You might say you are not discriminating necessarily because the farmer takes a year to produce his wheat or any other crop that is on the farm or any other type of crop. He does not get the provision of capital gain. It is only extended to these two items, and as I recall it, it was extended by a floor amendment offered to an agriculture bill.

Senator Anderson. By Senator Thye.

Senator Williams. There was considerable discussion at the time that this may open up a loophole where it would give the whole industry some embarrassment. I think a review of the debate at that time would be well in order. It may show us how we got into this problem that we have.

Mr. Smathers. All right, we will take that review, and I thank the Senator.

Senator Curtis. I will try to be brief because we have many witnesses here. The real nub of your opposition to this bill revolves around the hobby farm?

Mr. Smathers. Yes, sir.

Senator Curtis. At the present time the law prescribes that it has to be 5 successive years without a profit. I would like to ask you gentlemen do you regard this horse business as a business?

Mr. Honnen. Yes, sir.

Mr. Farnham. Absolutely, Senator.

Senator Curtis. It is a business, not a hobby?

Mr. Farnham. Yes, sir.

Senator Curtis. It hires people and so on?

Mr. Farnham. Yes, sir.

Senator Curtis. Now is it true that it takes upward of maybe almost 10 years to start from scratch and build a profitable stable?

Mr. Farnham. In many cases it takes that long, Senator.

Senator Curtis. Is it also true that the average horse breeder only produces three a year?

Mr. Farnham. Last year the horses that ran, speaking of thoroughbreds, Senator, there were 14,000 different breeders listed for the thoroughbred horses that ran at American race tracks, and that worked out to an average of three per breeder.

Senator Curtis. Now if they have to show a profit before the third year, they have got to sell the best stuff they have, do they not?

Mr. Farnham. Absolutely.

Senator Curtis. And then it will go to somebody else?

Mr. Farnham. That is right.

Senator Curtis. If horse raising is a business and not a hobby, why not treat it like a business?

Mr. Farnham. That is all that we are here asking, Senator, is that we be treated like a business.

Senator Curtis. Mr. Farnham, as you know, we have got one other problem in Nebraska.

Mr. Farnham. Yes, sir.

Senator Curtis. Under Nebraska law you cannot carry on parimutuel betting for profit. It either has to be a governmental subdivision or a nonprofit organization. Sometimes you have a county fair which has racing and they come under the governmental subdivision. But if an agricultural association has racing, it is my understanding that the parimutuel will be regarded under the House-passed bill as unrelated business activity.

Mr. FARNHAM. It could be, and it would be to the State of Nebraska a very disastrous thing, Senator.

Senator CURTIS. The nonprofit racing track, after they pay their expenses and the upkeep of their barns and property, turn it back to a youth council, which involves 4–H Club affairs and the promotion of agriculture, is that not right?

Mr. FARNHAM. Either that, or if they bought rescue squad units for almost every small city in Nebraska, charitable, eleemosynary or agricultural purposes, they have to get rid of every dime they make.

Senator CURTIS. Through the years Congress when it needed revenue had been tempted to tax parimutuel betting, but they refrained, because that source of revenue had been over the years given to the State, is that not right?

Mr. FARNHAM. Yes, sir.

Senator CURTIS. And how much did you say it amounts to, Mr. Farnham?

Mr. FARNHAM. Last year it was $426 million, and the projection this year, just from the horse part, Senator, will be well over $500 million to the 30 States that carry on parimutuel wagering, over $500 million in calendar year 1969, and I again emphasize that those are tax dollars to the State that cost less than a penny per dollar collected.

Senator CURTIS. Do you know how many people the racing business employs?

Mr. FARNHAM. Half a million to 1 million, Senator, and I can get a more exact figure on that, but just in the farm portion of the business that supplies these race tracks, it is estimated there are over a half million people employed in all 50 States, because all 50 States are engaged in breeding operations, even though they do not have parimutuel racing.

Senator CURTIS. And many of them are unskilled or come from minority groups, Cuban, Puerto Rican?

Mr. FARNHAM. Many of them have never done anything, Senator, but work as grooms or work with horses, work with livestock, and they are absolutely qualified to do no other work, sir.

Senator CURTIS. And you think that if there is some man of extreme wealth that is not paying any taxes because he is in the business of horse racing, that it could be reached in some other way?

Mr. FARNHAM. We are going to all be shot down this way.

Senator CURTIS. Is there any way a person can go into the horse breeding business and make it pay in 2 years?

Mr. FARNHAM. There is very little chance. Somebody can conceivably get very lucky and do it, Senator, but it just is not in the cards.

Senator CURTIS. Is the land that is used for horse breeding—adding to our surpluses?

Mr. FARNHAM. If it was not used for horse breeding, Senator, most of it would be taken out, put into corn production, and then the next year taken out and it would receive government payments for idle acres, because they have taken the land out of corn or wheat production.

That is what would happen with most of the pastureland that is presently used for horse production.

Senator CURTIS. That is all, Mr. Chairman.

The CHAIRMAN. Senator Miller?

Senator MILLER. On the holding period, are you familiar with the fact that the Treasury represents when they testified before the committee suggested that the 12 months be reduced to 6 months?

Mr. FARNHAM. Yes, Senator, I am.

Senator MILLER. How would that help?

Mr. FARNHAM. Well, Senator personally the other two provisions, this could be harmful to the industry as Mr. Honnen has said, but to me the other two provisions that we are talking about are disastrous, can literally kill the industry. This is something——

Senator MILLER. What is that provision?

Mr. FARNHAM. The reasonable expectation is changed——

Senator MILLER. I do not want to talk about that. I only want you to answer my question. In the House bill it requires the holding of 12 months from the time the animal begins its use as the capital type asset, breeding or racing. I have heard some pretty good criticism of that. But I point out to you that the Treasury representatives, when they appeared before us recently, recommended that it be reduced to 6 months. My question to you is will that be of some help to you or will that hamper you?

Mr. FARNHAM. I am sure it would be better than the House bill but I am interested.

Senator MILLER. You would much rather have 6 months than 12 months, I am sure of that.

Mr. HONNEN. There is very little difference in it, because it would upset the whole marketing program of running type horses, because of the futurities and the money is in them, and if you had to hold the horse for 6 months after he was 2 years old, you are too late then for a new owner to pick him up and train him because it takes 4 months to train him to get him ready to race, so you have got 10 months of the year gone and you would have a chance the last 2 months to run him. In a breeding animal if you are going to hold it 3 years, holding it 6 months or another year, you have passed the breeding period which is from February 1 to about July 1, so the 6 months would not help you in any way at all, because you have completely missed the boat in both cases.

Senator MILLER. Then the answer is, as far as you are concerned, whether it is 12 months or 6 months it does not make much difference?

Mr. HONNEN. Not if the provision was added after his eligible date to race or his eligible period of racing.

Senator MILLER. Sir?

Mr. HONNEN. Or his eligible period of producing, like in a mare. You would not breed a mare until she was in the spring of her 3-year-old and if you had to wait 6 months beyond that you would be beyond the breeding period so you would be in her fourth year before you would breed her anyway.

Senator MILLER. Now you are very persuasive in pointing out that it would be rare that in 3 years you would have a profit operation from horse breeding, if you start out from scratch, but under the Metcalf bill, as I understood him to testify this morning, and I believe you were here, it would be 8 years, as I understand it. What is wrong with 8 years? In other words, you could carry these losses back 3 and over 5, so in the first year if you make a loss, you can carry it back 3 and over 5, the second year you go back another 3 and the third, and so on, so it gives you an 8-year period under his bill, during which time you can offset these losses, as I understand it, against any other farm income. What is wrong with the 8-year period?

Mr. HONNEN. You pick that phase and that portion of the Metcalf bill out alone and not tie the rest of it together it might not be too bad, but when you tie the package together, one offsets the other as far as the abuse and discrimination to the horse industry is concerned.

Senator MILLER. You see what I think he is trying to do is he is trying to take those situations where you can have marketing losses, you can have drought losses, you can have normal losses that might occur in the course of trying to get a business going, and when those occur, he says we will let you carry them back 3 years and over 5 to apply against a profit that you may make eventually.

Of course, if you have just started in the horse breeding business, and you had a loss, there would be no 3 years to carry back, so you would go over a 5-year carryover. Maybe this could be varied so that if you have not been in the business before, instead of a 3-year carryback and a 5-year carryover, you could have your option of having an 8-year carryover, to give you an adequate period of time so that generally it could be said that if the individual who is engaged in this horse breeding had not made some profits after 5 or 6 or 7 years, well then maybe he should not have been in there and have the taxpayers, the general taxpayers, pick up the losses. I am wondering what would be a fair holding period, I mean a fair carryover period, because 3 or 5 is just an arbitrary figure.

We can make it 4 and 7 or 1 and 2. We are asking for information from people like you who are in the business, so that we can arrive at a carryover period that would be fair.

Mr. HONNEN. Senator, I feel this way about it: Being in the business and knowing the type of people that are in the cattle or horse-raising business, we have been so confused with some of the ramifications of the law and the changes in it, and the suggestion of EDA and the suggestion of extended capital gains tax and the change from accrual to cash method or cash to accrual method has brought in so many of these problems that I am just wondering whether the average horse raiser is going to understand what you are talking about with all this carryover and carryback business.

I think all you are doing is confusing him.

Senator MILLER. I can understand your frustrations with all these concepts being carried around and I share your frustrations. I just want to get it down to a simple proposition if somebody who has a pretty good-sized outside income decides he wants to become a horse breeder. Let us say he is in the 70-percent income bracket, and let us say he loses $50,000 in his first year of operations. That is $37,000 of tax saving. That is $37,000 that the general taxpayers around the country are picking up to subsidize.

You would not have to do it that way. Say you cannot get any loss at all, just send the bill to the Federal Government and we will send you a $57,000 check, but we do not do it that way.

He comes along the next year and he has another $50,000 loss and he has $57,000 in tax savings. How long are we going to let this go on, or are we going to put a limit on it?

As I understand Senator Metcalf's bill, he says we will let you do that on a 3-year carryback or a 5-year carryover, and I have talked to enough farmers so that most of them who are in a business like that, they understand carrybacks and carryovers. That is all I am asking about what would be a fair carryback or carryover period, so that an individual like that could look forward to eventually using up these losses, against profit from that operation, without having to write it off against nonfarm income.

Mr. HONNEN. I think I understand your problem. We have gotten used to the present law as it is written now. Normally we have to show a profit every 5 years, and we have learned to live with that law, so with your suggestion there, I do not see why we do not learn to live with that.

Senator MILLER. Well, 5 years frankly sounds a little short to me in the horse-breeding business.

Mr. HONNEN. That is right. We feel it is, too, but we have learned to live with it.

Senator MILLER. I have spoken to some of them as to the 5-year period in livestock and I have seen that become a problem.

Mr. HONNEN. I am not saying we are satisfied with it. We have just learned to live with it.

Senator MILLER. Yes, but I am asking you in your experience and best judgment would a 3-year carryback and a 5-year carryover, or if the person has not been in the business before, an 8-year carryover, would that be a fair approach to something like this?

Mr. HONNEN. It would be a better approach than the one we have now.

Senator MILLER. I am sure it would be, but I am trying to get what you would conclude to be a pretty fair appraisal, because any member of this committee can pull some figures out of a hat. We come to people who are in the business, and ask you what would be a fair, arbitrary figure for you, and I think a fair arbitrary figure from the business would be better than an arbitrary figure taken by somebody who does not know about it.

Mr. FARNHAM. Senator Miller, if I could just interject this, we of the National Association are spending considerable money at the present time doing an economic survey. Mr. Bell, in fact, who is with me is the chairman of this committee. I think that we will have within the near future, by reason of this economic survey which is being carried on in every State in the Nation, that we will have some figures that will supply the answer to this question for you, and we will certainly furnish them to you, sir.

Senator MILLER. Will you do that for the record, then, in say the matter of the next 3 or 4 weeks or the next 3 weeks?

Mr. FARNHAM. If they are available within 3 or 4 weeks you will have them a day or so after they are available.

Senator MILLER. I would like to get something from you, because I understand in our present system of loss carryovers and carrybacks, there are always some taxpayers that end up with losses that have not been used up and that is too bad. That is a hardship. But we have to draw a line somewhere. You cannot have carryovers forever. It is just not administratively feasible to do that. So if you could come up with a suggestion along that line, I know I would appreciate it.

Mr. HONNEN. Senator, any period that you establish, it is going to have to be set on an average, because you find one breeder who will have good luck. He will obtain a nick with a certain stud and a certain mare and another fellow will have hard luck, he will breed the horse for 3 years and find out he has not got anything so he dumps him and picks up another and he goes on from there and then you are going to have an extended period, so when you talk about breeders the period of time that you are suggesting, you are going to have to hit an average in there.

When Mr. Farnham comes up with a figure, it is going to have to be some place in an average of the lucky and the unlucky breeder.

Senator MILLER. I have an idea that Senator Metcalf's 5 years would gear in with the 5 years you say you have been able to live with. That does not sound bad to me, but I can visualize a person who just gets started, they do not have the opportunity to use the 3-year carryback. Why not give him an extra 3-year carryover, it might be fairer.

Mr. FARNHAM. Because there is no way, Senator, of course in the gestation period that it be changed, and by the time you apply the mating that you intend you are in the breeding business and then you add an 11-month gestation period and then 2 to 3 years in the event that mare is in foal and produces a foal, then 2 or 3 years before that first foal gets to the races, and find out if your mating was successful; so it is 4 to 5 years before you can have the first opportunity to determine this, and this cannot be rushed. That is nature.

Senator ANDERSON. Senator Hansen?

Senator HANSEN. I have no questions, Mr. Chairman.

Senator CURTIS. Could I ask just one very brief question and if it takes very long put the answer in the record, because I am mindful of these other witnesses. If an individual makes some money, makes a profit in the racing business and in the horse breeding business, does he pay taxes on it like anybody else that makes ordinary income?

Mr. FARNHAM. Absolutely, and a lot of taxes, because when he reaches that year and he has the big horse, he has the successful horse, in fact then he pays a considerable amount of taxes on it, because he is in a very high bracket, and happy to do so.

Nobody is against that at all. In fact, that is what we are striving for. Every breeder is striving to get into a high tax bracket, Senator.

Mr. HONNEN. This is carried out a little further even to the man who bets on a horserace. If he wins over $600 they will not give him a check until an Internal Revenue man comes up and gets his name and address before they pay him off.

Senator ANDERSON. Is that universal?

Mr. FARNHAM. Yes, sir, it is an Internal Revenue regulation; if it is more than a $600 return for a $2 ticket he must show identification before he can get the money.

Mr. SMATHERS. May I add one other thing to Senator Curtis question. I am new at this business as is evident. But it looks to me that the way these provisions are, they really do not hurt the very successful, the very rich, and the very big man. He has got the good horse. They make money on which they pay substantial taxes. They are glad to do it. But the fellow who gets hurt is the fellow that Mr. Honnen was describing who is trying to get into the business maybe for the first time. He does have the land. He is trying to start himself a farm and he is not very successful.

He is the man who gets punished and would be punished by these provisions of the House bill. It means that the little fellow, or the man who is starting, could not get in and could not make it.

Mr. FARNHAM. Senator, could I make one other comment. Mr. Bell, in charge of our economic survey, just gave me this note, and pointed out that at the time the $50,000 loss limit was established, that since that time the expenses of carrying on a breeding operation have doubled and tripled, and so now under the provisions of this proposed bill, it is now taking 3 out of 5 years, and a $25,000 limit. Yet the expenses have doubled and tripled since the time that the $50,000 limit was put in.

The CHAIRMAN. Senator Hansen?

Senator HANSEN. No questions.

The CHAIRMAN. Thank you very much.

Mr. SMATHERS. Thank you very much, Mr. Chairman.

(Harry J. Farnham's prepared statement follows:)

SUMMARY STATEMENT OF HARRY J. FARNHAM, PRESIDENT, NATIONAL ASSOCIATION OF STATE RACING COMMISSIONERS

Testimony by Mr. Harry J. Farnham, Chairman of the Nebraska State Racing Commissioners, and submitted as President of the National Association of State Racing Commissioners, an association founded in 1934 and comprised of all racing commissioners from all 30 states in which pari-mutuel racing is regulated and supervised by state officials.

The position of the National Association of State Racing Commissioners is one of unalterable opposition to the "farm-loss" federal tax provisions as proposed by Senator Jack Miller in Senate Bill 1560, as proposed by Senator Lee Metcalf in Senate Bill 500, and as proposed by House Bill 13270 and designated therein as Sections 211, 212, and 213.

The conclusion reached by the National Association of State Racing Commissioners after lengthy deliberation is that the aforesaid "farm-loss" proposals will discourage investment in the horse breeding industry resulting in an attrition of good horses and a sharp reduction in number of all horses bred by small breeders; that reduction in the breeding of horses will similarly affect the size and number of racing programs and thereby seriously endanger the racing industry which last year produced in direct state revenue a sum exceeding 426 million dollars; that in addition to the direct state revenue derived from racing, collection of federal, state and local taxes presently generated by the horse industry which employs more than 158 thousand persons with a payroll exceeding one billion dollars also will be curtailed.

It is urged that Sections 211, 212, and 213, of H.R. 13270 be deleted on the basis that fulfillment of the federal government's need for additional revenue should not jeopardize the equine industry's source of funds for our states' pressing needs.

STATEMENT

Mr. Chairman, my appearance before the distinguished members of this Committee is on behalf of the National Association of State Racing Commissioners of which I am President.

I am Chairman of the Nebraska State Racing Commission, an administrative agency charged with the statutory responsibility of regulating and supervising horse racing at the six tracks in Nebraska. I was appointed by Governor Norbert T. Tiemann.

The National Association of State Racing Commissioners was formed in 1934 and its membership comprises all racing commissioners from the 30 states in which pari-mutuel racing is conducted, namely, Arizona, Arkansas, Delaware, Idaho, Illinois, Louisiana, Nebraska, New Mexico, California, Colorado, Florida, Kentucky, Maine, Maryland, Massachusetts, Michigan, Montana, Nevada, New Hampshire, New Jersey, New York, Ohio, Oregon, Pennsylvania, Rhode Island, South Dakota, Vermont, Washington, West Virginia, and Wyoming. Other Association Officials appearing with me are: Mr. J. Newton Brewer, Chairman of the Maryland State Racing Commission, and Mr. John A. Bell, Kentucky State Racing Commissioner. Mr. Brewer is presently First Vice-President of the

Association and will succeed me as President next year. Mr. Bell is Chairman of our Public Relations Committee, and one of his responsibilities is working on a comprehensive plan for a national economic study of racing.

We have been directed to submit for your consideration the position of the National Association of State Racing Commissioners as to the changes in farm tax accounting proposals together with the facts and reasons from which this conclusion is drawn. Our position is presented today after lengthy deliberation and study.

The position of our Association is one of unalterable opposition to the farm tax accounting provisions as proposed by Senator Jack Miller in Senate Bill 1560, as proposed by Senator Lee Metcalf in Senate Bill 500, and as proposed by House Bill 13270 and designated therein as Sections 211, 212, and 213.

While our opposition to these proposals may be similar to others presented to this Committee, it differs in one significant way. The position of the state racing commissioners is not a personal one. It was not determined by self-interest, nor by concern for a racing commissioner's salary. Salaries in those states which provide for remuneration are nominal and the majority of racing commissioners serve without pay. All racing commissioners serve at the pleasure of the various State Governors and are charged with the responsibility of regulating and supervising racing so as to maintain public confidence in the sport. Each racing commission must report annually to the legislature giving a detailed account of state tax revenue gained from pari-mutuel racing. This is a most important part of the commissioner's responsibility.

All racing officials are seriously concerned with the possible side effects of the proposed farm tax changes, consequences perhaps not envisioned by proponents of these changes, but which we as racing officials fear will prove extremely detrimental to racing and which can reduce significantly state tax revenue derived from racing.

As a part of our statement, we would like to include *Statistical Reports on Horse Racing in the United States for the year 1968*, and as reflected in that document, Table 1, the direct state tax revenue derived from racing last year amounted to more than 426 million dollars. As shown on Table No. 5, the direct state tax revenue derived from racing increases each year as racing increases and we expect the direct state tax revenue of more than 426 million dollars in 1968 to approach 500 million dollars this year.

These are *whole tax dollars*, as distinguished from those tax dollars which require 45 cents to collect. This racing revenue costs the states nothing to collect. The racing commissions collect the license fees while the race tracks collect the tax revenue from admissions and pari-mutuel handle in such amounts as shown on Table No. 2 in the reports, and this sum is paid over directly to the states.

This state revenue comes from a *self-imposed* tax, and a state tax which cannot be deducted by the taxpayer against any federal taxes. This is an important source of state tax revenue which provides more than 155 million dollars for schools in New York, more than 57 million dollars for roads in California, and more than 40 million dollars for county projects in Illinois. These are significant budgetary accounts for important services provided by tax revenue from racing.

At this very moment, states, counties, and cities are demanding more federal funds to meet critical local needs. You well know that whatever the states lose in decreased tax revenue will ultimately have to be made up in federal funds. How much federal tax revenue is expected to be gained from these new farm tax accounting provisions? The House Ways and Means Committee report, on page 71, indicates that the "farm-loss" provisions will produce an estimated five million dollars in 1971. If state tax revenue drops only 20 percent, the states would lose 100 million dollars.

Mention has been made here only of the direct state tax revenue derived from racing, a sum expected to approach 500 million dollars this year. This is the readily accountable tax revenue from racing which we report each year as turned over directly to state treasuries from race track operation. Yet this is only a small portion of the federal, state, and local tax revenue generated by the racing industry. The National Association of State Racing Commissioners this year adopted a comprehensive plan for a national economic study of racing. This plan is beiug implemented under the direction of Mr. Bell's Committee, and the economic analysis of the data now being collected is expected to be completed next year.

Surveys preliminary to this comprehensive study indicate that the horse industry in the United States provides employment for more than 158 thousand persons with a payroll exceeding one billion dollars. This is an industry with fixed assets of one billion 261 million dollars in land, one billion 115 million dollars in horses, 621 million dollars in equipment, and 602 million dollars in race track property.

This is an industry which we as racing commissioners fear will be critically affected by the proposed changes in farm tax accounting. Proponents of these measures assert that the EDA, recaptured depreciation, longer holding period to receive capital gains and the $25,000 loss in three of five years, are designed to gain five million dollars in federal taxes from 100 rich people. These provisions, however, will affect not just 100 rich people, but the incomes of 158 thousand grooms, harness drivers, ranch hands, insurance men, Western clothing manufacturers, blacksmiths, hay growers, mutuel clerks, harness makers and parking lot attendants.

Racing and direct state tax revenue from racing depend to a large extent on the good horse. People come out to see the stars. The good horse is a rarity. Statistics compiled by The Blood Horse magazine last year showed that 43,715 Thoroughbreds raced and only 729 of these won a stakes race. That is one good horse out of 60. Statistics compiled by the American Petroleum Institute show that only one out of nine drilled wells produces oil and it is generally conceded that a tax incentive is essential for a man to challenge nine to one odds. Whatever tax incentive there may be for a horse breeder to challenge 60 to one odds is removed by these proposed changes in farm tax accounting.

The proposals will discourage the extremely successful businessman and preclude the moderately successful businessman from investing risk capital in the horse breeding industry. Breeding the good horse today requires a substantial investment in breeding stock and far more than five years of possible losses before a profit can be realized in that one good horse out of 60. However, the vast majority of horses are not produced by the large breeding operations, but by small breeders with four or five broodmares. Statistics compiled by Triangle Publications show that the 43,715 Thoroughbreds which raced last year were bred by 14,369 different persons, an average of three horses per breeder.

Removal of tax incentives from the horse breeding industry will discourage investment by the big breeder, and thereby can seriously curtail the production of good horses. These farm-loss proposals, moreover, can preclude investment by thousands of small breeders, and thereby critically reduce the overall number of horses needed to fill our race programs.

The National Association of State Racing Commissioners, therefore, desires to express its opposition to these proposals in the strongest possible manner. While the proposals are designed to gain five million dollars from 100 rich men, they serve as a deterrent to the more than 14 thousand other breeders who produce the horses for an industry that employs more than 158 thousand persons with a payroll exceeding one billion dollars, an industry that last year produced in direct state tax revenue more than 426 million dollars.

Our Association and all racing officials, on behalf of the industry, strongly urge this Committee to delete sections 211, 212, and 213, of H.R. 13270, that are so damaging to an industry making such a substantial contribution to state revenues—which in the case of 1969–70 are already committed. Although we are cognizant of and sympathetic with the federal government's need for additional revenue, it is our considered judgment and strong feeling that the fulfilling of this requirement should not jeopardize the equine industry's important source of funds for our states' many pressing needs.

REMARKS:

(1) Arizona, Florida, Louisiana: Reports based on fiscal year, July 1, 1967-June 30, 1968.

(2) Arizona: Fairs—All revenue and breakage to counties.

(3) California, Colorado, New Mexico, Ohio: Bold Face indicates Quarter Horse.

(4) California: Fairs—Thoroughbred, Quarter Horse, Harness and Appaloosa racing.

(5) Florida: Charity and Scholarship days not included in revenue figures above. Thoroughbred—20 days; attendance, 116,526; pari-mutuel turnover, $13,190,224. Harness—3 days; attendance, 4,731; pari-mutuel turnover, $250,163.

(6) Idaho: Thoroughbred, Quarter Horse, Appaloosa, and mixed races at most race meets.

(7) Louisiana: Quarter Horse, 277 races. Evangeline Downs, mixed racing.

(8) Louisiana: Donations to American Red Cross and Retarded Children's Funds not included in revenue figures above.

(9) Maine, New Hampshire: Fairs—All Harness racing.

(10) Maryland, Massachusetts: Fairs—All Thoroughbred racing.

(11) Maryland: Two-day Steeplechase meeting included in Thoroughbred figures. Estimated attendance, 28,000; par stuel turnover, $309,906; revenue to state, $15,964.30.

(12) Montana: Thoroughbred, Quarter Horse and Appaloosa racing at same track, same meet. Some mixed races for Thoroughbred and Quarter Horse.

(13) Montana: State derives no revenue from racing However, 1 per cent of 20% take-out is paid to Commission by licensee and deposited in State Treasury in Commission's account for expenses. Commission also receives toward expenses underpayments and license fee.

(14) Nevada: One per cent of total take-out is paid to Commission for administrative work.

(15) New Mexico: Mixed program each day of Thoroughbred and Quarter Horse racing.

(16) Ohio: Fairs—All Harness racing, except one day Quarter Horse.

(17) Oregon: There were 925 races programmed of which 792 were Thoroughbred, and 133 for Quarter Horse and Appaloosa.

(18) South Dakota: One race per day Quarter Horse.

(19) Washington: Fairs—Both Thoroughbred and Quarter Horse racing.

(20) Washington: Attendance estimated. Approximately 1,000 working passes issued—owners, trainers, jockeys issued two free passes; tax exempted passes issued to state, city and county officials.

Note on Attendance: At some meetings, principally Fairs, attendance records not always reported.

Note on Revenue to State: Totals computed to nearest dollar

(E)—Estimated.

Table No. 2

Breakdown of Revenue to States — 1968

State	From Track Licenses			From Occupational Licenses			From Pari-mutuel Taxes			From Admissions			From Breaks			From Miscellaneous Sources		
	Thoroughbred	Harness	Qtr. Horse and Fairs	Thoroughbred	Harness	Qtr. Horse and Fairs	Thoroughbred	Harness	Qtr. Horse and Fairs	Thoroughbred	Harness	Qtr. Horse and Fairs	Thoroughbred	Harness	Qtr. Horse and Fairs	Thoroughbred	Harness	Qtr. Horse and Fairs

REMARKS:

(1) Arizona: Fairs—All revenue and breakage to counties. Fairs—Licenses and Miscellaneous Sources included with Thoroughbred.
(2) California, Colorado, Ohio: Quarter Horse figures in Bold Face.
(3) Idaho: Fairs—Exempt from Track Licenses.
(4) Kentucky: Thoroughbred—Occupational Licenses held by Commission for expenses.
(5) Maryland: Occupational Licenses for Steeplechase and Fairs, all included in Thoroughbred. Pari-mutuel Taxes from Ste-plechase, $15.495 40 included with Thoroughbred. Miscellaneous Sources from Steeplecha-e, $463.10 included with Thoroughbred.
(6) Montana and Nevada: State does not derive any money from racing, except 1% of total take-out paid to Commission for administrative expenses.
(7) New York: Thoroughbred—Track Licenses includes $12,625, and $702,000 franchise fees, N.Y.R.A.
(8) Ohio: Pari-mutuel Taxes—Total tax less 25% tax on Breakage.
(9) South Dakota: One per cent of Pari-mutuel Taxes to Breeders' Fund added to purses for state bred and owned horses.

REMARKS:

(1) **Arizona:** Fairs—All revenue and breakage to counties.

(2) **Arkansas:** Breakage—One third to state, ⅓ to association and ⅓ to city where track is located.

(3) **California:** Any track operator that handled not more than $125 million qualifies to retain the breakage for purse distribution. Up to $24 million wagered, the track receives 50%, purses 50%. From $24 million to $50 million, 100% goes to purses. The state receives 100% over $50 million wagered.

(4) **Colorado:** Colorado State Fair—State receives only 2% of 15% take-out.

(5) **Delaware:** Thoroughbred—One per cent increase in pari-mutuel commission—50% allocable to purses and 50% to "servicing and repayment of debt and/or for past, present or future capital improvements."

(6) **Florida:** Breakage—One half of breakage to Racing Promotion Trust Fund to supplement purses.

(7) **Louisiana:** Breakage—Full amount used at track where breakage is collected, with 2/3 to track and ⅓ to supplement purses for Louisiana breeders.

(8) **Maryland:** Steeplechase—Total take-out 14%, with 5% to state. All breakage to association.

(9) **Montana and Nevada:** Revenue to State—State receives no revenue, but 1% of take-out goes to Commission for expenses.

(10) **Vermont:** Pari-mutuel Tax to State—State receives 1% more tax on Sunday racing.

Table No. 4

Brief Summary of Tax Methods by States

State	
Arizona	Total take-out 18%. State receives 4% of first $100,000 of daily pari-mutuel pool and 7% all over $100,000. Net underpay to state at end of meeting. Breakage 10c, all to association. FAIRS: County in which fair is located receives pari-mutuel tax revenue, instead of state.
Arkansas	Total take-out 16%. Pari-mutuel tax to state 6%, $500 daily license, 10c tax on admissions. Breaks 10c, divided 33⅓% to city where track is located, 33⅓% to association, 33⅓% to state.
California	Total take-out 14%. State receives 5% of first $10 million handled, 6% of next $10 million, 7% over $20 million to $75 million, 7½% over $75 million to $125 million, 8% over $125 million wagered. Occupational license fees and breakage. Breaks to 10c. Any racing association that handles not more than $125 million qualifies to retain breakage for purse distribution: All under $24 million wagered racing association receives 50%, purses 50%; $24 million to $50 million, 100% to purses. Over $50 million state receives 100%.
Colorado	Total take-out 15%. State receives 3% of first $200,000, 4% of excess over $200,000 which does not exceed $300,000, 5% of all in excess of $300,000 which does not exceed $500,000, 6% of all in excess of $500,000. Breaks 10c, all to association. At Colorado State Fair, state receives 2% of take-out.
*Delaware	THOROUGHBRED: **Total take-out 15%, 1% of which allocated 50% for purses, 50% for capital improvements.** Per season license $5,000. Admissions 20c. Breaks 10c, divided equally between state and association. Unclaimed pari-mutuel tickets payable to state one year following last date of meeting in which ticket was sold. HARNESS: Total take-out 17½%. State receives 4½%. Admissions 10c. Breaks 5c, to association. Uncashed pari-mutuel tickets revert to state after one year.
Florida	THOROUGHBRED: Total take-out 15%. State receives 8%. (3% and admission taxes divided equally among 67 counties after racing commission expenses deducted—5% and ½ breakage to General Revenue Fund. One half of breakage to Racing Promotion Trust Fund to supplement purses.) Breaks 10c, 5c on minus pools. Any track having an average daily handle of less than $400,000 per day for the preceding racing season operates on a fixed daily license fee. HARNESS: Total take-out 17%. State receives 7%. (Of state's commission, 3% and admission taxes divided equally among 67 counties after racing commission expenses deducted, 2% and 50% of breakage to General Revenue Fund, 2% to be divided equally among counties. Fifty per cent of breakage to Racing Promotion Fund to supplement purses.) Breaks 10c.
Idaho	Total take-out 15%. Non-fair associations receive 10% plus breakage and pay $25 daily license fee. Fairs receive 14% plus breakage, and are exempt from license fee. The 4% and license fee from non-fairs is deposited to Public School Endowment Fund. All occupational license fees deposited to General Fund. Associations accrue all monies in unclaimed tickets 30 days after close of race meet. Committee receives 1% of handle for operational expenses.
Illinois	Total take-out 15%. THOROUGHBRED—state receives: At race tracks within county of 500,000 or more or within county of less than 500,000 but within 100 miles corporate limits any city in state of 1 million or more tax rates, except charity: First $5,000,000 of annual handle—5%, $5,000,001 to $10,000,000—6%, $10,000,001 to $30,000,000—7%, $30,000,001 to $40,000,000—7½%, $40,000,001 to $60,000,000—8%, over $60,000,000—8½%. At race tracks within county of less than 500,000 and more than 100 miles of any city in state of 1 million or more tax rate, except charity: First $10,000,000 of annual handle—5%, $10,000,001 to $20,000,000—6%, $20,000,001 to $30,000,000—7%, $30,000,001 to $40,000,000—7½%, $40,000,001 to $60,000,000—8%, over $60,000,000—8½%. Breaks 10c, half to state. Charity meets, tax 7% plus half of breaks. HARNESS—state receives: First $30,000,000 of annual handle—5½%, $30,000,001 to $35,000,000—6½%, $35,000,001 to $40,000,000—7½%, $40,000,001 to $60,000,000—8%, over $60,000,000—8½%. Breaks 10c, half to state. Charity meets, tax 7%. Breakage, both Thoroughbred and Harness, 5c instead of 10c in case of minus pool.
Kentucky	THOROUGHBRED: Total take-out 14%. State receives 4% on all under $18 million wagered during year, 6% thereafter. Daily license $500 if average daily handle at track during year does not exceed $450,000, $1,000 at tracks with average daily handle $450,000 to $600,000, $2,500 at tracks where sum exceeds $600,000. Breaks 10c, to association; 15c on admissions. HARNESS: Total take-out 17%. State receives 4%. Daily license $100 if average daily handle during previous year does not exceed $75,000, $150 thereafter. Breaks 10c, to association; 5c on admissions. Unclaimed tickets to state after two years.
Louisiana	Total take-out 16%. In a parish with population of 450,000 and over state receives: On total daily pools from 1c to $201,000—5%, $201,000 to $401,000, $10,050 plus 6% of that amount exceeding $201,000 up to $401,000, $401,000 and over, $22,050 plus 7% of any amount exceeding $401,000. Daily license fee $1,000. In a parish with population less than 450,000 state receives: On total daily pools up to $200,000—5% of that portion exceeding $30,000, $201,000 to $300,000, $8,500 plus 6% of that portion exceeding $200,000, over $300,000, $14,500 plus 7% of pool exceeding $300,000. Daily license fee $1,000. Admissions 10c. Breaks 10c, 2/3 to association and ⅓ to Louisiana Breeders Fund to supplement purses.
Maine	THOROUGHBRED: Total take-out 18%. State receives 7% sub-divided as follows: 5% to General Fund, 1% to Agricultural Stipend Fund, 1% returned to association to defray cost of operation. License fee $5,000 annually. Any outstanding balance in unredeemed mutuel tickets divided equally between association and state when account is closed. Breaks to 10c, all to association. HARNESS: Total take-out 13% with 6% to state General Fund, 1% to Agricultural Stipend Fund, association 11%. One-sixth of state commission is returned to association for purpose of supplementing purse money. License fee $10 for each 6 days or less of racing. Bond up to $50,000 required for license. Breaks 10c, all to association.
Maryland	THOROUGHBRED (MILE TRACKS): Total take-out 13%. State receives 5%, association 7⅓% of which 4% is allocated to purses and .34 of 1% to Maryland-bred Fund Races. One half of 1% of money wagered to Racing Fund for plant improvements. Daily license fee $1,000. Breaks 10c, divided equally between state and association. COUNTY FAIRS (THOROUGHBRED): Total take-out 13%, with 1% of first $1,500,000 to state, 12% of first $1,500,000 to association, of which 3.66% is allocated to purses and .34 of 1% to Maryland-bred Fund Races. All over $1,500,000, 6% to state, 7% to association, of which 3.66% is allocated to purses and .34 of 1% to Maryland-bred Fund races. Breaks 10c, divided equally between state and association. HARNESS: Total take-out 16%. Of all money wagered not in excess of $125,000 daily average, 3⅓% to state, 12⅔% to association. Of all money wagered in excess of $125,000 daily average, 7% to state, 9% to association. Daily license $25. Breaks 10c. Association retains all breakage if daily average is below $166,666.67, above this figure, state gets all breakage. STEEPLECHASE: Total take-out 14%. State receives 5%, association 9%. Breaks 10c, to association.
*Massachusetts	THOROUGHBRED: **Total take-out 15%. State receives 7½%, association 7½%.** License fee $600 per day. Breaks 10c, divided equally between state and association. HARNESS: Total take-out 17%. State receives on daily handle to $400,000—5½%. $400,000 to $450,000—6¾%. $450,000 to $500,000—7¼%. $500,000 to $550,000—7¾%, $550,000 to $600,000—8¼%, $600,000 to $650,000—8¾%, $650,000 and over—9¼%. License fee $200 per day. Breaks 10c, divided equally between state and association. FAIRS: Total take-out 17%. State receives 2% of daily handle plus 3½% of any amount over $65,000. License fee $50 per day. Breaks 10c, divided equally between state and association.
Michigan	THOROUGHBRED: Total take-out 15%. State receives 8%, association 7%. Breaks 10c, divided equally between state and association. HARNESS: Total take-out 15%. State receives 5%, association 10%. Breaks 10c, divided equally between state and association.

* Portion bold face type indicates change in law 1968.

Table No. 4 (continued)

Brief Summary of Tax Methods by States

Montana	Total take-out 20%. The licensee shall pay to commission 1% of all gross receipts of each day's pari-mutuel betting at each race meet, which sums shall be paid to commission within five (5) days after receipt by licensee. At end of each race meet should report show underpayments to be in excess of overpayments, such balance shall be paid to commission. (No tax paid to State of Montana.)
Nebraska	Total take-out 14%. State receives 4% on all over $1 million. Tax on admissions 15c which, along with monies received in license fees, is distributed among counties of state for county fair premiums. Breaks 10c, to association.
Nevada	Total take-out 16½%. With exception of Fairs, state receives 2% of which 1% is paid to state General Fund and 1% to racing commission. (Daily license $50 per day; however, law provides that a maximum of $200 per day may be charged.) FAIRS: Total take-out 16⅛%, with 1% to racing commission for administrative work. However, after July 1 of following year any amount over $10,000 is to be distributed to agricultural districts conducting horse racing proportionately to the amount contributed by each district. Breaks 10c, to association.
*New Hampshire	THOROUGHBRED: Total take-out 15%. State receives 7½%, association 7½%. No license fee, but bond not exceeding $50,000 required. Breaks 10c, divided equally between state and association. HARNESS: Total take-out 17%, divided as follows: Of total mutuel pool for any one day, state receives 5¼% up to $400,000, 6¾%—$400,001 to $450,000, 7¼%—$450,001 to $500,000, 7¾%—$500,001 to $550,000, 8¼%—$550,001 to $600,000, 8¾%—$600,001 to $650,000, 9¼%—$650,001 and over. One quarter of 1% of total pari-mutuel pools allocated to Agricultural Fairs of state; however, total amount allocated is limited to $150,000 in any one year. Track licenses paid to township where track is located. Breaks 10c, divided equally between state and association.
New Jersey	THOROUGHBRED: Total take-out 14½%. Of first $40 million of handle, state receives 7½%, thereafter 8½%. Breaks 10c, all to state. HARNESS: Total take-out 16%. Of first $40 million of handle, state receives 5½%, thereafter 6½%. Breaks 10c, all to state.
New Mexico	Total take-out 18%. State receives 2% up to $250,000, 3% to $350,000, 4% to $400,000, 6% all over $400,000. New Mexico State Fair, state receives 2%. Daily license fee $300, half to state and half to county in which track is located, except State Fair charged $10 per race day. Breaks 10c, all to association.
*New York	THOROUGHBRED:[1] ~~Total take-out 16%. State receives from Saratoga 9%, from Aqueduct and Belmont 10% of total mutuel handle.~~ From Finger Lakes state receives 10% ~~first $175,000, 8%~~ next ~~$125,000, 7% next $100,000, 6% over $400,000 to $500,000, 5% to $600,000, 4% all over $600,000. Effective April 1, 1968 additional 1% of take-out for purses. Breaks 10c, state receives from Aqueduct-Belmont-Saratoga 80%, from Finger Lakes 75%. Franchise fee $3,000 per racing day paid by non-profit associations. Finger Lakes track~~ license, $100 per day. HARNESS: Total take-out 16%. Of total daily pool, state receives 5½% not exceeding $175,000, 7½%—$175,000.01 to $300,000, 8½%—$300,000.01 to $400,000, 9½%—$400,000.01 to $500,000, 10½%—$500,000.01 to $600,000, 11½% all over $600,000. Breaks 10c, with state receiving 50%, Horse Breeders Fund 25%, association 25%.
*Ohio	THOROUGHBRED: Total take-out 16½%. State receives 4¼% first $10,000 wagered, 5¼% next $40,000, 6¼% next $50,000, 7¼% next $300,000, 8¼% all over $400,000. HARNESS and FAIRS: Total take-out 17½%. State receives 3% first ?10,000, 4% next $40,000, 5% next $50,000, 6% next $300,000, 7% all over $400,000. For both Thoroughbred and Harness, breaks 10c with state receiving 25% after first $2,000 in any year; 40% of breaks retained by track for increase in net purse distribution. Ohio Fair Fund: One half of 1% of total wagered at Thoroughbred, Harness and Fair meetings appropriated for Ohio Fair Fund Tax (tax collected from take-out). Thoroughbred Fund. Four tenths of 1% of total wagered at Thoroughbred and Harness meetings (not collected from Fairs) is appropriated for Ohio Thoroughbred Race Fund. (One tenth of 1% increase for 1968 season.) General Revenue Tax collected from Fairs refunded to Agricultural Societies.
Oregon	Total take-out 12½% in Option 1, 15% in Option 2. Under Option 1, state receives 3% first $66,000, 4% next $67,000, 5% next $67,000, 6% all over $200,000 wagered in one day. Under Option 2, state receives 5% first $133,000, 6% next $67,000, 7% all over $200,000 wagered in one day. Non-profit Fairs, state receives 1½% under either Option. Daily license fee Option 1, $425, Option 2, $500. Per meet license non-profit tracks $1. Breaks 10c, half to association and half for purses Oregon-bred horses.
Pennsylvania	HARNESS: Total take-out 17%. State receives 5%, association 10%. In addition there is a 2% tax at tracks located in cities of first class, paid directly to school district. In all other areas 2% tax paid to Department of Commerce for projects in accordance with law. Breaks 10c, divided equally between state and association, except in case where a minus pool is created, then breaks 5c.
Rhode Island	Total take-out 16%. State receives 8½%, association 7½%. Breaks 10c, divided equally between state and association.
South Dakota	Total take-out 15%. State Special Racing Fund receives 3%, State Breeders' Fund 1%, association 11%. Law also provides that 5% of winning purse will go to South Dakota breeder of winning horse. Breaks 10c, all to association.
*Vermont	THOROUGHBRED: Total take-out 18%. State receives 5½%. Breaks 10c, half to state and half to association. HARNESS: Total take-out 18%, with state receiving on first $150,000 plus 3%, $150,000 to $200,000 plus 4%, $200,000 to $250,000 plus 5%, $250,000 to $300,000 plus 6%, $300,000 to $350,000 plus 7%, $350,000 and over 8%. Breaks 10c, half to state and half to association. On Sunday racing, state's share increased as follows: Tax percentage 6½% instead of 5½%, thoroughbred; tax percentage sliding scale 4% to 8%, harness.
Washington	Total take-out 15%. State receives 5%, association 10%. Breaks 5c, all to association.
West Virginia	Total take-out 15%. State receives 5¾%, association 9¼%. Daily license tax $250 for tracks under one mile, $500 for tracks one mile or more. Unredeemed pari-mutuel ticket money deposited to Special Account to support State Breeders' Awards. Breaks 10c, all to association.
Wyoming	Total take-out 17%, with 1% to commission for operating expenses, 4% and breakage to State General Fund, 2%, on a population ratio, to cities and towns within county where track is located. Association retains 10%. Breaks 10c, all to state. The 1969 Legislature has passed a new pari-mutuel law permitting total take-out of 20%, with 2% to Pari-Mutuel Board, 2% to city where track is located, 16% to racing association. Breakage all to racing association.

* Portion bold face type indicates change in law 1968.

[1] Total take-out 16%. State receives from Saratoga 9%, from Aqueduct and Belmont 10% of total mutel handle. From Finger Lakes state receives 5% first $175,000, 7% next $125,000, 8% next $100,000, 9% over $400,000 to $500,000, 10% to $600,000, 11% all over $600,000. Effective April 1, 1968 additional 1% of take-out for purses. Breaks 10c, state receives from Aqueduct-Belmont 80%, from Saratoga and Finger Lakes 75%. Franchise fee $3,000 per racing day paid by non-profit associations. Finger Lakes track license $100 per day.

The CHAIRMAN. Gentlemen, it is 15 minutes of 4 and we have heard three witnesses. I would hope we can move more rapidly to hear the full list of witnesses. I would suggest unless there is objection that we limit each Senator to 3 minutes to examine witnesses. If he wants to interrogate them further he can have the witnesses come into the conference room here and he can interrogate them as long as he wants to there.

We have a former member of our committee who has been waiting for a chance to be heard. I believe he will find it very inconvenient to stay over and I would like to hear him now if I may. I would like to call Senator Frank Carlson out of order to present what he has on his mind. We are proud to have you here with us, Senator. Many of us regret that you insisted on retiring last year.

STATEMENT OF HON. FRANK CARLSON ON BEHALF OF THE NATIONAL FEDERATION OF GRAIN COOPERATIVES; ACCOMPANIED BY BRUCE J. HENDRICKSON, VICE PRESIDENT, AND IRVING CLARK, GENERAL COUNSEL

Mr. CARLSON. Mr. Chairman, I would like very much if you have no objection to have Bruce Hendrickson who is executive vice president of the National Federation of Grain Cooperatives and Mr. Irving Clark who is their general counsel to sit with me.

Mr. Chairman, I appreciate very much the opportunity of appearing before this committee. As I sat here listening to this testimony I admire the committee. It was my privilege of serving for 14 years and it is a service I am going to cherish all the rest of my life.

I will appear here this afternoon I trust very briefly because I appreciate the problem you folks are meeting with. I come here this afternoon to express the views of the members of the National Federation of Grain Cooperatives on the proposals that are contained in section 531 of H.R. 13270.

This is a complex subject, and I thought it had been resolved. As the chairman well remembers, we spent much time on this hearing and discussion in the 1962 act. I thought we had written then and I still believe a very fair provision.

Appearing with me as I stated are Mr. Hendrickson and Mr. Clark. I have asked these men to sit with me because there may be some technical questions I am not familiar with.

I am afraid that as our farm marketing cooperatives have become more and more of an effective force in the selling and the processing for sale of grains and oil seeds for the mutual benefit of its members, opponents of this perfectly proper method of doing business have sought by a variety of extremely technical means to drive a "tax wedge" between member-patrons and the institutions they have tirelessly built and financed to further their own economic well-being. It has also been at considerable cost to these farmer-patrons, notwithstanding allegations to the contrary by those who have ceaselessly showered the Congress year after year with "co-op tax reform" schemes designed to deprive member-owners of these institutions of the full economic benefits which both the Congress and executive branches of our federal system have in their wisdom seen fit to encourage over many decades in the interests of sound public policy.

As I recall the many instances in the past when I was personally involved in judgments made with respect to cooperative taxation both in this distinguished committee and on the floor as a Senator from the great State of Kansas, the principle of the payment of a single tax upon the savings—earnings—of a farm cooperative at the investor level was never lost sight of despite the repeated attempts by opponents of these organizations to have them taxed otherwise under the guise of "reform." This has even included successive attempts to impose the "two-tier" system of levying taxes on the "profits" of these farmer-owned and controlled associations.

Despite the repeated efforts of farmers and their cooperative leaders over the years to combat this divisive tactic we have seen successive encroachment by the Government into the conduct of the business affairs of both patrons and their cooperatives as regards tax matters.

This involvement appears to be getting deeper too, judging from the proposals contained in section 531 of H.R. 13270.

Both the proposed phased-in cash payout requirements to 50 percent by 1970 and the statutory directive to treat future contributions of capital—investments—by patrons in their cooperatives as debts of the organization are perfect illustrations of this excessive tendency by some to submerge or sink well established public policies via the taxation route.

It might be pointed out too, that neither proposal serves the interests of the Government from the revenue standpoint since no additional taxes will be collected, according to estimates supplied by the Treasury Department.

Since this is to be the case, and I have no reason to disbelieve their estimates, I am at a loss to understand where any corresponding or redistribution of existing or future tax burdens—the object of tax reform—will come about as a result of the enactment of these proposals.

On the other hand, irreparable harm will be done to both farmers and their cooperatives if section 531 is enacted into law. I can't believe that members of this committe want to see this happen.

This is especially true in the present context of the tremendous demands being put on our limited resources budgetwise, including the U.S. Department of Agriculture. Farmers recognize this hard fact of life even in cases involving our major programs for grains like wheat. Because of this, they are attempting through various means to devise their own programs. A major effort in this direction to eventually relieve the Government of its dominant role in this area is being spearheaded by cooperatives. Most certainly, any program ultimately developed will take time. But experience convinces me that the very institutions which would be destroyed by the enactment of these harsh proposals—our grain marketing cooperatives—represent the most promising vehicle for eventually effecting the transfer of grain programs to the private sector sometime in the distant future.

Now, as to the subject at hand, I well recall the days of service on this committee prior to the enactment into law of the Revenue Act of 1962 when we exhaustively studied this subject.

At that time I remember we were very careful to erect a set of "qualifications" to insure that all noncash patronage allocations would be taxed at their stated dollar value in the hands of the patron or his cooperative would be taxed. In order to be sure that the patron had enough cash to pay the tax on these amounts we required that the cooperative include at least 20 percent of the savings in cash.

That seemed like a reasonable proposition then. It still does, I believe then and still do however, that the financial needs of these businesses is a matter which should be left more properly for them to determine by their own actions and not be impressed on them by some tax authority. This includes such jointly agreed-to decisions as those taken with respect to who is going to pay the tax on patronage distributions too, so long as the proper tax is paid by somebody.

The point which is often overlooked is the fact that these associations are voluntary as to membership. No one is under any compulsion to patronize them either, an item that those unfriendly to this form of business organization never bother to mention for self-serving reasons.

Now, it seems to me that as this committee considers section 531 of H.R. 13270 it ought to weigh very carefully the fatal consequences which it would have on the future ability of local grain marketing cooperatives like my own back in Kansas—the Cloud County Cooperative Elevator Association at Concordia—to provide the badly needed and growing services which its farmer-owners demand and get right there in town.

Of equal, if not of more importance, is FAR-MAR-CO., Inc., headquartered in Hutchinson, Kans. This latter organization, a regional grain marketing cooperative, makes it possible for members of my local to play a significant role in the key terminal and export grain markets where forces of supply and demand operate to establish prices. Markets created day in and day out by this major regional along with markets created by the other 19 regionals comprising the membership of this federation constitute an indispensable service for the 1 million grain producers and 2,680 local cooperatives owning them.

Earnings derived from the activities of these regionals represent a major source of revenue for the locals. At the same time, the locals' major investments (and consequently, their member owners) are generally those made in their regional. These are substantial, too, relative to others in most cases.

With limited exceptions, the capital which has been provided by farmers to build and enlarge their sphere or marketing influence has come from reinvested earnings on which farmers have willingly paid taxes on in order to supply to themselves as a group many of the services they could not economically afford to individually do. This would include such things as building and maintaining grain elevators, plants for processing their grains into more valuable products, owning rail and barge equipment, and even acquiring their own lending institution—the banks for cooperatives—through the systematic repayment of government capital from their own funds.

All of these have cost great sums of money, but they are providing their member owners with an important array of services which is the way they want it.

Thus, as you study and deliberate the pros and cons of section 531 of H.R. 13270 in the weeks and months ahead, I would urge you to ponder very carefully whether, by enacting this proposal you will be helping farmers or hurting them.

After it is all over, my inclination is tha. you will be disposed to agree with me that the wisest course is to have section 531 stricken from the bill.

The CHAIRMAN. Senator Carlson, I have a letter from the Department of Agriculture, not from the Secretary, signed by his Under Secretary but I am sure it represents the position of the Department as a whole. It couldn't be any stronger on your side than it is. It says that—

> This will not add a dime to revenue but it will seriously burden cooperatives. It will damage the cooperative's ability to meet members' demands for increased services with member-owned, internally-generated capital. It will hurt and seriously limit co-ops' ability to borrow money.

I will abbreviate the rest of it. It is discriminatory against farmers. I don't know of any letter that could be stronger in support of your position than that of the Under Secretary speaking for the Department of Agriculture. I would like to put that in the record, and also a statement that I have received from the executive vice president of the American Rice Growers Association who also states that the soybean farmers are in support of that. As far as I can see it is a case that cannot be refuted.

(The documents referred to follow:)

DEPARTMENT OF AGRICULTURE,
OFFICE OF THE SECRETARY,
Washington, September 9, 1969.

HON. RUSSELL B. LONG,
Chairman, Committee on Finance,
U.S. Senate, Washington, D.C.

DEAR SENATOR LONG: This Administration is deeply committed to helping farmers increase their net incomes and to bring equity to American agriculture. Section 531 of the proposed Tax Reform Act of 1969 provides for a gradual increase from the present 20 percent to 50 percent (3 percent per year for 10 years) in the amount of cash a cooperative must pay currently to "qualify" its refunds as non-taxable income. The proposed Act also would require that that part of the refund not paid currently in cash must be paid out within 15 years.

This proposal would throttle one of the essential tools for maintaining farm income. If adopted, it will have these results:

1. It won't add a dime to tax revenue, but it will seriously burden cooperatives.
2. It will damage co-ops' ability to meet members' demands for increased services with member-owned, internally-generated capital.
3. It will seriously limit co-ops' ability to borrow. With a 15-year due date on deferred refunds, these become long-term liabilities and would take precedence over any later-issued promissory notes. This added debt would impair co-ops' ability to borrow for constructive purposes.
4. It is discriminatory. Congress doesn't tell other corporations to pay their dividends in cash. They may pay all or part of them in stock, and many do. Nor does Congress tell other corporations how to manage their financial affairs by indicating the nature, time, and form of distributing their annual net margins. If Congress required corporations generally to revolve their equity capital every 15 years, as this Act would require co-ops to do, it would disrupt the economy and destroy capitalism as we know it.
5. It will force co-ops into a tight mold. Some co-ops pay only the required 20% in cash. Others pay 60%, 75%, or 100%, depending on each co-op's plans and its members' preferences for financing facilities and services.

I respectfully urge that the Committee, when it considers H.R. 13270, eliminate this provision from the tax reform package.

Sincerely,

J. PHIL CAMPBELL, *Under Secretary.*

Statement of George B. Blair, Executive Vice-President of American Rice Growers Cooperative Association

My name is George B. Blair. I am the Executive Vice-President of American Rice Growers Cooperative Association, 211 Pioneer Building, Lake Charles, Louisiana. This association, with its predecessors, has been engaged in rough rice marketing for the producers of Louisiana and Texas for over 60 years. I am also the Executive Vice-President of American Rice Growers Exchange which has been supplying fertilizers and agricultural chemicals to rice producers since 1944 and the Executive Vice-President of American Grain Association which has been marketing soybeans for soybean producers in Texas and Louisiana for the past five years. The first two named cooperative associations serve about 2,400 rice producers in Texas and Louisiana and American Grain Association, which is also a cooperative, serves about 600 soybean producers in the two states. Most of the soybean producers are also rice producers.

Our members have seen fit to cause the formation of three different organizations, rather than to try to perform all of the services through one farmers cooperative association simply because they believe that each organization should be of enough merit to "stand on its own feet" operationally and financially.

We are vigorously opposed to Section 521 of H.R. 13270 which proposes to "reform" the tax treatment of cooperatives and their patrons with respect to patronage dividends earned and per unit retains made.

As we understand the present provisions of the bill, a farmer cooperative association would be required to increase its amount of cash paid out by 3% each year beginning in 1970 until the amount of cash paid out is increased from the present 20% each year to 50% each year. This provision would apply both to earnings retained for capital purposes and to per unit retains which went into capitalization of the organization. In addition, as we understand it, those items which were currently retained would have to be retired in not more than 15 years.

Such requirements, if enacted into law, would seriously jeopardize all farmer cooperatives in the United States and, in its final analysis, would result in such associations having to be substantially debt financed instead of equity financed. Since the legislation would not increase revenues nor speed up the payment of revenues to the United States Government, we cannot but consider that it is punitive legislation.

We have heard the argument made that farmers must be protected from the management of their cooperatives. Certainly in our area, and I am sure in most of the rest of the United States, there are enough business organizations with which a farmer can do business that he is under no compulsion whatsoever to do business with his cooperative association if it is not doing a better job for him than he can get done elsewhere or if he is dissatisfied in anyway with its activities.

As we would interpret the effect of the proposed law on our own cooperatives, the effect would be disadvantageous to our members. For many years we have followed a policy in all of our organizations of keeping our operating expenses and amounts retained for capital purposes to an absolute minimum. Those amounts which have been invested for capital purposes in our cooperative associations are permanent capital items and we do not follow a revolving plan of retiring capital. These retainages range from 5% of net earnings in the case of American Rice Growers Exchange to a 2% of gross sales retain in the case of American Grain Association. In the latter organization, this amounts to a little less than 5¢ per bushel of soybeans.

In the case of American Rice Growers Cooperative Association, our net earnings for 1968 were $6,666.38 on almost 17 million hundredweights of rice with a value of 136 million dollars. For the preceding year of 1967 our earnings amounted to $3,371.05. The total of these earnings, less that required to be paid out, was retained as permanent operating capital.

In the case of American Rice Growers Exchange, some $35,000 was retained out of $700,000 of net profits for the year. Of the approximately 1.6 million dollars of net assets of this company, 1.5 million dollars is in permanent investments and there is no way that this company could adopt a policy of retiring retained earnings without entering into a liquidating process of its investments which have provided substantial advantage and made possible the earnings to its members.

American Grain Association operates on a pool basis and pays out all of the earnings of each pool upon liquidation of the pool except for a per unit retain of 2% of the gross sales price as mentioned above; this amounts to less than 5¢ per bushel of soybeans. These per unit retains provide operating and investment capital and are represented to the members in the form of preferred stock on which a minimum of 6% annual dividends have been paid since the organization came into existence. Last year this retain amounted to about $86,000 on 4.3 million dollars. In addition, our cash settlements to farmers was 4.6¢ per bushel over the market price.

At the present time, this association has under construction a river barge loading facility which is financed and will be paid for out of retain capital. There would be no way that the money retained and invested in this facility could be retired without liquidating the facility.

Many of the twenty-five local cooperative associations affiliated with us face the same problems. Some of them have recently built storage facilities costing several hundred thousand dollars each. This was done with the full approval and consent of their members with the full knowledge and understanding that a portion of the earnings or the retains would be used to pay off indebtedness and that the individual member would be required to pay Federal income taxes on that retained portion as provided by current law. Financing arrangements for the construction were based on this approval and the loan repayments are amortized over a period of years in fixed amounts.

Since these facilities are for service rather than profit with limited dividends paid on capital, as required by both Federal and state law and by financing institutions, their stock is not an attractive investment to anyone other than the farmer-user. At the same time, farmers are not in a position to raise the large sums required, in cash, to finance the facilities.

If this Section of the Act is enacted into law, I am sure farmers and their cooperatives would have extreme difficulty in inducing a financial institution to grant a sizable loan in the face of a requirement that one-half of any earnings had to be paid out currently in cash and the other half within fifteen years. Certainly, after the law became fully effective, this would be the rule since all of the earnings would be required to be paid out each year in cash, either as the current cash payment or to redeem equities previously retained.

In each of our companies, it seems to me, our only other alternative would be to approximately quadruple the amount of earnings and per unit retains that we are retaining in order that we might be able to pay out the required fifty per cent and retire the retained earnings of prior years and still be able to carry on with a constructive and progressive program if this Section of the bill is enacted into law.

We believe that the Revenue Act of 1964 which was developed after many years and many thousands of pages of hearings was a fair and equitable resolution of the cooperative tax problem. We believe that the current proposal which was developed without notices or hearings is unfair and inequitable to farmers and will be of benefit to neither the United States Government nor to farmer members of agricultural cooperatives. We urge that these provisions be stricken from the bill.

The CHAIRMAN. Senator Anderson.

Senator ANDERSON. I have no questions but I welcome Senator Carlson.

Senator CURTIS. I think you covered it but you have left out one bit of your credentials and that is your service on the Ways and Means Committee.

Mr. CARLSON. Thank you very much.

Senator MILLER. No comment except to welcome the Senator back. We certainly enjoyed our years of service together.

Mr. CARLSON. Thank you.

The CHAIRMAN. Senator Byrd.

Senator BYRD. No comment. I am delighted to see Senator Carlson again.

Mr. CARLSON. Thank you so much.

Senator JORDAN. No comment. Just it is good to have you with us. Your testimony is constructive.

Senator FANNIN. Mr. Chairman, certainly I concur that it is an honor to have you back with us, Senator Carlson.

Mr. CARLSON. Mr. Chairman, it is a pleasure to get back into my meeting with you here today. It brings back many pleasant memories going back to the days on the House side, Mr. Doughton, how many of you remember, Senator George, Senator Byrd. I do thank you very much.

The CHAIRMAN. I would say with regard to the farm cooperatives the wise thing would be to let the case rest right there.

Mr. CARLSON. Thank you very much.

(Senator Carlson's prepared statement follows:)

STATEMENT BY THE HONORABLE FRANK CARLSON

I appreciate very much this opportunity of appearing before this distinguished Committee, on which I had the pleasure of serving for 14 years while a member of the Senate, to express the views of the members of the National Federation of Grain Cooperatives on the proposals contained in Section 531 of H.R. 13270 dealing with the tax treatment of farm cooperatives. A complex subject, I might add, which I thought had been resolved both equitably and satisfactorily by enactment into law of the Revenue Act of 1962.

Appearing with me this afternoon are the Federation's Executive Vice President, Bruce J. Hendrickson, and the organization's General Counsel, Irving Clark, who is a partner in the law firm of Doherty, Rumble & Butler of St. Paul, Minnesota. I have asked both of these men to sit with me to provide assistance with respect to any technical points which may arise since this has become an increasingly complicated subject as to details.

It was not so at one time. But I am afraid that as our farm marketing cooperatives have become more and more of an effective force in the selling and the processing for sale of grains and oilseeds for the mutual benefit of its members, opponents of this perfectly proper method of doing business have sought by a variety of extremely technical means to drive a "tax wedge" between member-patrons and the institutions they have tirelessly built and financed to further their own economic well-being. It has also been at considerable cost to these farmer-patrons, notwithstanding allegations to the contrary by those who have ceaselessly showered the Congress year after year with "co-op tax reform" schemes designed to deprive member-owners of these institutions of the full economic benefits which both the Congress and Executive branches of our Federal System have in their wisdom seen fit to encourage over many decades in the interests of sound public policy.

As I recall the many instances in the past when I was personally involved in judgments made with respect to cooperative taxation both in this distinguished Committee and on the floor as a Senator from the great State of Kansas, the principle of the payment of a single tax upon the savings (earnings) of a farm cooperative at the investor level was never lost sight of despite the repeated attempts by opponents of these organizations to have them taxed otherwise under the guise of "reform." This has even included successive attempts to impose the "two-tier" system of levying taxes on the "profits" of these farmer-owned and controlled associations.

Despite the repeated efforts of farmers and their cooperatives leaders over the years to combat this divisive tactic we have seen a successive enroachment by the government into the conduct of the business affairs of both patrons and their cooperatives as regards tax matters.

This involvement appears to be getting deeper too, judging from the proposals contained in Section 531 of H.R. 13270.

Both the proposed phased-in cash payout requirements to 50 percent by 1970 and the statutory directive to treat future contributions of capital (investments) by patrons in their cooperatives as debts of the organization are perfect illustrations of this excessive tendency by some to submerge or sink well established public policies via the taxation route.

It might be pointed out too, that neither proposal serves the interests of the government from the revenue standpoint since no additional taxes will be collected, according to estimates supplied by the Treasury Department.

Since this is to be the case, and I have no reason to disbelieve their estimates, I am at a loss to understand where any corresponding or redistribution of existing or future tax burdens (the object of tax reform) will come about as a result of the enactment of these proposals.

On the other hand, irreparable harm will be done to both farmers and their cooperatives if Section 531 is enacted into law. I can't believe that members of this Committee want to see this happen.

This is especially true in the present context of the tremendous demands being put on our limited resourese budget-wise, including the U.S. Department of Agriculture. Farmers recognize this hard fact of life even in cases involving our major programs for grains like wheat. Because of this, they are attempting through various means to devise their own programs. A major effort in this direction to eventually relieve the government of its dominant role in this area is being spearheaded by cooperatives. Most certainly, any program ultimately developed will take time. But experience convinces me that the very institutions which would be destroyed by the enactment of these harsh proposals—our grain marketing cooperatives—represent the most promising vehicle for eventually effecting the transfer of grain programs to the private sector sometime in the distant future.

Now, as to the subject at hand, I well recall the days of service on this Committee prior to the enactment into law of the Revenue Act of 1962 when we exhaustively studied this subject.

At that time I remember we were very careful to erect a set of "qualifications" to insure that all noncash patronage allocations would be taxed at their stated dollar value in the hands of the patron or his cooperative would be taxed. In order to be sure that the patron had enough cash to pay the tax on these amounts we required that the cooperative include at least 20 percent of the savings in cash.

That seemed like a reasonable proposition then. It still does. I believed then and still do however, that the financial needs of these businesses is a matter which should be left more properly for them to determine by their own actions and not be impressed on them by some tax authority. This includes such jointly agreed-to decisions as those taken with respect to who is going to pay the tax on patronage distributions too, so long as the proper tax is paid by somebody.

The point which is often overlooked is the fact that these associations are voluntary as to membership. No one is under any compulsion to patronize them either, an item that those unfriendly to this form of business organization never bother to mention for self-serving reasons.

Now, it seems to me that as this Committee considers Section 531 of H.R. 13270 it ought to weigh very carefully the fatal consequences which it would have on the future ability of local grain marketing cooperatives like my own back in Kansas—the Cloud County Cooperative Elevator Association at Concordia—to provide the badly needed and growing services which its farmer-owners demand and get right there in town.

Of equal, if not of more importance, is FAR-MAR-CO., INC., headquartered in Hutchinson, Kansas. This latter organization, a regional grain marketing cooperative, makes it possible for members of my local to play a significant role in the key terminal and export grain markets where forces of supply and demand operate to establish prices. Markets created day in and day out by this major regional along with markets created by the other 19 regionals comprising the membership of this Federation constitute an indispensible service for the one million grain producers and 2,680 local cooperatives owning them.

Earnings derived from the activities of these regionals represent a major source of revenue for the locals. At the same time, the locals' major investments (and consequently, their member-owners) are generally those made in their regional. These are substantially too relative to others in most cases.

With limited exceptions, the capital which has been provided by farmers to build and enlarge their sphere of marketing influence has come from reinvested earnings on which farmers have willingly paid taxes on in order to supply to themselves as a group many of the services they could not economically afford to individually do. This would include such things as building and maintaining grain elevators, plants for processing their grains into more valuable products, owning rail and barge equipment, and even acquiring their own lending institution—the Banks for Cooperatives—through the systemic repayment of government capital from their own funds.

All of these have cost great sums of money, but they are providing their member-owners with an important array of services which is the way they want it.

Thus, as you study and deliberate the pros and cons of Section 531 of H.R. 13270 in the weeks and months ahead, I would urge you to ponder very carefully whether, by enacting this proposal, you will be helping farmers or hurting them.

After it is all over, my inclination is that you will be disposed to agree with me that the wisest course is to have Section 531 stricken from the bill.

The CHAIRMAN. Next, we will hear from the Honorable Herbert A. Fogel, general counsel of the Pennsylvania State Harness Racing Commission. Senator Carlson's testimony will appear under the cooperative heading.

STATEMENT OF HON. HERBERT A. FOGEL, GENERAL COUNSEL, PENNSYLVANIA HARNESS RACING COMMISSION

Mr. FOGEL. My name is Herbert A. Fogel, counsel for the Pennsylvania State Racing Commission and I am here at the request of our Governor, and with his authorization, who unfortunately could not make this himself.

We wish to thank the chairman and members of the committee for affording Pennsylvania this opportunity to appear before you. Because of the very devastating economic consequences we believe would follow as a result of the enactment of the amendments to section 270 as they are contained in H.R. 13270.

If I may say so, sir, in the first instance, I think that these amendments, a full understanding of them in terms of what it would mean to the State as far as not only revenue but jobs are graphically brought into play when you consider that Pennsylvania is one of the younger States that is going into racing. For example, thoroughbred racing has just started this year, 1969, and standardbred or harness racing commenced in 1963, and yet we now have a source of revenue that this year alone in direct revenues to Pennsylvania will exceed $17 million, of which for example 3.5 goes to the city of Philadelphia for its school system, the city that has the same plight as so many of our other major cities do with respect to revenues for education; $1 million of those revenues go to help the rural areas in connection with sewage and water treatment.

In addition to that, the investment in plant alone is something like $50 million. All of these are the racing associations that of course pay the normal corporate income taxes to the Federal Government as well as to the State itself.

The land investment and horse investment exceeds $100 million. The payrolls directed to racing along, the people who have been discussed, the grooms, the trainers, the waiters and all the others, that exceeds $10 million annually, and in fact given related horseracing endeavors such as the farming, the feed, and the other aspects we believe that the statistics from our department of agriculture show conservatively about $15 million a year in payroll is expended in this way.

These are all people who are employed who are of course paying their Federal taxes, paying their taxes to the State, besides the direct revenues the State is obtaining they are the sales taxes on items of produce and the rest.

I think that this dramatically shows how in terms of economics of Pennsylvania here has been not only a source of revenue but a source of employment, a source of jobs, and a source of all of the other benefits that have accrued that really we have had only in the last 6 years to this extent because we never had racing before then.

With respect to section 270, I think there are two very salient points. As this committee is well aware, probably far more aware than we are, the body of law that has been developed in the last 30 years has made it very clear, to answer I think a question that Senator Curtis put before, that people can't be in this as a hobby, that you have got to be in this as a business. Not only the regulations of the Internal Revenue Service themselves but the additional law of our courts have set up certain standards and guidelines, so that within a realm of reason, a man who is entering this business knows what he can look forward to, knows that which is legitimate and that which would be in the hobby area, and therefore he cannot get away with it.

What the amendment that is proposed in section 13 would do to section A, of 270, is to take it one step beyond there, and I respectfully submit that the language as written would put it into a complete maze, because now the test would be whether or not there is a reasonable expectation that you are intent to make a profit there.

I dare say that I think there is o'ly one group that will economically profit and I think that would be the lawyers who would spend years litigating this. It has been hard enough and difficult enough to establish a body of law with certainty as to what intent to make a profit means, but if we then take that one or two steps beyond, so we are not testing the intent to make it, but whether there is a reasonable expectation that that intent is accurate, I think that this would result in the kind of uncertainty that would certainly drastically reduce the number of people who are willing to invest in this business, and I add in this as a business.

I think the second part with respect to subsection (b) of 270, which would change the existing law wherein 5 consecutive years there cannot be 5 consecutive years of losses exceeding $50,000. I think if we remember that the $50,000 limit which was established in 1940 in effect probably in economic terms and worth really is probably $25,000 in terms of the $50,000 that was established by the Congress in 1940 itself.

And so you have an industry where we know that the risk of losses, because of the hazards of lameness, sickness, soreness, the other things that are beyond anyones control, where we know that the expenses have gone up and these risks have multiplied and yet the standard of the $50,000 standard, which is certainly far less in terms of the 1940 dollar we believe certainly is one that has sufficient guidelines so that we are able to establish not only the business purpose but not have this thing go so wild so that there are no controls.

I think one of the other interesting and significant points is that the mass of people who are in this industry are not a few wealthy people who have this as a hobby. The mass of people who are in this industry, for example, in the thoroughbred field, in the 1967 figures show that out of 28,000 winning horses, the average for the owner for that year was $3,000 of winnings. As a matter of fact the average was $800, but those 28,000 winning horses didn't exceed $3,000 in winnings for the owners in that year.

By the same token in the standard bred industry, out of 20,000 winning horses in 1967, the owners of those 20,000 horses also averaged winnings of $800 a year. The great bulk of the people who are in this field are the people who are in this with relatively modest means, and to whom it is most important that they be in this to win, because they are not people who have the resources to afford doing something where they can keep on losing.

We feel, however, and we know that the very difficult task that this committee has is to strike a balance, whereby the person who is in this as a bona fide business is protected, and that the few people who are abusing things should not be protected.

We would respectfully submit that we think by uniformly treating this in terms of horseracing as a business as other businesses are treated that this would be one solution.

For example, we subscribe to the idea that a capital gains period should be the same as it would be in a business or an industry. We also subscribe to the idea that just as a businessman who would sell his machinery in his business under section 1245 of the code to the extent that he is taking a depreciation on that machinery, and sells the machinery for a price that is above his present basis, that to the extent there has been depreciation, then he ought to pay ordinary income on that part of the profit reserving capital gains for the rest.

We believe that that provision and that proposed amendment to 1245 could certainly apply in terms of the horseracing industry, and at the same time put them on an equal footing with other businessmen.

In sum then we feel from past viewpoints, and we believe this is certainly true of the other States, and I won't repeat those figures, which the committee has before it, but in terms of the economy of these States, we certainly think that 270 would be a tremendously disruptive course and would in effect if not completely destroy, so hamper the horseracing industry that it would have a deleterious effect on the States involved.

Thank you very much.

The CHAIRMAN. Senator Anderson.

Senator ANDERSON. A very fine statement.

Senator CURTIS. I asked all my questions of the previous witnesses.

Senator MILLER. The previous witnesses apparently were very much opposed to this 1-year holding period. In fact they were opposed to a 6-month holding period. Now you recommend a 1-year holding period. How do you reconcile your two views?

Mr. FOGEL. My answer to that, Senator Miller, would be this. First of all, I believe, as you stated, sir, that the Treasury itself was willing to amend this to a 6-month period.

Second, I would say that, if there could be a further amendment, so that the same type of treatment as is given to all other capital assets, it would certainly be preferable—namely, a 6-month period from the time the asset is acquired, that would put it on the same footing with all other capital assets.

Senator MILLER. I agree with you, but that isn't what your recommendation is. As I read your recommendation or understood it, it was to go along with the 1-year holding after the horse becomes a breeder or a racehorse.

Mr. FOGEL. The Commonwealth's position is that, if necessary, we would be willing to see this amendment adopted because we think the real crux of the problem is found in the proposed amendments to section 270. Certainly we think it would be preferable to have a straight 6-month holding period, but, if necessary, we think the people in the industry could live with the holding period as proposed in the amendment by the Treasury of the existing provisions of section 270.

Senator MILLER. Speaking for myself, I just think it would serve to offer more problems than it would solve. I can't see much benefit from what we have now, but I can see some need for some other changes. But after what the previous witnesses testified, it seems to me that this would single out certainly the horse industry for special discriminatory treatment.

It would be completely contrary to the method of operation. You have heard his testimony as to the 2-year-old and how it would have to be held to be a 3-year-old. The 3-year-old would have to be held to be a 4-year-old. I would think that that would be a pretty severe provision to throw at them, and I am not sure that I see the benefits that would flow from it to the Treasury.

Mr. FOGEL. Well, sir, I think our position would be that to the extent that there could be equality of treatment along the line with all other businesses this would be fairer, bearing in mind as you point out and as the previous witness did that there are the facets of each industry that have to be considered, and I think this is one of the reasons why we feel that the broad brush stroke that has been applied in trying to lump everything together has perhaps produced some of these results.

Senator MILLER. Thank you.

The CHAIRMAN. Senator Jordan.

Senator JORDAN. No questions.

The CHAIRMAN. Senator Fannin.

Senator FANNIN. No questions.

The CHAIRMAN. Thank you, sir.

(Herbert A. Fogel's prepared statement follows:)

Statement of Herbert A. Fogel, General Counsel, Pennsylvania Harness Racing Commission

My name is Herbert A. Fogel and I am General Counsel for the Pennsylvania Harness Racing Commission. I have been authorized by the Governor to appear before the Senate Finance Committee on behalf of the Commonwealth of Pennsylvania at these hearings.

May I say, in the first instance, that the Governor and the other administration officials of the Commonwealth of Pennsylvania are most grateful to the Committee for affording me this opportunity to appear because of the grave economic consequences that would follow if the changes proposed by H.R. 13270 as an amendment to § 270 were adopted in their present form.

The changes proposed by H.R. 13270 as an amendment to § 270 wherein "Items attributable to an activity shall be allowed only to the extent of the gross income from such activity unless such activity is carried on with a reasonable expectation of realizing a profit" could rapidly result in drastic curtailment of Standardbred and Thoroughbred horse racing in the Commonwealth of Pennsylvania, with a resultant loss of state revenues, as well as employment to many thousands in the Commonwealth whose economic livelihood depends on Standardbred and Thoroughbred racing and its related industries.

In 1968, the Commonwealth of Pennsylvania received in direct taxes from pari-mutuel harness racing alone a sum in excess of seven million four hundred thousand dollars. Pari-mutuel thoroughbred racing in Pennsylvania commenced for the first time in 1969. It is conservatively estimated that barness racing will yield in excess of eight million dollars in revenue in 1969, and thoroughbred racing another five million, making a total of thirteen million dollars as direct taxes from this source.

In addition, the City of Philadelphia has a dire need for taxes for education, a need that plagues so many other major cities in the country. Philadelphia received almost two million dollars in direct taxes from pari-mutuel wagering for its public schools in 1968. In 1969, it is estimated that this figure, through the combined revenues of harness and thoroughbred racing, will approximate three and one-half million dollars.

In areas of the State other than Philadelphia in which harness racing tracks are located, approximately a million dollars in taxes were raised in 1968 for smaller communities needing funds to improve their sewage and water disposal plants. These sums will also be substantially increased in 1969.

The figures cited do not take into account other substantial revenues which the Commonwealth derives from sales taxes on food and other items sold both on and off the tracks in connection with the conduct of the pari-mutuel racing industries.

Pennsylvania, in this connection, is but representative of the thirty states that have pari-mutuel racing. For the year 1968 alone, the tax revenue from racing to these states were in excess of $426,800,000. The proposed changes will seriously affect, if not destroy this source of revenue, at a time when this Committee is well aware of the monumental problems confronting the states in their efforts to raise the necessary tax revenues in order to continue to furnish necessary services.

Quite apart from the loss of tax revenues, however, the impact upon the economy of the Commonwealth would be even more devastating.

In Pennsylvania alone there is a capital investment in racing plants of approximately fifty million dollars. All facets of the horse industry in Pennsylvania, including the land in use for raising and breeding horses, represent an investment that is well in excess of one hundred million dollars. The payroll at the tracks alone for grooms, trainers, waiters, maintenance men and others who find gainful and useful employment through the operation of pari-mutuel racing in Pennsylvania is in excess of ten million dollars annually. The salaries of all others who are employed in all facets of the horse industry, including the feed and breeding industries, brings the annual payroll to well in excess of fifty million dollars. These figures projected for the thirty states would indeed demonstrate the very substantial contribution to the overall economy made by horse racing and relating industries.

The administration in Pennsylvania is mindful of the purposes behind the Tax Reform Act of 1969 and, indeed, the Commonwealth not only realizes, but supports the need for tax reform in many areas.

The concern, however, is that in attempting to bring about needed reforms in certain areas, the wording of § 270 is such that it could result in bringing about a result which we know is not the intent of the drafters of this legislation; namely, the virtual destruction of the horse racing industry.

§ 213 of H.R. 13270,* in particular, which sets forth the general rule without reference to dollar limits could be interpreted to eliminate the thousands of persons who own horses on an extremely modest scale and whose gross income from this activity in the years in which they do not have good winning horses often does not exceed three to four thousand dollars per year, while their expenses are in excess of that amount.

According to the thoroughbred record on distribution of earnings for all 1967 horsse that started in races, there were 28,743 thoroughbreds with winnings of $3,000.00 or less, and the average winnings of this group were $802.00 for each winning horse. This includes over 70% of the horses starting and does not include the number of horses trained on which expenditures were made that were not even able to enter races due to lameness or sickness.

In harness racing, 20,473 horses earned less than $3,000.00 per horse, with the average earnings of this group totalling only $863.00 per horse. Again, this number represents 75% of the horses that actually started, and does not include horses which were trained and for reasons cited were unable to enter races.

Horse racing, by its very nature, is a hazardous undertaking due to sickness, lameness and other hazards which are unpredictable. § 213 of H.R. 13270, as written, could drive the bulk of the owners out of the business since the bulk of the owners are, indeed, the small owners. The probable result would be that there would not be enough horses to fill the races, thus depriving the Commonwealth of this source of revenue collected in 1968 as the result of the activity of 1,750,000 patrons who wagered a total in excess of 126 million dollars. Indeed, the effect would be the same upon all thirty states, in which 65,460,000 patrons in 1968 wagered in excess of $5,226,000,000.00, to bring about the tax yield of almost one-half billion dollars.

Although the small owners incur losses frequently until they are fortunate enough to develop a horse or horses that can recoup these losses, the over-all picture, including the revenues obtained by the states, is not one of a "loss" industry. In addition to the approximately one-half billion dollars in state taxes, about one-third of a billion dollars in purses will be paid to the owners of competing horses in 1969.

Assistant Secretary Cohen, on page 29 of his statement before this Committee, states:

"The Administration urges the adoption of this proposal as an effective means of dealing with cases where the tax losses are being used to subsidize the hobbies of wealthy taxpayers."

We believe the objective can be attained wtihout destroying the entire industry with the concommitant ill effects on thousands of small taxpayers and thousands of other persons whose livelihood depends on the business of horse racing.

Specifically, we believe that there are several approaches which we would respectfully submit for consideration by the Committee that can achieve the desired result of eliminating the abuses and at the same time not destroy the horse racing industry itself.

First, the proposal that the holding period for horses be at least 365 days after such animal normally would have first been used for its intended purpose before capital gains treatment will be afforded is certainly one that we heartily endorse. We believe that this would go far toward eliminating the abuses of some who are not interested in the sport or the industry, but merely interested in a tax shelter.

Second, we submit that depreciation rules akin to those set forth in § 1245 of the Internal Revenue Code be adopted, as proposed in H.R. 13270, with respect to the sale of horses and other livestock. We believe that it would be equitable for those in the horse business to have the horses treated in the same manner a businessman has personal property, such as machinery, treated upon the sale of that property. Specifically, to the extent that depreciation would be taken (whether straight line or accelerated), upon the sale of the animal, the tax treatment would be as follows: if the price is in excess of the adjusted basis of

*(§ 213 contains the amendments proposed to § 270 of the IRC of 1954.)

the animal, the amount in excess of the adjusted basis which is realized that is equal to depreciation taken should be taxed as ordinary income with capital gains treatment being restricted to the balance received. The enactment of the changes to § 1245 of th Internal Revenue Code which includes livestock would be sufficient to curb any abuses presently in the industry. As such, § 211 of the House Reform Bill relating to the denial of capital gains when there exists a surplus in an excess depreciation account, should be deleted. In short, we feel that there is no need to place a heavier burden on the horse indusrty than is presently placed on other businessmen.

Third, we submit that the proposed changes to § 270 of the Internal Revenue Code be entirely deleted.

We believe that such legislative changes, rather than the changes proposed to § 270, would achieve the result of correcting the abuses and, at the same time would permit the thousands of legitimate and bona fide persons who own and breed horses to remain in this industry.

In enacting these changes, the States would not be losing a vital source of revenue and the thousands of persons employed in this industry would continue to earn their livelihood in this manner.

Again, may I thank the Committee for the opportunity that was afforded me on behalf of the Commonwealth to submit these views.

The CHAIRMAN. Now we will hear from the attorney general of the State of Delaware, the Honorable David P. Buckson. Please proceed.

STATEMENT OF HON. DAVID P. BUCKSON, ATTORNEY GENERAL OF THE STATE OF DELAWARE

Mr. BUCKSON. Thank you, sir. I have been an owner, breeder, trainer, and driver of harness horses for many years.

Insofar as they apply to the racehorse industry, I oppose the various legislative proposals—including H.R. 13270—which would restrict the deduction of farm losses against nonfarm income; would provide for the recapture of depreciation on livestock; and would change the "hobby loss" test from the purpose and motivation to make a profit, to "reasonable expectation" of making a profit.

My basic point is a simple one. Each of the pending proposals—not to mention the totality of them—would ill advisedly and needlessly jeopardize a vital source of important revenue to many States, including Delaware—namely taxes yielded by parimutuel wagering at race tracks. These revenues amounted to $426 million in 1968 and will approximate one-half billion dollars in 1969. At the same time, I would add that on a net basis, the effect will be to shut off a source of substantial Federal income tax revenues.

The State of Delaware has a direct interest in this proposed legislation. It is threatened with the loss of $7 million which it presently realizes from horse racing in the form of direct parimutuel taxes. This is vitally important to a State as small as Delaware. Beyond this, the Delaware Legislature has recently appropriated substantial funds to stimulate race horse breeding in Delaware and this is rapidly becoming an important farm industry to the State of Delaware.

I do not lightly state that the pending proposals threaten the survival of parimutuel racing. My reasons for making this statement are set out below and are based on the knowledge I have accumulated in the many years I have spent in my various capacities in the racehorse industry.

Let me first direct your attention to the Treasury's estimates of the revenue which would be raised by the farm loss, depreciation and hobby loss provisions of H.R. 13270, as recited in Senator Metcalf's testimony before this committee on September 22, 1969. His testimony states as follows—and I quote—that the Treasury's estimate of the total revenue which would be yielded by these provisions after a 10-year interval would be $20 million (and that the ultimate total would be $25 million):

> By 1979, the estimated increase in tax liability under the farm provisions of the House bill are as follows: excess deductions account, $10 million; depreciation recapture, $5 million; holding period of livestock, $5 million; hobby losses, negligible; for a total of $20 million by 1979. It is estimated that sometime after 1979 the increase in tax liability ascribed to the excess deductions account provision would increase an additional $5 million.

And, of course, these estimates take into account all types of farming, not just race horses.

It seems to me that for such a pittance, it is the height of financial folly to jeopardize the huge revenues which the sorely pressed States are now receiving from horse racing—let alone the revenues which the Federal Government is realizing. This is a classic case of throwing the baby out with the bath water.

Now let me direct your attention to the specific reasons why I believe such a loss of revenue would result from the pending proposals.

1. As explained below, the pending proposals seriously endanger a source of enormous public revenues because they threaten to terminate parimutual racing, by forcing breeders and owners of race horses to get out of the business. This threatened loss of sorely needed revenues is needless because race horse owners are, in effect, subsidizing parimutuel racing at their own out-of-pocket expense. (See attached exhibit A, showing earnings experienced on the best bred harness racing stock.)

2. (a) Parimutuel racing provides the States a form of voluntary taxation which yielded them $426 million in 1968 and will yield about $500 million in 1969. (Attached exhibit B, tables 1 and 5.)*

(b) This form of State tax is not deductible against Federal income taxes. If lost, it will have to be replaced by other taxes—for example, income, sales, or property taxes—which are applicable to the public at large and are deductible expenses for Federal income tax purposes.

3. The Federal Government undoubtedly realizes net tax benefits from parimutual racing in the form of income taxes paid by:

(*a*) race tracks, their stockholders, employees and concessionaires;

(*b*) employees of breeding farms and racing stables, and their suppliers of various products—for example, hay, grain, straw, horseshoes, medicines, bandages, harness, sulkies, and so forth;

(*c*) ordinary income on sales of yearlings by breeding farms;

(*d*) capital gains on sale of racing and breeding stock and the sale of breeding farms.

4. (a) The "tax dodges" at which the livestock and hobby reforms are aimed are pointed out in a Wall Street Journal article of March 19, 1969. (Attached ex. C.) They do not apply to the breeding of racehorses or racing stables.

(b) There is no suggestion in that article that such tax avoidance practices apply to horses or that any of the estimated loss of Federal revenue is in any part attributable to horses. In any event, the revenues yielded by the horse racing industry to the States and the Federal Government far exceed the outside estimate of such losses.

*Exhibit B was received by committee and printed as an attachment to a previous witness' statement. See p. 2826.

(c) In contrast to cattle or citrus farms, there are no public investors in horse breeding farms or racing stables. The business is too hazardous to attract public investment capital.

5. There is no more hazardous business than the breeding and/or racing of horses. The chances of losing money are overwhelming. Estimates are that 9 of 10 racehorse breeders and owners lose money. Some of the reasons follow:

(*a*) Overall, the horse race population races for purses amounting to one-half of the operating expense of maintaining them (that is, exclusive of depreciation) and a very substantial part of the purses is furnished by owners by way of stake fees. For this and other reasons, race horses are not income-producing property, but a drain on their owners, as shown by attached exhibit A.

(*b*) Lameness, sickness, and accidents incapacitate or degenerate the great majority of race horses. Many other horses, even if sound, simply cannot race fast enough to pay their way. Horses are insurable only for mortality. If not useful as racehorses, they are worth virtually nothing—what they can bring for dog meat, and so forth, except for the relatively few animals useful for breeding purposes. Hardly any male horses are usable for breeding. The successful stallion is exceedingly rare. Geldings are useless for breeding purposes. Only a minority of females make successful broodmares.

6. (a) A change in the hobby law to "reasonable expectation of making profit" means that the applicable test is no longer the owner's purpose or motive, but his objective prospect of making money. On such a basis, the prognosis can readily be shown to be very dim. This will force owners and breeders out of the business. Virtually, all horse racing losses will likely prove nondeductible. Without breeders and owners, the parimutuel tracks cannot survive.

(b) Race horse breeders and owners can live with the present law. This is stated by the following extract from a recent case, entitled *Valden B. Starr*, which was reported on March 7, 1969 (28 TCM 167 at 172):

> Breeding and raising horses for sale may constitute a trade or business. *Commissioner* v. *Widener* [1929 CCH D-9279], 33 F. 2d 833 (C.A. 3, 1929), affirming [Dec. 2910] 8 B.T.A. 651 (1927); *Theodore Sabelis* [Dec. 25, 390], 27 T.C. 1058 (1962). But this must be determined in each case by whether the taxpayer engaged in the venture with the bona fide intention of conducting it as a business with the motive and purpose of making a profit. *Cf. Lamont* v. *Commissioner* [65-1 USTC ¶ 9124], 339 F. 2d 377 (C.A. 2, 1964); *Schley* v. *Commissioner* [62-1 USTC ¶ 9322], 375 F. 2d 747 (C.A. 2, 1967). It is not necessary that the expectation be a reasonable one; it is sufficient if it is genuine.

7. (a) Contrary to popular belief, the great majority of horse breeders and owners are people of modest means. Rich owners of the few profitmaking commercial farms alone cannot maintain the parimutuel tracks. Even on Kentucky Derby day, there must be eight other supporting races on the program. These are provided by rank and file breeders and owners with limited capital.

(b) More specifically, the commercially successful breeding farms in harness racing provide substantially less than 1,000 horses per year and, as exhibit A shows, most of these do not make the grade. The importance of the small breeder is easily demonstrated. For example, there are five harness tracks operating in New York State alone from early spring to late fall. They need 432 horses to fill their weekly racing cards—that is, nine races, with eight horses per race, 6 days a week. In sum, taking into account the incapacitating factors of lameness and accidents, the New York harness tracks alone require between 3,500–4,000 horses on their grounds to be able to fill their programs. And New York is only one out of 29 States which conduct parimutuel racing.

8. (a) The recapture of depreciation will also force owners out of business. Only by the occasional sale of a valuable, fully depreciated horse can an owner replenish his stable or broodmare barn without depleting his savings.

(b) As applied to racehorses, the recapture of depreciation is wrong in principle. It is the most hazardous of all businesses, since so few horses ever pay their way, let alone make a profit. It is far riskier than the oil business, as shown by the fact that it is shunned by public investors. But under existing law, horsemen do not get anything like the tax benefits provided for oil investors.

A race horse is a wasting natural aspect. It cannot be restored by depreciation funds—but must be replaced. It is not insurable for sickness, lameness or accident. The appropriate comparison is not depreciation, but depletion, which is not recaptured under the tax laws.

9. The restriction of the deductibility of horse racing expenses against nonfarm income will likewise force most owners out. Because of the hazards of horse racing, very few, if any, owners can depend on it for a living. If they must absorb horse losses, they will sacrifice the outside income on which they support themselves and their families. Confronted with the risk that horse losses will be nondeductible for tax purposes, they will have to get out.

10. Without the market provided by racing stables, all breeding farms will be forced out of business—including the very few large commercial breeders that have been profitable. And the racetracks cannot operate without racehorses.

Next, let me explain why there is no such thing as tax-dodge farming in the breeding of race horses or the operation of racing stables—as indeed is intimated by the passages from General Oppenheimer's book, quoted by Senator Metcalf. The initial statement in the chapter "Tax Plays In Race Horses" states the case in a nutshell. It states, "The tax aspects of the horse busines are unique, but in most instances, parallel the cattle business." The important statement is the recognition that the race horse business is "unique". This is an understatement. I could cite a whole host of reasons. I will content myself with two.

First, speaking broadly, the proof of the pudding is that there is no evidence whatever—from my source—that public money has ever been invested in race horse breeding farms or race horse stables. This should be conclusive. If the race horse industry could be used as a form of tax-dodge farming, public money would have long since been attracted to it. It is hard to see any room for rational dispute with the judgment of the public money market that the horse race industry does not yield rewards, by way of the tax laws or otherwise.

The reason is not mysterious. The odds are overwhelming that a race horse or a breeding animal which has failed as an income-producing asset—and this is true of the great majority—will bring far less in the market than the cost incurred during the two or three year period required to establish the animal's inability to earn money, whether for breeding or racing purposes. Consequently, there is no potential capital gain which will put the owner net ahead. An incapable or incapacitated race horse has virtually no market value. There is a simple and homely explanation. A horse is inedible—except as dogmeat.

Now let me give a specific example of the reason why the race horse industry is incapable of tax-dodge farming. One heifer in calf is essentially no different from any other heifer in calf. Each has a market value as a meat animal. As soon as the animal is in calf, there is an immediate incentive to sell, in order to obtain the tax advantage of a capital gain.

In contrast, there is no comparability between one broodmare in foal and another. A broodmare which has proved that she can produce fast race horses is a valuable asset—almost an annuity. There is every incentive to keep her as long as she will breed, and to sell her foals annually on the market—while, incidentally, paying ordinary income rates on the sales price. On the other hand, a broodmare who has proved she does not produce fast race horses is a cull. She must be sold because she is not worth the cost of her upkeep. But there is no profit in selling her. Like a worthless race horse, she will bring less than the cost incurred in keeping her through the 11 months conception period and the two subsequent years—at the minimum—it takes to get her first foal to the races. Most broodmares are culls.

The fact is that the current tax laws allowing the deduction of race horse losses—insofar as they do not exceed $50,000 per annum for 5 successive years*—is not a tax dodge, but a tax trap. It misleadingly entices the investor in race horses, or race horse breeding farms, to believe that it is worthwhile to take the gamble. Again, a classic metaphor comes to mind—this time the legend of the Pied Piper.

On the rationale that losses from the horse business will be tax deductible, the race horse investor convinces himself that it makes sense to take the reckless plunge into an incredibly hazardous business, although all the odds are against a profitable result. In the process, he exposes himself to almost inevitable out-of-pocket losses. To illustrate: assume that a taxpayer in the 50-percent bracket per year loses $25,000 in a tax year on his race horse enterprise. He save $12,500 in taxes, but is out of pocket the same amount. This happens over and over again.

The simple truth is that the horse investor is kept going by the dream of hitting the extraordinary great race horse, which will make his fortune. This happens very rarely, but just often enough to keep enough breeders and owners in business to sustain the race horse industry. If I were to analogize, I would liken the race horse owner to the gold prospector. But there is one vital difference. Every unsuccessful race horse owner is subsidizing a huge industry—that is, parimutuel racing—which makes money for everyone but himself—including the State governments and the Fed ral Government.

The horse investor, in short, is not the source of a loss of tax revenues, but a cornucopia of substantial tax revenues. There is no public purpose to be served by changing this situation. All that will be accomplished is to deprive the States and the Federal Government of an important source of desperately needed funds.

*Or lower losses, if the taxpayer cannot prove a genuine profit purpose.

Why enact any change in existing law which will jeopardize this huge industry supported by private citizens on a voluntary basis, at their own out-of-pocket expense?

I would like to have attachments to my statement included at this point, if I may.

The CHAIRMAN. Certainly.

(The attachments referred to follow:)

CITY COWBOYS—BIG INVESTORS ROUND UP TAX SAVINGS ON CATTLE THEY OFTEN NEVER SEE

Herds Yield Huge Deductions While Management Firms Take Care of the Details—Treasury Proposes a Curb

(By Ronald A. Buel)

I'm a rich cowhand, of the Wall Street brand
And I save on tax, to beat the band
Oh I take big deductions the law allows
And I never even have to see my cows
Yippie-i-o-ki-ay!

A growing number of investors could sing that parody of a 1930s tune ("I'm an Old Cowhand From the Rio Grande"). They're customers of agricultural management companies, which help them round up huge tax savings from investments in farming, sometimes fruit and nut groves but most often cattle.

The basic idea is familiar. A high-income taxpayer ($50,000 a year is the minimum to get much benefit from the plan) buys cattle. He then takes generous deductions permitted to farmers—even part-time farmers—writing them off against nonfarm income that otherwise would be taxed at rates up to 70%.

There are some disadvantages, though, for a taxpayer who tries to do this himself. He has to go to the bother of inspecting a herd or a whole ranch, negotiating a purchase, hiring a manager and keeping the books. If his inexperience results in mismanagement, he might even lose enough money on the cattle to cancel the tax benefit.

A DEDUCTIBLE VACATION

Now, for a fee—itself tax-deductible—a farm management company will take over the annoying details. It will buy cattle, arrange for professional ranchers to raise them, negotiate eventual sale of the herd and do the bookkeeping. A client who finds the nontax aspects of cattle boring doesn't even have to go look at the beasts. (A client who buys a citrus grove, however, might as well look it over during a Florida vacation; he can then deduct much or possibly all of the travel cost as the expense of a trip to inspect his property.)

Some of the bigger management companies even guarantee the investor against a loss of more than 3% or 10% (the amount varies with the type of investment) on their farm property. They make the rancher or grove manager who handles the property absorb any greater loss. A rich investor can shrug off a 3% or even 10% loss; it probably will be offset many times over by tax savings on his nonfarm income. Indeed, a small farming loss has its own tax advantage; it can be deducted from taxable nonfarm capital gains, such as stock-market profits.

As of now, all this is perfectly legal. The Internal Revenue Service requires only that a nonfarmer taking farm-expense deductions aim at making an eventual profit out of his sideline agriculture. To run afoul of this provision, an investor would have to show suspiciously large losses for a suspiciously long period or do something as stupid as forgetting to harvest his crops.

TREASURY SEEKS A LIMIT

But the Treasury now is trying to limit farm deductions against nonfarm income to $15,000 a year per person. Sen. Lee Metcalf (D., Mont.) calculates this proposal—one of a package of tax-reform ideas now being considered by the House Ways and Means Committee—would bring in $200 million to $400 million a year in taxes that sideline farmers now legally escape paying.

The proposal's fate is uncertain, however, and it hasn't stopped the rush of nonfarmers into agricultural investments. At least eight corporations, plus dozens of individual farmers who also manage farm property for a fee, now handle well over $100 million of investments for more than 5,000 people. Oppenheimer Industries Inc. of Kansas City, the oldest and largest of the companies, has doubled its clientele to 400 in four years. In December, it was managing 220,000 head of cattle for them and had orders for another 20,000 head it couldn't fill immediately.

Oppenheimer, the principal subsidiary of Atlas Acceptance Corp., Kansas City, began managing cattle in 1952, mostly for movie stars. Over the years, though, the focus of its appeal has shifted to Wall Street; stockbrokers and investment counselors now outnumber the Hollywood figures, such as Jack Benny, who still dot its client lists.

The tax savings these clients can make on cattle purchases compare favorably with the profits they can make on most stock-market investments. Consider, for example, the Kansas City broker for whom Oppenheimer bought a herd of "breeding cattle"—cows used to produce beef cattle—two years ago.

A 90-PERCENT LOAN

The broker paid $3,000 of the $30,000 purchase price in cash, borrowing the other 90% on a loan Oppenheimer arranged. This is a frequent practice for Wall Street cowboys; it allows them to get the full tax savings on a large herd without tying up too much of their own capital. Also, interest on the loan—in this case, $4,400 in two years—is tax-deductible.

The broker by now has paid out $32,000 in cash to cover various expenses of running the herd and deducted all of it from his nonfarm taxable income; at this point, the farm operations themselves have produced no profit. Besides interest, the deductions include a $5,050 management fee paid to Oppenheimer, $2,550 paid for use of bulls or artificial insemination for his cows—and a whopping $20,000 paid to purchase in advance several years' supply of feed.

This last deduction illustrates a special tax advantage of farming: Farmers are allowed to keep their books on a "cash" basis, rather than the "accrual" basis most businesses must use. That means, among other things, that they can deduct the full purchase price of feed in the year it is bought, rather than having to spread the deduction over the years in which the feed is consumed. This benefit was written into the tax laws because most farmers were assumed to have neither the time nor the accounting expertise to keep accounts on an accrual basis, but it applies to sideline farmers who are thoroughly familiar with involved bookkeeping methods.

Farmers also are allowed to take depreciation deductions on some kinds of cattle; in the broker's case, depreciation came to $5,000. That brought his total deductions to $37,000—saving $25,900 in taxes he otherwise would have had to pay at the 70% rate applying to the top slice of his nonfarm income.

That saving, it's true, may aventually be reduced by capital-gains taxes and possibly a paper loss on sale of the cattle. But the broker still figures to come out way ahead.

If he had Oppenheimer sell his cattle at today's prices, for instance—and he may—the broker would receive about $58,000, or about $4,000 less than he would need to recoup his cash outlays and repay the purchase loan. Also, he would have to pay capital-gains tax on $33,000, representing the excess of the $58,000 sale price over the cattle's $25,000 book value (the $30,000 purchase price less the $5,000 depreciation). At the top capital-gains rate of 25%, this tax would be $8,250.

39 PERCENT IN 2 YEARS

Subtracting this tax payment and the $4,000 paper loss from the $25,900 he has saved in income taxes, however, would leave the broker still $13,650 ahead on the deal. That's a two-year return of 39% on his total cash outlay of $35,000—a return not many stockmarket investments can match.

Lucrative as this deal was, it still doesn't illustrate all the advantages of cattle ownership. Investors in dairy cattle get the benefit of greater depreciation deductions than the Kansas City broker took, combined with greater income from their herds.

Modern Dairy Farms, Inc., Fort Madison, Iowa, now has 120 investors in its tax-shelter program, compared with 35 two years ago. One client, a clothing executive in the 50% tax bracket, bought a herd four years ago for $160,000, half of which he borrowed. He already has written the herd's value down to $60,000, saving $50,000 in taxes in four years through the $100,000 of depreciation deductions alone.

SPLITTING MILK INCOME

In addition, he receives income of $40 per cow per year, or $16,000 annually, on his herd of 400 head. (An equal revenue from milk sales goes to Modern Dairy Farms as a management fee; the farmer who raises the cattle keeps any remaining milk income.) With other deductions on the herd offsetting taxes on his milk income and then some, the investor figures to repay his $80,000 purchase loan out of milk revenues in five years, increasing his potential profit on eventual sale of the herd. This investor went to see his cows once: he recalls "slogging through the manure in the rain to take a look at the little beasts."

The permission for farmers to keep books on a cash basis also enables sideline agriculturists to take especially big deductions in years when their nonfarm income, and thus their potential tax liability, is highest. An example is one Oppenheimer client who bought a herd of cattle being fattened for slaughter for $17,684—95% of which he borrowed—in November of a year in which he knew his top tax rate on nonfarm income would be 70%. He immediately paid out $7,000 for a huge supply of feed. Other expenses brought his immediate deductions to $7,925, saving him $5,548 on that year's taxes.

Early the next year this investor made a planned switch to a new nonfarm job that he knew would depress his income enough at the outset to reduce his top tax to 35%. So he had Oppenheimer take advantage of favorable prices and sell the cattle in April. He received enough to recoup his cash expenses, repay the purchase loan and leave a nominal profit of $510.

A 5-MONTH BONANZA

Since he had held his cattle only five months, the investor paid ordinary-income, rather than capital-gains, tax on the excess of the purchase price over the sale price. But at a 35% rate, that tax came to only $3,351. Subtracting this sum from the total of his profit and previous year's tax savings left him $2,197 ahead on a cash outlay of $8,810—a return of almost 25% in five months. And that was without the benefit of depreciation deductions, which aren't permitted on feeder cattle.

Not every investor who signs up with an agricultural management company does that well, of course. Some apparently have been taken by small companies that dont't guarantee their clients against large losses and sometimes mismanage their cattle or groves.

The reputable companies take extensive precautions to protect their clients. To begin with, they set minimums on the investments they will accept to keep away would-be investors with incomes and tax rates too small to benefit much from agricultural property. Oppenheimer won't accept any amount less than $10,000, and Black Watch Farms, a subsidiary of Bermec Corp., an Englewood, N.J., truck-leasing concern, specifies a $100,000 minimum. Black Watch manages registered breeding cattle, whose lineage can be traced; it now manages 18,000 such cattle for investors, against 9,000 last June 30 and 1,900 at the end of 1965.

RESTRICTIONS ON RANCHERS

To make sure its clients' cattle are well cared for, Oppenheimer will make contracts to raise the cattle only with ranchers who have been successful enough to accumulate a net worth of at least $250,000. To prevent the ranchers from getting its clients' cattle mixed up with their own, it insists each investor's cattle bear a "personalized" brand.

Oppenheimer won't give any rancher contracts to raise more than 10,000 of its clients' cattle. It tries to scatter each client's herd over two or three ranches "so that," explains a spokesman, "if an investor gets hit by a drought in New Mexico, he's unlikely to get hit by a blizzard in Montana, too." The 220,000 head of cattle Oppenheimer's clients owned in December were roaming over more than 100 ranches or feed lots scattered across 17 states.

Despite these restrictions and its insistence that ranchers pick up any losses on an investor's cattle in excess of a guaranteed maximum, Oppenheimer has no trouble finding willing ranchers. Leonard H. Purdy, who currently raises 600

Oppenheimer cattle along with 1,700 of his own on a 39,000-acre spread in Picabo, Idaho, says that dealing with Oppenheimer gives him "something of a guaranteed market." He means that he can count on Oppenheimer to buy some of his cattle regularly for its clients at prices he considers reasonable.

Even Oppenheimer, however, concedes that finding ranchers who are capabile as well as willing is difficult. "Neglectful ranchers" who dont' take proper care of a client's cattle "are our biggest problem," says Garrett Cole, Oppenheimer's Midwest sales manager.

The much greater problems that an investor who signs up with a less careful management company can run into are illustrated by the case of Tenn-Tax Land & Cattle Co., Dallas. This company some years ago took mail orders and cash for $900,000 of cattle from more than 300 investors. It won enough attention to be recommended at one point by a prestigious national investment letter.

SECURITIES BOARD'S FINDINGS

The Texas State Securities Board, however, eventually found that Tenn-Tax had no reserve account to replace lost cattle as it had advertised, that it hadn't purchased all the cattle ordered, that the land upon which its clients' cattle "were being grazed was overstocked and that a large number of such cattle had died and were dying from starvation." The board ordered the company to stop soliciting investments and Tenn-Tax went into receivership. Its president, Leighton G. Datsom, pleaded guilty to mail fraud in April 1965 and was sentenced to a three-year jail term, with two and a half years of the sentence suspended.

There are some dangers in grove investments, too. The investor who goes into this type of agriculture "had better be sure he knows how his groves are being managed," says John Tobias, executive director of American Agronomics Corp., one of the biggest management companies specializing in groves. "There are plently of people still out to make a quick buck."

(American Agronomics itself has posted an enviable growth record; it how has over 2,000 clients investing in orange groves, more than double the number two years ago. It is getting increasing competition, though, some of it partly financed from Wall Street. Hayden Stone Inc., a big stock brokerage firm, owns the majority interest in Jasmine Groves Co., which started up in December.)

WOE FOR THE MIDDLING RICH

Even the management-company client whose investments are carefully handled can't always count on getting much benefit from farm property. For the only middling rich, such investments sometimes don't yield enough tax savings to make the outlay worthwhile.

A retired St. Louis investment banker, for example, has laid out $58,700 since 1964 for the purchase price and expenses of a cattle herd that now numbers 340 head. His deductions against nonfarm income (mostly from stock trades) came to $40,000 in the first four years, but since he is "only" in the 50 percent tax bracket, he saved only $20,000. Last year his nonfarm income dropped, and he had unusually high nonfarm deductions, including large medical expenses, to offset it almost entirely. As a result, he got "almost no tax benefit" from cattle deductions, since he didn't need them.

If he sold his herd now, the St. Louisian figures he would just about get back his purchase price and cash expenses and have to pay about $12,000 in capital-gains taxes. Subtracting that from his income-tax savings woud leave him only $8,600 ahead on the investment—a five-year return of less than 14 percent, or less than 3 percent a year, on his cash outlay. "I undoubtedly would have done better putting the money into the stock market," he says.

Why then did he bother investing in cattle? "Some of my smart freinds have cattle programs, so I figured I'd better have one too," he replies.

The CHAIRMAN. Thank you very much, sir. The next witness is Mr. Claude M. Maer, Jr., counsel of the National Livestock Tax Committee, accompanied by Mr. E. H. Shoemaker, chairman of the Tax Committee for American National Cattlemen's Association and Stephen H. Hart, counsel for the National Livestock Committee.

We welcome you.

STATEMENT OF CLAUDE M. MAER, JR., NATIONAL LIVESTOCK TAX COMMITTEE; ACCOMPANIED BY E. H. SHOEMAKER, CHAIRMAN, TAX COMMITTEE FOR AMERICAN NATIONAL CATTLEMEN'S ASSOCIATION; STEPHEN H. HART, COUNSEL, NATIONAL LIVESTOCK TAX COMMITTEE; ALBERT K. MITCHELL, CHAIRMAN, NATIONAL LIVESTOCK TAX COMMITTEE; FRED FERRELL, DIRECTOR, AMERICAN HEREFORD ASSOCIATION; WRAY FINNEY, PRESIDENT, OKLAHOMA CATTLEMEN'S ASSOCIATION; BRENHAM CROTHERS, DIRECTOR, AMERICAN NATIONAL CATTLEMEN'S ASSOCIATION; HENRY MATTHIESEN, PAST PRESIDENT, AMERICAN HEREFORD ASSOCIATION; AND CLARENCE CROSS, DIRECTOR, AMERICAN HEREFORD ASSOCIATION

Mr. MAER. I have with me here at the head table some people who represent about 650 years of active participation in the livestock industry. I would like to introduce them very briefly.

Mr. Albert K. Mitchell of New Mexico, chairman of the National Livestock Tax Committee, Mr. Fred Ferrell, of Oklahoma, a director of the American Hereford Association, Mr. E. H. Shoemaker, Jr., of Nebraska, chairman of the American National Tax Committee, Mr. Wray Finney, president of the Oklahoma Cattlemen's Association, whose family, incidentally, has been in the livestock business since 1720, which is some 250 years by the way that I would calculate it, Mr. Brenham Crothers, a past president of the Louisiana Cattlemen's Association, and Mr. Henry Matthiesen, past president of the American Hereford Association, Mr. Clarence Cross, past president of the Georgia Cattlemen's Association, and Mr. Stephen Hart, longtime counsel to the National Livestock Tax Committee.

Mr. Hart and I can claim to be disinterested, since we are some of the few lawyers in the country who are not in the cattle business. But we have had between us some 50 years of representing the livestock industry as counsel for the National Livestock Tax Committee, and I hope a little of it has rubbed off on us.

We have, in the interests of saving time, and at the request of the chairman, combined our testimony representing over 60 national breed and State associations representing some 300,000 individual farmers and ranchers, and we will try to make it as brief as possible.

When the House Ways and Means Committee held its hearings in February and March of this year, we testified and we were questioned rather closely on whether or not we felt there were any abuses in the livestock industry or any tax profiteering, and we said that we felt that there were some abuses but very few, but obviously they were giving the industry a black eye. We made it quite clear that the National Livestock Tax Committee and the livestock industry generally certainly does not condone the abuses by these very few, and we were asked what was our solution to them. We asked permission of the committee to work with the staff of the committee, the joint committee staff and the staff of the Ways and Means Commitee to prepare and propose some solutions to these problems.

And we did so. And we worked these out and I will reiterate them very briefly in a minute.

We are not here appearing before you saying that all is rosy and that we think that there is nothing wrong. We feel that there are some small abuses, but that we believe that our proposals will take care of them, but at the same time not endanger the entire industry.

The proposals that we make, all of which, incidentally, were adopted by the Ways and Means Committee, with some modifications, were as follows we felt that one of the best ways to eliminate the very few tax promotions and the tax profiteering which had been going on would be——

The CHAIRMAN. I am afraid I am going to have to interrupt you. We are having a vote on the Senate floor. We did obtain consent of the Senate to meet while the Senate is in session but that does not excuse members of this committee from being present to vote when the rollcall votes occur.

We will have to excuse ourselves to go over and vote and we will come back. I will have to stay over there because I am managing the next bill on the Senate floor. As you can see we are up against a very difficult time limit, and we do want to hear you. That is one reason why we have had to ask groups like yours representing 60 organizations and 300,000 people to limit yourselves to 10 minute presentations.

Since I can't come back I particularly want to recognize former Senator Crothers who did a magnificent job in the State legislature when I was old enough to be a clerk at the desk and later on to be a lawyer helping to advise the legislature. He is one of those of whom we are most proud in Louisiana and we are certainly proud to see him here with this group.

His presence along with the others you have here causes me to think there must be much to be said for your side. I will proceed with that assumption until it has been proved otherwise.

We will be back and meet after this rollcall.

Thank you.

(Short recess.)

(A statement of Mr. Crothers follows:)

STATEMENT OF BRENHAM C. CROTHERS, REPRESENTING LOUISIANA CATTLEMEN'S ASSOCIATION

U.S. SENATE FINANCE COMMITTEE,
Washington, D.C.

Mr. Chairman and Gentlemen of the Committee: We members of the Louisiana Cattlemen's Executive Committee do assure you of our full and complete support of the position being taken by the American National Cattlemen's Association on the TAX REFORM ACT of 1969 presently being considered by you.

We are concerned about many provisions of the House-passed bill but we will not go into detail as this will be more ably handled by representatives of the ANCA. We do feel that the application of the many damaging features of the measure would in due time force many dedicated and experienced cowmen out of business. The bill has been heralded as a most comprehensive tax reform effort but we see it as it applies to the cattle and livestock industry as a headache for the operator and a complexity in general. Cattlemen do not have the time or the accounting ability to properly inventory the cost and values going into the development of animals kept for breeding purposes. The present tax laws governing the livestock industry were designed to minimize the bookkeeping problems of cattlemen and other livestock producers by permitting them to keep their books on a "cash" basis. We think this is as it should be.

Great progress has been brought to all agriculture by people with outside nonfarm income enthusiastically engaging in the development of farms and ranches. These developments extend far beyond their tenure and they add value to their communities. We are informed by a representative of a Federal Land Bank that eighty seven (87) percent of their loans are made to people with nonfarm income. Forcing these many dedicated citizens out of agriculture will certainly adversely affect land values. Almost every rancher needs some outside income and he needs capital gains to generate capital. There is a definite shortage of needed capital in most livestock operations. Our cost have advanced out of proportion to our income.

The Excess Deductions Account as passed by the House of Representatives will be very difficult to maintain. Certainly beyond the ability and training of many operators.

Respectfully submitted,

LOUISIANA CATTLEMEN'S ASSOCIATION,
BRENHAM C. CROTHERS,
Chairman, Executive Committee, Louisiana.

Senator JORDAN. Gentlemen, if you will be seated at the witness table we will proceed.

There are a lot of witnesses to hear yet today, so you just go right ahead with your presentation.

Mr. MAER. As I was saying when the meeting temporarily recessed, the National Livestock Tax Committee representatives did work with the staff of the Ways and Means Committee and the joint committee to propose certain revisions to the existing law which we thought and which we feel would eliminate the tax profiteering that was the subject of the criticsm in the House Ways and Means hearings. Our analysis of this problem was that what profiteering there is, is caused by the "in-and-outers"—taxpayers who get in for a quick deduction and sell out after a few years at capital gains rates. We made five proposals which we thought would constitute a sort of rifle approach aimed at these "in-and-outers" rather than a sawed-off shotgun approach which would severely damage the entire industry. These five proposals very briefly were to include livestock in depreciation recapture, that is recapture at ordinary income rates of so-called excessive depreciation tax, that the holding period for cattle and horses, in order to realize capital gains, should be increased from 1 year to 2 years.

We also suggested that the Ways and Means Committee might include something in its report to the effect that existing law was that there should be no tax-free exchange of male calves for female calves. Similarly we suggested that the committee report might well include a statement that the mere proof that the animal was held for the required time would not be sufficient to prove that it was entitled to capital gains treatment, but that it would be necessary to prove that the animal was held for breeding purposes or draft or other purposes.

Finally, to cover the entire farm area, we also suggested that if land were held for less than 10 years, there would be a sliding scale recapture at ordinary income rates of land improvement expenses which had been previously deducted.

As I say, these proposals were aimed at eliminating from the livestock industry the in-and-outer, the fellow who gets in, spends a lot of money, deducts it against ordinary income, and then gets out after a short period of time at capital gains rates. We believe that these proposals would substantially or completely eliminate the in-and-outer from the business.

The Ways and Means Committee, in H.R. 13270, did in fact adopt all five of those proposals, with some modifications. Without going into details, our written statement covers this, we believe that the modifications that were made were really unnecessary, and were too restrictive.

However, the Ways and Means Committee went further, in an albeit well-intentioned effort to get at the profiteers, what few there are in the livestock area, and enacted four additional provisions which we strongly oppose. Those provisions briefly are the EDA, the Excessive Deductions Act, the hobby loss presumption, the limitation on tax preferences, and the allocation of deductions.

I will not spend the time to explain those, because I am sure the members of the committee are familiar with these provisions. We believe that these are unnecessary. These are unneeded. These go much too far and are really contrary to the basic principles of a sound and equitable tax system, and I will tell you why.

First of all, we believe that these provisions are unnecessarily complex and confusing. They will have a severe impact on a large group of taxpayers who are probably least able to comply with these complex provisions, the ordinary farmer and rancher. He doesn't have the facilities or the help or anything else to comply with all these very, very complex provisions.

We think it is unwise to write a tax law where compliance is difficult or impossible, because that means that enforcement is equally difficult, and it just really causes nothing but controversy between taxpayers and the Government.

Then when you get to the interplay of these four provisions, these unneeded provisions we call them, it is just a real nightmare. We just don't see how it will be possible for the average and small farmer and rancher to comply with them. As a matter of fact, if these are aimed at the big, the so-called big, wealthy ranchers, they are the ones who can comply, but the ones that are going to get hurt are the hundreds of thousands and millions of middle size and small operators. It seems to use that the imposition of such a set of complexities on the agriculture community would be a serious mistake.

Accounting help is just not available in the part of the country where the great majority of livestock are located. For instance, our statistics show, on page 21 of our statement, that in the 21 western States, excluding California as an industrial State, there are listed 20 percent of the certified public accountants. Yet those States comprise 67 percent of the land area of the continental United States, and 64 percent of the cattle population resides in those 21 States.

Finally, these four unneeded provisions really end up by requiring all taxpayers, except the very small, to keep two sets of books. If they are on the cash basis, they are going to have to keep an accrual set of books, also, in order to comply properly with these provisions. They are just really too complex and too confusing for the industry.

Moreover, another problem with these four provisions is discrimination. They discriminate between farmers and ranchers. For instance, the EDA provision provides exemption for individuals, a $50,000 outside income and a $25,000 farm loss, but it does not give a similar exemption to corporations, estates, and trusts. So if your business happens to be conducted in corporate form you would not be entitled to any exemption under EDA whereas you would be if you were an individual.

Also the EDA discriminates between those who report on the cash basis and those who report on the "proper" accrual basis, so that this is contrary to a sound tax policy, where you discriminate between taxpayers in the same business.

Similarly, the hobby loss presumption is arbitrary, in that it discriminates between taxpayers; a man who has a loss of more than $25,000 has certain restrictions put on him; whereas, a fellow who has a loss of $24,000 doesn't, and who is to say, just as the horse-racing people said a minute ago, 8 inches difference might mean the difference between being subject to this hobby loss law or not being subject to it. So here again you are discriminiating between taxpayers.

Finally, allocation of deductions treats corporations differently from estates and trusts, thus discriminating among taxpayers in the same business. It just doesn't seem right that taxpayers living right across the street or right across the road from each other would be treated this differently because of the form used to operate their business.

Finally, the interplay of these four unneeded provisions we are against discriminates against farmers and ranchers as opposed to the entire business community. So far as I know, and I am not a great student of the history of the income tax laws, although I have worked in this area for more than 20 years, this is the first time in history that a concerted attack has been made on one industry. It seems to me that this is very unfair discrimination against the farm and ranch business.

As has been pointed out quite often recently, this cannot be a revenue measure. A tax program is normally aimed at collecting revenue, and it can't be a revenue measure if the small amount of tax money involved amounts to only $5 million or $20 million. Such amounts are really very small in relation to the overall economy.

Finally, we would like to reiterate that our proposals, the five proposals that the National Livestock Tax Committee made, don't fall under any of our objections.

One, they are simple. They are merely extensions of the current law. They are simple to abide by and to administer. They are not complex.

We are living under them right now, under slightly different circumstances. There is no discrimination as between taxpayers in the same or different businesses. All farm and ranch taxpayers are treated similarly.

If I may say just one or two more words, we believe that the Metcalf and the Miller bills, although well intentioned, are unnecessary for the same reasons that the four unneeded provisions in the House bill are unnecessary. Senator Metcalf's bill would discriminate as between taxpayers depending upon the amount of their outside income, and Senator Miller's bill again would discriminate between taxpayers, depending upon the nature of their principal income. It seems to us that this is the wrong way to administer a tax system on such a discriminatory basis.

Senator Gore has introduced a bill which we think is excellent. It qualifies in many respects by meeting the tests of a sound and equitable tax system. S. 2645 is quite simple. However, our proposals in reality go further than Senator Gore's proposals, and we would urge Senator Gore to add at least the rules of depreciation recapture to his bill.

Our statement contains our general objections to these unneeded provisions of H.R. 13270. I won't go into that now in the interests of saving time. We certainly appreciate the opportuity to be before you.

Senator CURTIS. I got over here as fast as I could after the vote. The five things that you suggest to meet current objections, enumerate them again.

Mr. MAER. All right.

Senator CURTIS. You don't need to explain them.

Mr. MAER. I understand. These five provisions include placing livestock under the depreciation recapture rules of present law.

Senator CURTIS. When you sell that particular livestock.

Mr. MAER. When you sell an animal which you have depreciated, then to the extent that you make a profit over the depreciated base, that profit would be ordinary income to the extent of previous depreciation taken or allowed.

Senator CURTIS. All right, what is the second one.

Mr. MAER. The second one is to increase the holding period of cattle and horses from 1 year to 2 years.

Senator CURTIS. From birth?

Mr. MAER. Correct, from birth, as regards raised animals.

Senator CURTIS. You do not subscribe to the Treasury's position that a calf is born at no cost?

Mr. MAER. No.

Senator CURTIS. Children aren't either. And what is the third one.

Mr. MAER. The third one is really merely declaratory of existing law, that the exchange of male calves for female calves is not a tax-free transfer. This is one of the elements of some of these tax profit promotion schemes in agriculture. There is at least one court case which has held the exchange of male animals for female animals as being tax free.

Senator CURTIS. Now number four.

Mr. MAER. The fourth proposal is that a taxpayer must not only prove that he held the animal for breeding purposes the required length of time, but that he also really and truly held the animal for breeding purposes, which again is merely declaratory of existing law.

Senator CURTIS. And the fifth one?

Mr. MAER. The fifth one is in the area of real estate and provides that form and ranch land improvement expenses, that is soil and water conservation, land clearance and fertilizer costs, which are presently deductible more or less against current income, would be recaptured at ordinary income rates to the extent of such deductions if such land were sold within 10 years of its acquisition. So if a taxpayer were a quick in-and-outer, and sold the land, holding it less than 10 years, there would be a sliding scale recapture of those previously deducted expenses on a graduated basis.

Senator CURTIS. Declaring as a business expense, soil and water conservation practices for farmers it was a good thing, but what you propose would prevent someone, and it would probably be a man of great wealth, buying a very rundown tract of land, improving that land as a business expense offset against ordinary income, and getting his profit from the sale of land.

Mr. MAER. That is correct, and would prevent such activity on a short-term basis, by the in-and-outer.

Senator CURTIS. By short term, it would be a long-term gain.

Mr. MAER. I understand, but by short term I mean less than 10 years. What I am talking about is aiming at the in-and-outer, the fellow who gets in for a quick buck, deducts the ordinary expenses against current income and sells out at capital gain rates within a few years.

Senator CURTIS. Do you think the five points which you have enumerated will take care of the glaring abuses, those that are real that have some substance to them?

Mr. MAER. Yes, sir, we do.

Senator CURTIS. Without changing the hobby laws.

Mr. MAER. Correct.

Senator CURTIS. And without going so far as the House bill does in reference to capital gain?

Mr. MAER. Correct. As a matter of fact, it would go further than curing the glaring abuses. We think it will eliminate the tax profiteer from the farm and ranch business completely. He will have to go elsewhere, if he is going to use the tax laws to benefit, and we want that fellow out of the livestock business.

He doesn't do the industry any good.

Senator CURTIS. You are a lawyer.

Mr. MAER. Yes, sir.

Senator CURTIS. Do you know of any other occupation or industry where the losses incurred by the taxpayer cannot be deducted from his other income?

Mr. MAER. No, I don't know of any other business.

Senator CURTIS. Agriculture is the only place where that has been suggested in the House bill, isn't that right?

Mr. MAER. That is correct.

Senator CURTIS. There are a lot of questions I could ask but you have waited a long time today.

Senator Jordan.

Senator JORDAN. Thank you. This is persuasive testimony. Tell me how in your three points that you expect the in and outer as you call him, the fellow who is in for the fast buck, is going to be eliminated from this field of work.

Mr. MAER. One of the popular schemes, and one that was written up I believe in the Ways and Means Committee Report, is the purchase of a breeding aniaml for $3,000, take rapid depreciation on the animal for 3 years, and sell it back to the syndicate that he bought it from for $3,000. This is a break-even economically, but just by this device, he was able—by deducting the depreciation against ordinary high bracket income, and selling the animal back at no economic profit at 25-percent capital gain rate to reap a large tax savings. Depreciation recapture would eliminate this practice almost entirely.

Senator JORDAN. You are not in sympathy with the objectives of the Metcalf bill nor the Miller bill?

Mr. MAER. No, because we believe that those bills are much too broad and that they affect the broad spectrum of the entire livestock industry.

They change the rules of the game which have been accepted and well established for many, many years. Moreover, they are discriminatory as between taxpayers, because in essence, they discriminate against and among taxpayers, depending upon what their outside income is, that is different tax treatment for people depending on the amount of their nonfarm income.

Senator JORDAN. Do you feel—I think you did state that the agriculture industry, including the livestock raisers is the only industry being discriminated against in this bill—this is a statement that you can subscribe to? You said something like that.

Mr. MAER. Yes, probably I wasn't quite clear as to that. I said that it was my belief that the livestock industry, agriculture, farming and ranching was the only industry where there were specific provisions designed to change the tax rules affecting this business.

Mr. SHOEMAKER. Senators, may I try to clarify that just a bit. Under what are referred to as tax preferences in the House bill, farm losses is the only business related item included under tax preferences to be handled under the limited tax preference and your allocation of deductions. Losses in other businesses or professions are not mentioned, and it is very odd that as a tax preference a farm loss is the only item included. I think that explains why we feel it is discriminatory.

Senator JORDAN. To that extent then it is discriminatory.

Mr. SHOEMAKER. Yes, sir.

Mr. MAER. As far as businesses are concerned. Other things listed as tax preferences are not business connected with the possible exception of depletion allowance, but that is only one element of the oil business. It doesn't affect the business overall, like including farm losses as a tax preference.

Senator JORDAN. And you are not opposed to all the provisions of H.R. 13270 with respect to livestock, only with the four exceptions that you have indicated.

Mr. MAER. That is correct.

Senator JORDAN. Thank you.

Senator CURTIS. Senator Hansen.

Senator HANSEN. Thank you, Mr. Chairman. I am sorry I was not able to be here for your formal presentation. Mr. Maer. Let me say that I have read your testimony and I compliment you on the depth of understanding of the industry that is reflected by your statement. I happen to be a cattleman. As a consequence I have a real appreciation for the points you are making.

Earlier today it was brought out that there are some 3 million persons who report income derived from farming and ranching. Is this your understanding generally?

Mr. MAER. That is my understanding from the statistics of the Internal Revenue Service.

Senator HANSEN. And I hear all kinds of estimates as to the number of persons who might be affected under some of the proposals that have been made. I think that Senator Metcalf testified this morning that the Treasury had estimated that some 14,000 taxpayers would be affected by his bill as they interpret its thrust.

I have the feeling that if those figures are essentially correct, we are talking about one out of every 214 people in the business as would be affected by this bill.

In your mind, is there justification to impose the tax treatment that is contemplated in the Metcalf bill upon an industry to reach the one out of around every 214 persons that is in the business today?

Mr. MAER. We certainly do not, and that is why we made our proposal. The five proposals that we made to the Ways and Means Committee which I discussed when you were out of the room are a rifle approach aimed at this one fellow out of the 214 or 213, so that we wouldn't affect adversely the great bulk of the industry; and we believe that our proposals will take care of this tax profit taker.

Senator HANSEN. I hear different reasons given for some of the proposals that have been made. One that I hear bandied about occasionally is that the Metcalf bill might tend to minimize he competition that apparently some regard as emerging now or as existent because of the advantages, the so-called advantages, that presently exist in the law in enabling people in other businesses to get into the livestock business. If you were to single out the most damaging thrust of competition that the industry is experiencing at the present time, would you say it comes from residents of this country who are trying to get into the business, or indeed who are going into the business, or would you think that the imports that come into the United States from foreign countries would be of major significance? Which of these two sources disturb you most?

Mr. MAER. Certainly it is the imports. I think the statistics will show that we are talking about many thousands and hundreds of thousands of pounds of beef imports, whereas we are talking about a very small number of tax profiteers. If Senator Metcalf's figures, and I guess he received those from the Treasury, and far be it from us to quarrel with the Treasury, that 14,000 out of 3 million would be affected by his bill is correct, it is hard to see how 14,000 people could adversely affect any substantial segment of the livestock market.

The statistics that we have, which we cite in our statement, show that in 1966 there were only about 3,600 taxpayers with adjusted gross incomes of $100,000 or over who would be affected by the provisions of the Metcalf bill. So it seems inconceivable that this small number of taxpayers, that is about one one-thousandth of 1 percent of the total farm and ranch taxpayers, could have any substantial effect upon either land prices or livestock prices.

Senator HANSEN. I assume you have talked with a great many people in the ranching business. Generally has it been your observation that the typical rancher would like to see the value of his real estate depreciated?

Mr. MAER. We have talked to a lot of farmers and ranchers, and that is just exactly what they are worried about. If some of these we call unneeded bills and provisions, albeit well intentioned, are enacted, they are just worried about this very thing, and even more worried than the ranchers are their bankers.

Senator HANSEN. Isn't it true that there is quite a turnover in the typical tenancy on a farm or ranch? I have forgotten what the figures are. Do I recall correctly that the average farmer stays on a particular farm about 7 years? Do you recall any figures like that?

Mr. MAER. I don't but I have a number of experts here with me.

Senator HANSEN. Would someone volunteer an answer to that?

Mr. MAER. I guess none of them are familiar with that statistic.

Senator HANSEN. Anyway the point I was going to make is wouldn't it be fair to assume that anything which would bring about a sharp diminution in value of real estate would militate very much against the interests of a big majority of the people in the farming and ranching business, and that the shorter their tenancy is on a farm or ranch, the more severely they would be hurt?

Mr. MAER. No question about it. As a matter of fact I have heard this said over the last few years, and I think Mr. Mitchell could comment on that. Albert, could you just state briefly your impressions over the past few years.

Mr. MITCHELL. Well, there has been a substantial increase in values in ranch properties in the last 10 years, nothing to be greatly disturbed over. It is more or less in keeping with the general economy. But I would think that grazing lands in New Mexico, the area with which I am familiar, has more or less kept pace with the general economy, would probably be just a little ahead of it.

Senator HANSEN. Mr. Mitchell, you have been living in that area for a long time and I believe during that period of time you served on a local school board. I happen to remember that you are a trustee of Cornell University, I believe. What would be the result insofar as the impact is concerned upon the school districts and county units of government if there was a sharp depreciation, a widespread depreciation in values of rural land?

Mr. MITCHELL. Well, right now in New Mexico, with its sparse population, the demands made by our school system to maintain a respectable school system in New Mexico are so great that they are going to have to change, and we have a constitutional convention in progress now, they are going to definitely have to readjust the valuations that will be established for support of the public schools.

Senator HANSEN. And I would assume that greater rather than lesser values will be the goal of that?

Mr. MITCHELL. Inevitably an increase in values in order to raise the money necessary, or for an increase in the level. It will be one or the other.

Senator HANSEN. The livestock or cattle business as such, has not been directly supported by the Government in the normal term or in the normal sense of price supports as compared to other commodities. Is that an accurate statement?

Mr. MITCHELL. Absolutely no support whatsoever. It is a free industry and it gets no support from any source.

Senator HANSEN. It has had its ups and downs, I am sure.

Mr. MITCHELL. Very definitely, yes. We had a very abrupt one last spring that led everybody to think there might be some hope for improvement, but that has dwindled to the point that the market is back even a little lower than it was 6, 7, or 8 months ago.

Senator HANSEN. I think I recall right around the first of this year the average price of fat cattle throughout the United States was around $27.62, and now this past week it was down to $27.50. Are those figures essentially correct?

Mr. MITCHELL. A few cents under what it was the first of the year, yes.

Senator HANSEN. I have no further questions, Mr. Chairman.

Senator MILLER. I would just like to ask one question of what I regard as one of the most distinguished panels of people in an industry that we have had before this committee. Item No. 4 of your recommendations as I understand it is that you would require the taxpayer to prove the purpose for which he held the livestock as well as the holding period, is that correct?

Mr. MAER. That is correct.

Senator MILLER I thought that was already the law.

Mr. MAER. It is. Both items 3 and 4 are in the law. We felt, however, that this would give assistance to the Revenue Service in enforcement.

Senator MILLER. Do you think they need a leg up?

One other question here. On the holding period, you remember the holding period on cattle and horses. What is wrong with the holding period we have got now?

Mr. MAER. One of the popular tax promotion schemes involves the sale to an investor of a group of cows, and he holds those cows for a period of about 5 years, swapping if you will, item No. 3, swapping the male calves for the female calves. The syndicate says this is taxfree but we don't think that is the law. Over the years the taxpayer builds up a large herd of females, and at the end of 5 years he sells out at capital gains.

We believe increasing the holding period from 1 year to 2 years will take most of the tax profit out of that deal, because by arithmetical progression the biggest increase in females occurs in the last 3 years, and so the 2-year holding period would knock out the last 3 years' calf crops.

Senator MILLER. Would that be the only way you could handle that kind of a syndicate operation?

Mr. MAER. Probably not; but it was our thought that this would be a way to get at it directly.

Senator MILLER. That would get at some of it certainly, and it would get at the largest volume perhaps, but I am troubled about this holding period. I have visions of the hog people getting a little unhappy, and if we start making different holding periods for different types of animals, I think we can have a real problem.

Mr. MAER. That certainly is a problem, and of course our proposal did not apply to other than cattle and horses.

Senator MILLER. Yes; but you didn't mention hogs.

Mr. MAER. No; hogs would remain at the current holding.

Senator MILLER. That is right, and you would end up with a different holding period.

Mr. MAER. Correct.

Senator MILLER. You could get into a problem when you start building up different holding periods. I don't know how your recommendations for 24 months would fit with the horse breeders who have been testifying here. You were just talking about the holding period from date of birth, I suppose.

Mr. MAER. That is correct, as under existing law.

Senator MILLER. Whereas they are concerned about any holding period from the date it is converted into a capital asset, so yours wouldn't probably meet as much objection, if any. Have you had a chance to talk to the horse people on it?

Mr. Maer. Yes. We have had a number of conversations with the horse people. I don't know just exactly how they would react to our particular proposal, because of course their reaction is to the Ways and Means Committee bill, so I wouldn't want to speak for the horse people as to whether or not they would favor our provision or not, but I might say just one other thing if I might, Senator Miller.

One of the reasons for limiting our recommendation to a 2-year holding period is again a problem of enforcement. Once an animal passes 2 years, as you well know, of course, coming from Iowa, they become stabilized in weights, and the way that the revenue agents are able to check the age of an animal for holding period purposes, for instance, is generally to look at the bill of sale, and the invoice from the commission house as to what a particular lot of animals weigh. When you increase the holding period to 3 or 4 years, these animals are going to weigh substantially the same amount and you are not going to be able to identify them so it is going to increase the enforcement problem.

Senator Miller. One last question. I am sure you heard Senator Metcalf's testimony this morning. What gives you trouble with the Metcalf approach, if you have any trouble with it, with this proviso for a 3-year carryback and a 5-year carryover?

Mr. Maer. One of the problems we have with that, of course, is the complexity of it. Admittedly we are currently operating on a 3-year net operating loss carryback and carry forward, and to that extent, we are accustomed to it. But we feel that the so-called relief in the Metcalf provision is really more apparent than real, because of the difficulty of keeping records, just the general complexity of it.

We don't think that it is really a practical solution to the problem.

Senator Miller. You mentioned difficulty of keeping records. I don't know what records, additional records you would have to keep, unless you are talking about the keeping of records to take advantage of the 3-year carryback or the 5-year carryover. I don't think you were referirng to those records; were you?

Mr. Maer. Yes; to a certain extent.

Senator Miller. Taxpayers should certainly keep their tax returns for 3 years back at least. as you well know. As a matter of fact, it is ordinarily safe to keep them back, say, for 5 years. I don't know why that should be because any difficulty, at least for 3 years back. Understand I am all for avoiding undue recordkeeping on the part of farmers and ranchers, but I can't see that that is going to require them to keep any more than they are keeping. What I am concerned about is that I can see where the Metcalf bill, by exempting the accrual basis farmer, might cause some farmers to say, "Well, we had better get into accrual basis of accounting as a precaution," although to the extent that he replied to that point this morning I thought that it wasn't so bad. I don't like to see them forestall a cash basis or even particularly be encouraged indirectly to be taken off the cash basis, but I have the feeling that his 3-year carryback and 5-year carryover provision did a pretty good job of protecting the people who incur these losses, especially when in addition to that, you recognize losses due to market conditions and drought and all the kinds of situations that you people are familiar with.

Mr. Maer. Let me make two comments on that, on the last one first, regarding market conditions.

My understanding of Senator Metcalf's bill is that it would not protect a taxpayer, a farmer, against a drop in the price, a mere drop in the price of animals.

Senator MILLER. Not unless he sold.

Mr. MAER. Well, even if he sold them, the only exemptions, as I read the bill, and I could be wrong, is for casualty losses or drought losses or items of that nature. Let us just take a case. Let us just say that it costs this rancher 25 cents to raise this steer, 25 cents a pound, and as long as the steer is selling for 27 cents and 30 cents, he is going to make a profit. But if the market drops, and if he sells this animal for 20 cents he has realized a loss, and I don't see how Senator Metcalf's bill would exempt that loss.

Senator MILLER. Well, in my first reading of the Metcalf bill I reached the same conclusion, but his testimony this morning, in answer I think to Senator Byrd's question, indicated that he was thinking in terms of allowing losses where you have sales of the animal, and that seemed to me to be a fairly reasonable——

Mr. MAER. That is exactly what he said, but it doesn't comport with my understanding of the way his bill reads.

Senator MILLER. Suppose the bill were changed to cover that so that that is exactly what the bill says. Then it seems to me that we have all these contingencies that your people are concerned about, drought, disease, rain storms, flood, pestilence, market conditions, and then a 3-year carryback and a 5-year carryover. I don't know why that wouldn't be thoroughly fair.

Mr. MAER. I would like to comment on the carryover in just a minute, but let me just say this. It would seem to me that if the market price changes are taken into consideration in the Metcalf bill, or just market prices period, then that would not eliminate the tax profit taker, because he could go in and he wouldn't care what he spent to raise these animals or to operate his farm, so that there would be no incentive to keep his costs down, because if his costs are high and he sells low, as long as he sells he has a loss deducted against his ordinary outside income.

Senator MILLER. Oh, no. According to Senator Metcalf it would be deducted against farm income 3 years back and 5 years over.

Mr. MAER. We are talking about two different things. You are exactly right as far as the carryover and carryback is concerned. That is my understanding once you establish a farm loss excluding all of the exemptions. But the point I was making is that if you exclude as true economic loss the fact that he is selling for less than it costs him to raise in the taxable year, then that is an exempted economic loss, and could be deducted against outside income in the taxable year. That was the point I was trying to make.

Therefore it would seem to me that this would not get at the tax profit taker, because he would go in and wouldn't care what he paid to raise his animals, to improve his farm, or to do all these things. He could deduct these expenses against his income in that year, since they are treated as economic losses. But you are exactly right as far as the carryover carryback is concerned. That would apply only against farm profits as I read his bill.

Senator MILLER. Yes. It seems to me that when we have such a period of time as 8 years that we are getting at 8 out of 9 years we may be getting at the bulk of the problem.

Mr. MAER. May I comment on that? Let us make an analogy here that when you talk about agricultural crops, that seed is planted in the soil, is harvested within the year or less, and in reality the soil is your factory. But whereas in livestock we must first of all grow the factory, and that takes 18 months to 2 years. Mares, although I am not too familiar with the horse business, may take perhaps 3 years. Then it takes another 2 years to harvest the first crop. So that you are looking at at least 5 years of start-up losses in the livestock business, and so you are cutting it pretty thin, if you just give him a 5-year carry forward.

Senator MILLER. On that point, you remember my dialog with the last group. If you have a beginning business you can have no benefit from a 3-year carryback, then let him have an 8-year carryover.

Mr. MAER. Yes; that would certainly be an improvement, but the only other comment I would make on that is this, of which I am sure the Senator is well aware. Generally in the livestock business we look at a 11-year cycle, that on the average, in 11 years you are going to reach the peak, and the valley and the peak again, so that to get a full benefit, it would seem to me of a complete economic cycle, we should probably consider even more than 8 years, perhaps even as long as 11 years.

Senator MILLER. And in that case we might have an administrative problem.

Thank you very much.

Senator CURTIS. You gentlemen have made a good presentation here. We could go on longer very well, but with nine witnesses to hear yet, it is 6:15, we thank you very much for your presentation. If there is anything further that you want to add, why, we will be glad to receive it for the record.

Mr. MAER. Thank you, sir.

Senator MILLER. Mr. Chairman, may I make an observation. I think it might be helpful to the witnesses. It has been brought to my attention by the staff that in the Metcalf bill on page 7, paragraph (E), under the category of recognized losses for the purpose of the exceptions is the statement, "recognized losses from sales, exchanges, and involuntary conversions." That might be what the Senator was relying upon in his response to Senator Byrd.

Thank you.

(Claude M. Maer, Jr.'s prepared statement follows:)

STATEMENT OF CLAUDE M. MAER, JR., ON BEHALF OF NATIONAL LIVESTOCK TAX COMMITTEE

The National Livestock Tax Committee feels that certain provisions of H.R. 13270, namely those dealing with an Excess Deductions Account (EDA), a Hobby Loss Presumption, a Limit on Tax Preferences (LTP) and an Allocation of Deductions, are unnecessary and are contrary to the basic objectives of a sound and equitable tax system. These unneeded provisions of H.R. 13270 unfairly discriminate between farmers and ranchers based upon accounting systems used and the size of losses sustained; impose restrictions on capital gains claimed by persons only in agriculture and classify only certain losses from farming, but not from any other business, as "tax preferences"; and make compliance with and enforcement of these unneeded provisions unworkable and in some instances practically impossible.

The Tax Committee is of the opinion that fair and equitable tax treatment of ranch and farm businesses can be achieved by adoption of the proposals made by the Tax Committee which were included in the House bill (in somewhat modified form). These proposals will eliminate the relatively small amount of tax profiteering and will not substantially harm the industry in that they are simple and easy to appy and will not require complicated cost accounting techniques. Furthermore, these proposals of the Tax Committee will not have the effect of: discouraging farmers and ranchers from diversifying into non-farm businesses and investments; isolating agriculture from the rest of the nation's economy; impeding needed agricultural programs; stemming the flow of needed new blood and capital into the industry; and causing meat price increases, as would undoubtedly be the case if the unneeded farm loss provisions of H.R. 13270 were enacted.

I. INTRODUCTION

My name is Claude M. Maer, Jr. I am a partner of the law firm of Holland & Hart, Denver, Colorado, which is and has been counsel for the National Livestock Tax Committee for many years. The National Livestock Tax Committee is a non-profit corporation organized and operating for the purpose of maintaining and assuring equity and equality in the field of federal income, gift and estate taxation for the entire livestock industry, not only beef cattle, but also sheep, horse and dairy interests. The Tax Committee was first formed in 1942 and has been active continuously since then. The Committee is sponsored by 6 national, 11 breed and 45 state associations representing roughly 300,000 individual farmers and ranchers throughout the fifty states. The following is a list of the Tax Committee's sponsors:

National and breed sponsoring organizations:

American Angus Association
American Brahman Breeders Association
American Guernsey Cattle Club
American Hereford Association
American International Charolais Association
American Jersey Cattle Club
American National Cattlemen's Association
American Polled Hereford Association
American Quarter Horse Association
American Shorthorn Association
Holstein-Friesian Association of America
International Brangus Breeders Association
National Society of Live Stock Records Association
National Wool Growers' Association
Pony of the Americas Club, Inc.
Santa Gertrudis Breeders International
Thoroughbred Owners and Breeders Association

State sponsoring organizations:

Alabama Cattlemen's Association
Arizona Cattle Feeders' Association
Arizona Cattle Growers' Association
Arizona Wool Growers' Association
Arkansas Cattlemen's Association
California Cattle Feeders' Association
California Cattlemen's Association
California Wool Growers' Association
Colorado Cattlemen's Association
Colorado Wool Growers' Association
Florida Cattlemen's Association
Georgia Livestock Association
Hawaii Cattlemen's Council
Idaho Cattlemen's Association
Idaho Wool Growers' Association
Kansas Livestock Association
Louisiana Cattlemen's Association
Maryland Beef Cattle Producers, Inc.
Mississippi Cattlemen's Association
Missouri Cattlemen's Association
Montana Stockgrowers' Association
Montana Wool Growers' Association
Nebraska Stock Growers' Association

Nevada State Cattle Association
Nevada Wool Growers' Association
New Mexico Cattle Growers' Association
New Mexico Wool Growers' Association
New York Beef Cattlemen's Association
North Carolina Cattlemen's Association
North Dakota Stockmen's Association
Oklahoma Cattlemen's Association
Oregon Cattlemen's Association
Oregon Sheep Growers' Association
South Dakota Stock Growers' Association
Tennessee Livestock Association
Texas and Southwestern Cattle Raisers' Association
Texas Sheep and Goat Raisers' Association
Utah Cattlemen's Association
Utah Wool Growers' Association
Virginia Beef Cattlemen's Association
Washington Cattlemen's Association
Washington Wool Growers' Association
Western South Dakota Sheep Growers' Association
Wyoming Stock Growers' Association
Wyoming Wool Growers' Association

II. PROPOSALS OF NATIONAL LIVESTOCK TAX COMMITTEE

Earlier this year when hearings on various tax reform proposals were held by the House Ways and Means Committee, the National Livestock Tax Committee presented a statement and testimony on the subject of proposed changes in the federal income tax laws affecting livestock and other agricultural operations. At the request of members of the House Ways and Means Committee, the National Livestock Tax Committee agreed to work with the staff of the Ways and Means Committee in proposing several changes in the livestock tax laws which would eliminate tax profiteering in the industry which is caused by a few persons who enter the business on an in-and-out basis with the only intention being of making a tax profit as opposed to an economic profit.

After an in-depth study of this situation, the National Livestock Tax Committee submitted certain proposals which would help eliminate tax profit schemes in agricultural operations while at the same time provide fair and equitable tax treatment for the whole agricultural industry. These proposals were: (1) apply the depreciation recapture rules of section 1245 of the Internal Revenue Code to purchased livestock used for draft, breeding, dairy or racing purposes; (2) extend the holding period of cattle and horses from 12 months to 24 months in order to qualify for capital gains treatment under section 1231 of the Internal Revenue Code;[1] (3) clarify that male calves or steers cannot be traded tax-free for female calves or cows; (4) require a taxpayer to prove the purpose for which he held livestock in addition to proving the length of time the livestock were held to qualify for capital gains; and (5) establish a sliding scale recapture of land improvement expenses when farm or ranch land is sold within ten years after its acquisition.

III. CERTAIN PROVISIONS OF H.R. 13270 (TAX REFORM ACT OF 1969) PERTAINING TO FARM LOSSES ARE NOT NECESSARY AND ARE CONTRARY TO OBJECTIVES OF AN EQUITABLE AND SOUND TAX SYSTEM

Following hearings on proposed tax reform, the House Ways and Means Committee reported to the House of Representatives its recommendations on tax reform, which recommendations were subsequently passed by the House as H.R. 13270. This bill contained a number of the suggested proposals of the National Livestock Tax Committee, although some of these proposals had been modified. However, H.R. 13270 included several additional provisions pertaining to livestock taxation which went considerably further than the proposals offered by the National Livestock Tax Committee. These additional provisions, all of which relate to farm losses, include an Excess Deductions Account (EDA),

[1] Exempted from this increased holding period requirement would be animals subject to involuntary conversion due to drought or disease, since the premature disposition of such animals results from circumstances beyond the taxpayer's control.

a Hobby Loss Presumption, a Limit on Tax Preferences (LTP), and an Allocation of Deductions. The Tax Committee feels that these additional provisions (hereinafter sometimes referred to as "unneeded provisions") go much too far, are not necessary to prevent tax profiteering, and are contrary to the basic tenets and objectives of an equitable and sound tax system.

A. Objectional Provisions Unnecessary

These unneeded provisions of H.R. 13270 are not necessary for purposes of preventing tax-profiteering, result in an "overkill" approach, would create complexity and confusion throughout the industry, and would cause changes in the overall economics of the livestock industry, all of which would cause serious harm to the entire livestock industry. Unlike the proposals of the National Livestock Tax Committee which single out and clamp down solely on the few persons engaged in tax profiteering in the industry and which provide fair and equitable tax treatment for the whole industry, these unneeded provisions of H.R. 13270 would apply on a broad scale to all livestock operators. In short, these unneeded provisions would "burn down the barn to catch a few rats."

B. Reason these Provisions Objectionable

It is the position of the National Livestock Tax Committee that the essential and basic objectives of an equitable and sound tax system are: (1) to raise revenue; (2) to treat all taxpayers engaged in the same business fair and equitably; (3) to treat all taxpayers in the entire business community fair and equitably; and (4) to provide for efficient and workable compliance and enforcement. The Tax Committee feels that these unneeded provisions of H.R. 13270 are contrary to all of these essential rules.

1. *Not Intended to Raise Revenue*

In the so-called "farm loss provisions" of H.R. 13270, which encompass EDA, Hobby Loss Presumption, depreciation recapture for livestock and increased holding period requirements for livestock, the House Ways and Means Committee Report estimates that all of these provisions would increase revenue by the relatively insignificant sum of $5 million in 1971.

Back in 1963, when the Treasury Department first proposed EDA, it was estimated that EDA alone would yield only $5 million per year in tax revenue. But it is now estimated, nine years later, that all of these "farm loss provisions" would increase revenues by just $5 million. This statement by itself refutes the claim of increasing tax profiteering that allegedly has caused a great loss of tax revenue and evidences the desire to extend these "farm loss provisions" across the board to all farmers and ranchers and not restrict tax reform to eliminating tax profiteering as do the propsals of the National Livestock Tax Committee. Yet, the announced intention of these "farm loss provisions" is to stop the practice caused by "some high-income taxpayers who carry on limited farming activities as a sideline to obtain a tax loss which is then deducted from their high-bracket, non-farm income".

2. *Treats Farm and Ranch Taxpayers Unfairly as Between Themselves*

a. EDA: (1) *Corporations, Trusts and Estates Hardest Hit.*—As written, EDA would apply to all farmers and ranchers on the cash method or using presently acceptable accrual methods of accounting[2] who incurred farm losses or who acquired certain farm property already subject to previously accumulated farm losses. However, no additions would have to be made to EDA by taxpayers operating as *individuals* unless non-farm income exceeded $50,000 and only to the extent farm losses were in excess of $25,000. *All* farm losses incurred by other taxpayers (i.e. corporations, trusts and estates) would generally be added to EDA without these limitations.

Thus, hardest hit by these provisions of EDA would be the numerous small and medium-sized family-owned corporations, trusts and estates engaged in farming or ranching which have even small amounts of non-farm income. Such taxpayers would be unduly penalized just because they received non-farm income, such as rentals, royalties, or other business income, and as other businesses, combine all income and losses from whatever source earned in computing their taxable income.

(2) *Imposition of Burdensome Record Keeping Requirements.*—Furthermore, farmers and ranchers who remained on the cash basis or used presently accepta-

[2] See discussion beginning on p. 16.

ble accrual methods would be required to compute losses each year and maintain a separate EDA. To all of these operators, this would be very troublesome and in many cases virtually impossible because of the complexities involved. Even to those legitimate operators who have access to reliable outside record keeping and tax assistance and can afford to pay for such services, this would impose an additional cost and further reduce their already small margin of profit.

In 1952, the Secretary of the Treasury presented to the Congress a proposal[8] to modify the cash basis so as to require capitalization of all costs of raising breeding herd livestock. At that time, the Tax Committee pointed out the practical necessity for simple accounting methods and Congress agreed by failing to act on the Treasury's contention. There has been no substantial change in conditions which would require or warrant a different approach today.

(3) *Capital Gains Denied.*—In addition to discrimination based upon what form of accounting system was employed and in what form the livestock business was operated, EDA would also categorize individual farmers or ranchers as being "undesirable" by limiting capital gains on the sale of their farm property if they were in a certain non-farm income bracket and sustained farm losses over $25,000. Singling out such farmers and ranchers for this type of treatment even though they are legitimate operators seems most unfair.

(4) *Full Deductibility of Interest and Property Taxes Denied.*—EDA would further and unjustly injure those taxpayers who have borrowed money to obtain working capital for the operation or purchase of farms or ranches, since the interest paid on these loans would increase farm losses. Taxpayers in debt would be discriminated against and persons would be discouraged from entering the industry on a legitimate basis by acquiring farms or ranches subject to a mortgage. Moreover, higher and higher property taxes would also swell the EDA and thus reduce their full deductibility by reason of the required offset of EDA against capital gains.

(5) *Sales of Farm and Ranch Property Hit—Conservation Discouraged.*—In addition to restricting capital gains on the sale of livestock and other farm assets, EDA would tax gain realized on the sale or exchange of farm and ranch land at ordinary income rates, instead of at capital gains rates as under present law, to the extent of land clearing and soil and water conservation expenses deducted during the current taxable year plus the four previous taxable years. As with other provisions of EDA, this would only apply to farmers and ranchers using the cash basis or presently acceptable accrual methods of accounting. This provision not only represents bad economics and bad agricultural policy, but it also would discourage needed and continuing conservation projects which are so vital to the industry. The adverse repercussions such provision could have on the reduction or termination of needed conservation projects would also be felt by other businesses connected with the promotion and operation of such projects and by the consuming public dependent on agricultural products.

b. *Hobby Loss Presumption*—(1) *Would Disallow All Farm Losses to Certain Farmers and Ranchers.*—If farm losses exceeded $25,000 for any three of five consecutive years, even a legitimate farmer or rancher who has been in the business all his life would be presumed to be a "hobby farmer" and *all* his losses could be disallowed under the Hobby Loss Presumption provision of H.R. 13270. This provision would apply to all taxpayers, whether doing business as individuals or in corporate form.

The cyclical nature of farming and ranching, the adverse effect of climate and weather, sporadic and unstable market prices, and continually rising production costs could easily result in farm losses incurred by many legitimate operators exceeding $25,000 for any three of five years. No exceptions or exclusions would be made for death or casualty losses or certain fixed expenses such as taxes and interest.

Thus, a farmer or rancher who sustained losses in excess of $25,000 for any three of five years because of drought, blizzards, falling livestock prices, and increasing operational costs could have *all* his losses disallowed while his neighbor who sold his livestock at a different time or escaped the full blow of adverse weather conditions and had losses of $24,999 for this period would not be subject to the disallowance of such losses under this provision.

[8] Special letter from the Secretary of Treasury to the Chairman of the Senate Finance Committee dated June 27, 1952, 98 Cong. Rec. Pt. 6, p. 8207, 1952 CCH Fed. Tax Rep. ¶ 6230.

(2) *Could Cause Lumping of Income Tax.*—Farmers and ranchers whose farm losses were disallowed under this Hobby Loss Presumption could find their income taxes greatly increased in one year as a result of disallowance of farm losses in prior years. As previously explained, this could apply to and cause a terrific hardship to a farmer or r. ncher who because of factors beyond his control, such as adverse weather conditions, increasing costs or low market prices, had losses in excess of $25,000, while his neighbor with $24,999 of losses would not be subject to such disallowance. Under these circumstances, the farmer or rancher with the disallowed losses could discover that the increased income taxes resulting from the disallowance of such losses in prior years greatly increased his taxes in one particular year. Securing the necessary funds to pay these additional taxes could present a very serious problem to such farmer or rancher.

(3) *To Rebut Presumption Would be Time-Consuming and Expensive.*—To try to rebut the presumption that the farm or ranch was not operated with a profit motive would be both time-consuming and expensive and could even be a recurring event. Furthermore, the uncertainty caused by this provision whereby a farmer or rancher may be treated as a "hobby operator" one year and all his farm losses denied, and as a "legitimate" operator the next year, would be very disruptive and create great uncertainty throughout the whole industry. Because of changing and variable conditions previously noted, a farmer or rancher might be presumed to be a "hobby operator" and *all* his losses disallowed necessitating lengthy and costly protests or litigation, whereas his neighbor whose losses were just a few dollars less would escape this presumption and not have to go to the added expense of contesting the presumption.

c. *LTP and Allocation of Deductions*—(1) *Would Classify Farm Losses of Some Taxpayers as "Tax Preferences."*—Farmers and ranchers (individuals, trusts and estates) on the cash basis or using presently acceptable accrual methods of accounting[4] would generally be subject to additional tax liability and/or to a reduction of personal itemized deductions if certain of their farm losses exceeded $10,000 under the LTP and Allocation of Deductions provisions. In such cases, farm losses would be termed "tax preferences". This would result in different tax treatment for farmers and ranchers based upon the system of accounting they used. In addition, there would be further discrimination between farmers and ranchers on the cash basis or using presently acceptable accrual methods who had certain farm losses under $10,000 and those who had farm losses exceeding this amount.

(2) *Would Adversely Affect Some Farmers and Ranchers but not Others.*—Farmers and ranchers would be caught in an ignominous vise under these provisions in that capital gains realized on the sale of farm assets would not be considered in determining farm loss "tax preferences" although the deductible portion of such capital gain would be treated as another "tax preference" resulting in increased income taxes and restricting itemized personal deductions. Also, death and casualty losses and fixed operational expenses such as interest and taxes would not be deleted from the formula in computing farm losses. In application this would mean that, as under EDA and the Hobby Loss Presumption provisions, farmers and ranchers who fell in hard times or sold their livestock when prices were low would be penalized while neighboring farmers and ranchers who were lucky and escaped these catastrophies would not be subject to additional tax or to a reduction of their itemized personal deductions.

3. *Singles Out Farmers and Ranchers for More Adverse Treatment than Taxpayers in Other Businesses*

a. *EDA*—(1) *Would Restrict Capital Gains on Livestock and Farm Property.*—The principle and provisions of EDA—restricting capital gains treatment of livestock and other farm property—are harmful to most farming and ranching operations, large and small, and would be a most serious blow to the whole livestock industry. This EDA provision constitutes discrimination against farming and ranching. No other businesses are singled out in like manner for such treatment. Yet, livestock are still selling at below parity prices.

(2) *Would Recapture Certain Conservation Expenses at Ordinary Income Rates When Farm or Ranch Land Sold.*—Under EDA, gain realized on the sale of farm or ranch land would be subject to taxation at ordinary income rates, instead of at capital gains rates as under present law, to the extent of land clearing and soil and water conservation expenses deducted in the 5 years prior to the sale. Yet, no

[4] See discussion beginning on p. 16.

other business is subject to such restrictions on the sale of its land used in business operations. Moreover, the Congressional policy of providing farmers or ranchers under present law with the right to deduct these expenses in order to foster and encourage conservation projects would be abrogated.

b. *Hobby Loss Presumption—Would Appear to put "Hobby" Label on Agricultural Operations.*—Including the Hobby Loss Presumption section under the "farm loss provisions" of H.R. 13270 appears to be an attempt to place the tag of "hobby" on the agricultural industry and subject it to unreasonable and deleterious tax provisions. Yet, agriculture today is big business and remains near the top in size of all businesses in the country.[5] More importantly, it is one of the most vital of our nation's industries, for a country without adequate supplies of food and fiber would soon cease to exist. In this regard, it should also be recognized that agricultural operations require vast amounts of capital and are not entered into by the great majority of taxpayers just to lose money, as this provision of H.R. 13270 erroneously implies.

c. *LTP and Allocaion of Deductions—Would Unjustly Single out Farm Losses as "Tax Preferences".*—The Limit on Tax Preferences (LTP) and Allocation of Deductions provisions of H.R. 13270 unfairly label certain farm losses as "tax preferences". Yet, losses from no other *business* are termed or treated as "tax preferences" under these provisions of H.R. 13270.

Farming and ranching are one of the highest risk businesses in the country. The vagaries of weather, an unstable and sometimes non-existent labor force, and unsteady market prices make the farming and ranching business subject to elements beyond its control not experienced by any other industry. Under these conditions, and considering the absolute dependency of the nation's health on an adequate supply of food and fiber, it is not only dangerous tax policy but also precipitous agricultural and economic policy to term farm losses as "tax preferences" when all but a very few persons in the country are legitimate operators.

d. *Farming and Ranching Subject to Specific and General Provisions.*—Farming and ranching, with possibly only one or two exceptions, is the only business that is singled out for both special and general tax treatment under H.R. 13270. The so-called "farm loss" provisions of H.R. 13270 apply specifically to all agricultural operations. Yet, certain farm losses are also treated as "tax preferences" under LTP and Allocation of Deductions. The singling out of agriculture for this sort of dual treatment appears to be an unreasonable discrimination against farming and ranching.

4. *Compliance and Enforcement will be Neither Efficient nor Workable*

a. *New and Difficult Accounting System Prescribed for Livestock Industry*—(1) Livestock Operators Discouraged To Use Cash Basin and Presently Acceptable Accrual Accounting Systems.—Under EDA, it is provided that farmers and ranchers who use a "proper" accrual method of accounting (i.e. "by using inventories and by charging to capital account all expenditures chargeable to capital account" which can under present law be either deducted currently or capitalized) would in general not be subject to the provisions of maintaining an excess deductions account under EDA. This could have the tendency of forcing many farmers and ranchers on to this impossibly complex "proper" accrual system. In any event, this would pose a Hobson's choice to farmers and ranchers who would have to decide between maintaining a complex accounting of farm losses by establishing an excess deductions account and being subject to the restrictions spelled out under EDA or employing the even more complex "proper" accrual system and not being permitted to deduct certain expenses as under present law. Similarly, under the LTP and Allocation of Deductions provisions of H.R. 13270, all farmers and ranchers operating in other than corporate form and who in general incur farm losses in excess of $10,000 would be forced to use a "proper" accrual system, since if they do not use such accrual system they would be required to keep two sets of accounting records—one on their present method and one on the "proper" accrual method.

Under this "proper" accrual system, it would appear that farmers and ranchers would have to use inventory methods based upon actual costs of raising farm livestock and produce instead of on amounts "which reasonably account for the normal costs incurred in producing the animals" under the unit livestock price

[5] See *Food Costs—Farm Prices,* Committee on Agriculture House of Representatives (90th Congress, 1st Session July, 1967) at 15.

method of the present Treasury Regulations. This would mean that costs of raising crops and livestock would have to be separately computed and would not be deductible until such crops or livestock were sold. Furthermore, the effect of such system would be to abolish in one fell swoop and arbitrarily to deny to farmers and ranchers the important and heretofore Congressionally recognized provisions of the Internal Revenue Code dealing with the deductibility of soil and water conservation expenditures (section 175), fertilizer costs (section 180), and land clearing expenses (section 182).

Most alarming of all is the fact that for the first time in the history of federal taxation of agriculture, Congress has attacked the cash basis method of accounting and also apparently the use of presently acceptable unit livestock price inventory methods, by the suggestion in the House Ways and Means Committee Report that these are not "proper accounting rules". This represents a marked and radical departure as Congress has consistently recognized and sanctioned the use of the cash basis accounting method since inception of the federal income taxes in 1913. Furthermore, the unit livestock price method of valuing livestock using values based upon reasonable estimates of normal costs of producing animals has been sanctioned by the Treasury Department since 1944 as being required by the problems of valuing livestock inventories. It seems both unjust and without merit to deny the time-honored and workable cash basis and the presently-used unit livestock price methods of accounting to legitimate farmers and ranchers, simply for the purpose of eliminating the relatively few tax profiteers, particularly when they can be eliminated by the proposals of the National Livestock Tax Committee.

(2) *"Proper" Accrual Method of Accounting by Livestock Operators is Virtually Impossible to Achieve.*—Due to the nature of and conditions surrounding livestock operations, the Tax Committee is of the opinion that simplified record keeping and accounting methods, such as the cash basis, are absolutely essential. The great majority of farmers and ranchers use the cash basis system of accounting because of its simplicity. Even the cash basis method of accounting is not easy for some farmers and ranchers to maintain. To force cash basis farmers and ranchers on to a "proper" accrual system would be imposing an impossible requirement on most and a burdensome and unnecessary requirement on all.

This "proper" accrual system would be a virtual impossibility even for the most sophisticated accountants. This is due to the fact that it would be impossible for the farmer or his accountant to differentiate between and properly segregate the costs of raising his breeding livestock from the costs of raising animals held for sale, which would be most essential since gain on the sale of breeding animals held for the requisite holding period is taxed at capital gains rates. In many instances, the farmer or rancher is unable to determine for a significant period of time whether to place an animal with his sales herd or to retain it as a member of the breeding herd. Attempting to allocate costs in these circumstances would test the ingenuity of even the most complex accounting equipment. Similar and greater problems would develop where, as is commonly the case, the farming or ranching operation includes the raising of livestock as well as the growing and harvesting of crops and other agricultural activities. To allocate in a proper manner the costs of the overall agricultural business to the multifaceted operations involved would be a nightmare and exercise in futility. In the final analysis, it would be an impossibility.

(a) *Accurate Inventories Impossible.*—Unlike other businesses where the production and sale of merchandise is a significant factor and the "proper" accrual method of accounting is required for income tax purposes, ranching and farming is not the type of business where accurate inventories can be made at periodic intervals and meaningful cost accounting methods employed. On many ranches covering thousands of acres, livestock cannot be conveniently located and inventoried on December 31 of each year or at any other such specific date for accounting purposes. The same would seem to apply equally to other agricultural activities.

A number of the most prominent livestock tax accountants in the country have confirmed to the Tax Committee that it would be a virtual impossibility for the livestock operator to conform to the "proper" accrual method of accounting. Furthermore, these accountants stated that the multiple accounting problems involved in attempting to comply with such a "proper" accrual method would be practically insuperable.

(b) *"Proper" Accrual Accounting Very Expensive.*—Even if the "proper" accrual method of accounting were feasible and could be complied with, this would substantially increase the operational costs of the farmer and rancher which are already at a record level. With such additional costs to cope with, and viewing the already existing thin overall profit margin of livestock operations, it is conceivable that the added burden of increasing the complexity of their record keeping and attendant costs would cause many farmers and ranchers to cease operation.

(c) *Expert Accounting Assistance Not Available.*—Furthermore, in a large number of rural areas there are no accountants, or an insufficient number of accountants, to perform the complex bookkeeping chore that would result from imposition of the "proper" accrual method of accounting on farmers and ranchers. For instance, available statistics published by various accounting societies show approximately less than 20% of the total number of certified public accountants in the continental United States practice in the twenty-one states west of the Mississippi (excluding California), yet those twenty-one states comprise about 67% of the land area of the continental United States. It is in these same states that approximately 64% of the nation's cattle population is located according to U.S. Department of Agriculture statistics, yet it is obvious that competent accounting assistance necessary for accurate accrual reporting would be hard to come by at least in the western states. Even if the services of qualified cost accountants could be obtained, the additional time and expense which would be spent in trying to justify to the Internal Revenue Service or to a court the method of cost allocation used, which would obviously be subject to very close scrutiny, could be most substantial.

b. *Present Law has Built-in Presumption—No Statutory Presumption Needed.*—Replacing present section 270 of the Internal Revenue Code with this new Hobby Loss Presumption provision would not add any extra arsenal for enforcement of present tax law. This is because under present tax law disallowance of any business loss by a revenue agent is already *presumed* to be correct until rebutted by the taxpayer. The fact that the Internal Revenue Service has not fared too well in the farm and ranch "hobby loss" area of litigation is probably due to the unfamiliarity of revenue agents with the essential elements of a legitimate operation. A statutory presumption, such as that created by this new provision, would appear to add nothing constructive to present law. It would merely provide a convenient and speedy means by which an examining agent would disallow *all* losses, regardless of the operator's actual good faith and length of time in the business; and it would substantially increase the time spent by taxpayers and the Internal Revenue Service in extensive tax protests and litigation of such cases.

c. *Cost of Enforcement.*—In the Hobby Loss Presumption provision, no reference is made as to how farm losses are to be computed. Whether such losses will be computed as under present section 270 of the Internal Revenue Code, whether capital gains will be excluded or included and whether farm income will include income from farm land use is not indicated. This lack of direction in this provision will certainly invoke considerable protests and litigation. Furthermore, protests and litigation rebutting the presumption created by this provision will probably be numerous, necessitating a larger staff and additional funds for the Internal Revenue Service.

In addition, protests and litigation resulting from attempts to rebut the presumption created by the Hobby Loss Presumption and from attempts to police and audit the use of a "proper" accrual accounting system, the excess deductions account, and the carryforward and basis adjustments of LTP will probably be numerous, requiring additional personnel and larger administrative funds for the Internal Revenue Service.

As a matter of conjecture, the Tax Committee wonders whether this cost of enforcement will not exceed the small additional revenue which these provisions may raise.

C. General Objections to Unneeded Provisions of H.R. 13270

1. *Would Create Extreme Complexity and Confusion to Livestock Operators.*—Unraveling, comprehending and applying these unneeded provisions of H.R. 13270 would even be a major undertaking for a professional tax adviser. It would be a virtual impossibility for most farmers and ranchers.

The extreme complexities of and the virtual impossibility of farmers and ranchers complying with the "proper" accrual system of accounting under the EDA, LTP and Allocation of Deductions provisions of H.R. 13270, previously discussed, would only serve to add to the confusion of attempting to comply with these provisions.

Further, the right of such farmers and ranchers under LTP to increase the basis of their farm assets in computing gain or loss by the amount of disallowed farm loss "tax preferences", but limited to the basis of such farm assets computed on a "proper" accrual system or determined by use of reasonable estimates of unit costs, would result in unending confusion. Also, the five-year carryforward provisions of LTP with respect to any remaining disallowed farm loss "tax preferences" would create similar problems. The unreasonable requirement of keeping two sets of separate accounting records would also be necessary in order to determine the "proper basis" adjustment for these farm assets in computing gains or losses.

Maintaining an accurate EDA by all farmers and ranchers not on a "proper" accrual method of accounting would entail further and additional record keeping duties and expenses, which a large number of stockmen would be unable to perform or pay for. Preparing income tax returns, much less keeping the type records required under these provisions, would be a monumental task. In short, most farmers and ranchers would just not be able to grasp, understand or comply with these additional and complex complications imposed by these provisions of H.R. 13270.

Because of this complexity and the impossibility of maintaining accurate records and properly allocating costs on a "proper" accrual system, farmers and ranchers would be left to the mercy and whims of individual revenue agents. If past events are any indicator, these agents are usually uninformed of the facets of livestock operations and accounting which portends farther confusion and expense for stockmen should these provisions be enacted.

As one Treasury Official has stated, perhaps H.R. 13270 should be entitled the "Lawyers and Accountants Relief and Pension Act".

Attached hereto as an exhibit is a statment by Mr. N. E. Tamplin, a partner with the accounting firm of Ernst & Ernst, briefly explaining the complexities and confusion which these unneeded provisions of H.R. 13270 would cause.

2. *Would Discourage Diversification by Farmers and Ranchers into Non-farm Businesses*—a. *Farmers and Ranchers Must Diversify.*—For the past several years, because of depressed livestock and crop prices and rising production costs, many farmers and ranchers have had to seek off-farm employment in order to supplement their farm income.

> "The farmer more frequently is moonlighting. The farm housewife more frequently is participating in the nonfarm labor force. Better roads and easier access to town, increasing demand for nonfarm labor in many areas, increasing need for income by farmers themselves, all play a vital role in this trend. Farmers are diversifying, but off the farm, rather than on it."[6]

This indicates that off-farm income has become an increasingly important factor in the lives of farm families. For example, in 1967, farmers received $10.7 billion from non-farm sources. Between 1960 and 1967, non-farm income per farm family more than doubled.[7]

Diversification by legitimate farmers into non-farm activities has become almost a necessity because of the fact that parity is only about 74%. Additionally, it is becoming increasingly apparent that it makes good economic business sense not to have "all your eggs in one basket". Such diversification by long-time legitimate farmers and ranchers in non-farm businesses, of course, means larger off-farm income.

These figures and the move toward diversification show not only the important role non-farm income is presently playing in the farming and ranching economy, but also portend that non-farm income will, as it increases in the future, play even a more vital part in agricultural economic stability.

[6] M. L. Upchurch, Administrator of Economic Research Service, U.S.D.A., Address to Annual Agricultural Outlook Conference on February 18, 1969.

[7] Upchurch, *Ibid.*

b. *EDA Could Discourage Diversification.*—Corporations, trusts and estates engaged in farming or ranching and subject to the provisions of EDA would be discouraged to diversify since the offsetting of *any* farm losses against income from any non-farm source would result in increasing the amount in EDA. Non-farm income could include income from land rentals, royalties, dividends, interest on savings and other similar sources, which are becoming increasingly common to more and more of such legitimate farming and ranching operations.

c. *EDA Could Discourage Thrift and the Investing of Non-farm Income in Livestock Operations.*—When such a typical farm or ranch enterprise has a profitable year resulting perhaps from good moisture and higher selling prices, the prudent operator will want to invest some of the profits so that there will something to fall back on when a bad year comes along. Often this investment of profits is in a non-farm business because of the desire to diversify. The EDA provisions would tend to discourage such investments, since the income from such non-farm investments would swell the amount in EDA to the extent used to offset farm losses.

Furthermore, non-farm income is often plowed back into the livestock operation to make it more effective. By discouraging diversification, such non-farm income would not be available for increasing the effectiveness or productivity of the operation, and with increasing interest rates, many of such legitimate farmers and ranchers might have to terminate their operations if credit sources dried up.

These are just further indications of the economic unsoundness of this particular provision of H.R. 13270.

d. *Existing Government Programs Could be Impaired by EDA.*—By the same token, these EDA provisions fly directly in the face of existing government programs, such as those sponsored by the Farmer's Home Administration, which are designed to encourage farmers to increase their non-farm income. The objects of such programs are to establish non-farm trades and businesses such as recreational uses and thus provide rural communities with services previously unavailable, while increasing non-farm income. As previously explained, the EDA provisions affecting corporations, trusts and estates engaged in farming and ranching would mean that such taxpayers would be discouraged to receive any non-farm income no matter what the source.

3. *Would Isolate Agriculture From Rest of Nation's Economy.*—These unneeded provisions of H.R. 13270 would have the effect of isolating the livestock industry, and agriculture in general, from the mainstream of our country's economy by discouraging needed outside capital from entering the industry and by hindering many existing legitimate farming and ranching operations to remain economically sound by diversifying into non-farm businesses and investments. This would result in a situation which would be very damaging to this industry which constantly needs new blood and new capital and which has heretofore not been discouraged to diversify into non-farm businesses or investments.

Instead of saving agriculture from outside forces which supposedly distort farm and ranch economies, these unneeded provisions of H.R. 13270 would inflict damage on the legitimate operator who is trying to expand his business and remain on the farm, by reducing his supply of available capital and placing restrictions in one form or another on the deductibility of farm losses. It would, in fact, appear to inflict the most severe damage on the small and medium-sized livestock operations which, unlike the large operations, could not afford to comply with or pay the price exacted by these provisions in the form of additional record keeping and professional tax assistance.

4. *Would Impede Vital Agricultural Programs.*—Many research programs in the fields of agricultural production on farms and ranches are in large part supported by funds from non-farm sources.[8] These unneeded provisions of H.R. 13270 would seriously impair these programs which are beneficial to the entire economy, farmers and consumers alike, by discouraging investment and participation in research. The reason these programs reflect losses is for the simple reason that they are not designed to show immediate profitable returns in cash, but are profitable in long-term breed and biologic improvements for the whole industry.

Closely related to these research programs is the vital role played in the livestock industry by purebred operations. These operations, which are analogous to engineering and research departments in certain industrial businesses, are

[8] See Logan, *Evaluating Financial Support of Research Programs, Journal of Farm Economics* (Feb., 1964).

the foundation of the entire livestock industry since they provide the seed livestock for all livestock operation. Because of the extensive research and experimentation involved in these operations, the profit reflected is often very small and in many instances there are sustained losses for a number of years until an improved seed stock animal is developed and recognized by the industry. To restrict or deny the full deductibility of the losses incurred in these operations in any manner, whether by reducing capital gains on the sale of livestock under EDA, by a hobby loss presumption, by increasing taxable income under LTP, or restricting the deductibility of certain itemized personal expenses under Allocation of Deductions, would be unfortunate; it would discourage, and possibly eliminate, the needed flow of capital from non-farm sources into these research programs, and it would have the resultant and adverse effect of restraining the production and development of needed seed stock. Already there seems to be developing a trend away from cow-calf operations to steer operations because of lower operational costs associated with raising steers. This forecasts a far more serious development, since there has to be some entity or group producing seed stock for the livestock industry.

5. *Would Dry Up Needed Sources of Outside Capital and Restrict Entry of New Blood into Industry.*—Enactment of these unneeded provisions of H.R. 13270 would almost certainly place a restriction on the availability of capital for farming purposes from outside sources. This could be severely damaging to agriculture which has been largely dependent upon the availability of outside capital.

a. *Large Amounts of Outside Capital Necessary.*—Livestock operations need large amounts of capital to begin and continue operations, and very often this capital is not available from the farmer's or rancher's own resources or borrowings. Thus, attraction of outside capital always has been important to the livestock industry. Any law, such as these unneeded provisions of H.R. 13270. which would discourage new capital investment, could prove catastrophic to the whole industry. Productivity could decrease, operation costs would increase, husbandry and agricultural practices would deteriorate, and local communities and other businesses would disappear. The entry of new capital into the livestock business, particularly in the western states, has a long historical background.[9] American agriculture was built largely by outside capital. It is this capital which makes efficiencies resulting in the United States being the most productive agricultural nation in the world.

Further, it should be recognized that the small and medium-sized family farm or ranch is having its hardest financial time in history.[10] The increased cost of machinery, supplies, feed, and such other necessary products and equipment is such that a small operation cannot justify it. For this reason, many such operations are amalgamating with the assistance of outside capital and thereby developing efficient and larger units over which the costs of operation can be more economically spread. To effect this, such farmers and ranchers need and are entitled to operate under the tax laws without these detrimental provisions.

b. *Essential Flow of New Blood into Industry Would Be Stifled.*—The average age of a farmer today is about 55. With expanding and lucrative opportunities in other businesses, agriculture has not kept pace with encouraging new people to enter the industry on a legitimate basis. With an average rate of return on capital investment of between 1% and 3% (and in certain areas of the country the rate of return is below 1%).[11] there need to be *incentives* not barriers placed in the way for such new people to come into agriculture. Instead of creating such essential incentives, these unneeded provisions of H.R. 13270 erect barriers. Start-up costs for any legitimate livestock operation could and usually do result in losses for the initial years of operation, subjecting the operations to some if not all of these unwarranted and deterimental provisions of H.R. 13270.

In addition, these unneeded provisions of H.R. 13270, in combination or in single application, would make it virtually impossible for a person to borrow sufficient capital to purchase a farm or ranch or to acquire a farm or ranch subject to a mortgage. This is because the interest on the mortgage and the higher and higher property taxes being levied against agricultural property would increase farm losses. Under EDA, this could result in reduction of the full deductibility of such expenses by reason of the required offset of EDA against capital gain. Under

[9] See Gray, *Ranch Economics* (1968).

[10] See generally *Food Costs—Farm Prices*, Committee on Agriculture House of Representatives (90th Congress, 1st Session, July, 1967).

[11] Based upon compilation of studies conducted by U.S. Department of Agriculture, national livestock associations, and colleges and universities.

the Hobby Loss Presumption, it could result in *all* farm losses being disallowed if they exceeded $25,000 for any three of five consecutive years, as they well might in the initial years of operation. Under LTP, these losses could result in increasing the taxable income of the farmer or rancher. Under Allocation of Deductions, these losses could cause the reduction of the farmer's or rancher's itemized personal deductions.

6. *Could Result in Substantial Meat Price Increases to Consuming Public*—a. *Livestock Currently Produced at Low Prices.*—Improvement of livestock breeds through dedicated research programs, as previously noted, has produced overall meat prices at lower prices to the consuming public than practically anywhere else in the world. However, the livestock business receives no governmental subsidy for raising meat. The livestock producer operates as an individual with no bargaining power and is unable to set the price at which he buys or sells his livestock. As a matter of fact, livestock producers who are still operating at below parity prices subsidize the consumers. Still, the livestock business, because of its high capital investment requirements and slim profit margins caused by increasing operational costs and fairly static livestock prices, receives one of the lowest returns on its investment of any business.

b. *Food Costs Presently a Bargain.*—Under the present income tax system, and notwithstanding the distressed economic condition of the industry, American agriculture has done an outstanding job in fulfilling the nation's food and fiber needs. In fact, food and fiber have been supplied by the industry to the consuming public at bargain prices. This is evidenced by the fact that according to the American Meat Institute Bulletin of May 20, 1969, the working man today spends 17% of his income for food, whereas 20 years ago he spent 26% of his income for food. In contrast, the average family in Italy spends about 38% of its disposable income for food, and Peruvian and Russian families spend about 56% of their income for food.

Even in light of these bargain food prices for the American public, operators are still receiving prices below parity for their livestock. Until the slight upsurge in livestock prices a few months ago, livestock prices were about the same as 20 years ago[12] although production costs have increased by about 105%.[13] As a matter of fact, since 1950 livestock prices received by operators were on the average *below* the total costs of production for most of these years.

c. *Provisions of Act Could Increase Meat Prices.*—Enactment of these unneeded provisions of H.R. 13270 could well result in a substantial increase in meat prices to the consuming public. By discouraging the entry of needed outside capital and new blood into the industry and by driving many small and medium-sized operators out of the business, it is very likely that as a result of these provisions, livestock numbers will be substantially decreased, causing a corresponding rise in meat prices.

IV. SOME SECTIONS OF H.R. 13270 ARE SIMILAR TO PROPOSALS OF NATIONAL LIVESTOCK TAX COMMITTEE AND WOULD PREVENT TAX PROFITEERING WHILE NOT HARMING LIVESTOCK INDUSTRY

Included in H.R. 13270 are two specific provisions extending depreciation recapture rules to livestock and increasing the holding period for livestock to qualify for capital gains treatment. The provision on depreciation recapture is the same as one of the proposals offered by the National Livestock Tax Committee, while the provision relating to an increased holding period for livestock has been modified slightly from that proposed by the Tax Committee.

A. Depreciation Recapture Rules Applied to Livestock

Depreciation allowed or allowable on purchased livestock used for dairy, breeding or racing purposes would, under the provisions of H.R. 13270, be subject to the depreciation recapture rules of present law, as are all other similar business assets. This would mean that gain realized on the sale of such livestock would be taxed at ordinary income rates to the extent of depreciation claimed or allowable on such animals, and the remainder of the gain, if any, would be taxed as capital gains, if holding period requirements had been satisfied.

The Tax Committee feels that this proposal is fair and equitable in that it equalizes the tax burden among livestock operations and other businesses and since it will discourage the entry of tax profiteers into the livestock industry.

[12] See *Food Costs—Farm Prices,* Committee on Agriculture, House of Representatives (90th Cong. 1st sess. July, 1967).

[13] See Agricultural Statistics, U.S. Departmnet of Agriculture Table 695 (1967), Table 684 (1968).

B. Increase in Holding Period for Livestock

H.R. 13270 provides that, in order to qualify for capital gains treatment, the holding period required for livestock held for draft, breeding and sporting or dairy purposes will be at least 365 days after such animal normally would have been used for any of such purposes.

The Tax Committee feels that, although some modifications are called for, this proposal in the main is fair and equitable and will help prevent tax profiteering.

Such modifications would include a clarifying provision that the use of animals for breeding, dairy or racing purposes from which the 365-day holding period is measured, shall be based on the time in each taxpayer's own operation that such use normally commences. This will assure equitable treatment of all farmers and ranchers, since the first use of animals for such purposes normally varies from region to region and from farm to farm within a given region.

The second modification which would be included is that there be a presumption of First In, First Out, as under the present unit livestock price method of inventorying livestock if the animals are not individually identifiable (as in most commercial range operations). Such presumption would assist in determining the age of raised livestock, since such age is difficult to determine by weight (method commonly used) after an animal exceeds two years of age. Inclusion of such a provision would also make administration of this provision easier and more effective, including verification of returns by revenue agents.

A third modification would be to exempt from this increased holding period requirement, as does the proposal of the National Livestock Tax Committee, animals subject to involuntary conversion due to drought or disease. The reason for this exemption is that premature disposition of such animals results from circumstances beyond the taxpayer's control.

C. Proof of Intention for Holding Livestock

One of the proposals suggested by the Tax Committee was that to claim capital gains on the disposition of livestock, a taxpayer be required to prove the purpose for which he held the livestock in addition to showing the length of time they were held. In adopting this proposal, the House Ways and Means Committee Report refers to the fact that ". . . the mere satisfaction of the holding period requirement in the case of livestock should (not) . . . be considered to conclusively demonstrate that the animals were held for breeding purposes (or any of the other specified purposes). . . . This determination should be made on the basis of all the facts and circumstances which may indicate the purpose for which the animal was held."

D. Tax-Free Exchange of Livestock

Another proposal offered by the Tax Committee was that present law be clarified to show that it is not proper to exchange male calves or steers tax-free for female calves or cows. This proposal was also adopted by the House Ways and Means Committee and appears in its Report on H.R. 13270, where it is stated that ". . . Congress did not intend this type of exchange to be considered a like-kind exchange."

E. Treatment of Land Improvement Expenses

Under EDA, gain realized on the sale of farm or ranch land would be recaptured and taxed at ordinary income tax rates to the extent of land clearing and soil and water conservation expenses deducted in the five years previous to the sale. Since such expenses are frequently incurred and deducted on a continuing yearly basis, this would result in the gain realized on the sale of much farm or ranch land, which is presently taxed at capital gains rates, being taxed at the higher ordinary income rates, thereby reducing the overall profit. Such a provision could cause considerable harm to a large number of farmers and ranchers who only reap a substantial profit when their land is sold.

Adoption of the National Livestock Tax Committee's proposal for recapturing these land clearing and soil and water conservation expenditures on a graduated basis if farm or ranch land is sold within 10 years after acquisition would be more equitable and would not cause harm to the legitimate long-term farmer and rancher, since such proposal is based on the length of time the farm or ranch land was held and not when these expenses were sustained. In addition, the National Livestock Tax Committee's proposal would have the beneficial effect of encouraging the improvement of farm and ranch land by permanent operators, yet discouraging the purchase of farm and ranch land by tax profiteers on a short-term basis.

F. Income Averaging Provision Would Be Beneficial to Industry

The Tax Committee supports the sections of H.R. 13270 improving and simplifying the income averaging provisions of the tax law.

V. TAX PROFITEERING NOT WIDESPREAD AND IS DECREASING

A. Basis for "Farm Loss" Provisions is Incomplete

The basis and reason for enactment of the "farm loss provisions" of H.R. 13270 is found in the statement in the House Ways and Means Committee Report that according to Treasury Department data for the years 1964 to 1966, "as the taxpayer's adjusted gross income level increases, the size of the average farm loss also consistently increases."

This statement is incomplete and fails to recognize the entire economic picture. For the years 1963–66, the 1966 *Statistics of Income, Individual Income Tax Returns* compiled and reported by the Treasury Department, analyzing individual income tax returns filed and sources of income, reveals that returns filed by individuals showing net farm losses amounted to only about *one-third* of the total returns filed showing farm income and losses. The 1966 Report further indicates that the number of returns reporting net farm losses has *decreased* from 1,086,000 in 1963 to 1,012,000 in 1966. Also significant is the fact that these returns reflect a slight *decrease* from $1,902,000,000 in farm losses in 1963 to $1,853,000,000 in such losses in 1965. If as alleged, a large number of high-income-tax bracket individuals are being attracted into farming for tax write-off purposes, it would apepar that the number of returns showing farming losses would have increased substantially since 1963 inasmuch as the total number of tax returns filed in 1966 by all classes of taxpayers increased 9.7% over 1963.

From the all inclusive application of these "farm loss provisions" of H.R. 13270 to farmers and ranchers, it might be concluded that tax profiteering operations were widespread. This is not true as the 1966 Report shows that, except for the $600 and under adjusted gross income bracket, where the aggregate amount of net farm losses exceeded net farm profits, only in the $100.000 and above bracket did net farm losses exceed net farm profits. Further significant is the fact that only *3.598 returns* (.001% of total farm returns) were filed showing net farm losses in the $100,000 and above tax bracket.

B. Farm Losses Not Significantly Different From Other Business Losses

Also relevant is the fact that the 1966 Report reveals that more losses were reported by individuals in the $100,000 and above adjusted gross income bracket with respect to *other businesses and professions* than by individuals in the same income bracket who reported net farming losses. This is revealed in the following except from the 1966 Report:

Adjusted gross income classes	Business or profession (net loss)	Farm (net loss)
$100,000 under $200,000	$43,473,000	$38,375,000
$200,000 under $500,000	32,047,000	25,605,000
$500,000 under $1,000,000	10,304,000	9,207,000
$1,000,000 or more	16,045,000	3,729,000

However, no other businesses are singled out for discriminatory tax treatment by subjecting them to an EDA or by including their business losses as "tax preferences" under the LTP and Allocation of Deductions provisions of H.R. 13270.

If the basis for enactment of these "farm loss provisions" of H.R. 13270 is predicated on the statement that the size of the average farm loss increases consistently as adjusted gross income rises, then closer scrutiny of such Treasury Department data is required. This is because this same Treasury Department data set forth in the following table reveals that the size of the average loss from *non-farm businesses and professions* also increases consistently as adjusted gross income rises.

1965

AGI classes	Number of returns	Net business loss (thousands)	Average loss
0 to $5,000	448,749	$1,034,775	$2,372.76
$5,000 to $10,000	282,121	256,116	907.82
$10,000 to $15,000	99,319	114,895	1,156.83
$15,000 to $20,000	28,692	49,787	1,735.22
$20,000 to $50,000	29,951	101,444	3,387.00
$50,000 to $100,000	6,176	53,460	8,656.09
$100,000 to $500,000	2,728	63,115	23,136.00
$500,000 to $1,000,000	149	8,471	56,852.35
$1,000,000 and over	97	14,591	150,422.68
1966			
0 to $5,000	429,151	$1,117,336	$2,603.59
$5,000 to $10,000	306,737	328,222	1,070.04
$10,000 to $15,000	115,863	140,939	1,216.42
$15,000 to $20,000	38,350	64,358	1,678.17
$20,000 to $50,000	36,910	134,968	3,656.68
$50,000 to $100,000	7,265	64,558	8,886.17
$100,000 to $500,000	3,128	75,520	24,143.22
$500,000 to $1,000,000	180	10,304	57,244.44
$1,000,000 and over	99	16,045	162,070.70

Yet, these non-farm businesses and professions are not subjected to EDA or are these non-farm losses classed as "tax preferences" under the LTP or Allocation of Deductions provisions of H.R. 13270.

C. Average Farm Profit also Increases Consistently as Adjusted Gross Income Levels Rise

An examination of this same Treasury Department data further shows that the size of the average farm profit also generally increases as adjusted gross income rises. This is reflected in the following table.

1965

AGI classes	Number of returns	Farm net profit (thousands)	Average profit
0 to $5,000	1,243,666	$1,767,545	$1,421.23
$5,000 to $10,000	532,485	1,760,012	3,305.27
$10,000 to $15,000	135,458	754,027	5,566.50
$15,000 to $20,000	42,776	352,551	8,241.79
$20,000 to $50,000	39,003	474,633	12,169.14
$50,000 to $100,000	4,984	83,027	16,658.71
$100,000 to $500,000	1,045	23,521	22,508.13
$500,000 to $1,000,000	32	518	16,187.50
$1,000,000 and over	17	1,671	98,294.12
1966			
0 to $5,000	1,100,435	$1,618,827	$1,471.07
$5,000 to $10,000	596,475	2,058,458	3,451.03
$10,000 to $15,000	186,213	1,055,339	5,667.37
$15,000 to $20,000	57,004	504,127	8,843.71
$20,000 to $50,000	49,889	630,545	12,638.95
$50,000 to $100,000	5,642	92,852	16,457.28
$100,000 to $500,000	1,201	25,191	20,975.02
$500,000 to $1,000,000	27	620	22,962.96
$1,000,000 and over	15	172	11,466.66

From the foregoing statistics showing the relative size of net farm profits and losses, it would appear that in general the larger the operation the greater are the sizes of both profits and losses. This is because a business such as farming and ranching which is subject to so many elements beyond its control can either have a profit or a loss in any given year, and the amount of the profit or loss of a particular operation can be and is frequently in direct proportion to its size. Under these conditions, and based on the foregoing statistics, singling out the entire livestock industry for discriminatory tax treatment under these unneeded provisions of H.R. 13270 is not warranted or justified.

D. Drawing Farm Loss Demaracation Line at $15,000 or $25,000 not justified

H.R. 13270, under its Hobby Loss Presumption and EDA provisions, would treat even legitimate farmers and ranchers who incur farm losses in excess of $25,000 for one year or a period of years as "hobby operators" and restrict the amount of capital gains they could claim on the sale of their livestock or other farm property.

In similar manner, the official position of the Treasury Department as stated by Mr. Edwin S. Cohen before this Committee on September 4, 1969 is to treat even legitimate farmers and ranchers as non-bona fide operators if farm losses exceed $15,000 under EDA and to include *all* losses in EDA if such farmer's or rancher's non-farm adjusted gross income is also in excess of $25,000. As an apparent basis for this conclusion, Mr. Cohen stated that:

> ". . . large farm losses generally represent capital expenditures which have been deducted under the liberal cash method of accounting. The cash method has been allowed to farmers primarily to help small farmers, but taxpayers with *large* farm losses are generally not in this class but are wealthy investors who obtain a tax shelter." [Emphasis added.]

This statement is too general. For instance, there are no statistics cited by Mr. Cohen or of which the Tax Committee is aware that show that large farm losses generally represent capital expenditures which have been deducted under the cash basis. Further, the cash basis is under present law allowed to all farmers and ranchers, regardless of their size, and is necessary because of the nature of livestock operations. To restrict or deny farm loss deductions or use of the cash basis by legitimate farmers and ranchers who, because of the size of their operation, incur large losses (or profits) in a certain year or period of years is not justified. Many legitimate and lifetime farmers and ranchers have farm losses in excess of $15,000 or even $25,000. One bad storm alone can cause this much of a loss in one year.

To classify legitimate lifetime farmers and ranchers as "wealthy investors" seeking a tax shelter just because their farm losses exceed $15,000 or $25,000, besides being unsubstantiated, is not warranted. The amount of farm losses (or even the amount of non-farm income) a farmer or rancher sustains is no indication, nor should it be, of whether he is in the business on a legitimate basis.

Mr. Cohn stated that under the Treasury-modified EDA only 9,300 individuals, with farm losses aggregating $418 million, would be affected. This statement implies that this is an insignificant number of farmers and ranchers and only a relatively *few* wealthy taxpayers will be affected. Yet, according to Treasury Department data for 1966, there are 9 states where there were about 9,300 or less returns filed by farmers and ranchers. These states are: *Arizona* (6,784), *Connecticut* (5,299), *Delaware* (5,010), *Hawaii* (4,002), *Maine* (9,753), *Massachusetts* (5,483), *Nevada* (1,941), *New Hampshire* (2,766 and *Vermont* (5,918). Further, this same Treasury Department data reveals that a $418 million farm loss would be approximately 22% of *all* farm losses in 1966 and would represent about 7% of the total net farm profit reported for that year.

VI. TAX COMMITTEE ALSO OPPOSED TO PROVISIONS AND PRINCIPLES IN METCALF AND MILLER BILLS

In addition to the unneeded provisions of H.R. 13270, the Tax Committee is also opposed to the provisions and principles embodied in S. 500, introduced and sponsored by Senator Lee Metcalf of Montana and S. 1560, introduced and sponsored by Senator Jack Miller of Iowa, which would restrict or totally deny the deduction of farm losses. Although these bills are obviously intended in good faith to help the livestock industry, the Tax Committee feels that these bills would seriously harm the whole industry and perhaps cause the greatest damage to the small and medium-sized family farms and ranches.

Under Senator Metcalf's bill, farm loss deductions would be restricted or totally denied to farmers or ranchers who were not on a "proper" accrual method of accounting and who had non-farm income in excess of $15,000. Legitimate farmers or ranchers who earned $30,000 of non-farm income would have *all* farm losses disallowed. Treasury data for 1966 reveals that this bill would adversely affect at least 79,263 returns (reflecting adjusted gross income above $15,000) and possibly more,[14] a number equal to approximately the total returns reflecting farm income or loss filed by all persons in the State of Oklahoma.

[14] Since losses from business operations, including farming and ranching, are deducted from gross income in arriving at adjusted gross income, it is possible that the number of farming operations affected by this proposal could be well in excess of 79,263.

Legitimate farmers and ranchers who are elected to political office and who receive more than $15,000 would find their farm loss deductions restricted and in some cases completely disallowed. The ramifications of this could discourage qualified legitimate farmers and ranchers from entering public life.

In recent Congressional hearings on federal grazing fee increases, Senator Clifford Hansen of Wyoming, noting that profits in the livestock business have been low, stated that: "I've had to find outside employment to keep my livestock business going." This statement is generally applicable throughout the livestock industry and is supported by statistics which reveal that in recent years, non-farm income received by each farm operator family almost equals total net farm income.[15]

The previously discussed adverse and detrimental effects of the unneeded provisions of H.R. 13270 are also generally applicable to Senator Metcalf's bill. They would include forcing many farmers and ranchers on the impossible "proper" accrual system; restricting the flow of needed new blood and legitimate outside capital into agriculture, discouraging diversification and investment in non-farm businesses by farmers and ranchers; impairing existing and proposed Government programs; impeding vital agricultural research programs; isolating agriculture from the rest of the nation's economy; and jeopardizing the credit base of agricultural lands.

Senator Miller's bill would in general prevent the deduction of farm losses if farm income did not equal or exceed two-thirds of total net income. Although this bill would not have the effect of forcing farmers and ranchers on to a "proper" accrual method of accounting, it follows basically the same underlying and objectionable principle of Senator Metcalf's bill in that it would base disallowance of farm losses on the amount of non-farm income earned by a legitimate farmer or rancher.

VII. SENATOR GORE'S BILL (S. 2645) A PARTIAL SOLUTION

S. 2645 introduced by Senator Albert Gore of Tennessee contained a specific provision (Section 13) pertaining to suggested changes in the livestock tax laws. Senator Gore's bill would: (1) provide that the Secretary of the Treasury could not prescribe in his regulations for the useful life of livestock held for breeding purposes to be less than 10 years; and (2) extend the holding period for livestock from 12 months to 24 months in order to qualify for capital gains treatment.

Because of its simplicity and ease of application, and the fact that it would be at least a partial solution to eliminating tax profiteering in the livestock industry, the National Livestock Tax Committee feels there is considerable merit in the provisions and approach taken by Senator Gore's bill.

However, the Tax Committee is of the opinion that in order to meet the objectives of an equitable and sound tax system, the depreciation recapture rules of present law which apply to all depreciable personal property, other than livestock, should also be extended to livestock. In this sense, including livestock under the depreciation recapture provision of present law would make the restriction of useful life provision in Senator Gore's bill unnecessary.

VIII. CONCLUSION

Proposals of National Livestock Tax Committee would eliminate tax profiteering while not substantially harming industry

Si the National Livestock Tax Committee is convinced that this Committee is intent on maintaining an equitable and sound tax system and not inflicting harm on the entire industry, it is the urgent request of the Tax Committe that this Committee amend H.R. 13270 to include just those proposals offered by the Tax Committee, with the suggested modifications previously noted, that are contained in this bill and referred to in the House Ways and Means Committee Report. These proposals would preserve for the serious permanent farmer and rancher the time-honored and essential cash basis and presently used unit livestock price methods of accounting, retain capital gains for livestock, and permit all farmers and ranchers the right to deduct currently the costs of soil and water conservation, fertilizing and land clearing under sections 175, 180 and 182 of the Internal

[15] M. L. Upchurch, Administrator of Economic Research Service, U.S. Department of Agriculture, Address to Annual Agricultural Outlook Conference on February 18, 1969.

Revenue Code. At the same time, these proposals would put an end to tax profiteering by a few whose only motive is to enter the livestock and farming business on a short-term basis to make a tax profit.

The National Livestock Tax Committee strongly feels that the enactment of the unneeded provisions of H.R. 13270 would be contrary to an equitable and sound tax system, would constitute an "overkill," would add complexity and confusion to the tax law, would radically change the accounting and economics of the industry, and could result in higher meat prices to the consuming public.

EXHIBIT

DENVER, COLO., *September 13, 1969.*

SENATE FINANCE COMMITTEE,
New Senate Office Building,
Washington, D.C.

GENTLEMEN: The proposed income tax law now being considered by you creates unrealistic complexities of computation in the agricultural area. Not only does the taxpayer engaged in agriculture have to cope with the inordinate complexities of the entire reform proposal, he alone has the problem of maintaining an excess deduction account with its carry-over provisions and limitations and special rules on farm land. This coupled with a limited tax preference, with carryover provisions, and allocation of deduction rules that apparently forces an individual taxpayer to compute a loss on profit on agricultural operations on a strict accrual method seems to involve more computation and record keeping than seems practical, or even possible, in the normal agricultural operation. The interplay and interrelation of these complex provisions, which will not be understood or even interpreted for years, coupled with the already complex and little understood rules on operating loss and capital loss (this being changed also) carryforwards will obviously result in lack of compliance and difficulty in enforcement. Tax reform does not imply simplicity, but it should not create impossible complexities such as this.

Very truly yours,

N. E. TAMPLIN.

Senator CURTIS. Mr. Marvin McLain of the American Farm Bureau.

Mr. McLain, you have been very helpful to the Congress, to the Senate and to this committee on many occasions. You represent a fine organization. We are delighted to have you here. We are sorry that you had to wait so late in the day. Is Mr. Anderson with you?

STATEMENT OF MARVIN L. McLAIN, LEGISLATIVE DIRECTOR, AMERICAN FARM BUREAU FEDERATION

Mr. McLAIN. No, he isn't.

Senator CURTIS. You may proceed in your own manner.

Mr. McLAIN. I will brief this statement, Senator Curtis.

The Farm Bureau has long included the broad subject of taxation and tax reform on its list of major concerns. Earlier this year, when the House Ways and Means Committee conducted hearings on the entire subject, Farm Bureau presented testimony on several occasions.

Several aspects of the tax reform proposal now before you are of considerable concern to Farm Bureau members throughout the country. At the time this legislation was under final consideration in the House, our organization made this concern clear publicly and expressed determination to seek changes in the bill when it is considered in the Senate.

Most taxpayers view taxation as a means of raising the revenue necessary to carry out the essential functions of government. The growing use of taxation as a means of regulating the economy has resulted in a great deal of confusion and misunderstanding among taxpayers. At the same time sharply rising rates of taxation at nearly all levels of government and the progressive nature of the Federal income tax have created both a tremendous pressure for so-called tax shelters and a critical reaction to such shelters. These factors are responsible for the current drive for various tax reforms.

In our view, and we believe it is a view held by most citizens, the most pressing tax reform needed is a general reduction in Federal taxation. For this to be possible, more effort will have to be made to bring spending under control. This committee, whatever its final conclusion may be, should make every effort to facilitate and encourage future general reductions both in the proportion of national income that is preempted by the Federal Government and in the progressivity of our tax system.

Likewise, it is also urgent that the tax laws be simplified. It is a poor tax system which results in overtaxation of millions simply because they do not understand the tax laws and cannot afford to hire someone who does. The complexity of the tax laws is directly related to the high level of current taxes and the progressive nature of the rate structure. H.R. 13270 would introduce many new complications into an already complex tax structure. For this reason, if for no other, we urge this committee to act slowly and deliberately to make sure proposed tax reforms represent true reform and not new complications and frustrations for the average taxpayer. If necessary to allow time for adequate study, the features of H.R. 13270, which face time deadlines, such as the excise and surtax extensions, should be removed from the bill and given separate consideration. You have already done that with the 7-percent investment credit, of course.

Underlying Farm Bureau's basic attitude toward taxation is a statement in the "Monetary, Spending, and Tax Policies" section of the Farm Bureau policies for 1969 which reads in part as follows:

> A stable domestic economy must be maintained in the interests of a high level of employment and a proper rate of economic growth as well as the protection of the value of the dollar.
>
> Inflation is a serious threat to continued economic stability. To bring inflation under control and halt the decline in the value of the dollar, we must follow wise tax, budget and monetary policies.

It is with this broad economic goal in mind that Farm Bureau sets forth its specific recommendations relative to H.R. 13270.

TAX TREATMENT OF FARM LOSSES

Original suggestions for dealing with the matter of tax loss farming included elimination of both cash accounting for farmers and ranchers and capital gains treatment for livestock used for breeding. Since Farm Bureau members believe the elimination of these features of present tax law would be extremely harmful to a large segment of agriculture. Farm Bureau proposed that the tax loss problem be dealt with by placing a simple limitation of $15,000 on the amount of farm losses that can be used as an offset to nonfarm income. This approach was introduced by several Members of the House.

Subsequently, House included in H.R. 13270 two provisions which, while alleged to be methods of dealing with the abuse of farming losses by taxpayers with nonfarm income, actually would work to the detriment of thousands of full-time farmers. We refer specifically to the provisions which would (1) extend the holding period required for livestock to be eligible for capital gains treatment, and (2) repeal the livestock exemption from the depreciation recapture provisions of current law. Nowhere in the report of the House Ways and Means Committee or in the debate on the floor of the House is there any evidence of excessive "tax dodging" or other abuses resulting from these provisions of present law.

While the proposed extension of the holding period for capital gains might not work a serious hardship on the producers of cattle and horses, it would work an extreme hardship on farmers engaged in the breeding and production of livestock with a shorter lifespan, namely, hogs and fur-bearing animals.

It also should be noted that the bill as drafted by the House does not specifically state whether the 1-year holding period would begin at the beginning or end of normal gestation. This in itself has caused some confusion. If the holding period is to begin at the end of gestation, capital gains treatment would largely be eliminated for most of the smaller species of livestock. For example, most hog breeders maintain female stock for only one or two farrowings.

The proposed extension of the depreciation recapture provisions of the current law to livestock fails to recognize that livestock is different from other personal property, that is, the maintenance of livestock is a fairly high risk business for which adequate insurance is not available. Even though some may view this matter differently, farmers faced with a disastrous cost-price squeeze during the current inflationary period view this change as one which would only increase their costs without contributing a great deal to the economy as a whole or the goal of tax reform.

Farm Bureau does not oppose the proposed creation of an excess deductions account for taxpayers with farming losses provided the exemption from this requirement is not reduced below the $15,000-level which has been suggested by the Department and which is the level previously proposed by Farm Bureau as a ceiling on the deduction of farm losses from nonfarm income. We have no objection to the proposed tightening of the so-called "hobby" loss provision of the current law.

TREATMENT OF COOPERATIVE PATRONAGE REFUNDS

This matter was not included in the House hearings on tax reform. Therefore, when these changes were proposed in the Ways and Means Committee, Farm Bureau asked that action be delayed until interested parties could be heard. Now that this committee is giving the matter a hearing, our position is as follows:

Over the years Farm Bureau has taken an active part in improving and strengthening farmer cooperatives. In 1962 we actively supported changes in the law which clearly defined the tax status of cooperative allocations to member patrons.

We believe changes made at that time were sound and that current law with respect to cooperative activities is adequate, and should not be changed. We oppose the changes made in the House bill.

The provisions of H.R. 13270 would unnecessarily increase the Federal Government's role in the management of cooperative fiscal affairs. The purpose clearly is to restrict cooperative activities rather than to improve the equity of the tax system.

Among other things, the provisions of H.R. 13270 seek to force cooperatives to adopt a 15 year pay-out requirement for retained patronage allocations. This, in effect, would force cooperatives to treat these allocations as debt rather than equity, and thereby reduce their borrowing capacity. A mandatory pay-out requirement for all patronage allocations also would make it difficult for cooperatives to give priority to the redemption of allocations held by retiring members and the estates of decreased members. Recognizing that cooperatives are owned and controlled by member-patrons, we believe patron allocations also would make it difficult for cooperatives to give priority to the redemption of allocations held by retiring members and the estates of decreased members. Recognizing that cooperatives are owned and controlled by member-patrons, we believe such matters should be left to the decision of the members themselves.

CAPITAL GAINS

We have already addressed ourselves to the matter of capital gains treatment of livestock. Official Farm Bureau policy includes a statement on the general subject of "capital gains" as follows:

> The tax treatment of capital gains should encourage investment without creating tax loopholes or discouraging the sale of property.
>
> The present law results in the taxation of "gains" which reflect in part a decline in the value of the dollar. In periods of rising prices this penalizes property owners and discourages the sale of property.
>
> As a partial answer to this inequity we recommend that the rate of tax on capital gains be reduced as the length of the holding period increases. We favor retention of the present minimum holding period.
>
> Where farmland is acquired for public use by eminent domain or private treaty, the owner should be permitted a period longer than one year to reinvest in farming or another business with the same tax treatment. We support the present law with respect to capital gains treatment for sales of breeding livestock.

We are opposed to the proposed extension of the capital gains holding period to 12 months because it would discourage the investment that is needed to sustain economic growth. The fact that capital gains can be taken at the end of 6 months makes investors more willing to supply risk capital to new ventures, even though they may have no intention of turning over their investments at such a rapid rate.

We are also opposed to the proposed elimination of the alternative tax rate on capital gains. While the alternative rate is normally of little concern to farmers, a great many farmers benefit from it when they sell a farm or liquidate their farming operations. The capital gains realized by farmers in the sale of a farm or a herd of livestock often represent a lifetime of work which ends up being taxed all at once. In such instances we believe the alternative rate is not only beneficial, but fair to both the taxpayers and the Government. This is particularly true in times such as the present when much of what the law defines as "capital gains" is the result of inflation. Excessive taxation of inflation-created gains represents destruction of capital and should be avoided.

TAX TREATMENT OF TAX-EXEMPT BONDS

We are opposed to the section of H.R. 13270 which deals with the tax treatment of income from presently tax-exempt State and municipal bonds. We view this newly proposed Federal subsidy of such bonds as being nothing more than a "gimmick" which would result in still further involvement of the Federal Government in the fiscal affairs of St te and local units of government.

We also ask the committee to exempt income from State and municipal bonds from the provisions of H.R. 13270 which would establish a limit on tax preferences and require the allocation of deductions. These provisions are clearly a backhanded effort to impair the tax-exempt status of State and municipal bonds. We believe that these bonds should remain tax exempt, and that their status should not be impaired by indirection. If local governments are forced to pay higher interest rates to borrow money, a part of the cost will fall on overburdened property owners, including farmers.

The uncertainty created by House actions affecting tax-exempt bonds has made it difficult for State and local governments to sell new bonds. We urge the committee to take prompt action to remove the cloud on the future treatment of the income from such bonds.

CONCLUSION

Many have argued that tax reform has been too long in the making and that we must have action now. But, with our own economy and that of the entire Western World in a rather delicate balance, hasty action could prove disastrous. Again, we urge that the committee move forward cautiously in order to avoid actions that might disrupt important segments of our economy and to insure that the actions finally taken are based on sound premises rather than emotion.

We thank you for this opportunity to express our views.

Senator CURTIS. I yield the chairmanship to the distinguished Senator from Virginia, Mr. Byrd.

Senator BYRD. I would much prefer that the distinguished Senator from Nebraska continue to serve as chairman, if he will permit me to say a few words to the witness.

Mr. McLain, the committee staff summarized your statement section by section, but in summarizing the statement as a whole, it says that you feel that the most pressing tax reform needed is general reduction in Federal taxation.

Mr. MCLAIN. That is correct. I omitted that in my briefing of the statement because of time limit, but it is in our statement and our members firmly believe it.

Senator BYRD. The Senator from Virginia feels the same way. It says further that you feel that for this to be possible it is necessary to bring spending under control. The Senator from Virginia agrees with you 100 percent on that.

You have also urged the committee to act slowly and deliberately to make sure that proposed tax reform is not complicated for the average taxpayer, and I think that is very important. I think your testimony is most interesting and I am glad I was here when you testified.

Mr. MCLAIN. Thank you.

Senator Curtis. Your statement is very sound. I am going to waive questions because of the hour.

Senator Miller.

Senator Miller. No questions.

Senator Curtis. Senator Hansen.

Senator Hansen. Mr. Chairman, if I may, just let me pose this one question. There has been a lot said about real estate values, Mr. McLain, and many people have different solutions for this situation. Some are apparently disturbed over the accelerating values of land, and others think that it would bring about a serious disruption and an economic dislocation of a great many rural people if land values were not rising. Do you think that the increase in land values is a reflection of the interest on the part of some who, in the eyes of some are using "tax loopholes" to get into the farm business, or is it, rather, that, in an effort to hedge against inflation, people have found real estate to be a pretty effective hedge. Which of these two would you say is the real reason?

Mr. McLain. By all means the latter, Senator Hansen. I am 63 years old. I have been through some inflationary periods as you have before, during other war periods, and obviously this is primarily caused by the general inflation and, as Senator Byrd indicated, by spending, by the Federal Government, a lot more money than we take in. It is going to continue as long as we do that. That is why our great organization wants to do something about stopping deficit spending. I have yet to see a farmer that isn't greatly concerned, or he would put it the other way. He would be gravely concerned if you did anything here that all of a sudden would deflate the value of his land.

Senator Hansen. He would be, you say?

Mr. McLain. He would be very concerned about it. To many farmers this is the only equity they have, and if you do anything here that is going to drastically reduce the value of their land, you have them in real trouble.

Senator Hansen. In that regard, Senator Metcalf noted that one of the arguments that had been advanced by supporters of his bill was that it would tend to reduce the competition for real estate, and thereby would make it easier for a young person to buy into a livestock operation because the price of land would be lessened. What is your feeling about the desirability of that approach?

Mr. McLain. Well, may I say on the point of the outside interests, I think people that are interested in housing developments and the multitude of things we have all over this Nation has in many instances, as you would agree I am sure, created an artificial value on land as far as its use for farm purposes, and certainly on the eastern seaboard here, we see this all over, and we see it in other places.

I don't share the worry that Senator Metcalf has in the area you are mentioning here. There might be some isolated cases where this happened, but as you ably brought out this morning, I think they are isolated, and are not of major concern to farmers generally.

Senator Hansen. When you use the term "artifical values" of land, while I think you and I might agree that these values do not reflect productivity——

Mr. McLain. Right.

Senator Hansen. Insofar as the payment of an inheritance tax is concerned, they are not artificial in the eyes of the Government.

Mr. McLain. Oh, by no means they are not. I meant from the standpoint of productivity and a farmer trying to make a living, for farming purposes.

Senator Hansen. Thank you very much, Mr. McLain. That is all I have, Mr. Chairman.

(Marvin L. McLain's prepared statement follows:)

Statement of Marvin L. McLain, Legislative Director, American Farm Bureau Federation

SUMMARY

Farm Bureau has long included the broad subject of taxation and tax reform on its list of major concerns. At the time this legislation was under final consideration in the House, our organization made this concern clear publicly and expressed determination to seek changes in the bill when it is considered in the Senate.

Rising rates of taxation at nearly all levels of government and the progressive nature of the federal income tax have created both a tremendous pressure for so-called tax shelters and a critical reaction to such shelters. These factors are responsible for the current drive for various tax reforms.

The most pressing tax reform needed is a general reduction in federal taxation. For this to be possible, more effort will have to be made to bring spending under control. Likewise, it is also urgent that the tax laws be simplified.

H.R. 13270 would introduce many new complications into an already complex tax structure. For this reason, if for no other, we urge this Committee to act slowly and deliberately to make sure proposed tax reforms represent true reform and not new complications and frustrations for the average taxpayer. If necessary to allow time for adequate study, the features of H.R. 13270 which face time deadlines, such as the excise and surtax extensions, should be removed from the bill and given separate consideration.

TAX TREATMENT OF FARM LOSSES

Farm Bureau has proposed that the tax loss problem be dealt with by placing a simple limitation of $15,000 on the amount of farm losses that can be used as an offset to non-farm income.

H.R. 13270 would (1) extend the holding period required for livestock to be eligible for capital gains treatment, and (2) repeal the livestock exemption from the depreciation recapture provisions of current law. Nowhere in the report of the house Ways and Means Committee or in the debate on the floor of the House is there any evidence of excessive "tax dodging" or other abuses resulting from these provisions of present law. We oppose both provisions.

Farm Bureau does not oppose the proposed creation of an Excess Deductions Account for taxpayers with farming losses provided the exemption from this requirement is not reduced below the $15,000-level. We have no objection to the proposed tightening of the so-called "hobby" loss provision of the current law.

TREATMENT OF COOPERATIVE PATRONAGE REFUNDS

In 1962 we actively supported changes in the law which clearly defined the tax status of cooperative allocations to member patrons. The provisions of H.R. 13270 would unnecessarily increase the federal government's role in the management of cooperative fiscal affairs. The 15-year pay-out requirement for retained patronage allocations would force cooperatives to treat these allocations as debt rather than equity, and thereby reduce their borrowing capacity.

Recognizing that cooperatives are owned and controlled by member-patrons, we believe such matters should be left to the decision of the members themselves.

CAPITAL GAINS

We are opposed to the proposed extension of the capital gains holding period to 12 months because it would discourage the investment that is needed to sustain economic growth. We are also opposed to the proposed elimination of the alternative tax rate on capital gains. While the alternative rate is normally of little concern to farmers, a great many farmers benefit from it when they sell a farm or liquidate their farming operations.

TAX TREATMENT OF TAX-EXEMPT BONDS

We are opposed to the section of H.R. 13270 which deals with the tax treatment of income from presentiy tax-exempt state and municipal bonds. We view this proposed federal subsidy of such bonds as being nothing more than a "gimmick" which would result in still further involvement of the federal government in the fiscal affairs of state and local units of government.

We also ask the Committee to exempt income from state and municipal bonds from the provisions of H.R. 13270 which would establish a limit on tax preferences and require the allocation of deductions. If local governments are forced to pay higher interest rates to borrow money a part of the cost will fall on overburdened property owners including farmers.

CONCLUSION

Again, we urge that the Committee move forward cautiously in order to avoid actions that might disrupt important segments of our economy and to insure that the actions finally taken are based on sound premises rather than emotion.

STATEMENT

Farm Bureau has long included the broad subject of taxation and tax reform on its list of major concerns. Earlier this year, when the House Ways and Means Committee conducted hearings on this entire subject, Farm Bureau presented testimony on several occasions.

Several aspects of the tax reform proposal now before you are of considerable concern to Farm Bureau members throughout the country. At the time this legislation was under final consideration in the House, our organization made this concern clear publicly and expressed determination to seek changes in the bill when it is considered in the Senate.

Most taxpayers view taxation as a means of raising the revenue necessary to carry out the essential functions of government. The growing use of taxation as a means of regulating the economy has resulted in a great deal of confusion and misunderstanding among taxpayers. At the same time sharply rising rates of taxation at neary all levels of government and the progressive nature of the federal income tax have created both a tremendous pressure for so-called tax shelters and a critical reaction to such shelters. These factors are responsible for the current drive for various tax reforms.

In our view, and we believe it is a view held by most citizens, the most pressing tax reform needed is a general reduction in federal taxation. For this to be possible, more effort will have to be made to bring spending under control. This Committee, whatever its final conclusion may be, should make every effort to facilitate and encourage future general reductions both in the proportion of national income that is preempted by the federal government and in the progressivity of our tax system.

Likewise, it is also urgent that the tax laws be simplified. It is a poor tax system which results in overtaxation of millions simply because they do not understand tax laws and cannot afford to hire someone who does. The complexity of the tax laws is directly related to the high level of current taxes and the progressive nature of the rate structure. H.R. 13270 would introduce many new complications into an already complex tax structure. For this reason, if for no other, we urge this Committee to act slowly and deliberately to make sure proposed tax reforms represent true reform and not new complications and frustrations for the average taxpayer. If necessary to allow time for adequate study the features of H.R. 13270 which face time deadlines, such as the excise and surtax extensions, should be removed from the bill and given separate consideration.

Underlying Farm Bureau's basic attitude towards taxation is a statement in the "Monetary, Spending, and Tax Policies" section of the Farm Bureau Policies for 1969 which reads in part as follows:

"A stable domestic economy must be maintained in the interests of a high level of employment and a proper rate of economic growth as well as the protection of the value of the dollar.

"Inflation is a serious threat to continued economic stability. To bring inflation under control and halt the decline in the value of the dollar, we must follow wise tax, budget, and monetary policies."

It is with this broad economic goal in mind that Farm Bureau sets forth its specific recommendations relative to H.R. 13270.

TAX TREATMENT OF FARM LOSSES

Original suggestions for dealing with the matter of tax loss farming included elimination of both cash accounting for farmers and ranchers and capital gains treatment for livestock used for breeding. Since Farm Bureau members believe the elimination of these features of present tax law would be extremely harmful to a large segment of agriculture. Farm Bureau proposed that the tax loss problem be dealt with by placing a simple limitation of $15,000 on the amount of farm losses that can be used as an offset to non-farm income. This approach was introduced by several members of the House.

Subsequently, the House included in H.R. 13270 two provisions which, while alleged to be methods of dealing with the abuse of farming losses by taxpayers with non-farm income, actually would work to the detriment of thousands of full-time farmers. We refer specifically to the provisions which would (1) extend the holding period required for livestock to be eligible for capital gains treatment, and (2) repeal the livestock exemption from the depreciation recapture provisions of current law. Nowhere in the report of the House Ways and Means Committee or in the debate on the floor of the House is there any evidence of excessive "tax dodging" or other abuses resulting from these provisions of present law.

While the proposed extension of the holding period for capital gains might not work a serious hardship on the producers of cattle and horses, it would work an extreme hardship on farmers engaged in the breeding and production of livestock with a shorter life span (namely, hogs and fur-bearing animals).

It also should be noted that the bill as drafted by the House does not specifically state whether the one-year holding period would begin at the beginning or end of normal gestation. This in itself has caused some confusion. If the holding period is to begin at the end of gestation, capital gains treatment would largely be eliminated for most of the smaller species of livestock. For example, most hog breeders maintain femals stock for only one or two farrowings.

The proposed extension of the depreciation recapture provisions of the current law to livestock fails to recognize that livestock is different from other personal property, i.e., that maintenance of livestock is a fairly high risk business for which adequate insurance is not available. Even though some may view this matter differently, farmers faced with a disastrous cost-price squeeze during the current inflationary period view this change as one which would only increase their costs without contributing a great deal to the economy as a whole or the goal of tax reform.

Farm Bureau does not oppose the proposed creation of an Excess Deductions Account for taxpayers with farming losses provided the exemption from this requirement is not reduced below the $15,000-level which has been suggested by the Treasury Department and which is the level previously proposed by Farm Bureau as a ceiling on the deduction of farm losses from non-farm income. We have no objection to the proposed tightening of the so-called "hobby" loss provision of the current law.

TREATMENT OF COOPERATIVE PATRONAGE REFUNDS

This matter was not included in the House hearings on tax reform. Therefore, when these changes were proposed in the Ways and Means Committee, Farm Bureau asked that action be delayed until interested parties could be heard. Now that this Committee is giving the matter a hearing, our position is as follows:

Over the years Farm Bureau has taken an active part in improving and strengthening farmer cooperatives. In 1962 we actively supported changes in the law which clearly defined the tax status of cooperative allocations to member patrons.

We believe changes made at that time were sound and that current law with respect to cooperative activities is adequate.

The provisions of H.R. 13270 would unnecessarily increase the federal government's role in the management of cooperative fiscal affairs. The purpose clearly is to restrict cooperative activities rather than to improve the equity of the tax system.

Among other things, the provisions of H.R. 13270 seek to force cooperatives to adopt a 15-year pay-out requirement for retained patronage allocations. This, in effect, would force cooperatives to treat these allocations as debt rather than equity, and thereby reduce their borrowing capacity. A mandatory pay-out requirement for all patronage allocations also would make it difficult for cooperatives to give priority to the redemption of allocations held by retiring members and the estates of deceased members. Recognizing that cooperatives are owned and controlled by member-patrons, we believe patronage allocations also would make it difficult for cooperatives to give priority to the redemption of allocations held by retiring members and the estates of deceased members. Recognizing that cooperatives are owned and controlled by member-patrons, we believe such matters should be left to the decision of the members themselves.

CAPITAL GAINS

We have already addressed ourselves to the matter of capital gains treatment of livestock. Official Farm Bureau policy includes a statement on the general subject of "capital gains" as follows:

"The tax treatment of capital gains should encourage investment without creating tax loopholes or discouraging the sale of property.

"The present law results in the taxation of 'gains' which reflect in part a decline in the value of the dollar. In periods of rising prices this penalizes property owners and discourages the sale of property.

"As a partial answer to this inequity we recommend that the rate of tax on capital gains be reduced as the length of the holding period increases. We favor retention of the present minimum holding period.

"Where farmland is acquired for public use by eminent domain or private treaty, the owner should be permitted a period longer than one year to reinvest in farming or another business with the same tax treatment. We support the present law with respect to capital gains treatment for sales of breeding livestock."

We are opposed to the proposed extension of the capital gains holding period to 12 months because it would discourage the investment that is needed to sustain economic growth. The fact that capital gains can be taken at the end of 6 months makes investors more willing to supply risk capital to new ventures, even though they may have no intention of turning over their investments at such a rapid rate

We are also opposed to the proposed elimination of the alternative tax rate on capital gains. While the alternative rate is normally of little concern to farmers, a great many farmers benefit from it when they sell a farm or liquidate their farming operations. The capital gains realized by farmers in the sale of a farm or a herd of livestock often represents a lifetime of work which ends up being taxed all at once. In such instances we believe the alternative rate is not only beneficial, but fair to both the taxpayers and the government. This is particularly true in times such as the present when much of what the law defines as "capital gains" is the result of inflation. Excessive taxation of inflation-created gains represents destruction of capital and should be avoided.

TAX TREATMENT OF TAX-EXEMPT BONDS

We are opposed to the section of H.R. 13270 which deals with the tax treatment of income from presently tax-exempt state and municipal bonds. We view this proposed federal subsidy of such bonds as being nothing more than a "gimmick" which would result in still further involvement of the federal government in the fiscal affairs of state and local units of government.

We also ask the Committee to exempt income from state and municipal bonds from the provisions of H.R. 13270 which would establish a limit on tax preferences and require the allocation of deductions. These provisions are clearly a back-handed effort to impair the tax-exempt status of state and municipal bonds. We believe that these bonds should remain tax exempt, and that their status should not be impaired by indirection. If local governments are forced to pay higher interest rates to borrow money a part of the cost will fall on overburdened property owners including farmers.

The uncertainty created by House actions affecting tax-exempt bonds has made it difficult for state and local governments to sell new bonds. We urge the Committee to take prompt action to remove the cloud on the future treatment of the income from such bonds.

CONCLUSION

Many have argued that tax reform has been too long in the making and that we must have action now. But, with our own economy and that of the entire Western World in a rather delicate balance, hasty action could prove disastrous.

Again, we urge that the Committee move forward cautiously in order to avoid actions that might disrupt important segments of our economy and to insure that the actions finally taken are based on sound premises rather than emotion.

We thank you for this opportunity to express our views.

Senator CURTIS. Thank you very much. We have a rollcall over there. It is now 25 minutes to 6. It seems to me that if there is any witness scheduled yet to appear tonight, and cannot appear tomorrow, if he would see the staff about inserting their statement. I am very sorry; we assure you this was not planned. But I do not think it would be fair to any of the parties involved to go on past 6 o'clock. If you want to insert your statement, see the staff.

Mr. VOORHIS. Senator, I just want to ask will we be heard tomorrow if we stay over?

Senator CURTIS. Mr. Voorhis, Mr. Miller says he will come back.

Senator HANSEN. I will be happy to come back.

Senator CURTIS. If Mr. Graham, Mr. McDonald, Mr. Frederick, Mr. Jaenke, Mr. Voorhis, Mr. Sims, Mr. Healy, Mr. Clark, if you want to give your testimony, we will come back. We will recess to answer the rollcall.

(Brief recess.)

Senator MILLER. The committee will come to order.

Mr. Harry Graham.

STATEMENT OF HARRY L. GRAHAM, LEGISLATIVE REPRESENTATIVE, NATIONAL FARMERS ORGANIZATION

Mr. GRAHAM. Thank you, sir. The NFO would specifically like to record its endorsement for the provisions of S. 500 covering farm losses and tax shelters.

We would also point out that the organization is also in favor of a major modification of the oil-depletion allowance. We are not convinced that this will restrict oil exploration which is now more of a science than in the old wildcatting days. The sale of oil claim land in Alaska indicates the industry is not completely pessimistic about the future. We would point out that oil royalties granted by American companies to foreign governments frequently greatly exceed the U.S.A. oil-depletion allowance.

The National Farmers Organization is an association of farmers which is engaged in collective bargaining in an effort to improve farm income.

We accomplish our marketing objectives by blocking together enough production in any commodity to enable us to have some influence on the market.

The policy of the organization is to support the family-size owner-operator farms both because they represent the greatest economic efficiency and the maximum social and political stability which is essential for the welfare of our Nation.

We therefore support legislation which will accomplish our economic, social and political goals, and we oppose those acts which contribute to the weakening of our desirable and essential objectives.

With this background, this distinguished committee will not be surprised that the NFO opposes any tax law or its implementation which will give an economic advantage to the farms and their owners who do not depend upon the farming operation for their profits and especially those which enable those who have large losses in their farming operations to deduct these losses from their other economic losses from their other economic operations.

The use of short-term capital gains as a means of creating a paper loss or to avoid taxes which would be collected if this income was treated as corporation income is particularly objectionable to us as it should be to the Congress.

The preferential tax treatment extended to farmers by the Congress was a justified attempt to help alleviate the lock of economic equality with the rest of the economy which has been the lot of farmers except during wartime for over 50 years.

It seems to the NFO that the Congress should do two things; first it should limit the farm losses which may be charged off against nonfarm income; second, it should tighten up the privileges being extended to reduce taxes by the application of capital gains to relatively short term investments.

If an animal is simply fed out for the market, there probably is no justification for treating the profit from this operation as capital gains. If an animal is held to maturity and used for breeding purposes, the profits which accrue to the operation should be treated as capital gains.

There is a problem in this area which troubles us. The 2-year minimum is certainly justified in the case of cattle. Maybe it could even be increased. However, in the case of swine, the time which it takes for the animal to mature, be bred, and reproduce is less than 2 years. Good gilts can be bred at about 4 months and produce a litter in 9 or 10 months. Thus, in about a year, the gilt has become a sow and is at the maximum size to sell without taking a substantial loss due to size for which there is not much demand.

We would therefore recommend that the maximum time requirements to make swine eligible for capital gains be reduced to 1 year.

We also would like to make recommendations on two other matters which are before this committee.

First, we urge that the investment tax credit be continued for agriculture until such time when the income for the factors of production—risk, labor, investment, and management reaches a reasonable equality with the return of these factors when they are committed to the other segments of our economy.

Second, we would point out that the NFO is not effected by tax laws as they apply to cooperatives. However, we believe that cooperatives usually use their earnings in a way which contributes to the welfare of their membership. We, therefore, believe that the tax proposals in section 531 are such as to cause hardship and damage to the cooperatives and we urge that this section be eliminated and the present law, which was only recently enacted by the Congress, be retained.

We commend the committee for its efforts to improve the tax laws. We have great confidence in the ability, integrity and wisdom of this committee. We hope that you will agree with the positions which we commend to you as also being reasonable and fair.

Thank you, sir.

Senator MILLER. Thank you Mr. Graham. The next witness is Angus McDonald, director of research for the National Farmers Union.

It is nice to have you with us, Mr. McDonald.

STATEMENT OF ANGUS McDONALD, DIRECTOR OF RESEARCH, NATIONAL FARMERS UNION

Mr. McDONALD. Mr. Chairman, we certainly appreciate your coming back, because we have been waiting all day, and we do want to get in our 2 cents worth.

I will comment briefly on two parts of the tax bill approved by the House, S. 500, which relates to the farm loss tax provisions of the House bill. I will comment also on the provisions approved by the House of Representatives which relate to farm cooperatives.

I might say at the outset, Mr. Chairman, that our primary concern is with farm income. Farmers are subject to inflation, just as everyone else is. The farmer is the only businessman who can't pass on his costs. The buck stops at the farm.

When the farmer goes to sell his products in the marketplace, he faces usually an oligopoly, a small group of businesses who set his price. When he goes to buy a tractor or other implement or other things necessary to farm production, he must pay the price which is set usually by a small group of men, 1,000 or 2,000 miles away. So he has no way in which he can alleviate his economic situation.

He can, of course, petition the Congress as he has done, and the Farmers Union, as the Senator knows, has been very much interested in farm legislation over the years. It is our No. 1 priority.

Secondly, the farmer can pool his economic power in farm cooperatives. The Congress has been sympathetic to the farmers economic position, and for over a long period of years the Congress has approved legislation which encourages and protects farmer cooperatives. The Congress has authorized the building of certain institutions which protect the farmer in the cooperative way. The farm credit institutions, for example, the Farmers Home Institution, the REA, just to mention a few things represents an interest of the Congress in cooperatives.

The Congress also, of course, has enacted certain laws to prevent abuse of the cooperative. The relation of the farmer to the cooperative to antitrust laws have been spelled out by the Capper-Volstead Act and other laws. I want to establish this point. The Congress has always been solicitous of the farm cooperative, and has time and time again said that we want cooperatives, we think they are necessary, we think they are good. Now we have, like a bolt out of the blue, the provisions in the tax bill approved by the House of Representatives. In 1962 the Congress unwisely, we felt at the time, as I recall I testified on this matter before this committee, required the farmer to pay 20 percent in cash, but now under the tax bill this would be increased over a period of years to 50 percent in cash.

Another provision would require that the paper issued to the patron be redeemed within a period of 15 years. So you have the remaining patronage refunds which the cooperative didn't have to pay out in cash, the cooperative must redeem this paper and pay the rest of the original equity, so the whole development you might say, the whole equity which is available for capital over a period of time is wiped out. We look on these provisions as punitive, as unnecessary, as provisions which will not produce any additional revenue, and the only reason that we can think of that they were inserted in the bill is that the other body doesn't like cooperatives, wants to penalize them and harass them, and thinks perhaps that the farmer is dishonest. There must be other things, more stringent provisions built around the cooperative and the farmer to see that the member gets his dues under the rules of cooperation.

Mr. Chairman, we recommend that these provisions be deleted.

The other matter I will address myself to concerns S. 500 introduced by the Senator from Montana and sponsored I believe by 22 Senators, relating to farm losses of "tax farmers." Farmers Union has been interested in this matter for several years. Several years ago my attention was attracted to a report of the Treasury, to the IRS report in which the statistic said that of the 119 millionaires in 1965 who had farm developments, 103 of them lost money. Of the individuals whose net income was between $500,000 and $1 million, 202 of them invested in farming. One hundred and seventy of them lost money. I am sure the Senator is familiar with these statistics. I have tables in my statement. And it will be noted that the lesser the income, the bigger proportion of farmers or those in the farming business show a profit.

We think that the material in the various documents that have come out of the IRS studies, I have a couple of them here, the material in the report of the Ways and Means Committee and even in the presentation made by the Secretary of the Treasury documents the fact that something should be done about this gigantic loophole in our tax laws.

Senator MILLER. Do I understand you support the Metcalf bill?

Mr. McDONALD. Yes, sir. I know it is very late. I am going to conclude by just making one comment.

Senator MILLER. On that point, I don't know whether you were here this morning when I asked Senator Metcalf about the possibility of a loophole in the Metcalf loophole-closing bill.

Mr. McDONALD. No, sir; I wasn't.

Senator MILLER. I pointed out that the Metcalf bill exempts accrual basis farmers.

Mr. McDONALD. That is correct.

Senator MILLER. If an accrual basis farmer values his inventory at fair market value, I don't have a problem. But if he uses the unit livestock price, which could be greatly under the fair market value, as long as it is used consistently down through the years, I can see quite a slippage of revenue. I can see quite a substantial amount of the losses being incurred, and then that is converted into capital gain when you have a livestock selloff.

Doesn't that appear to you to possibly be a loophole?

Mr. McDONALD. Well, I am not familiar, Senator, with this particular accounting method. I just have to answer that I don't know. I don't know anything about that point that you raise.

Senator MILLER. If there is one, you would have——

Mr. McDONALD. I will look into it, and if you desire, I will write a letter to you and to the committee giving our opinion.

Senator MILLER. I think that would be helpful, because I detect that you want the loopholes closed and if there is a loophole in the Metcalf loophole-closing bill, I think you would want that taken out, too, wouldn't you?

Mr. McDONALD. Certainly.

Senator MILLER. Thank you.

Mr. McDONALD. I just want to conclude by saying that there has been a good deal of discussion today; in waiting out in the hall this morning some people came out talking about the Senator from Montana wanting prices to go down, land values to go down, and they were laughing about it, and so forth, and I heard comments here today when I finally got into the room.

Senator Curtis. May I interrupt? We will have a bigger room tomorrow, because we meet in the auditorium.

Mr. McDonald. Senator, I appreciate that, but I won't be here. At least, I won't be waiting to testify. I just wanted to say, Senators, that I am perturbed a little bit by the opinion on the committee that an inflated land value is always of benefit to the farmer, at least some individuals think so.

I have here a study, I just happened to have it in this folder, the University of Minnesota, the Agricultural Economics Department made a survey, and they found that the recorded land purhcases made in 1967, and in Minnesota there were 1,406 land purchases made by operating farmers, there were 246 made by investors. I assume those would be the people we have been trying to get after.

My point is this: that in this day of expanding technology, the farmer, if he is to compete and he is to survive, he must expand his landholdings, and in some areas the price of land is so high that the working farmer is unable to buy more land that he needs.

Now, the other side of the coin is that some corporations have come in, such as the Gates Rubber Co. in western Colorado on a gigantic scale, and are undertaking to raise sugar beets among other things, and I am told by our people in Colorado that land out there is inflated, they tell me $120 an acre.

Well, the farmers out there don't like that because they are not planning to sell out. They would like to stay there. They would like to apparently buy more land. So that I would say this: that if the farmer wants to sell out, why, sure. If land is inflated, particularly if he is near a city, and I had a farm here near Washington some years ago. I sold that farm. I wish now I had waited. But I made a nice profit on it. But that is outside of agriculture, really.

The farmer who goes to the bank to borrow money, the banker wants to know what is the productivity of that farm, and will he be able to repay his loan, and so forth and so on. Senators, I just wanted to bring that point out. I do not think it is an unmixed blessing that land values are inflated.

Senator Curtis. We thank you, and we are sorry that you could not appear sooner.

(Angus McDonald's prepared statement follows:)

Statement of Angus McDonald, Director of Research, National Farmers Union

SUMMARY

1. National Farmers Union is unequivocably opposed to the punitive, non-revenue producing cooperative provisions of the Tax Reform Act of 1969. These provisions were inserted in the bill without warning and with no opportunity for affected groups to present their views.

2. The National Farmers Union supports S. 500, sponsored by Senator Metcalf and 22 other Senators. This legislation would stop one gigantic loophole in our tax laws which permits wealthy individuals to avoid payment of their fair share of taxes. The so-called "tax farmers" engage in activities adverse to working farmers. They inflate the price of land and enter into competition with farmers who have no off-farm income.

3. The enactment of the cooperative provisions of the tax bill would reverse and repudiate the 50-year policy of Congress in regard to cooperatives. They would work such a hardship on cooperatives that many would be forced out of existence.

4. The cooperative provision which would ultimately require 50 percent of the patronage refund to be paid in cash is an unwarranted intrusion into a business. It would penalize cooperatives regardless of the wishes of a majority of their members and would entail additional bookkeeping.

5. The provision requiring all redemption of paper within 15 years would affect adversely the capital needs and credit of cooperatives.

6. The suggestions made in regard to farm-loss abuses are unsatisfactory and cannot be accepted by the Farmers Union. The Excess Deductions Account provision in the House bill would affect very few tax dodgers and bring in little additional revenue.

7. The Metcalf bill would, on the contrary, bring in additional revenue and would effectively close the loophole during the year when tax-dodging was resorted to. It would not foreclose taxpayers using the accrual method which is required of other businesses. It would, contrary to the House and Administration recommendations, protect the farmer in regard to losses incurred because of drouth, flood and in regard to certain other deductions.

Statement

Mr. Chairman and members of the committee, I will comment briefly on two subjects before this Committee. One relates to farm cooperative provisions in the tax reform bill and the other to S. 500, introduced by Senator Lee Metcalf and sponsored by twenty other Senators. Our comments on all legislation reflect our concern over the decline of farm income due to inflation, to lack of bargaining power, to discrimination against cooperatives and against farmers.

Historically the farmer has always been a second class citizen. His income has consistently been much lower than those of persons in other industries. Senator Proxmire characterized this situation some years ago as being the shame of America. The farmer has not shared in our so-called "affluent society." President Harry S. Truman, it was reported, had a sign on his desk as follows: "The buck stops here." The American farmer should post such a sign on his mailbox. He has no one to pass his costs on to. He has little to say about what he is paid in the marketplace. He is caught in an economic vise.

In the marketplace he faces oligopoly. How can he dictate the price of his eggs or his cattle or his grain when he faces a group of corporations who tacitly or otherwise have agreed on the price they will pay him. How can he bargain over the price of a truck or a tractor when the price is administered by a small, tight group of manufacturers who control 50 to 90 percent of production?

The farmer may resort to two courses of action—he may petition Congress to enact laws which introduce some kind of rationale into the marketing of his commodities. He may ask that certain devices be instituted which will shore up prices which often fall below cost of production. The other action available to the farmer is to pool his bargaining power by means of cooperatives. The history of the farmer's effort to build a countervailing power to offset the gigantic power of corporations is long and tortuous. He has been persecuted; he has been discriminated against, and he has even been charged with criminal activities when he and his neighbors pooled their economic resources.

Congress has recognized the farmer's right to organize cooperatives. Beginning with the year 1968 Congress has passed laws which attempted to clarify and support the farmer's inalienable right to join with his neighbor in his economic activities. These laws attempted to clarify the farmer's constitutional right to bargain, but they also attempted to clarify the relationship of cooperatives to the antitrust laws. Here is a partial list of laws which set forth they policy of the Congress. They repeatedly stated that cooperatives were good, were legal, and should be encouraged, fostered and preserved by our Government:

(1) War Revenue Act of 1898 (30 Stat. 448, 461).

(2) Corporation Tax Statute of 1909 (36 Stat. 11, 113).

(3) War Finance Corporation Act of 1918 (42 Stat. 181, 182).

(4) Federal Reserve Act Amendment 1923 (42 Stat. 1479, 1480, 12 U.S.C.A. 351).

(5) Federal Intermediate Credit Banks Act of 1923 (42 Stat. 1454, 12 U.S.C.A. 1021).

(6) Agricultural Marketing Act of 1929 (46 Stat. 11, 12 U.S.C.A. 1141).

(7) Farm Credit Act of 1933 (48 Stat. 257, 261, 12 U.S.C.A. 1134, 1134f).

Here is what Congress said in the Agricultural Commodity Act of 1929:

"It is hereby declared to be the policy of Congress to promote the effective merchandising of agricultural commodities * * *.

"(3) By encouraging the organization of producers into effective associations or corporations under their own control for greater unity of effort in marketing and by promoting the establishment and financing of a farm marketing system of producer-owned and producer-controlled cooperative associations and other agencies."

Congress not only stated very clearly its policy in regard to cooperatives, but set up institutions for the specific purpose of assisting cooperatives. In the Federal Farm Board Act and in the Farm Credit Act of 1933, it set up organizations for the specific purpose of helping cooperatives. Among these were the 12 regional banks for cooperatives and the Central Bank for Cooperatives. Mindful of the fact that abuses might arise, the Farm Credit Act set forth certain rigid rules in regard to cooperatives as follows:

"As used in this act, the term 'cooperative association' means any association in which farmers act together in processing, preparing for market, handling, and/or marketing the farm products of persons so engaged, and also means any association in which farmers act together in purchasing, testing, grading, processing, distributing, and/or furnishing farm supplies and/or farm business services: PROVIDED, HOWEVER, That such associations are operated for the mutual benefit of the members thereof as such producers or purchasers and conform to one or both of the following requirements:

"First. That no member of the association is allowed more than one vote because of the amount of stock or membership capital he may own therein; and

"Second. That the association does not pay dividends on stock or membership capital in excess of 8 percentum per annum.

"And in any case to the following:

"Third. That the association shall not deal in farm products, farm supplies, and farm business services with or for nonmembers in an amount greater in value than the total amount of such business transacted by it with or for members. All business transacted by any cooperative association for or on behalf of the United States or any agency or instrumentality thereof shall be disregarded in determining the volume of member and nonmember business transacted by such association."

In order that the often meager savings which resulted from buying and selling in large quantities might not be suoject to corporation taxes, certain rules were set up by the Congress and by the Treasury. In 1962 the tax law relating to cooperatives was changed to require that 20 percent of patronage refunds be paid in cash and that the consent of the member in regard to investment of patronage refunds in the cooperative be authorized in writing by the individual member or by a provision in the by-laws which must be agreed to by a maority of the members. Farmers Union opposed this provision, believing that it was an unwarranted interference in the private affairs of the business.

It should be made clear that all patronage refunds under our tax laws, in whatever form, must be reported to the Treasury as income. The only excuse for requiring a patronage refund to be paid in cash is that the cooperative unlawfully withholds payment from the member or that the member does not report his patronage refund to the Treasury when it is not paid in cash. We strongly believe that the American farmer is as honest, even more honest, than other taxpayers and that the inference that he is dishonest is unwarranted.

Now, like a bolt out of the blue comes the recommendation of the House of Representatives. No opportunity was given for cooperatives and other interested groups to present their views in regard to the punitive, non-revenue producing provisions inserted almost at the last minute in the House Tax Reform Act of 1969. Protests to the Committee and to the House of Representatives were unavailing.

Yet, we do not think that the importance of these damaging recommendations can be exaggerated. One requirement says that three percent a year beginning with 1970 is to be added until 50 percent of the refund is paid in cash to the patron. This provision ignores the fact that a majority of the members may have indicated that they wanted all of their patronage refunds, or at least a larger part, reinvested in the business. One can imagine the bookkeeping entailed in obtaining funds represented by checks from individual members for reinvestment in the cooperative. Red tape and inefficiency would inevitably result from such procedure.

The other provision which says that investment in the cooperatives must be repaid in cash within 15 years is even more damaging. It changes on the books of the cooperative an asset to a liability. It would make difficult, we are told by experts, the obtaining of loans from banks. It would involve the raising of cash from time to time which might not be available, particularly when large investments have been made in necessary equipment. In these days of rapidly developing technology a large capital investment is absolutely necessary if a business is to grow and compete.

If the Congress enacts this provision it is saying in effect, "We repudiate all past policies in regard to cooperatives. We disagree with many laws on the books which encourage and assist voluntary cooperation among farmers. We are, in effect, opposed to the Farm Credit Administration and the Rural Electrification Administration, which are agencies established to fulfill that governmental policy."

These provisions in the House bill strike at the backbone of hundreds of rural communities and forestall the possibility of organizing new cooperatives to furnish farm supplies and market and process farm products.

During the last few years there has been a great deal of publicity in regard to the gigantic loopholes in our tax laws. One of the most notorious is that loophole which allows wealthy individuals to invest in farming activities for the purpose of tax avoidance. The Farmers Union has been studying various proposals which have been made in regard to this loophole which affects directly and adversely the welfare of farmers. Our attention was called to certain statistics published by the Treasury Department which indicate that wealthy individuals were purposely losing money in the farming business. These tables, attached hereto as Exhibits A and B, substantiate this belief.

Attached also as Exhibit C, is a table published in the Congressional Record of October 4, 1968, which proves that an economic net income of $10,000 can be converted into a $10,000 net loss for tax purposes.

The Treasury Department has published much statistical information to illustrate this point. One example is given: Assuming that the expenses of raising a herd of cattle are $200,000, it is obvious that the taxpayer in the top tax bracket will incur a tax saving of $140,000. On the sale of the herd, however, the entire sales price, including the $200,000 representing the recovery of these expenses, will be taxable only at the 25 percent capital gains rate. The capital gains tax on $200,000 is $50,000, or less than half the tax savings realized in the earlier years. Thus, the taxpayer in this situation would realize a $90,000 tax profit from a transaction which economically is merely a break-even.

S. 500 would go far in eliminating abuses engaged in by wealthy individuals and corporations. It would limit the losses of a farm entrepreneur to $15,000 plus taxes, interest and losses resulting from natural disasters. It would not, as its opponents say, require that all farmers resort to the accrual method. Under this legislation taxpayers would still have the option of selecting the method they prefer. However, if they did not restrict themselves to the restrictions under the $15,000 rule they would be required to report their inventory as do other businesses.

The suggested alternatives in regard to farm losses are not acceptable to my organization. The Excess Loss Deductions Account would allow the taxpayer to deduct his losses during the current tax year, no matter how huge. As we understand the House-passed measure, only those losses above $25,000 would be set aside in the deduction account. Furthermore, only those individuals whose outside income was in excess of $50,000 a year would be required to set up the account. Thus, all other taxpayers would escape even the Excess Deduction Account method which postpones the time when the taxpayer would be required to report capital gains as regular income up to the amount of the Excess Deductions Account.

The recommendations of the Administration in regard to the EDA treatment are somewhat of an improvement over the House version. Recently Secretary Kennedy recommended that the EDA rules apply to any taxpayer with non-farm adjusted gross income in excess of $25,000 losses which exceeded $15,000. Originally the Treasury's suggestion was that this latest figure be $5,000. It appears that the alternative to S. 500 in some respects has gone from bad to worse.

Another provision in the House bill is also objectionable. It requires that capital gains treatment can only apply to livestock after it has been held one year after reaching breeding age. This provision would no doubt work a hardship on many small operators.

It should be emphasized that the Metcalf bill takes into account certain hazards which are unique to farming operations. It would not, for tax purposes, include in the $15,000 ceiling deductions attributable to taxes, interest, the abandonment or theft of farm property, losses of farm property arising from fire, storm or other casualties, losses or expenses attributable to drought, and losses from sales, exchanges and involuntary conversions of farm property.

EXHIBIT A

The following statistics lead us to believe that wealthy individuals have been using farm investments to escape payments of taxes:

ALL 1965 INCOME-TAX RETURNS OF INDIVIDUALS RELATING TO FARMING, BY ADJUSTED GROSS INCOME CLASSES

	Net profit		Net loss	
	Number of returns	Amount (thousands)	Number of returns	Amount (thousands)
Taxable returns, total	1,151,882	$3,951,260	661,860	$1,001,106
Under $1,000	6,548	4,338		
$1,000 under $2,000	65,519	69,113	16,603	13,739
$2,000 under $3,000	107,019	168,442	35,891	32,770
$3,000 under $4,000	139,737	259,685	64,020	63,354
$4,000 under $5,000	140,030	314,961	80,522	92,672
$5,000 under $6,000	132,512	345,937	83,450	84,166
$6,000 under $7,000	114,602	334,594	80,887	85,396
$7,000 under $8,000	96,434	293,086	68,302	64,550

TAX ADVANTAGES OF CATTLE OPERATIONS[1]

Economic situation:	
Gain from sale of breeding cows classified as sec. 1231 property	$40,000
Ordinary income from sale of feed and gain from sale of calves and steers	70,000
Gross profit	110,000
Less ordinary expenses including depreciation	100,000
Economic net income	10,000
Tax situation:	
Ordinary income from sale of feed and gain from sale of calves and steers	70,000
Loss: Ordinary expenses including depreciation	100,000
Ordinary loss	(30,000)
Sec. 1231 gain	40,000
Less long-term capital gain deduction	20,000
Taxable portion of capital gain	20,000
Net loss for tax purposes	(10,000)

[1] Prentice-Hall, Inc., "Tax Ideas," July 3, 1968.

Senator CURTIS. Mr. Robert M. Frederick, legislative representative, representing the National Grange.

Mr. Frederick, we welcome you here. We regret that not every witness could be the first witness today, but I assure you and all the other witnesses who will appear that we follow a system here through the work of our staff that no one's recommendation will fail to be brought before the committee at the time we vote. You may proceed.

STATEMENT OF ROBERT M. FREDERICK, LEGISLATIVE REPRESENTATIVE, NATIONAL GRANGE

Mr. FREDERICK. Thank you, and I certainly want to thank the Senators for coming back and hearing us tonight, because a great deal of testimony was put in the record today that the National Grange is certainly not in accord with.

We welcome the opportunity to record our position on H.R. 13270. I am Robert Frederick, the legislative representative of the National Grange, an organization which needs no further explanation to the Senators present.

In general, we support H.R. 13270, a bill to reform the income tax laws to the extent that the provisions of the bill conform to Grange tax policy. However, there are several provisions of H.R. 13270 with which we are in total disagreement.

We would like to take the time allotted to us to discuss these provisions.

H.R. 13270 undertakes to correct a situation in which some high-income taxpayers, not primarily engaged in farming, have used farm losses to obtain a deduction in their high-bracket nonfarm income.

To do this, H.R. 13270 requires the taxpayer to maintain an excess deductions account to record his farm losses. In the case of individual farm losses would be added to the excess deductions account only if the taxpayer had income from nonfarm sources of more than $50,000 for the year, and only to the extent that the farm loss for the year exceeded $25,000.

In our judgment, the FDA account approach does not strike at the heart of the "tax-loss" farming loophole. It only postpones the issue and strikes at all farmers, big and small, bona fide as well as the investor who is investing in agriculture truly for a profit. In doing so, it includes, accidentally, the "tax-loss" tax-dodging farmer. In referring to the latter, we use the word "farmer" rather loosely.

It is our firm belief that the provision of the amendment No. 139 introduced by Senator Metcalf on August 13, 1969, will correct the abuse of the liberal tax rules provided to the Internal Revenue Code for the use of bona fide farmers. Therefore, we respectfully urge that amendment No. 139 be inserted in H.R. 13270 in place of part of subtitle B-farm loss, et cetera, starting at line 10, page 139, of the bill and striking all that follows through line 6 on page 152.

In our judgment, this method will be more in line with true tax reforms in providing more revenue for the Federal Treasury, a shifting of the tax burden and expediting the closing of tax loopholes that allow revenue losses.

It is our understanding that the EDA and other farm tax proposals of the House bill will only apply to an additional 3,000 persons and bring into the Federal Treasury an additional $25 million by the year 1979, such increase to come from correction in the tax-loss farming, depreciation recapture, holding period for livestock and a negligible amount from hobby farm losses.

The amendment proposed by Senator Metcalf, amendment No. 139 would apply to 14,000 taxpayers—and may I point out that this would not include the farming that is done by corporations that is not now being picked up on income tax returns—thereby shifting the tax burden, and would bring in an additional $205 million per year as soon as the bill became effective. In our opinion, this is true tax reform, because it increases Federal revenue at the same time it shifts the tax burden and the effect is immediate, and as we pointed out earlier in our testimony, it hits at the "jugular vein" of the tax-dodge farming.

This corrective amendment will affect only nonfarmers with large amounts of nonfarm income who invest in farming to obtain tax losses.

Senator Metcalf has explained that he considered the EDA approach when he first began to look into ways to correct the tax-dodging farm problem. In remarks before the Senate August 13, he said:

> After a great deal of technical discussion with experts, I was convinced that the most effective way to get at this problem without hurting the legitimate farmer would be to take the loss limitation approach. Under this method, a dollar limit would be placed on the amount of artificially created farm losses that could be used as an offset against non-farm income in any given year.

The family farm structure in American agriculture must be given an even break with others engaged in agriculture for profit. It is our opinion that amendment No. 139 will give us equality of income tax treatment and preserve for agriculture the liberal provisions of the Internal Revenue Code that were meant for farmers who farm for a livelihood.

It is the opinion of the National Grange that the provisions of amendment No. 139 meet the needs of the American farmer far better than the first part of subtitle B of H.R. 13270, thereby making any further changes in the Internal Revenue Code pertaining to agriculture unnecessary.

I repeat this corrective amendment will affect only nonfarmers with large amounts of nonfarm income who invest in farming in order to obtain tax losses which may be set off against their nonfarm income.

To save your time, I would like to make a brief reference to hobby loss farming as it appears in our statement. I also call your attention to the holding period for livestock which we suggest changing a line. Lines 7 and 8, page 153, which would strike "for at least 365 days," which would make that line read, "but only if held by him after such animal normally would have first been used for any of such purposes."

This, we think, would make it more equitable with other holding periods for other capital.

We are also opposed to the cooperative tax revisions as they have come out of the house. We were quite shocked to learn that it had been included in the House bill, since it had not been announced by the House Ways and Means Committee that tax reform or even tax treatment would be a part of the hearings on the House side. Then this amendment to the provisions of the House bill came out of the House Ways and Means Committee in the last 1 or 2 days of the executive hearing of the committee, without the opportunity of public hearing.

We appreciate the fact that we have an opportunity here on the Senate side to express our opposition to the punitive anti-co-op tax provisions.

It is too bad that we must once again be asking busy Senators to devote time to matters which seemingly were settled in 1962 after lengthy hearings and debate. Here you are confronted with what has been called the most sweeping tax reform in history.

Among the many sections is the measure which has nothing to do with tax reform, would not yield any additional tax revenue, without any additional tax benefits but which would greatly restrict the growth of farm cooperatives——

We see no justification for the new laws regarding cooperative financing or taxation. We urge in the strongest possible appeal that the entire section on cooperatives be deleted from the Tax Reform Act of 1969.

There is one final statement that appears in our summary that is not covered in the House bill as referred to. Simply stated, the House did not have time to consider the Federal estate tax. Here we are considering the most sweeping tax reform bill, and the Federal estate tax is not covered.

I think this is of vital importance to agriculture, because of the present inheritance tax provisions. A boy who wants to take over the family farm finds it impossible because the value of the land is appraised, not at its value in the terms of production return, but because of its commercial development value; therefore he has to pay a tremendously high Federal estate tax, and in some cases State estate taxes which go along with Federal taxes, making it impossible for that boy to take over the farm.

He has to sell the farm in order to pay the estate taxes.

This is something that is left out of the House bill, and we urge that the Senate take it under consideration. I think our generalizations speak for themselves in our statement. I appreciate the opportunity for allowing us to present the Grange views, and I especially thank the Senators for returning so that we could be heard.

The CHAIRMAN. Thank you very much, sir.

Senator MILLER. You heard my question of the previous witness about the loophole in the Metcalf bill?

Mr. FREDERICK. Yes, sir, I did, Senator. I am not sure about accrual tax accounting. We will look into it.

I would think, and I am not a tax expert, far from it, but if he can assign any unit value that he sees fit to assign, then we would say that this is wrong and it should closed. I would think that in the accrual method of tax accounting, that the market value should be used.

The CHAIRMAN. Thank you very much, sir.

Mr. FREDERICK. Thank you.

(Robert M. Frederick's prepared statement follows:)

STATEMENT BY ROBERT M. FREDERICK, LEGISLATIVE REPRESENTATIVE OF THE NATIONAL GRANGE

SUMMARY

I. TAX-LOSS FARMING

H.R. 13270 undertakes to correct a situation in which some high-income taxpayers, not primarily engaged in farming, have used farm losses to obtain a deduction in their high-bracket non-farm income.

To do this, H.R. 13270 requires the taxpayer to maintain an excess deductions account to record his farm losses. In the case of individual farm losses would be added to the excess deductions account only if the taxpayer had income from nonfarm sources of more than $50,000 for the year, and only to the extent that the farm loss for the year exceeded $25,000.

In our judgment, the E.D.A. account approach does not strike at the heart of the "tax-loss" farming loophole. It only postpones the issue and strikes at all farmers, big and small, bona fide as well as the investor who is investing in agriculture for a profit. In doing so, it includes the "tax-loss" tax-dodging farmer. In referring to the latter, we use the word "farmer" rather loosely.

It is our firm belief that the provisions of the Amendment No. 139 introduced by Senator Metcalf on August 13, 1969 will correct the abuse of the liberal tax rules provided in the Internal Revenue Code for the use of bona fide farmers. Therefore, we respectfully urge that Amendment No. 1-39 be inserted in H.R. 13270 in place of part of Subtitle B—Farm Loss, etc., starting at line 10, page 139 of the bill and striking all that follows through line 6 on page 152.

In our judgment, this method will be more in line with true tax reforms in providing more revenue for the Federal Treasury, a shifting of the tax burden and expediting the closing of tax loopholes that allow revenue losses.

It is our understanding that the E.D.A. and other farm tax proposals of the House bill will only apply to an additional 3000 persons and bring into the Federal Treasury an additional $25 million by the year 1979, such increase to come from correction in the tax-loss farming, depreciation recapture, holding period for livestock and a negligible amount from hobby-farm losses.

The amendment proposed by Senator Metcalf, Amendment No. 139 would apply to 14,000 taxpayers, thereby shifting the tax burden, and would bring in an additional $205 million per ye?. as soon as the bill became effective. In our opinion, this is true tax reform, because it increases Federal revenue at the same time it shifts the tax burden and the effect is immediate, and as we pointed out earlier in our testimony, it hits at the "jugular vein" of the tax-dodge farming.

This corrective amendment will affect only non-farmers with large amounts of nonfarm income who invest in farming to obtain tax losses.

Senator Metcalf has explained that he considered the E.D.A. approach when he first began to look into ways to correct the tax-dodging farm problem. In remarks before the Senate August 13, he said:

"After a great deal of technical discussion with experts, I was convinced that the most effective way to get at this problem without hurting the legitimate farmer would be to take the loss limitation approach. Under this method, a dollar limit would be placed on the amount of artificially created farm losses that could be used as an offset against nonfarm income in any given year."

The family farm structure in American agriculture must be given an even break with others engaged in agriculture for profit. It is our opinion that Amendment No. 139 will give us equality of income tax treatment and preserve for agriculture the liberal provisions of the Internal Revenue Code that were meant for farmers who farm for a livelihood.

It is the opinion of the National Grange that the provisions of Amendment No. 139 meet the needs of the American farmer for better than the first part of Subtitle B of H.R. 13270, thereby making any further changes in the Internal Revenue Code pertaining to agriculture unnecessary.

This corrective amendment will affect only non-farmers with large amounts of non-farm income who invest in farming in order to obtain tax losses which may be set off against their non-farm income.

II. HOBBY LOSSES

We believe that if the Metcalf amendment is adopted by this Committee there will be no need to make further provisions in the law for the so-called "hobby farmers".

As stated by Senator Metcalf before the Senate on August 13, 1969 when he introduced his amendment, ". . . The loss limitation approach would include the hobby loss farmer and would limit the current deduction of his farm losses."

There exists the mistaken impression that H.R. 13270 would discourage hobby farming to a greater extent than the amendment introduced by Senator Metcalf. In the opinion of the author and the Grange, this is not the case.

III. HOLDING PERIOD FOR LIVESTOCK

In H.R. 13270, livestock for dairy, draft or breeding purposes are discriminated against in only this one major provision. It requires that such animals be held for at least *365 days after* such animals would have first been used for such purposes. There is no similar provision for other personal property, such as machinery. Basically the requirement is that the item not be held for customers in the ordinary course of business.

We do not believe that the tax rules should be made more stringent against the farm industry at a time when it is undergoing severe economic problems. We therefore believe that the same rules regarding holding period for capital gains should apply to livestock.

This can be accomplished by striking the following in lines 7 and 8 on page 153, "for at least 365 days". Lines 7 and 8, page 153, would then read "but only if held by him after such animal normally would have first been used for any such purposes."

We realize that one of the problems of our proposal would be one of intent. However, we believe our proposal fully meets the necessary requirements in this respect. In essence, under our proposal, until an animal became a draft, dairy or breeding animal, it *would not* qualify for long-term capital gains treatment. Once it had reached such status (draft, dairy or breeding) it would clearly show that this was the intent of its owner and that he was not primarily holding it for sale to customers in the ordinary course of business.

IV. COOPERATIVE TAX REVISIONS

The National Grange was *shocked* to learn of the proposed changes in co-op tax treatment contained in H.R. 13270 as passed by the U.S. House of Representatives and now pending in the tax reform legislation before this Committee. Quite frankly, we do not see that co-op tax treatment has any connection whatsoever to "tax reform", the announced reason for holding these very hearings.

In our opinion "tax reform" should meet the following tests: (1) increase revenue to the Federal Treasury; (2) expedite the collection of the tax; and (3) shift the tax burden to those who are not carrying their share of the tax burden from those who are presently paying more than their proportionate share. The cooperative tax treatment in H.R. 13270 meets none of these tests.

We followed each press release of the House Ways and Means Committee regarding tax measures to be heard by the Committee and not once did we find the subject of co-op tax treatment listed as a subject for discussion. Therefore, neither we nor any other farm organization was permitted the privilege of open debate on such an important matter to agriculture as the tax treatment of farm co-ops, that was accorded the anti-co-op lobbyists who were permitted to have the subject introduced during the closing days of the executive hearings of the House Ways and Means Committee.

Our last ditch efforts in the Ways and Means Committee were successful only in extending the time in which *small* co-ops will be permitted to live and serve agriculture and rural America. Such hasty action on a subject of vital concern to the lifeblood of all small co-ops can have a devastating effect and completely wipe out many such co-op marketing organizations. In attacking the "giants", the "Davids" will also be slain, quite contrary to the Biblical story.

We would all agree it is desirable that the farmer receive as big a cash refund as possible, as quickly as it can be paid. This already is being done. Farmers, through an elected board of directors, decide each year what amounts they can take in cash and what amounts they must defer in order to provide capital for the cooperative.

But the proposed new regulations would take that decision away from the farmer and instead write a 15-year limit into law. This would put a "due date" on the farmer's investment in the co-ops and change the nature of that investment from "equity" to "debt capital". This could completely disrupt the capital structure of the cooperative and impair its ability to borrow money.

The 15-year payout provision is one of the least-understood yet potentially the most damaging of the new rules being proposed for cooperatives.

Secretary of Agriculture, Clifford Hardin, in addressing the annual meeting of the American Institute of Cooperation, in Urbana, Illinois on August 4, 1969, stated:

"Cooperatives are a positive and dynamic force in rural development. They have proved themselves an effective instrument in helping farm families make more effective use of their agricultural resources. Many cooperatives are also providing the original impetus for new community enterprises. In some communities the cooperative is the area's biggest industry.

"But cooperatives can, and must, do more, not only to increase job opportunities and income, but to be a positive force in helping local communities initiate and carry out new development projects."

We suggest to this Committee that cooperatives cannot aid farmers or rural America if they are "bled" to death by such measures as contained in Sec. 531 of H.R. 13270.

Official figures buttress our case. They show, for example—

• That the income of farm families is about 75 percent as much as that of non-farm families.

• That prices paid by farmers increased 28 percent from 1957–59 to mid-1969, compared with a 17 percent rise in the overall consumer price index and a 24 percent increase in retail food prices.

• That food prices have risen only two-thirds as much as those of all other consumer goods in the past 10 years.

• Agricultural output per man-hour increased 82 percent between 1957–59 and 1968.

• One farm worker in 1967 supplied the needs of 43 people compared with 23 in 1957–59.

• Farmers in recent years have increased their productivity by 5.3 percent, a rate twice that of industry.

To date we, as producers of this abundance of food and fiber, have not shared in the benefits of our labors. Farm cooperatives are one way and perhaps the best way that farmers can increase their economic position in relationship to other segments of our society—and now this avenue of economic improvement is being threatened by so-called "Co-op Tax reforms". The destruction of cooperatives appears to be the only purpose of the measure as it would deny cooperatives the same right to use their earnings for legitimate business purposes that corporations have had from the beginning of corporate history.

It's too bad that we must once again be asking busy Senators to devote time to a matter which seemingly was settled in 1962 after lengthy hearings and debate. Here you are confronted with what has been called the most sweeping tax reform measure in history. And among the many sections is a measure which has nothing to do with tax reform; which would not yield any additional tax revenue nor any additional tax benefit; but which could greatly restrict the growth of farmer cooperatives.

We see no justification for new laws governing cooperative financing or taxation. We will urge—in the strongest possible appeal—that the entire section on cooperatives be deleted from the Tax Reform Act of 1969.

V. FEDERAL ESTATE TAX

We are cognizant of the fact that the Committee report of the Ways and Means Committee of the House of Representatives states the following:

"Other income tax problems have had to be postponed for further analysis and study. Moreover, your committee found that the time available did not permit the inclusion of reform measures relating to revision of the estate and gift tax laws or the related problem of the tax treatment of property passing at death. Estate and gift taxes are an area of the tax laws your committee will undertake to study as soon as possible, with the expectation of reporting out a bill on this subject in this Congress."

However, we fail to understand how the most revolutionary tax reform legislation since the enactment of the Federal Income tax law can ignore and fail to deal with the problem of Federal Estate tax; especially as it affects the family-owned farming operation or a closely-held business.

As we indicated earlier, long overdue legislation has been introduced in both Houses to correct this tax inequity, in the House by Congressman Price and in the Senate by Senator Dole.

The present inheritance tax laws were enacted in the emotion-laden depression years when men were selling apples in the streets at a time when a few heirs and heiresses came into their inheritances which they proceeded to flaunt with worldwide publicity. Thus, the legislation was to prevent this from happening in the future.

But the result has been that the extremely wealthy have developed means of escaping the full impact of the law while the closely-held business and the family farm, the backbone of the middle-class, bears the brunt.

There is a distinct area of discrimination in the valuation of an estate that is comprised of a business or a farm and one that is comprised of publicly traded stocks and securities, the Texas Congressman maintains. While in an estate consisting of stocks, the earning power of the shares are the basis for valuation, on business enterprises or farms the value is placed on the presumed market value of the property with no attention given to whether or not speculation has substantially and unrealistically inflated the going price.

We therefore respectfully request that this Committee include in the Tax Reform Act of 1969, the provisions of Congressman Price and Senator Dole. The American family-held farm needs this tax relief if we are to maintain the family farm structure in American Agriculture and aid, not obstruct, young farmers continuing in agriculture.

VI. CONCLUSIONS AND RECOMMENDATIONS

The tax structure should be so constituted as to fall as equally as possible on all individuals and all segments of the economy according to the income and resources of each. Accordingly, no individual or industry should enjoy unduly favorable or unreasonable advantages nor should any industry or individual be penalized by unfair tax levies or regulations.

It is generally recognized that deficit financing is a prime cause of inflation at the Federal level and jeopardizes the ability of state and local governments to meet the needs of their areas in the future. We, therefore, reaffirm our position favoring a balanced Federal budget at the earliest possible time.

We urge the Congress to review the budget with the purpose of reducing the budget deficit by eliminating or modifying programs not absolutely essential to the economy and immediate welfare of the nation. If budget reductions thus effected are not sufficient to relieve the inflationary pressures now threatening the welfare of the nation and its citizens, then we favor a surtax levey to decrease the pressures that are resulting in high interest rates and serious and damaging inflation. These steps are necessary to avoid wage and price controls which are not consistent with our free enterprise system and a growing and expanding economy.

The Grange believes there definitely is merit and justification for mineral depletion allowances. However, it is our opinion that present legislation and regulation in this regard should be carefully reviewed.

Remove the tax-exempt status for industrial development bonds issued by state and local governments.

No favored property tax treatment for religious, educational, fraternal or eleemosynary institutions on their property held for enterprises conducted primarily for profit in competition with taxpaying private enterprises.

As it becomes apparent that reductions in revenues received from Federal income taxes may be justified by reasons of reduction in expenditures, the means employed in achieving such reductions should include: (a) elimination of the recently-enacted income surtax; and (b) a substantial increase in the personal exemption of individual taxpayers for themselves and their dependents. The present exemptions provide less than half the "buying power" that they did when they were incorporated in the Code.

It is one of the basic precepts of our legal system that a person is innocent until proven guilty; however, in cases involving the Internal Revenue Service, a person is, in effect, guilty until proven innocent. Therefore, the Grange favors legislation which would place the burden of proof on the Internal Revenue Service whenever that agency takes action against a taxpayer.

The National Grange would also like to go on record at this time in favor of the 6 months' continuation of the surtax at 5% or more after December 31, 1969—if the nation's economy is still superheated and that in addition to taxation, every means be used, short of Federal controls on prices and wages, to slow down and level off the nation's economy.

STATEMENT

Mr. Chairman and Members of the Committee, I am Robert M. Frederick. Legislative Representative of the National Grange, with offices at 1616 H Street, N.W., Washington, D.C. The National Grange is a farm and rural-urban community and family organization, representing 7,000 community Granges located in rural America. Our membership lives in rural-urban areas in 40 of the 50 States and has a vital interest in the legislation being considered by this Committee. Our interest in tax legislation has continued over a period of 102 years.

In a general sense, we support H.R. 13270, a bill to reform the income tax laws, to the extent that the provisions of the bill conform to Grange tax policy. However, there are several provisions of H.R. 13270 with which we are in total disagreement. We would like to take the time allotted us to discuss with the Committee the changes which the Grange believes should be made.

The most glaring differences between the position of the Grange and H.R. 13270 are in the following areas: (1) tax-loss farming; (2) hobby losses; (3) holding period for livestock; and (4) cooperatives' tax treatment.

In addition to these areas, there exists in present tax law an inequity in the Federal inheritance tax apparently not dealt with in H.R. 13270. We believe a corrective provision should be included in any tax reform bill. Corrective legislation has been introduced by Senator Robert Dole of Kansas and Representative Robert Price of Texas.

With the Committee's permission, we would like to discuss briefly each of these areas, and in some instances to point out what we think are better alternatives to the provisions of H.R. 13270.

Taking up in order the areas which we have enumerated, let me comment first on the question of tax-loss farming.

H.R. 13270 undertakes to correct a situation in which some high-income taxpayers not primarily engaged in farming have used farm losses to obtain a deduction in their high-bracket nonfarm income.

To do this, H.R. 13270 attempts to provide that a gain on the sale of farm property is to be treated as ordinary income, rather than capital gains, to the extent of the taxpayer's previous farm losses.

The taxpayer would have to maintain an excess deductions account to record his farm losses. In the case of individuals, farm losses would be added to the excess deductions account only if the taxpayer had income from nonfarm sources of more than $50,000 for the year, and only to the extent that the farm loss for the year exceeded $25,000.

In our judgment, the E.D.A. account approach does not strike at the heart of the "tax-loss" farming loophole. It only postpones the issue and strikes at all farmers, big and small, bona fide as well as the investor who is investing in agriculture for a profit. In doing so, it includes the "tax-loss" tax-dodging farmer. In referring to the latter, we use the word "farmer" rather loosely.

It is our firm belief that the provisions of the Amendment No. 139 introduced by Senator Metcalf on August 13, 1969 will correct the abuse of the liberal tax rules provided in the Internal Revenue Code for the use of bona fide farmers. Therefore, we respectfully urge that Amendment No. 130 be inserted in H.R. 13270 in place of part of Subtitle B—Farm Losses, etc., starting at line 10, page 139 of the bill and striking all that follows through line 6 on page 152.

In effect, what we are suggesting is the adoption of Amendment No. 139 in place of the House bills E.D.A. approach to solving tax-loss farming.

In our judgment, this method will be more in line with true tax reforms in providing more revenue for the Federal Treasury, a shifting of the tax burden and expediting the closing of tax loopholes that allow revenue losses.

It is our understanding that the E.D.A. and other farm tax proposals of the House bill will only apply to an additional 3000 persons and bring into the Federal Treasury an additional $25 million by the year 1979, such increase to come from correction in the tax-loss farming, depreciation recapture, holding period for livestock and a negligible amount from hobby-farm losses.

The amendment proposed by Senator Metcalf, Amendment No. 139, would apply to 14,000 taxpayers, thereby shifting the tax burden and would bring in an additional $205 million per year as soon as the bill became effective. In our opinion, this is true tax reform, because it increases Federal revenue at the same time it shifts the tax burden and the effect is immediate, and as we pointed out earlier in our testimony, it hits at the "jugular vein" of the tax-dodge farming.

This corrective amendment will affect only non-farmers with large amounts of nonfarm income who invest in farming to obtain tax losses.

There are numerous safeguards in the amendment to protect the family farmer who depends upon his farm to produce a living for his family.

Senator Metcalf has explained that he considered the E.D.A. approach when he first began to look into ways to correct the tax-dodging farm problem. In remarks before the Senate August 13, he said:

"After a great deal of technical discussion with experts, I was convinced that the most effective way to get at this problem without hurting the legitimate farmer would be to take the loss limitation approach. Under this method, a dollar limit would be placed on the amount of artificially created farm losses that could be used as an offset against nonfarm income in any given year."

Amendment No. 139, as introduced by Senator Metcalf, is identical to S. 500, the legislation introduced by Senator Metcalf and 26 other Senators and endorsed by all major farm organizations and many of the commodity groups, plus many other trade associations.

The family farm structure in American agriculture must be given an even break with others engaged in agriculture for profit. It is our opinion that Amendment No. 139 will give us equality of income tax treatment and preserve for agriculture the liberal provisions of the Internal Revenue Code that were meant for farmers who farm for a livelihood.

It is the opinion of the National Grange that the provisions of Amendment No. 139 meet the needs of the American farmer far better than the first part of Subtitle B of H.R. 13270, thereby making any further changes in the Internal Revenue Code pertaining to agriculture unnecessary.

This corrective amendment will affect only non-farmers with large amounts of non-farm income who invest in farming in order to obtain tax losses which may be set off against their non-farm income.

There is an important exception to the dollar limitation in the amendment introduced by Senator Metcalf. This amendment in no event prevents the deduction of farm losses to the extent they relate to taxes, interest, casualty losses, losses from drought, and losses from the sale of farm property. An exception is made for those deductions. In general they are deductions which would be allowed to anyone holding property without regard to whether it was being used in farming or because they represent deductions which are clearly beyond the control of the farmer, such as losses from casualty and drought.

Under provisions of the amendment, if the total of these deductions is higher than fifteen thousand dollars, then the higher figure may be used without any reduction because of nonfarm income above fifteen thousand dollars. In other words, the fifteen thousand dollar limitation is directed solely at the type of deductions that are artifically created through the abuse of the special accounting rules designed for ordinary farmers.

We are confident that the suggested amendment will not have a detrimental effect on *legitimate farmers or non-farmers who invest in farming to earn farm profits*. The amendment is unique, in that it is pointed directly at the abuse of the liberal tax accounting rules of the Internal Revenue Code, provided by Congress for ordinary farmers or those interests outside of agriculture that make investments in farming for a profit.

The amendment also provides for the large commercial farming interests in cattle, citrus and other farm specialty crops to be exempt from the provisions of the Act if they follow standard accrual accounting methods. Surely, such large privately-owned agricultural interests or investors in agriculture that use either grove management firms or cattle management firms have available to them the accounting expertise to follow such accounting methods.

The National Grange would be the last organization to support legislation to prohibit persons outside of agriculture from entering agriculture as full-time farmers or as investors supplying capital for those already engaged in agricultural production. We have insisted, however, and will continue to insist, that the rules for playing the game be the same. The adoption of Amendment No. 139 will equalize the rules and make farming a fair game for all interested in agriculture for profit.

Invasion by conglomerates

We realize that the elimination of tax loopholes in the Internal Revenue Code as it applies to individuals and corporations investing or engaged in agriculture will not stop the conglomerate corporation invasion. It will, however, eliminate the financing of such mergers and take-overs by some taxpayers through the use of "tax shelter" windfalls.

The real control over conglomerate corporate invasion can be done by tightening of the anti-trust laws, which we realize does not come under the jurisdiction of this Committee. However, we feel that this intrusion into agriculture is part of the same kind of problem which the Committee is considering today and perhaps is a far greater danger to the family farm structure of American agriculture. Curtailing tax abuse is the first step, and a necessary step, in controlling conglomerate corporation invasion of agriculture. We welcome this and similar tax legislation to ιake the "tax profit" out of such acquisitions by non-farm interests.

Benefits from tax shelters

We, as responsible members of the agricultural society, would be remiss if we did not consider any possible economic benefit to agriculture and rural America of the so-called "tax incentives" provided in the Internal Revenue Code.

Those who are in opposition to plugging the Internal Revenue loopholes that permit "tax-loss" farming present the following arguments in favor of a continuation of the laissez faire:

1. They are not tax loopholes but are tax incentives to attract into agriculture outside "risk" money;

2. That outside capital investments in agriculture have assisted in improvement in livestock breeds;

3. That farmers have benefited by outside capital in that they can expand their operations, buy more cattle, more land, which in turn benefits rural America.

We cannot help but agree that outside capital has benefited *certain individuals in agriculture* as well as *certain specific rural communities.* However, we hasten to ask, is it worth the total cost to the *Federal Treasury of approximately $205 million in lost revenue?* The total increase in Federal revenue would be much higher since farm operations carried on by corporations usually are not separately reported on the corporation tax return. Consequently, data concerning the number of corporations and revenue effect with respect thereto are not available.

Thousands upon thousands of family farms, the backbone of rural communities, are adversely affected by the activity of a small percentage of individuals who are lucky enough to have benefited directly from outside "risk" capital.

Improvement in livestock breeds has been and continues to be a major research function of our land grant colleges. These institutions are supported by public funds and devote time, money and labor into herd improvement by breeding as well as scientific feeding. We suggest that these laboratories of animal research have made major contribution to breed improvement, feeding improvement and similar advancements in the livestock industry far in excess of contributions made from outside "risk" capital.

We submit to this Committee that the interest of American agriculture and rural communities will be best served if the family farm structure does not have to compete with a select few individuals who are deriving direct benefit from the loopholes in the Internal Revenue Code.

Three categories of people receive direct benefit from the abuse of the liberal provisions in the Internal Revenue Code created for the use of the ordinary farmer: the investor, the financial manager and the farmer who manages the livestock or agricultural crops in which outside risk capital is invested, this at a tremendous loss to the Federal Treasury and the further economic loss to the family farm structure that is dependent upon profit for its very existence. Gentlemen, can we afford this kind of "Cowboy Economics"?

An unwholesome trend

The National Grange recognizes the importance of preserving and protecting the integrity of the owner-operator-manager farm, as a guarantee to the Nation of the efficient and abundant production of high-quality food and fiber at reasonable prices for the domestic and world market.

We seek to obtain for American farmers a return for their labor, management, risk and investment which bears a reasonable relationship to that received for these same economic factors in any other segment of our economy, as well as adequate compensation for their contribution to the general welfare.

The activities of conglomerate corporations and other non-farm interests in agriculture are not consistent with long-range Grange objectives and have resulted in commodity market price manipulation, unrealistically high prices for farm land and increased farm real estate taxes, (which have made it increasingly difficult to pass farms on to heirs). The net result has been a loss in rural America of farm families. These farm families are frequently forced to migrate to urban centers and into situations for which they are ill-prepared, which further aggravates the explosive problem of our central cities and urban areas, including flooding of the labor market with additional unskilled workers.

If large corporations and non-farm interests become predominant in agriculture, the need for many Main Street businesses, schools, churches and municipal facilities will be eliminated. It will destroy job opportunities in rural America and will not be in the best interest of long-term national objectives.

This impact on community life makes the non-agricultural corporate farm invasion a human as well as an economic problem. It is a problem that should concern all Americans and demand their immediate attention.

Incidentally, the Grange has a long history of interest in this problem. At the 73rd Annual Session of the National Grange, held in 1939 in Peoria, Illinois, the Delegate Body adopted the following resolution:

"In order to discourage corporation farming and capitalists acquiring large acreage of farm land, we recommend that the Federal income tax be amended to provide that losses on agricultural operations can be deducted only from incomes derived from agricultural operations."

The policy of the National Grange, adopted 30 years ago, was a lone voice against the inequities contained in the Internal Revenue Code. The continuing validity of this objective has been subsequently recognized by action of the Delegate Body taken in 1963, 1964, 1965 and again in 1967, at the 100th Anniversary of the founding of the National Grange.

At our 102nd Annual Session held in Peoria, Illinois, in November 1968, as we started our second century of service to rural America, the Delegate Body once more reaffirmed Grange position on this important and vital matter of great concern to family farms and rural communities.

The Taxation and Fiscal Policy Committee that considered tax revision resolutions made the following statement:

"The mounting concern of the family farm operator over the accelerating acquisition of agricultural lands by individuals and organizations for the purpose of building up a loss position from farming operations conducted on the lands acquired and deducting such losses from income tax liability is indicated by the fact that resolutions to prevent this practice have been received at this Annual Session of the National Grange from eighteen of the 38 State Granges.

"Farmers and their families engaged in bone fide farming operations are being forced to leave the farm, as a result of net income being at a depressed level.

"Competition of non-farm investors inflating the price of agricultural land and using loss on farming operations as a deduction against non-farm income is a factor in this lower net farm income.

"Resolved, that the National Grange vigorously support amending the Internal Revenue Code to prohibit any substantial portion of farm operating losses being used as a tax deduction or write-off against non-farm income."

Hobby losses

We believe that if the Metcalf amendment is adopted by this Committee there will be no need to make further provisions in the law for the so-called "hobby farmers".

As stated by Senator Metcalf before the Senate on August 13, 1969 when he introduced his amendment, ". . . The loss limitation approach would include the hobby loss farmer and would limit the current deduction of his farm losses."

There exists the mistaken impression that H.R. 13270 would discourage hobby farming to a greater extent than the amendment introduced by Senator Metcalf. In the opinion of the author and the Grange, this is not the case.

The Grange is not against any individual having a hobby, be it farming or wood craft; we only want fair and equitable tax treatment and to ask that such a hobby not be used as a tax dodge. We feel that the Metcalf amendment does just this.

Holding period for livestock

Previously, livestock for draft, dairy or breeding purposes had to be held one year to qualify for long-term capital gains treatment, while other capital items had to be held only six months. Conformity has been reached by requiring all capital items to be held at least one year before qualifying for long-term capital gains. However, this provision will still discriminate against many raised farm animals by increasing the holding period for them, in some cases to periods in excess of three years, or three times the general holding period.

In H.R. 13270, livestock for dairy, draft or breeding purposes are discriminated against in only this one major provision. It requires that such animals be held for at least *365 days after* such animals would have first been used for such purpose. There is no similar provision for other personal property, such as machinery. Basically the requirement is that the item not be held for customers in the ordinary course of business.

We do not believe that the tax rules should be made more stringent against the farm industry at a time when it is undergoing severe economic problems. We therefore believe that the same rules regarding holding period for capital gains should apply to livestock.

This can be accomplished by striking the following in lines 7 and 8 on page 153, "for at least 365 days". Lines 7 and 8, page 153, would then read "but only if held by him after such animal normally would have first been used for any of such purposes."

In our judgment, this would more completely bring the treatment of livestock in line with the treatment of other property used in a trade or business.

We realize that one of the problems of our proposal would be one of intent. However, we believe our proposal fully meets the necessary requirements in this respect. In essence, under our proposal, until an animal became a draft, dairy or breeding animal, it *would not* qualify for long-term capital gains treatment. Once it had reached such status (draft, dairy or breeding) it would clearly show that this was the intent of its owner and that he was not primarily holding it for sale to customers in the ordinary course of business.

Cooperative tax revisions

The National Grange was *shocked* to learn of the proposed changes in co-op tax treatment contained in H.R. 13270 as passed by the U.S. House of Representatives and now pending in the tax reform legislation before this Committee. Quite frankly, we do not see that co-op tax treatment has any connection whatsoever to "tax reform", the announced reason for holding these very hearings.

In our opinion "tax reform" should meet the following tests: (1) increase revenue to the Federal Treasury; (2) expedite the collection of the tax; and (3) shift the tax burden to those who are not carrying their share of the tax burden from those who are presently paying more than their proportionate share. The cooperative tax treatment in H.R. 13270 meets none of these tests.

We followed each press release of the House Ways and Means Committee regarding tax measures to be heard by the Committee and not once did we find the subject of co-op tax treatment listed as a subject for discussion. Therefore, neither we nor any other farm organization was permitted the privilege of open debate on such an important matter to agriculture as the tax treatment of farm co-ops, that was accorded the anti-co-op lobbyists who were permitted to have the subject introduced during the closing days of the executive hearings of the House Ways and Means Committee.

Our last-ditch efforts in the Ways and Means Committee were successful only in the extending the time in which *small* co-ops will be permitted to live and serve agriculture and rural America. Such hasty action on a subject of vital concern to the lifeblood of all small co-ops can have a devastating effect and completely wipe out many such co-op marketing organizations. In attacking the "giants", the "Davids" will also be slain, quite contrary to the Biblical story.

In 1952, the same anti-co-op lobby was successful in writing into the tax code the requirement that the tax must be paid on dividends earned by the patron for or by his patronage. At that time the Internal Revenue Code called for at least 20% of such dividend to be paid in cash so as to provide to the patron the money to pay the income tax on the dividend. The remainder could be retained in the capital structure of the co-op.

The proposal now before you, although it is a compromise, still means slow death to the small-to-medium farm cooperatives, especially those that have been organized less than 5 years.

Farmers will lose another measure of the right to say how their own businesses are to be run unless Sec. 531 is deleted from H.R. 13270.

The proposal would dictate the amount of a cooperatives' earnings that must be returned to a farmer in cash each year. It also would state when the remaining patronage refund certificates must be redeemed. Refunds not paid in accordance with the new requirements would be subjected to a current corporate federal income tax.

The borrowing power of farmer-owned businesses will be jeopardized if the proposed restrictions on cooperative financing are allowed to remain in the Tax Reform Act of 1969.

We would all agree it is desirable that the farmer receive as big a cash refund as possible, as quickly as it can be paid. This already is being done. Farmers, through an elected board of directors, decide each year what amounts they can take in cash and what amounts they must defer in order to provide capital for the cooperative.

But the proposed new regulations would take that decision away from the farmer and instead write a 15-year limit into law. This would put a "due date" on the farmer's investment in the co-ops and change the nature of that investment from "equity" to "debt capital." This could completely disrupt the capital structure of the cooperative and impair its ability to borrow money.

The 15-year payout provision is one of the least-understood yet potentially the most damaging of the new rules being proposed for cooperatives.

The co-op tax provisions of H.R. 13270 completely ignore the role farm cooperatives play in improving the incomes of farmers by providing them with alternative methods of marketing their crops or of purchasing new farm equipment, machinery and other farm supplies at reasonable prices.

Also, as pointed out in the "Summary of H.R. 13270, The Tax Reform Act of 1969" prepared by the staffs of the Joint Committee on Internal Revenue Taxation and the Committee on Finance, "There is no showing that the present balance between farm cooperatives and regular businesses should be upset to the detriment of the cooperative movement."

The cooperative movement in the United States has had the encouragement and support of every Administration as far back as President Theodore Roosevelt, who stated:

"Wherever farmers themselves have the intelligence and energy to work through cooperative societies, this is far better than having the state undertake the work. Community self-help is normally preferable to using the machinery of government for tasks to which it is unaccustomed."

President Nixon at the start of his Administration stated:

"Some of the things that will be done in my Administration to help farmers include:

"—encouragement of farmers to improve their bargaining positions through their corperatives,

"—assistance to farm cooperatives, including adequate funding of the rural electric and telephone programs. . . .

"—Improvement of credit programs within the Farm Credit System and the Department of Agriculture to meet the capital requirements of modern agriculture, especially young farm families trying to get a decent start. . . ."

Secretary of Agriculture, Clifford Hardin, in addressing the annual meeting of the American Institute of Cooperation, in Urbana, Illinois on August 4, 1969, stated:

"Cooperatives are a positive and dynamic force in rural development. They have proved themselves an effective instrument in helping farm families make more effective use of their agricultural resources. Many cooperatives are also providing the original impetus for new community enterprises. In some communities the cooperative is the area's biggest industry.

"But cooperatives can, and must, do more, not only to increase job opportunities and income, but to be a positive force in helping local communities initiate and carry out new development projects."

We suggest to this Committee that cooperatives cannot aid farmers or rural America if they are "bled" to death by such measures as contained in Sec. 531 of H.R. 13270.

All farm leaders agree that more income for farmers should be the objective of any national program, taxation or farm policy. Our ideas on how to achieve this objective may differ as to farm policy, but not on co-op tax treatment.

Official figures buttress our case. They show, for example—

- That the income of farm families is about 75 percent as much as that of nonfarm families.
- That prices paid by farmers increased 28 percent from 1957-59 to mid-1969, compared with a 17 percent rise in the overall consumer price index and a 24 percent increase in retail food prices.
- That food prices have risen only two-thirds as much as those of all other consumer goods in the past 10 years.
- Agricultural output per man-hour increased 82 percent between 1957-59 and 1968.
- One farm worker in 1967 supplied the needs of 43 people compared with 23 in 1957-59.
- Farmers in recent years have increased their productivity by 5.3 percent, a rate twice that of industry.

To date we, as producers of this abundance of food and fiber, have not shared in the benefits of our labors. Farm cooperatives are one way and perhaps the best way that farmers can increase their economic position in relationship to other segments of our society—and now this avenue of economic improvement is being threatened by so-called "Co-op Tax reforms". The destruction of cooperatives appears to be the only purpose of the measure as it would deny cooperatives the same right to use their earnings for legitimate business purposes that corporations have had from the beginning of corporate history.

It's too bad that we must once again be asking busy Senators to devote time to a matter which seemingly was settled in 1962 after lengthy hearings and debate. Here you are confronted with what has been called the most sweeping tax reform measure in history. And among the many sections is a measure which has nothing to do with tax reform; which would not yield any additional tax revenue nor any additional tax benefit; but which could greatly restrict the growth of farmer cooperatives.

We see no justification for new laws governing cooperative financing or taxation. We will urge—in the strongest possible appeal—that the entire section on cooperatives be deleted from the Tax Reform Act of 1969.

Federal estate tax

We are cognizant of the fact that the Committee report of the Ways and Means Committee of the House of Representatives states the following:

"Other income tax problems have had to be postponed for further analysis and study. Moreover, your committee found that the time available did not permit the inclusion of reform measures relating to revision of the estate and gift tax laws or the related problem of the tax treatment of property passing at death. Estate and gift taxes are an area of the tax laws your committee will undertake to study as soon as possible, with the expectation of reporting out a bill on this subject in this Congress."

However, we fail to understand how the most revolutionary tax reform legislation since the enactment of the Federal income tax law can ignore and fail to deal with the problem of Federal Estate tax; especially as it affects the family-owned farming operation or a closely-held business.

At the 102nd Annual Convention of the National Grange, held in Peoria, Illinois, on November 11, 1968, the Delegate Body adopted the following resolution:

"FEDERAL ESTATE TAX

"Whereas, in suburban and rural-urban areas farm real estate is currently appraised for inheritance tax purposes on the value of the land for non-farm uses in the areas; and

"Whereas, a high appraisal value per acre for federal estate tax purposes results in a burdensome levy upon those who wish to remain in farming; and

"Whereas, placing such high taxable values upon farms for either property or inheritance tax purposes is not a realistic approach and when applied generally to all farms in an area, it is a futuristic value concept which adversely affects the continuation of farming in areas of prime agricultural land and needed open spaces; therefore, be it

"*Resolved*, that we recommend that appraisals of farm real estate made for inheritance and estate tax purposes be made on the basis of agricultural use value."

Under present inheritance, or death tax laws, when the principal owner of a family, or closely-held, business approaches the end of his life span, a crisis results. Knowing on his death the business will be forced to pay an inheritance tax far in excess of any existing cash position, and often not even in line with its earning record, the usual procedure is to seek a merger to avoid liquidation.

The family head of a family-owned farming operation faces the same situation, inasmuch as today's inflated land and property values are not all in line with the profitability of the enterprise, whether it be an independent business firm, or a farming operation.

As we indicated earlier, long overdue legislation has been introduced in both Houses to correct this tax inequity, in the House by Congressman Price and in the Senate by Senator Dole.

The Greeks did have a word for it—Harpyiai—which translates to "snatchers". The Greek word, subsequently anglicized to Harpies is apparently, in the opinion of many Americans, synonymous with the inheritance tax collector.

While we may not go that far, we do agree with Congressman Price of Texas' legislation to drive the Harpies away by ending what has been a major cause of mergers, as well as the liquidation of the family-held farm.

The bills by Congressman Price and Senator Dole would permit the value of an estate for inheritance tax purposes to be set, at the option of the executor, either on the basis of the deceased's costs, or on the basis of the profit of the enterprise as revealed by income tax returns.

Congressman Price cites the hypothetical example of a family-owned cattle ranch that under the present system of appraising at today's inflated values would be assessed at $300,000 leaving the inheriting son liable for $110,500 in taxes, according to his computations.

Using this hypothetical example, to further illustrate, the Texas legislator says the actual profit being realized is only $7,500. Thus, using a reasonable factor for determining value, the estate should only be valued at $105,000 which would result in a death tax liability of $22,500.

On top of the Federal death tax, most states also assess a similar tax, but usually the states will follow the Federal pattern.

Operation of the inheritance tax has and continues to create many problems which are probably more middle-class in nature than those of the very wealthy who have learned to use foundations and other loopholes to escape the full weight of the tax laws.

The present inheritance tax laws were enacted in the emotion-laden depression years when men were selling apples in the streets at a time when a few heirs and heiresses came into their inheritances which they proceeded to flaunt with worldwide publicity. Thus, the legislation was to prevent this from happening in the future.

But the result has been that the extremely wealthy have developed means of escaping the full impact of the law while the closely-held business and the family farm, the backbone of the middle-class, bears the brunt.

Perhaps the comparison between this situation and Greek mythology is even more pertinent. In early ancient mythology Harpies were considered somewhat semibeneficial but in the later era of the Argonautic sagas Harpies had degenerated into foul and loathsome creatures. The inheritance tax appears to have followed the same course.

Whether or not Congressman Price and Senator Dole will be able to emulate Calais and Zetes who drove off the Harpies, remains to be seen. Not only must they secure support from fellow legislators, but they must also educate the less knowledgeable that the inheritance taxes are no longer a "soak the rich" device, but a powerful destructive force of the middle-class backbone.

There is a distinct area of discrimination in the valuation of an estate that is comprised of a business or a farm and one that is comprised of publicly traded stocks and securities, the Texas Congressman maintains. While in an estate consisting of stocks, the earning power of the shares are the basis for valuation, on business enterprises or farms the value is placed on the presumed market value of the property with no attention given to whether or not speculation has substantially and unrealistically inflated the going price.

We therefore respectfully request that this Committee include in the Tax Reform Act of 1969, the provisions of Congressman Price and Senator Dole. The American family-held farm needs this tax relief if we are to maintain the family farm structure in Americal. Agriculture and aid, not obstruct, young farmers continuing in agriculture.

CONCLUSIONS AND RECOMMENDATIONS

It is the opinion of the National Grange that tax reform should be effected, but only in accordance with certain economic principles.

Recognizing that the economic policy of the Federal Government has a direct and important impact on the economy of the nation and affects all citizens, it is essential that these policies be sound and in keeping with the obligations of the various units of government and the services rendered by the respective units of government.

The tax structure should be so constituted as to fall as equally as possible on all individuals and all segments of the economy according to the income and resources of each. Accordingly, no individual or industry should enjoy unduly favorable or unreasonable advantages nor should any industry or individual be penalized by unfair tax levies or regulations.

It is generally recognized that deficit financing is a prime cause of inflation at the Federal level and jeopardizes the ability of state and local governments to meet the needs of their areas in the future. We, therefore, reaffirm our position favoring a balanced Federal budget at the earliest possible time.

We urge the Congress to review the budget with the purpose of reducing the budget deficit by eliminating or modifying programs not absolutely essential to the economy and immediate welfare of the nation. If budget reductions thus effected are not sufficient to relieve the inflationary pressures now threatening the welfare of the nation and its citizens, then we favor a surtax levy to decrease the pressures that are resulting in high interest rates and serious and damaging inflation. These steps are necessary to avoid wage and price controls which are not consistent with our free enterprise system and a growing and expanding economy.

The following tax reforms are recommended by the Grange:

1. We appreciate the steps that have been taken to simplify the tax report form. Further change and simplification, we believe, can have the effect of making reporting easier for the taxpayer, and will result in more exact reporting. An easy-to-understand form will also benefit the government by bringing more accurate reports and thus save on auditing costs as well as the expense of refunds and billing.

2. The Grange believes there definitely is merit and justification for mineral depletion allowances. However, it is our opinion that present legislation and regulation in this regard should be carefully reviewed.

3. The Grange approves of giving the farmer the option of choosing limitation of losses that are deductible or reporting his farming operations on an "accrual accounting" basis, but we oppose any action that would *mandate* that farmers report to the I.R.S. on an accrual basis.

4. Remove the tax-exempt status for industrial development bonds issued by state and local governments.

5. No favored property tax treatment for religious, educational, fraternal or eleemosynary institutions on their property held for enterprises conducted primarily for profit in competition with tax-paying private enterprises.

6. As it becomes apparent that reductions in revenues received from Federal income taxes may be justified by reasons of reduction in expenditures, the means employed in achieving such reductions should include: (a) elimination of the recently-enacted income surtax; and (b) a substantial increase in the personal exemption of individual taxpayers for themselves and their dependents. The present exemptions provide less than half the "buying power" that they did when they were incorporated in the Code.

7. The Grange does not favor sharing Federal income tax with the states. It is the opinion of the Grange that there is little to be gained by having the Federal Government collect taxes for blanket re-distribution to the state governments, and therefore we recommend the policy of special appropriations by the Congress to care for any necessary sharing in state financial difficulties.

We believe that the present distribution and control of Federal funds coming into states for specific community development or similar projects should be free of Federal control. These funds, according to Grange policy, should be placed under the control of state, county or local units of government and be used for the specific programs designated in the allocation of the funds.

Until permanent and equitable "in lieu of tax" legislation is enacted, the Grange recommends that present law be amended to provide that states shall receive a percentage of gross, rather than net, income from sales, rentals and other revenue from national forest lands.

8. It is one of the basic precepts of our legal system that a person is innocent until proven guilty; however, in cases involving the Internal Revenue Service, a person is, in fact, guilty until proven innocent. Therefore, the Grange favors legislation which would place the burden of proof on the Internal Revenue Service whenever that agency takes action against a taxpayer.

Innocent people have found it necessary to wage costly court battles in order to defend themselves from unfounded charges by the Internal Revenue Service. This has caused them to suffer severe financial hardship through no fault of their own and is unjust and inconsistent with the stated principles of our society.

Therefore, the Grange favors legislation which will make the Internal Revenue Service financially responsible (at the discretion of the courts) for the legal costs of any cases which are decided against them.

The National Grange supported the immediate passage of the ten-percent surtax when it was before this Committee believing that it would be followed by meaningful and equitable general tax reform legislation. We now respectfully urge that this Committee, as soon as possible, while making the necessary corrections in H.R. 13270, as requested by us and other witnesses appearing before this Committee, report to the floor of the Senate the best and most progressive Tax Reform Bill in history and work with the Senate leadership to enact such legislation into law before the end of this Session of the 91st Congress.

The National Grange would also like to go on record at this time in favor of the 6 months' continuation of the surtax at 5% or more after December 31, 1969—if the nation's economy is still superheated and that in addition to taxation, every means be used, short of Federal controls on prices and wages, to slow down and level off the nation's economy.

Agriculture can never hope to walk side by side with other segments of the nation's economy as long as we have inflation eating up the small gains we are able to obtain through agricultural program planning, export marketing and increased efficiency of the commercial family farm.

We thank this Committee for the many hours they will have to spend to bring forth a tax reform act that meets the needs of our nation. We especially thank the Chairman for his leadership in tax legislation and respectfully urge early action on tax reform legislation.

Thank you, Mr. Chairman, for permitting the National Grange to present its views on this most important matter.

The CHAIRMAN. The next witness will be the Honorable E. A. Jaenke, Governor of the Farm Credit Administration.

STATEMENT OF HON. E. A. JAENKE, GOVERNOR, FARM CREDIT ADMINISTRATION; ACCOMPANIED BY PAUL O. RITTER, GENERAL COUNSEL, FARM CREDIT ADMINISTRATION; AND EARL R. KITTREDGE, COOPERATIVE BANK SERVICE

Mr. JAENKE. We appreciate your staying so late, giving us a chance to be heard. I have prepared a short summary. I am going to summarize my short summary, if that is all right with you.

The CHAIRMAN. As you know, we will print your entire statement in the record, as well as the summary that has been prepared.

Mr. JAENKE. I have with me the General Counsel of the Farm Credit Administration, Mr. Ritter, and Mr. Kittredge of the Cooperative Bank Service.

I am here as a representative of the Farm Credit Administration, the Federal Farm Credit Board, a Board appointed by the President, confirmed here by the Senate, which sets the policy for the Farm Credit Administration in the overall boundaries of course set by Congress in creating the bank system, and also the banks for cooperatives which are one portion of the system, and the directors which serve and guide those banks.

We have two or three major points that we would like to present to the committee. No. 1, to urge the committee to strike from the bill section 531, that relating to special new provisions of taxation that would apply to cooperatives. Our purpose, the Board's purpose for urging this upon the Congress, is twofold.

First, as it affects the banks for cooperatives themselves, but more important as it affects the stockholders, the owners, and the borrowers from these banks, that is the co-ops who own and borrow from these banks.

If I might start with the latter, I think this is perhaps more important. This provision in the bill, 531, strikes at the very basis of the capital structure of the cooperatives, who are the owners and the borrowers and the stockholders of the banks' cooperatives.

By switching their reinvested earnings from equity capital to debt capital, it can seriously impede the opportunities to grow, and in some cases of smaller and newer struggling co-ops could actually result in their elimination.

As such, naturally the banks for co-ops have a great concern. There are some provisions, very complicated provisions, which are in section 531 which also, and these are covered in my statements, which would adversely affect the banks for co-ops themselves.

For these reasons, the Board believes that it would be in the public interest to strike this provision.

Now, if I might just touch on two other minor points, but important. These are not in the nature of changes in the legislation itself, but in the way of clarification. We have suggested in our Sept. 12 statement that these two provisions could be handled by language in the report; language of clarification. These have to do with treatment of reserves for losses and patronage dividends.

During that period when, pursuant to congressional mandate in the act the banks for co-ops began to pay off the federally invested capital and become privately owned, and then become subject to Federal income tax, during the first taxable years there is some question as to how the reserves for losses should be treated. We are asking that they be treated just the same as commercial banks; the treatment accorded commercial banks during the same period.

On the second matter of clarification, which again is in our prepared statement, it has to do with the dealing with a small amount, generally 5 percent or less of the total income of the banks for cooperatives, which do not come from normal patronage business, this is from overnight deposits in commercial banks, and so forth, we are asking that this be clarified for tax treatment also.

These two provisions, we believe, and as I indicated, can be handled by legislative history in the report rather than by specific legislation. Again repeating the Federal farm credit board, the Federal farm credit system, and particularly the banks for co-ops would urge this committee to strike section 531 in the interests of fair treatment of co-ops.

Thank you, sir.

Unless there are questions, we are through.

Senator CURTIS. I think your statement was very well put. I understand your position. No questions.

Senator MILLER. Mr. Jaenke, what banks come under your administration?

Mr. JAENKE. There are three phases to the farm credit system, sir, the Federal land banks, which provide mortgage money to farmers, long-term money, the Federal intermediate credit banks which provide short and intermediate term credit, and which supervise the Production Credit Associations, the local associations, and then going to the matter which concerns us primarily today, the banks for cooperatives. There are 13 of these, one in each of the 12 districts, and a——

Senator MILLER. Where are the PCA's?

Mr. JAENKE. PCA's are supervised, and fit in with the Federal intermediate credit bank. They provide short- and intermediate-term credit.

Senator MILLER. You have pointed out that the 13 banks for cooperatives recently became taxable when they retired their Government capital. Have the intermediate credit banks retired their Government capital, too?

Mr. JAENKE. All capital, all seed money put in by the Federal Government initially has been repaid now.

Senator MILLER. And are they taxable, too?

Mr. JAENKE. Yes; as to the PCA's.

Senator MILLER. So the local PCA pays a tax just like any other cooperative?

Mr. JAENKE. That is right.

Senator MILLER. What about the Federal Land Banks? Have they retired their Government capital?

Mr. JAENKE. May I ask Paul Ritter to comment on this, please?

Mr. RITTER. They have retired their Government capital, the last of it in 1947, but their tax exemption continues, because the Federal Farm Loan Act so provides.

Senator MILLER. You say the Federal Farm Loan Act so provides?

Mr. RITTER. As to the Federal Land Banks; yes.

Senator MILLER. Was that provision written in before they retired their Government money?

Mr. RITTER. Originally, in 1916, there was a general tax exemption given to the Federal Land Banks, and that was not made conditional on having Government Capital, and therefore the general exemption continues.

Senator MILLER. So there is a difference between the three banks under your administration in the tax treatment, and that exemption that was written into that original Act has continued without change, whereas in the case of the intermediate credit bank, PCA's, and the banks for cooperatives, they are subject to tax now?

Mr. RITTER. No, the Federal intermediate credit banks have the same tax position as the Federal Land Banks, where general exemption continues.

Senator MILLER. Mr. Jaenke said that the PCA's were subject to tax.

Mr. RITTER. The Production Credit Associations are.

Senator MILLER. But not the intermediate credit banks.

Mr. RITTER. That is right, sir.

Senator MILLER. But the banks for cooperatives are.

Mr. RITTER. The basic provision in the Farm Credit Act of 1933 provided—and this also applied in the case of the Production Credit Associations—that after retirement of their Government capital, the exemption should no longer apply as to the bank or the association, its income or its property.

Senator MILLER. Could you provide for the record an analysis of the difference in those provisions between the three banks?

Mr. JAENKE. Of course, we will.

(Hon. E. A. Jaenke's prepared statement and information requested follows:)

STATEMENT OF E. A. JAENKE, GOVERNOR, FARM CREDIT ADMINISTRATION

SUMMARY

The Federal Farm Credit Board, which sets policy for the Farm Credit Administration, and the 13 banks for cooperatives consider it to be in the public interest that section 531 should be stricken from the tax reform bill.

The additional requirements which would be imposed by section 531 of H.R. 13270, in order to qualify patronage dividends of cooperatives generally for deduction in computing income subject to Federal income tax, would seriously impair the ability of both the 13 banks for cooperatives and the farmer cooperatives to which such banks make loans to serve farmers effectively.

The reasons for these conclusions follow:

(1) The increased money payment requirements of section 531 (from 20 to 50 percent with the remainder to be paid within 15 years) would present special problems for a bank for cooperatives which must operate as provided in the Farm Credit Act of 1933, as amended.

> (a) Alternatively, the 30 percent increased money payment requirement of section 531 may be met by payment on *qualified* outstanding patronage dividends. However, the Farm Credit Act requires that the oldest outstanding patronage dividends be retired first, and those issued by a bank for cooperatives since 1956 and before it recently became subject to Federal income tax (between 1965 and 1969) are *not qualified* under the Internal Revenue Code.
>
> (b) In the event of a year with net losses, the Farm Credit Act provides that they shall be absorbed by charges against or impairment of outstanding patronage dividends, which might make the amount payable thereon less than their value when issued. If this possibility were considered to preclude a bank for cooperatives from meeting the additional 15-year money payment requirement of section 531, it would mean that none of its patronage dividends, except those paid in money, could qualify for deduction.

(2) A general problem for all cooperatives, including a bank for cooperatives, under the 15-year money payment requirement of section 531, is whether their financial position in the year that the money payments are due, will be such that the payments can be made.

(3) The additional requirements imposed by section 531 would seriously impair both the financial strength and the debt repayment capacity of many farmer-owned cooperatives which borrow from a bank for cooperatives and they also would seriously impair the capacity of a bank for cooperatives to carry or make a loan to a farmer cooperative on a self-sustaining basis, particularly term loans.

Therefore, section 531 would greatly hamper farmers' efforts to build strong cooperatives or even maintain existing organizations that farmers designed to help themselves solve many of their own problems, as Congress has long encouraged them to do.

Scope of statement

Inasmuch as section 531 of H.R. 13270, the Tax Reform Act of 1969, would impose additional requirements on cooperatives generally, if their patronage dividends are to qualify for deduction from gross income in computing their income that is subject to Federal income tax, it concerns both the 13 banks for cooperatives, which operate under the supervision of the Farm Credit Administration in making loans to farmer cooperatives, and the farmer cooperatives which borrow from the banks for cooperatives. In the circumstances, after noting the additional requirements in section 531, this statement will undertake to review the application of those requirements to the banks for cooperatives and to the farmer cooperatives which borrow from the banks. Comment will also be made relative to the lending operations of the banks for cooperatives. Before doing so, though, it may be helpful to have in mind the present tax status of the banks for cooperatives.

Tax status of banks for cooperatives

The 13 banks for cooperatives are established under the Farm Credit Act of 1933 to make loans to eligible farmer cooperative associations as therein authorized; and since 1955, the Act requires that the banks themselves also operate on a cooperative basis, with the borrowing cooperatives investing in capital stock and surplus of the banks by retention of patronage dividends and by direct stock purchase. Such investments have been used during the past 14 years largely to retire Government stock. Each bank for cooperatives first became subject to Federal income tax when it retired all of its Government capital and, for each bank, this was during the period June 30, 1965, to December 31, 1968. The banks for cooperatives, therefore, are subject to the Federal income tax treatment provided in the Internal Revenue Code for organizations doing business on a cooperative basis, as are the farmer cooperatives which borrow from the banks.

Proposed amendment of Internal Revenue Code by section 531

(1) As passed by the House of Representatives, section 531 of H.R. 13270, the Tax Reform Act of 1969, would amend the Internal Revenue Code to change the Federal income taxation of organizations doing business on a cooperative basis, and their patrons, as respects patronage dividends (and per-unit retains) from a cooperative to its patrons.

(2) Under existing law, patronage dividends (and per-unit retains) which meet the specific requirements of the Internal Revenue Code to qualify for such treatment, are excludible or deductible from gross income in computing the taxable income of the cooperative, for the year for which paid, and are includible in the gross income of the patron for the year in which received·

(3) Section 531, as passed by the House, without increasing tax revenues in any respect, would impose additional requirements if patronage dividends (and per-unit retains) are to qualify for the foregoing tax treatment for taxable years beginning after 1969. One additional requirement, noted under (4) below, would apply only to patronage dividends; a second additional requirement, noted under (5) below, would apply to both patronage dividends and per-unit retains.

(4) One additional requirement would be to increase to 50 percent (from the present 20 percent at the rate of 3 percent each year for 10 years) the portion of annual patronage dividends to be paid in money in order to qualify them for deduction, although the added (up to 30 percent) money payment requirement could be met by payment on qualified patronage dividends issued for earlier taxable years.

(5) A second additional requirement, as to the remainder of annual patronage dividends or per-unit retains not already paid in money, would be (a) that the bylaws of the cooperative provide for payment of the remainder in money within the next 15 years, or (b) that an unconditional written evidence of indebtedness, to mature within the next 15 years, be issued for such remainder.

Application of proposed amendment (section 531) to a bank for cooperatives

If the present 20 percent money payment requirement in the Internal Revenue Code should be increased to 50 percent, as proposed in section 531, the increased money payment would also be required to be made by banks for cooperatives under the Farm Credit Act. Under the bill the additional 30 percent cash payout could be treated in one of two ways: (1) As current patronage refunds, or (2) to retire *qualified* patronage refunds resulting from earnings in prior years. As a practical matter the banks for cooperatives probably would not distribute the additional amounts as patronage refunds because of the underlying intent of the Farm Credit Act that new capital inputs should be used to retire the oldest outstanding equities of cooperatives. Insofar as the alternative is limited to payment on *qualified* patronage dividends issued for earlier taxable years, there would be a special problem for the banks for cooperatives.

The Farm Credit Act requires that retained patronage dividends of the banks for cooperatives be issued in the form of allocations of surplus and class C stock. The Act also provides that after the retirement of all class A (Government) stock, class C stock also may be retired in money at par by the board of directors of a bank calling the oldest outstanding stock. When the surplus account of a bank exceeds 25 percent of total capital stock, the excess amount of allocated surplus may be distributed in the form of class C stock. However, it was only as each bank for cooperatives retired all of its Government capital and became subject to Federal income tax starting with the period June 30, 1965, to December 31, 1968, that a bank issued patronage dividends that *qualified* for deduction under the terms of the Internal Revenue Code. Accordingly, although section

531 would permit the additional 30 percent money payment requirement to be met by payment on outstanding qualified patronage dividends, the Farm Credit Act in effect requires that *unqualified* patronage dividends, issued since 1956 and before a bank for cooperatives became subject to Federal income tax, must be retired first.

Since the Farm Credit Act requires that retained patronage dividends of a bank for cooperatives be in the form of allocations of surplus account and class C stock, such patronage dividends cannot be issued in the form of an unconditional written evidence of indebtedness to mature within the next 15 years. Such banks can adopt a bylaw providing for payment of the remainder of its patronage dividends for years after 1969 within the 15 years after issue. However, such a bylaw would be subject to the provisions of the Farm Credit Act concerning allocated surplus and class C stock, and special problems occur under these circumstances.

First, the banks for cooperatives could have difficulty in meeting the 15-year limitation on retained patronage dividends. At the present time the revolving periods for the allocated equities vary by banks and range from 8 to 14 years. Four of the banks are at the 14-year level since they have just recently repaid all Government capital and have not yet had the opportunity to consider the retirement of their oldest outstanding capital held by cooperatives. There is no assurance that the amount of patronage dividends to be earned in future years will be sufficient to retire equities on a 15-year basis without weakening the financial structure of a bank. In such circumstances a bank might not be able to fully serve the needs of farmer cooperatives as intended by Congress.

Secondly, in the event of a net loss in the operations of a bank for cooperatives in any succeeding fiscal year, the Farm Credit Act requires that such loss be charged to allocated surplus and, to the extent not absorbed by surplus, to the impairment of class C stock. The above losses, therefore, would reduce the amount of patronage dividends to be retired at a future date. If there are sufficient earnings in succeeding years, any impairment of the class C stock would be restored, but there is no provision in the Farm Credit Act as to the restoration of any losses charged against allocated surplus. Conceivably, the amount payable on at least the allocated surplus portion of the patronage dividends some years hence might be less than when the patronage dividends were issued. If this possibility were considered to preclude a bank for cooperatives from meeting the additional 15-year requirement of section 531, although a reasonable interpretation could be otherwise, it would mean that none of its patronage dividends except those paid in money, could qualify for deduction.

These provisions would give the banks for cooperatives two poor alternatives. Either they would have to accept a weakened financial structure and, thus, a curtailment of their ability to serve agriculture, or accept tax burdens that were not contemplated in 1955 when Congress, in effect, asked cooperatives to take over the ownership of the banks by providing a plan under which cooperatives would invest their funds in the capital of the banks in order to retire the Government stock.

Lending operations of the banks for cooperatives

The banks for cooperatives provide seasonal and term loans to about 3,000 of the nation's 8,100 farmers' marketing, supply, and business service cooperatives. Such loans constitute about 60 percent of all borrowed funds by these organizations. At June 30, 1969, the banks had loans outstanding of $1.6 billion of which $650 million were seasonal loans, generally due within one year, and $945 million were term loans maturing in from one year to about 15 years. Since the banks began operations in 1933, loans totaling $22 billion have been made. The banks extend credit on a sound business basis and they counsel with borrowers on developing sound financial structures and operating programs. Encouragement to farmers to build cooperatives through which they can improve the profitability of their farm operations has been restated on many occasions as an intent of Congress.

The proposed requirements for the method of payment of patronage dividends unquestionably will weaken the financial structures of many cooperatives, particularly those that are smaller and newer. It will become more difficult for them to even maintain their present capital structure when, in many cases, they are in dire need to build additional capital. Consequently, many of the loans could develop into serious weaknesses and possibly result in losses, thus adversely affecting the operations and financial condition of the banks for cooperatives.

Effect of section 531 on cooperative borrowers

The cooperative approach has been effectively utilized by farmers to improve the profitability of their farm operations which have historically been and are yet typically small, independent enterprises with extremely limited bargaining power in the marketing of their products and purchase of production supplies and services. By associating together in cooperatives, farmers have created organizations which they control as member-owners and from which they benefit as patrons. The borrowing capacity justifying the credit required to make these cooperatives effective has largely been created by the implicit and explicit commitments of their members to reinvest portions of their allocations on an *equity* basis, as distinguished from a *debt* basis as section 531 would require. Term loans can be made on a sound basis by a lender only if he is reasonably assured that earnings, or in the case of cooperatives, savings or per-unit retains, will be generated in the future *and* that some portion of these inputs or savings will be capitalized and retained in the business as risk capital, thus creating repayment capacity. The result to be expected if section 531 is enacted that some term loans will not be made that otherwise would have been made, such loans may be smaller and not fully responsive to the financial requirement, amortized installments no doubt will be larger than practical and maturity periods will be shorter than otherwise. These restrictions in the extension of credit will obviously be harmful to most cooperatives and to the farmers they serve and to the communities in which they operate.

Most cooperatives have some type of capitalization plan which provides for the replacement of savings or retains capitalized in prior years with current margins or per-unit retains. The objective and effect of each of these plans is to place the burden of capitalizing the cooperative on those current patrons who are benefiting from the operations of the cooperative in direct proportion to their utilization of the cooperative. The length of time for which capitalized savings must be retained in the cooperative is dependent on many factors including the capacity of the cooperative to generate net margins, whether or not new investments in facilities and equipment are being made, and the extent to which the cooperative can and desires to utilize leverage on its member-owned capital. The critical element in the capitalization programs of all cooperatives is that the retention and retirement of retained net margins is entirely at the discretion of the board of directors and, ultimately, the membership to which it is directly accountable.

The prime effect of this section of the bill is to deny to cooperati·es and their members the right to capitalize earnings allocated to members which are retained in the cooperatives. The capitalization programs of the vast majority of cooperatives are based on the right and willingness of cooperative members to reinvest in equity form portions of the earnings of their cooperatives which have been allocated to them. Enactment of these provisions of section 531 would seriously jeopardize the continued financial stability, borrowing capacity, and effectiveness of many cooperatives in improving the profitability of their members' farming operations. This judgment is based on our conclusions regarding the implications of the above-mentioned prime effect of these provisions as illustrated by the following brief example.

Table 1 compares the financial condition of a cooperative at the end of 15 years on the basis of present laws and on the basis of the provisions of section 531. This comparison shows that the financial condition has changed substantially for the cooperative operating under section 531 and that any requests by it for term loans at that point must be given considerable analysis, and if made, must be on a much more conservative basis than to the other cooperative. This is true because the risk to the lender is greater, there being no net worth to protect the lender.

TABLE 1.—COMPARISON OF CHANGE IN FINANCIAL CONDITION, 15 YEARS OF OPERATIONS UNDER SEC. 531 AND PRESENT LAW

Balance sheets	Present	15 years later— Under sec. 531	15 years later— Under present law
Total assets	$500,000	$500,000	$500,000
Current liabilities	100,000	100,000	100,000
Term liabilities:			
Outside borrowings	100,000	100,000	100,000
15-year member investments		300,000	
Total liabilities	200,000	500,000	200,000
Net worth	300,000		300,000
Total liabilities and net worth	500,000	500,000	500,000

Assumptions

1. Net earnings of $25,000 annually.
2. Cash payment of 20 percent of savings each year ($5,000).
3. Remaining $20,000 each year retained as capital and a like amount of a prior issue of member capital retired in cash.

Note: The total cash payments in items 2 and 3 would fulfill the 50 percent cash requirement of section 531.

Table 2 compares the financial conditions 5 years later after experiencing a period of reduced savings from that of the previous 15 years. During the 5-year period, the cooperative operating under section 531 would need to retire $100,000 of 15-year member investment ($20,000 per year was retained in each of the first 15 years), but savings available for retention would total only $20,000. The deficit of $80,000 in capital funds is shown as being borrowed on a term basis. Although this period of reduced savings has seriously affected the financial condition of the cooperative operating under section 531, if it were operating under present tax laws it would remain financially sound with its borrowing capacity and ability to render service to its members unimpaired. This is because the board of directors has limited the retirement of equities retained in prior years to the amount of funds available from savings. This has necessarily increased the revolving cycle of equities to more than 15 years but this flexibility is essential if cooperative members are to assume the ownership risks of their own cooperative ventures, thus creating the borrowing capacity their cooperatives require to be effective.

TABLE 2.—COMPARISON OF FINANCIAL CONDITION FOLLOWING 5 YEARS OF UNFAVORABLE OPERATIONS UNDER SEC. 531 AND PRESENT LAW

[Based on figures shown in table 1]

	Balance sheets Under sec. 531	Balance sheets Under present law
Total assets	$500,000	$500,000
Current liabilities	100,000	100,000
Term liabilities:		
Outside borrowings	180,000	100,000
15-year member investments	220,000	
Total liabilities	500,000	200,000
Net worth		300,000
Total liabilities and net worth	500,000	500,000

Assumptions

1. Net earnings of $5,000 annually.
2. Cash payment equal to 20 percent of earnings each year ($1,000).
3. Cooperative under present law uses excess cash ($4,000 per year) to retire old equities to maintain net worth at $300,000.

4. Cooperative operating under section 531 retains $4,000 per year but must retire $20,000 per year of 15-year investments.

Note: The total cash payments in items 2 and 4 would fulfill the 50 percent cash requirement of section 531.

Enactment of section 531 would, as shown in Table 1, transform the character of the member investment in most cooperatives from owners' equity to debt. The most salient and injurious implication of this result is that the term borrowing capacity of cooperatives would be greatly reduced if not destroyed by their inability to financially withstand periods of unfavorable operating results as demonstrated in Table 2.

A bank for cooperatives or any other lender contemplating a term loan to a cooperative operating under section 531 cannot avoid giving prime consideration to two unfavorable facts: (1) The cooperative is faced with annual obligatory retirements of member investments pursuant to section 531 which are equal to 80 percent of its average long-term annual savings and substantially greater than its recent capacity to generate savings; and (2) no repayment can be anticipated unless and until net savings exceed the long-term average or as it may become possible for the cooperative to achieve its long-term average net saving with a lower asset investment. Obviously, the term lender would be forced to tailor his lending policies regarding loans to cooperatives in recognition of the fact that as long as a term loan is outstanding to a cooperative operating under the provisions of section 531, he must be prepared to realize on security in satisfaction of the loan. The potential for rapid deterioration of the financial condition of the cooperative and his position would be continual and, to a great extent, beyond his control or that of the organization's board of directors allowing, at best, a restricted grace period during which necessary adjustments to operations can be identified and effected.

The inescapable conclusion is that the enactment of section 531 would do serious harm to most cooperatives and might actually destroy a number of them. While the purpose of section 531 appears on the surface to assure cooperative members of receiving their allocations in cash within a stated period of time, it would in actuality deprive many cooperative members of the organizations which they have been encouraged by Congress to build in their own interest. Additionally, the enactment of this section of the House bill would effectively preclude farmers from acting together in the future to alleviate their income problems on their own initiative.

Inasmuch as section 531 would not increase tax revenues, but would impair the capacity of farmers through their cooperatives to provide, and obtain financing for, marketing, purchasing, and farm business services for themselves, the Federal Farm Credit Board and the banks for cooperatives consider it to be in the public interest that section 531 should be denied from the tax reform bill.

Tax Status of Farm Credit Banks and Associations (September 22, 1969)

I. PRELIMINARY

(a) What follows was prepared at the request of the Senate Committee on Finance to show the differences in the present tax status of the banks and associations which are under the supervision of the Farm Credit Administration, namely:

Federal Land Banks and Federal Land Bank Associations;
(Authorized in 1916 and make long-term farm mortgage loans)

Federal Intermediate Credit Banks;
(Established in 1923 and finance production credit associations and other institutions in making agricultural loans)

•Production Credit Associations; and
(Authorized in 1933 and make short- and intermediate-term loans to farmers)

Banks for Cooperatives.
(Established in 1933 and make loans to farmer marketing, purchasing, or service cooperatives)

(b) At the hearings, September 22, 1969, on H.R. 13270 (Tax Reform Act of 1969), there was a question as to whether the tax status of such banks and associations changed when their Government capital was retired. Except for the Federal land bank associations, all of the banks and associtions were started with

Government capital (capital stock owned by the United States). The Federal land banks completed retirement of their Government capital by 1947; the Federal intermediate credit banks by the end of 1968; each production credit association during the period 1945 to 1969; and each bank for cooperatives during the period 1965 to 1968. Such tax exemption as is granted by the Federal land banks and Federal land bank associations, and the Federal intermediate credit banks, by the Federal Farm Loan Act, continues as before they retired their Government capital. On the other hand, the tax exemption granted a production credit association or a bank for cooperatives or its property or income by the Farm Credit Act of 1933 no longer applies when such a bank or association is without Government capital. Mostly the difference is that the production credit associations and the banks for cooperatives became subject to income and similar taxes, Federal and State, when they retired their Government capital; but that the other banks and associations did not.

(c) After a separate explanation for the different banks and associations, this statement concludes with some of the relevant statutory provisions as printed in the United States Code.

II. FEDERAL LAND BANKS AND FEDERAL LAND BANK ASSOCIATIONS

(a) As provided in the Federal Farm Loan Act, as amended (12 U.S.C. 931-3), the real property of every Federal land bank and every Federal land bank association is subject to State, county, and municipal taxes, to the same extent, according to its value, as other real property is taxed (12 U.S.C. 933). Otherwise, such banks and associations are generally exempt from Federal, State, municipal, and local taxation (12 U.S.C. 931). Their exemption from Federal income taxes is specifically recognized in the Internal Revenue Code (26 U.S.C. 501 (a), (c) (1)).

(b) Mortgages executed to the Federal land banks are exempt from Federal, State, municipal and local taxation (12 U.S.C. 931).

(c) Consolidated Federal farm loan bonds issued by the Federal land banks and the income derived therefrom are exempt from State, municipal, and local taxation. Since the Public Debt Act of 1941, interest on such bonds is not exempt from taxation by the United States Government. Gain from the sale or other disposition of such bonds and transfer of the bonds by inheritance, gift, etc., are not exempt from either Federal or State taxation. (12 U.S.C. 931; 31 U.S.C. 742a).

(d) The Federal Farm Loan Act includes a provision, added in 1953, that any Federal land bank with outstanding capital stock held by the United States shall pay a franchise tax to the United States (12 U.S.C. 903). However, because the United States has not held any capital stock in a Federal land bank since 1947 and its authority to again purchase such capital stock was repealed in 1955, no franchise taxes have been paid.

(e) In addition to State and local taxes on real estate, the Federal land banks and Federal land bank associations pay employment taxes as do other employers under the Federal social security program and the Federal-State unemployment insurance program. However, for those land bank employees who continue under the Civil Service Retirement Act (a declining group), the banks contribute under that Act instead of paying social security taxes.

III. FEDERAL INTERMEDIATE CREDIT BANKS

(a) As provided in the Federal Farm Loan Act, as amended (12 U.S.C. 1111), each Federal intermediate credit bank has the same tax exemption accorded to Federal land banks and Federal land bank associations, and consolidated collateral trust debentures issued by the Federal intermediate credit banks enjoy the same tax exemptions as are accorded bonds issued by the Federal land banks. This is as more fully described in paragraphs (a) and (c) under II.

(b) Annually since 1923, except for the years 1932–36, and until the last of their Government capital was retired at the end of 1968, the Federal intermediate credit banks have paid a franchise tax to the United States. Under existing law, each bank is subject to payment of a franchise tax for any year during which any of its outstanding capital stock is held by the United States. Since 1956, the amount of the franchise tax is the lower of either (a) the interest cost to the United States on its investment in the capital stock of the bank as certified by the Secretary of the Treasury or (b) 25% of any net earnings of the bank for the year which are available after restoring any impairment of its capital stock, participation certificates, and surplus account, and adding 25% of the net earnings then remaining to its reserve account (12 U.S.C. 1072(a)). No further franchise tax will be payable by any Federal intermediate credit bank so long as it continues without Government capital.

(c) In addition to State and local taxes on real estate, the Federal intermediate credit banks pay employment taxes as do other employers under the Federal social security program and the Federal-State unemployment insurance program. However, for those credit bank employees who continue under the Civil Service Retirement Act (a declining group), the banks contribute under that Act instead of paying social security taxes.

IV. PRODUCTION CREDIT ASSOCIATIONS

(a) As provided in the Farm Credit Act of 1933, as amended (12 U.S.C. 1138c), any real property and any tangible personal property of the production credit associations has always been subject to Federal, State, Territorial, and local taxation to the same extent as other similar property is taxed. In a production credit association, the Government capital may be in the form of class A stock (which results in partial tax exemption) or class C stock (which has no effect on tax status). While the Government holds class A stock in such an association, its property, its franchises, capital, reserves, surplus, and other funds, and its income, are exempt from all taxation now or hereafter imposed by the United States or by any State, Territorial, or local taxing authority. However, the exemption does not apply with respect to any production credit association or its property or income after the class A stock held in it by the Government has been retired, as is now the case for all of the associations.

(b) Presently, therefore, the production credit associations are subject to taxes as is any other corporation doing business as they do. The most significant change because of the retirement of their Government capital is that the associations now pay Federal income tax and State income or similar taxes, in addition to taxes on real property and tangible personal property. They also pay employment taxes under the Federal social security program and the Federal-State unemployment insurance program.

V. BANKS FOR COOPERATIVES

(a) As provided in the Farm Credit Act of 1933, as amended (12 U.S.C. 1138c), any real property and any tangible personal property of the 13 banks for cooperatives has always been subject to Federal, State, Territorial, and local taxation to the same extent as other similar property is taxed. While the Government holds any stock in such a bank, its property, its franchises, capital, reserves, surplus, and other funds, and its income, are exempt from all taxation now or hereafter imposed by the United States or by any State, Territorial, or local taxing authority. However, the exemption does not apply with respect to any bank for cooperatives or its property or income after the stock held in it by the United States has been retired, as is now the case for all of the banks for cooperatives.

(b) The Farm Credit Act of 1933, as amended (12 U.S.C. 1138c), provides further that consolidated collateral trust debentures issued by the banks for cooperatives shall be exempt both as to principal and interest from all taxation (except surtaxes, estate, inheritance, and gift taxes) imposed by the United States or by any State, Territorial, or local taxing authority; however, under the Public Debt Act of 1941, as amended (31 U.S.C. 742a), the income derived from the debentures and gain from the sale or other disposition thereof are subject to all taxation imposed under the Internal Revenue Code or laws amendatory or supplementary thereto. This separate provision continues applicable as to the debentures and is not changed by the retirement of Government capital from the banks for cooperatives.

(c) Annually since 1953 each bank for cooperatives has paid a franchise tax to the United States, until the last of its Government capital was retired during the period 1965 to 1968. This is required for any year during which any of the outstanding capital stock of a bank is held by the United States. The amount of the franchise tax is the lower of either (a) the interest cost to the United States on its investment in the capital stock of the bank as certified by the Secretary of the Treasury or (b) 25% of any net savings of the bank for the year which are available after restoring any impairment of its capital stock and adding 25% of the net savings then remaining to its surplus account (12 U.S.C. 11341(a)). No further franchise tax will be payable by any bank for cooperatives so long as it continues without Government capital.

(d) Presently, therefore, the banks for cooperatives are generally subject to taxes as is any other corporation doing business as they do. The most significant change because of the retirement of their Government capital is that the banks now are subject to Federal income tax and State income or similar taxes, in addition to taxes on real property and tangible personal property. They also pay employment taxes under the Federal social security program and the Federal-State unemployment insurance program. However, for those cooperative bank employees who continue under the Civil Service Retirement Act (a declining group), the banks contribute under that Act instead of paying social security taxes.

VI. STATUTORY PROVISIONS AS PRINTED IN UNITED STATES CODE

Federal land banks and associations

Section 26 of Federal Farm Loan Act, as amended, as codified in Title 12 of United States Code.

EXEMPTION FROM TAXATION

§ 931. Federal land banks and associations; mortgages and bonds as instrumentalities of Government.

Every Federal land bank and every Federal land bank association, including the capital and reserve or surplus therein and the income derived therefrom, shall be exempt from Federal, State, municipal, and local taxation, except taxes upon real estate held, purchased, or taken by said bank or association under the provisions of sections 761 and 781 of this title. First mortgages executed to Federal land banks, or to joint stock land banks, and farm loan bonds issued under the provisions of this chapter, shall be deemed and held to be instrumentalities of the Government of the United States, and as such they and the income derived therefrom shall be exempt from Federal, State, municipal, and local taxation. (July 17, 1916, ch. 245, title I, § 26, 39 Stat. 380; Aug. 18, 1959, Pub. L. 86–168, title I, § 104(h), 73 Stat. 387.)

§ 932. Joint-stock land banks; State taxation of shareholder, limitations on.

[Obsolete inasmuch as all joint stock land banks have been liquidated.]

§ 933. Federal and joint-stock land banks; real property not exempt.

Nothing in sections 931–933 of this title shall be construed to exempt the real property of Federal and point-stock land banks and Federal land bank associations from either State, county, or municipal taxes, to the same extent, according to its value, as other real property is taxed. (July 17, 1916, ch. 245, title I, § 26, 39 Stat. 380; Aug. 18, 1959, Pub. L. 86–168, title I, § 104(h), 73 Stat. 387.)

Federal intermediate credit banks

Section 210 of Federal Farm Loan Act, as amended, as codified in Title 12 of United States Code.

TAX EXEMPTION

§ 1111. Capital and income; debentures instrumentalities of Government.

The privileges of tax exemption accorded under section 931 of this title shall apply also to each Federal intermediate credit bank, including its capital, reserve, or surplus, and the income derived therefrom, and the debentures issued under this subchapter shall be deemed and held to be instrumentalities of the Government and shall enjoy the same tax exemptions as are accorded farm-loan bonds in said section. (July 17, 1916, ch. 245, title II, § 210, as added Mar. 4, 1923, ch. 252, title I, § 2, 42 Stat. 1459.)

Banks for cooperatives and production credit associations

Section 63 of Farm Credit Act of 1933, as amended, as codified in Title 12 of United States Code.

§ 1138c. Tax exemption; realty and tangible personality as subject to taxation; termination of tax exemption after retirement of Government-owned stock.

The Central Bank for Cooperatives, and Production Credit Association, and Banks for Cooperatives, organized under this chapter, and their obligations, shall be deemed to be instrumentalities of the United States, and as such, any and all notes, debentures, bonds, and other such obligations issued by such banks, or associations shall be exempt both as to principal and interest from all taxation (except surtaxes, estate, inheritance, and gift taxes) now or hereafter imposed by the United States, or by any State, Territorial, or local taxing authority. Such banks, and associations, their property, their franchises, capital, reserves, surplus, and other funds, and their income shall be exempt from all taxation now or hereafter imposed by the United States or by any State, Territorial, or local taxing authority; except that any real property and any tangible personal property of such banks, association, and corporations shall be subject to Federal, State, Territorial, and local taxation to the same extent as other similar property is taxed. The exemption provided herein shall not apply with respect to any production credit association or its property or income after the class A stock held in it by the Governor has been retired, or with respect to any bank for cooperatives or its property o. income after the stock held in it by the United States has been retired. (June 16, 1933, ch. 98, title VI, §63, 48 Stat. 267; Aug. 11, 1955, ch. 785, title II, § 205, 69 Stat. 663; July 26, 1956, ch 741, title I, § 105(*o*), 70 Stat. 666.)

From Internal Revenue Code as codified in Title 26 of United States Code.

§501. Exemption from tax on corporations, certain trusts, etc.

(a) Exemption from taxation.

An organization described in subsection (c) or (d) or section 401 (a) shall be exempt from taxation under this subtitle unless such exemption is denied under section 502, 503, or 504.

* * *

(c) List of exempt organizations.

The following organizations are referred to in subsection (a):

(1) Corporations organized under Act of Congress, if such corporations are instrumentalities of the United States and if, under such Act, as amended and supplemented, such corporations are exempt from Federal income taxes.

* * *

From Public Debt Act of 1941, as amended, as codified in Title 31 of United States Code.

§742a. Same; by Federal tax Acts

(a) Interest upon obligations, and dividends, earnings, or other income from shares, certificates, stock, or other evidences of ownership, and gain from the sale or other disposition of such obligations and evidences of ownership issued on or after March 28, 1942, by the United States or any agency or instrumentality thereof shall not have any exemption, as such, and loss from the sale or other disposition of such obligations or evidences of ownership shall not have any special treatment, as such, except as provided under the Internal Revenue Code of 1954; except that any such obligations which the United States Maritime Commission or the Federal Housing Administration had, prior to March 1, 1941, contracted to issue at a future date, shall when issued bear such tax-exemption privileges as were, at the time of such contract, provided in the law authorizing their issuance. For the purposes of this subsection a Territory, a possession of the United States, and the District of Columbia, and any political subdivision thereof, and any agency or instrumentality of any one or more of the foregoing, shall not be considered as an agency or instrumentality of the United States.

(b) The provisions of this section shall, with respect to such obligations and evidences of ownership, be considered as amendatory of and supplementary to the respective Acts or parts of Acts authorizing the issuance of such obligations and evidences of ownership, as amended and supplemented.

(c) Nothing contained herein shall be construed to amend or repeal sections 114 and 115 of the Revenue Act of 1941. (Feb. 19, 1941, ch. 7, § 4, 55 Stat. 9; Mar. 28, 1942, ch. 205, § 6, 56 Stat. 190; June 25, 1947, ch. 147, 61 Stat. 180; Sept. 22, 1959, Pub. L. 86–346, title II, § 202, 73 Stat. 624.)

The CHAIRMAN. Thank you very much, gentlemen.

Mr. JAENKE. Thank you, sir.

The CHAIRMAN. Our next witness will be Mr. Jerry Voorhis, past president of the Cooperative League of the United States.

Senator CURTIS. Mr. Chairman, Mr. Voorhis was a hardworking and respected Member of the House of Representatives for many years, with whom I had the opportunity to serve.

The CHAIRMAN. We are very happy to have you here, Mr. Voorhis, particularly with that introduction from Senator Curtis.

STATEMENT OF HON. JERRY VOORHIS, PAST PRESIDENT, COOPERATIVE LEAGUE OF THE UNITED STATES; ACCOMPANIED BY SHELBY EDWARD SOUTHARD, A WASHINGTON REPRESENTATIVE OF THE COOPERATIVE LEAGUE

Mr. VOORHIS. May I introduce Mr. Shelby Southard, local representative of the Cooperative League, who is sitting with me.

I would like to add, Mr. Chairman, if I may, to Senator Curtis' very kind reference to service in the House, that it ended by my defeat by a certain gentleman named Richard M. Nixon.

I appreciate very much indeed the members of the committee remaining here until this late hour to hear a witness like myself, but I believe what I have to say is of some importance to our country.

I want first to associate myself completely with the testimony of former Senator Carlson, and with the letter the chairman made reference to from Mr. Phil Campbell, the Under Secretary of Agriculture.

These points, together with the testimony of Mr. Jaenke, told the story pretty well.

My appeal is that section 531 be stricken from the bill. I think it has no place in the bill.

I think it has nothing to do with tax reform, with revenue, and I think it was put there, an obviously bad circumstance, because the persons most affected were given no opportunity to be heard, which underlines my thanks to this committee for this hearing now.

By the way, Mr. Chairman, I ask consent that my statement be included in the record, and I am not going to read it.

The CHAIRMAN. That will be done. We do that in all cases, both the statement and the summary.

Mr. VOORHIS. I think I need not underline the great value to this country of cooperatives as one of our forms of business. They are the best chance, if not the last chance, for the American pattern of owner-operated agriculture to survive in this economy so largely monopolistic as it is.

The farmer, when he buys and when he sells, has got to stand in the marketplace not alone as an individual, but together with his fellows.

Every other major industry in this country has been integrated. Agriculture has a right to a degree of relationship between a farm operation on the one hand and the related business on the other, and this is what the farm cooperative is.

I take it we are interested in preserving the most efficient, productive method known to man; namely, the American pattern of agriculture. Cooperatives are important also because they make it possible for all kinds of people, including very poor people, to own a share of the American free economy, and this is being urged upon our poor people right now as a means of overcoming their poverty by their own effort.

Now then, section 531 strikes a bitter blow at the opportunity of cooperatives to obtain capital. Cooperatives are different from other businesses. Cooperatives are obligated to return what would be profit to another business back to their patrons in patronage refunds. They don't choose to do this. They must do it.

Consequently, it is obvious that the average investor is not interested in investing in cooperatives for gain. The value of cooperative securities is of value only to the member of that cooperative, the person who wants to use its services, and those who contend that they are doing him a favor by getting him cash forget that he is much better off if he can have ownership of a new, up-to-date fertilizer plant, a new petroleum facility, a new cottonseed or soybean oil mill, a new rice mill or something of the kind than he would be just to have cash for his wife perhaps to spend on a color television set.

And so it is not a kindness to that member to deny him or curtail his right to contribute capital to his cooperative. The one time these members have a good chance to do that is at the time the cooperatives pay them its patronage refund, and the extent to which those patronage refunds are accepted by the member in noncash form represents his contribution to the capital of his own business, and a matter of great value to him.

The other way in which cooperatives might obtain capital is by borrowing the capital. What does section 531 do? It says that you cannot over a period of time pay more than 50 percent in noncash form. You must pay that much in cash. This is not true with any other kind of business.

It says, in the second place, that cooperatives, unlike all other businesses, must resolve their capital, their equity capital, within a 15-year period. It is obviously discriminatory to say that to co-ops and not to say it to other businesses.

This strikes, as Mr. Jaenke has just said, directly at their borrowing power, because it turns what would be the equity capital provided by the members into debt capital and cripples them for that reason.

Mr. Chairman, there is much more that I could say. I will not prolong this any further, as a means of expressing my further appreciation to the committee for hearing us at this late hour.

The CHAIRMAN. Thank you very much.

Any questions?

Thank you very much for a very fine statement.

(Hon. Jerry Voorhis' prepared statement follows:)

STATEMENT OF JERRY VOORHIS OF THE COOPERATIVE LEAGUE OF THE USA

SUMMARY

Recommends deletion of Section 531 of H.R. 13270.

Points out that this section is discriminatory to cooperatives.

That no hearings on this provision were held to permit cooperatives to explain their opposition.

That cooperatives would be handicapped severely in raising development capital.

That this legislation preempts a proper function of the cooperative's board of directors.

That it would place a roadblock in front of cooperative development at a time when government policy is to encourage cooperatives as a means of shoring up farm income and assisting those in urban poverty to escape by means of cooperative enterprises.

STATEMENT

The Tax Reform Bill, as it passed the House of Representatives, contains provisions affecting cooperatives which are ill conceived, discriminatory, extremely damagng to American farmers, and which, if finally enacted into law would be punitive in nature.

One such provision would require after a short period of years that cooperatives must pay out fifty per cent of their patronage refund in cash. Another would require that capital investment of cooperative members be returned to them in cash within 15 years. These provisions were inserted in the Tax Reform Bill without any notice whatsoever having been given to cooperative organizations or businesses. They were inserted after the Committee on Ways and Means had, however, heard testimony from professional opponents of cooperative business enterprises. I shall not in this statement undertake to expand on the obvious unfairness of this procedure. For it is plain to see. I will only express deep appreciation to this distinguished Committee of the United States Senate for inviting testimony from Cooperatives on this vitally important subject.

Neither shall I dwell at any length upon the values and contributions to the health of our national life and economy which cooperative institutions have made and are making today. I shall only point out that agricultural cooperatives are the one best hope, if not the only substantial hope, which the independent owner-operated farmers of this country have to survive in an economy dominated by huge monopolies, some of which are attempting at this very moment to invade the field of agriculture and drive the independent farmer out of business. Concerning cooperatives in general, it may be pointed out that they are a legitimate and unique form of voluntary enterprise which make it possible for millions of people, including even very poor ones, to participate as owners of their own businesses in our American economic life. Something like a quarter of our American families are owners of businesses today only because the cooperative form of business enterprise opens that door to them.

Surely this is something that Congress does not want to destroy. In fact the Government of the U.S. is right now urging the formation of cooperatives by low-income people as one of the most constructive ways of enabling them to work their way out of poverty. The critical problem is how to secure enough capital to make such cooperatives viable institutions. Every encouragement should be given to these cooperatives to accumulate capital. And it need hardly be pointed out that investors aren't going to rush to provide it. It must be supplied basically by the members.

But if Section 531 were to be permitted to remain in the Tax Reform Bill a fatal blow would be struck at the hope of cooperatives of low-income people to accumulate the modest capital which they must have.

The provisions in the pending legislation would not raise a single cent of additional revenue. The Revenue Act of 1962 which was well and thoughtfully hammered out by the Congress makes absolutely certain that both cooperatives and their patrons will pay their full share of taxation. Indeed that Act already requires that twenty per cent of all patronage refunds be paid in cash to members and contains requirements of the strictest character which require cooperatives to obtain from their members their consent to receive a portion of their patronage refunds in stock or certificates of investment before the cooperative is allowed to treat those payments as "qualified patronage refunds." While this provision laid very onerous additional burdens upon cooperatives, it nonetheless received almost general support from cooperative organizations, and I am confident that practically every member of Congress believed when that Act was passed that the question of taxation of cooperatives had been well and thoroughly settled for a long time to come.

I feel, therefore, Mr. Chairman, that cooperatives in this country are entitled to regard as ill timed, ill conceived, and a breach of faith the inclusion of this discriminatory provision in the pending legislation.

Congress does not presume to tell the other segments of the business community how they must dispose of their dividend payments or their patronage refund rebates if they make any. Why, then, should cooperatives be singled out in this manner? It is important to bear in mind that cooperatives cannot, in the nature of the case, raise capital in the same manner that other businesses do. The sharec and securities of cooperatives never rise above par, are not, therefore, in any way objects of investment for the average investor, and are of real value only to those who need and use their services.

Patronage refunds paid in non-cash form constitute the member-patron's contribution to the capital of his cooperative. The nature of that as a capital subscription cannot be blurred without seriously damaging the opportunity of cooperatives to secure the financing they must have to stay in business. The 15-year pay out requirement would probably do that very kind of damage. The enemies of cooperatives know this very well indeed. That is why they have proposed it.

And again—why should Congress place such a requirement on cooperatives when it does not propose doing the same thing with respect to their competitors? Such a provision—across the board—would have to provide that all corporations retire their outstanding stock every 15 years and begin all over with their financing.

It is pertinent at this point to recall that the obligation to return as patronage refunds to patrons their proportionate share of earnings is no exclusive province of cooperatives. Any business, including the large corporations, may obligate itself if it chooses to pay back earnings to patrons in proportion to their patronage just as cooperatives do.

The pertinent fact is that other businesses do not choose to do this. Cooperatives by their very nature must so choose.

Opponents of cooperatives make it their business to misrepresent the essential differences between cooperatives and other businesses. They deliberately call patronage refunds dividends and speak of the net margins of cooperatives as profits. They speak of member-patrons and shareholders as if they were the same. They are not. They disregard the essential fact about a cooperative business.

That fact is that the cooperative is formed, owned, and controlled by the same people who patronize it and by no one else.

Hence the cooperative binds itself to operate on a non-profit basis so far as business with its members is concerned. The earnings which result from business with members legally belongs to those members, not to the cooperative. In other businesses the earnings belong to the business not certainly to it customers or patrons. Such a concept sounds ridiculous on its face.

The cooperative business must return to its members all of their share of the earnings.

On any business a cooperative does beyond this and which it is not obligated to return to members it is fully taxed at regular rates.

But the second point is that any business may if it chooses operate as cooperatives do—provided it obligates itself *ahead of time* to return to its customers—not its stockholders—their share of profits. Other businesses want to keep their profits or to pay them in dividends to shareholders—mostly the former.

They can do that.

Cooperatives cannot.

This is an essential basic difference and the tax laws have always recognized it. So have the courts.

It should not now be blurred by action of this Congress, hastily taken.

Neither should it penalize cooperatives nor deny them their main opportunity to gain the working capital they so badly need.

Remembering that hardly any cooperative members are in any sense wealthy people, it should be quite clear that the one best time for them to make investments in their cooperative businesses is when they receive their patronage refunds. What in practical terms it means when a portion of these patronage refunds are paid in shares or certificates of ownership is this: it means that instead of simply receiving a certain number of cash dollars, the cooperative member receives his share of a new or improved fertilizer plant, milk processing plant, cotton seed oil mill, petroleum facility, feed mill, or other facility, which will strengthen basically his economic position and enable him to stand taller in the market place.

Again, in practical effect, what the bill as it came from the House proposes to do is to tell cooperative members that they are forbidden to authorize their cooperative to invest their patronage refunds, above the 20% cash requirement, in any kind of plant that would expand or improve the services of that cooperative to its members.

I do not believe the Senate, or indeed the House on reflection, wants to say a thing like that to American citizens. It is, however, precisely what some of the most clever opponents of cooperatives and those who would like to cripple their competitive position would indeed like to have Congress say.

For all of the foregoing reasons, it is the earnest hope of the Cooperative League of the United States and certainly of your present witness, that this distinguished Committee will in its wisdom eliminate Section 531 from this Tax Reform Bill because it is a punitive provision against cooperatives, and raises not one cent of additional revenue.

The CHAIRMAN. Our next witness will be Mr. Melvin Sims, president of the National Council of Farmer Cooperatives.

STATEMENT OF MELVIN E. SIMS, PRESIDENT, NATIONAL COUNCIL OF FARMER COOPERATIVES; ACCOMPANIED BY KENNETH D. NADEN, EXECUTIVE VICE PRESIDENT, NATIONAL COUNCIL OF FARMER COOPERATIVES; AND L. JAMES HARMANSON, JR., GENERAL COUNSEL

Mr. SIMS. Mr. Chairman, I am accompanied by Mr. Kenneth D. Naden, executive vice president of the National Council of Farmer Cooperatives and Mr. L. James Harmanson, Jr., general counsel of the National Council of Farmer Cooperatives. I have prepared a statement which has been submitted to the committee which I understand will be included in the record. I will proceed with my oral summary.

The CHAIRMAN. We will print the entire statement, and then the oral summary as well.

Mr. SIMS. I am Melvin E. Sims, president of the National Council of Farmer Cooperatives. This is a national organization representing approximately 4,500 farmer cooperatives who serve several million farmers throughout our Nation.

I am also an active farmer, living on and operating, in partnership with my brother, a livestock and grain farm in west-central Illinois. I have been deeply involved in cooperative activity for the past 23 years and have experienced firsthand the substantial contribution which farmer cooperatives have made toward improving the profitability of my farming business.

Section 531 of the tax reform bill is the most serious threat to the continuation of this self-help program that has occurred since I began farming in 1946. I respectfully request that this entire section be removed in its entirety from the tax reform bill for the following reasons:

1. It is based upon the erroneous premise that farmers must be protected from their own organizations. Farmers own and control their cooperatives and direct them through the democratic processes. Farmers can influence the direction and policies of their organization in a number of ways; namely, by changing the bylaws or articles of incorporation at an annual meeting, by electing directors who represent them. These directors employ the manager, and I have yet to see a manager defy the board of directors or flagrantly violate policy and survive, and finally and perhaps most effectively, the farmer may choose to do business elsewhere. I might add that there are numerous representatives of competing firms who are spending full time trying to convince farmers to do just that—to leave their cooperative and do business with them.

There is virtually no way a cooperative can be out of tune with a majority, or even a sizable number of its members, and successfully survive. As a farmer and a cooperative director, I would like to pay out a large cash patronage dividend each year—it stimulates cooperative growth. But I was not elected to liquidate the cooperative, but to exercise prudent judgment in providing a continuing service. Distributing more cash than is prudent reminds me of the old fable where they killed the goose that laid the golden egg.

2. Section 531 is an arbitrary and unwarranted dictation by the Federal Government to the members of a cooperative as to how they should finance and operate their business. This legislation is in effect

a mandatory corporate financing plan, and I know of no other such restriction which is imposed upon any of the remaining three forms of doing business. The legislation is punitive and discriminatory as far as farmers and their cooperatives are concerned. As a farmer, this section takes out of my hands how I choose to finance my cooperative.

3. The legislation is not, in my opinion, tax reform and should not be a part of this bill. There is little change expected to result in net revenue to the Government and the burden of the tax bill will remain essentially as before. It has the appearance of attempting to legislate an operating handicap for cooperatives.

4. The proposed legislation seems to be contradictory to the national policy of supporting and promoting self-help programs to help farmers and alleviate rural poverty. Farmer cooperatives generally build their facilities in small villages or open country, employ rural people, return their earnings to farmers, and generally stimulate the rural economy.

5. Section 531 will, by weakening the small cooperative, put more economic power in the hands of the large industrial corporation, which is not in the best interests of farmers or the public in general. Contrary to what some have said, cooperatives are quite modest in size when compared to many corporations. As a farmer, I am very much aware of the imbalance of the bargaining position which exists between farmers and the many corporations with which they must deal. The cooperative approach is the most promising solution to this dilemma. We must not destroy this valuable tool and deny farmers the benefit of their cooperative institutions.

6. The proposed legislation will make it extremely difficult, in some cases impossible, for the cooperative to provide both the equity and debt capital to finance the growing farmer demand for facilities and services. A fixed date of redemption on capital stock changes its character from equity to debt capital and causes a double impact on the debt to equity ratio. As has already been pointed out, it would greatly reduce and in some instances eliminate the borrowing capacity of the cooperative business.

7. The proposed legislation would, in fact, hurt farmers at a time when they are already caught in a severe cost price squeeze. Farmers would be hurt in the following ways:

A. This could lead to the forced liquidation or bankruptcy of many cooperatives and the resultant loss of the farmers investment in his cooperative.

B. The ultimate elimination of his cooperative would deny the farmer the future benefit of his cooperative.

C. Many cooperative members are now receiving dividends on their stock investment. Most cooperatives would be forced to eliminate stock dividends if they were required to revolve all patronage securities in a limited period of time.

D. Many farmers are now able to redeem their stock or other securities upon moving from the territory, upon retirement, in settlement of estates and even upon demand. The implementation of this legislation would force all to conform to a fixed and rigid revolvement period. A farmer who now retires at age 65, and can in many cases redeem his stock upon retirement, would under section 531 be forced to wait 15 years for revolvement of his investment.

8. All previous Congresses and administrations have recognized the substantial benefit that farmer cooperatives can make toward the improvement of the welfare of farmers and ultimately of the consumer in the form of increased efficiency in food production. If the Congress wanted to destroy the cooperative form of business, this would be a logical first step. I view this proposal as I view terminal cancer. This section must be removed in its entirety if cooperative life is to be sustained.

In conclusion, I mention the fact that we have the unique situation in which every organized group representing farmers and their cooperatives are, to the best of my knowledge, unanimously opposed to section 531 of this bill and seek its removal. It is a bit ironic that all groups representing farmers are unanimously opposed to section 531 while those outside of farming who support this bill are doing so. purporting to speak for farmers.

The CHAIRMAN. Thank you very much, sir.

Are there any questions?

Senator CURTIS. Not at this time.

Senator MILLER. I have one. Mr. Sims, one of the most telling arguments that you used is that, if this provision of the bill stayed in, it would by law take from the farmers their power of decisionmaking in the cooperative.

The essence of the cooperative is that it is a democracy.

Mr. SIMS. That is right.

Senator MILLER. The decisions are made by the members, by the majority of the members. I don't know what the situation over in the House was on this, but I am wondering, and I don't know what the situation would be in the conference committee, if, say, the Finance Committee knocked this out, I don't know what the conference would come up with, but if the power of decision on this matter of holding these earnings in a cooperative was made annually by a majority of the members, if that was a requirement, would that pose any particular difficulties? Would not that be in line with the philosophy of the cooperative?

Mr. SIMS. I am assuming that you mean the majority of those present at the annual meeting.

Senator MILLER. Not necessarily those present, but a majority either at the annual meeting or a majority of the membership by mail solicitation, so that you have in fact, a majority of the members of the co-op making the decision every year.

Mr. SIMS. Of course, farmers presently have this privilege of sponsoring a motion at the annual meeting to amend the articles or bylaws to conform to any capital plan that they desire, and it would then be acted upon by those present.

This procedure you asked about, it seems to me, might present a hardship, if it were a majority of all members. This might involve the solicitation of proxies and rather extensive work, which would be an added burden.

Also this would create an uncertainty as far as their long-term capital program is concerned, and lenders might be hesitant to loan long-term funds, if the repayment of this loan were based upon a capital program or financing program that must be submitted to the membership for annual approval.

Senator MILLER. Why would they be any more uncertain with that than they are now, if the members can get together now and change the situation?

Mr. SIMS. Yes. I think there would be some added uncertainty, in view of the fact that this would come up each year, and would be an annual decision and previous committment.

Senator MILLER. But isn't that a part of the concept of the cooperative being in control of the majority of its members?

Mr. SIMS. Yes, and this we cherish very much. I would like to have the opportunity to research the idea that you have presented. I believe that you introduced this when the Secretary of the Treasury was testifying. I think it would be well to research this and see what the impact of this kind of a proposal might be.

Senator MILLER. Let me say this. You represent the National Council of Farmer Cooperatives. I have had occasion to attend a good many annual meetings of cooperatives out in my State.

I must say that it has been my observation they are all operating quite above board. Of course, in any organization or any group of organizations, you may have some abuses that occur.

I don't know, as I say, what the House had in mind, but it is conceivable that there might have been some abuses where it might be very difficult for a period of time at least for the members to assert their authority, until maybe after it is too late, but if they do this on an annual basis, by majority vote, I can't see how anybody can object to that, this concept of the cooperative.

Mr. SIMS. The democratic processes do have some weaknesses. For instance, I am not always in agreement with the decisions made by my local schoolboard. But I am quite willing to abide by the decisions of the elected representatives.

I become active times in seeing who it is that is elected to these boards, but I am reasonably well satisfied with the democratic processes, and I would agree with you that for the most part they do function very effectively, and cooperatives are responsive.

I repeat again that I don't think there is any way that a cooperative can be out of tune with a majority or a sizable number of their members, and successfully survive. It is just not in the picture.

Our experience has been that we have to poll them, we have to inform our members, we have to be understanding and be responsive to their desires, in order to survive.

Senator MILLER. Thank you.

Senator HARTKE. I understand that about five of the cooperatives in the country are on the list of the 500 largest corporations in the country as listed by Fortune magazine. What do you have to say about that?

Mr. SIMS. It is true that five cooperatives are on the list of the 500 largest industrials. I believe, according to the 1968 listing, the largest cooperative was in 175th position. Size, as you know, is a relative term: and we ought to bring this into proper perspective. First, let's take a look at the share of market which is currently represented by cooperative organizations. According to the Farmer Cooperative Service of the U.S. Department of Agriculture for the year 1966, the most recent statistics which are available, cooperatives had 28 percent of the marketing volume and 16 percent of the farm producion supplies volume.

Marketing volume includes values of a very diverse nature, including those in which the farm product is taken from the farm all the way through processing and marketing of the final product and those which involve only a very simple one-step transaction. Twenty-six of the top 50 industrials in Fortune's list are now competitors with cooperatives for the farm market. These 26 cooperatives have combined sales of $79 billion, combined assets of $87 billion, and combined net income of $6 billion. The after-tax net income of these 26 corporations is nearly double the total farm supply gross sales value of the 8,300 farmer cooperatives in the United States. When people say, "farm cooperatives are getting too big," I am inclined to ask "compared to whom."

Senator HARTKE. I understand when Mr. Mortimer Caplin, former Commissioner of Internal Revenue, testified before our committee last week, he referred to a study that he had made for the National Tax Equality Association to the effect that it is constitutional to subject the net margins of cooperatives to a corporate income tax. What does your organization, and what do you personally, have to say concerning this?

Mr. SIMS. As you know, I am a layman, not an attorney, but it seems to me that this particular section (531) of the tax reform bill is not a question of constitutionality, but rather a question of basic policy for the Congress to decide. This policy decision was resolved after lengthy hearings and extensive research in 1962. The decision seemed to be reasonable and fair, and I believe it to be adequate today. Now, the National Council of Farmers Cooperatives did have a study on this subject made in 1962 by Mac Asbill, Jr., a well-known attorney of Washington, D.C., and it was his opinion that Congress has the power to tax to patrons the noncash patronage refunds at face amount. His opinion was made part of the 1962 hearings, and I have attached a copy of the opinion to my statement. Would Mr. Harmonson, our general counsel, desire to add any further comments?

Mr. HARMONSON. I think that is sufficient. It might be said that when Mr. Caplin testified on September 12, at the request of a member of the committee, there was introduced in the record a study made by the staffs of the Treasury and the Joint Committee on Internal Revenue Taxation in 1951. There was also introduced in the record a study that Mr. Caplin had made on behalf of the National Tax Equality Association. Although it is true that there is no relation between these opinions that Congress has the power under the Constitution to tax cooperatives on net margins and section 531 of the bill that question was raised in connection with a bill which has been introduced by Senator Ribicoff.

Senator HARTKE. Thank you.

Senator RIBICOFF. Mr. Sims, under the present law, I understand that the cooperative patron is taxed on the entire amount of the cooperative's paper allocation to him even though he may only receive 20 percent in cash. I also understand that it is possible that a patron may be taxed on the paper allocation to such an extent that because of his high tax bracket, the actual cash he receives from the cooperative is not enough to cover his tax bill to the Government on his paper allocation. If we were to raise the 20-percent payout provision would you not agree that this would alleviate the position of the patron?

Mr. Sims. In my testimony which was presented for the record, we cite examples of average income and the resulting tax. Under the present income tax rate, a single farmer receiving average net farm income—and you might add that the single farmer is the exception—and would be in the highest tax bracket. If he received the average net farm income of $4,841 in 1968 the effective tax rate would have been 18.8 percent. I do not believe that the 50-percent cash payout is justifiable, nor is it desired by farmers who understand the need for a capitalization program to finance their cooperative. A 50-percent cash payout requirement would force an undue hardship on the farmers' off-farm business and could lead to the eventual liquidation of his cooperative institution. Those farmers who understand the financial and capital problems of their cooperative are more interested in maintaining the long-term benefit from their cooperative than they are in seeking an immediate payout. As a farmer, I certainly subscribe to the 1962 tax treatment, and I believe it is fair and just and that it should remain in effect.

Senator Ribicoff. The ultimate goal of our tax system is to tax in similar measure those who are in similar economic circumstances. The House bill has adopted several provisions to assure that some tax-exempt organizations and foundations pay their way when they enter the competitive marketplace. I have introduced legislation, S. 2646, which would place an ordinary corporation tax on cooperatives and provide protection to the patrons through a $300 dividend exclusion. From a policy standpoint, it seems fair to me that when cooperatives engage in normal business activities in the marketplace—and when they reach the size where several are included in the Fortune Directory of the largest 500 corporations—they should also pay normal corporate taxes. What is your view on this?

Mr. Sims. I do not ask for any preferential treatment, and I do not want any discriminatory treatment for cooperatives. I only ask for fair treatment and a recognition of the different purpose for which cooperatives are formed. Cooperatives are an extension of "barn-raising and threshing bee." It is a self-help program. In it, farmers join together to do what they cannot do alone. Industrial corporations have long organized their structure on a functional basis. For instance, many have a purchasing department, a marketing department, and so forth. Now, many farmers recognize that they cannot be experts in all fields. For instance, I want to delegate the purchasing responsibility to a purchasing department—but the size of my operation will not permit my farm to establish an efficient purchasing department. But I can organize an effective purchasing department jointly with my neighbors in the form of a cooperative. It is merely an extension of my farm business beyond the "line fence" of my farm. The long-term interest of a farmer and his cooperative are identical and separable. There should be a single tax paid by the farmer because the cooperative is an integral part of the total farm business. This policy decision was established in 1962 after considerable dialog and research. Although some cooperatives are not particularly happy with this arrangement, I believe it is fair and the National Council of Farmer Cooperatives is in support of the single tax principle.

Senator Ribicoff. Would you want to add any comment with respect to my bill.

Mr. SIMS. Certain parts of your bill might be appealing to farmers at their first reaction. However, any legislation which restricts a farmer's cooperative, will in the long-term be detrimental to the farmers' interest. Those who study this proposal will in my opinion support the philosophy of the 1962 legislation rather than this approach. I have not had the opportunity to read your bill, but judging from your question, I would anticipate that I would oppose your bill and expect the vast majority of the members of all farmer cooperatives to oppose your bill.

Senator RIBICOFF. Thank you, sir.

(Mr. Sims' prepared statement follows:)

SUMMARY OF STATEMENT OF MELVIN E. SIMS, PRESIDENT, NATIONAL COUNCIL OF FARMER COOPERATIVES

I. Identification of Witness and Organization.
II. Position.
III. What Section 531 Provides.
IV. Background to Inclusion of this Section in the Bill.
V. Why Section 531 Should be Deleted.
1. It is based on the erroneous premise that the members and patrons of a farmers' cooperative do not individually have a choice as to investment of part of their patronage refunds in the cooperative.
2. It is arbitrary and would be an unwarranted dictation by the federal government to the members of cooperatives as to how to finance and operate their business.
3. The proposed requirement that cooperative corporations retire the capital contributions by members and patrons within 15 years or any other specific period of time is discriminatory and punitive in that no such requirement is made of other corporations, partnerships or other business enterprises.
4. While Section 531 is not estimated to yield any revenue gain or loss to the federal government, it will actually result in the loss of revenue.
5. The required conversion under Section 531 of membership capital from equity to debt would seriously and immediately impair and ultimately detroy the borrowing ability of cooperatives to soundly finance growing farmer demand for services and facilities.
6. Section 531 would produce grave and costly enforcement problems for the government and compliance problems for farmer cooperatives.
VI. Conclusion.
VII. Appendix:
A. Section 531 would undermine the "Capital Fund Method of Financing" which has been adopted by an increasing number of cooperatives with approval of the Internal Revenue Service.
B. Section 531 would impose hardships and inequities on the members and patrons of many cooperatives through the proposed limitation of the application of cash payments in excess of 20 percent to retirement of "any qualified written notice of allocation."
C. Opinions on the Constitutional Question.

STATEMENT

I am Melvin E. Sims, President of the National Council of Farmer Cooperatives. The Council is a national organization whose members are farmer-owned and farmer-controlled cooperative associations engaged in marketing practically every type of agricultural commodity and furnishing the major types of farm supplies to their members and patrons. Approximately 4,500 farmer cooperatives serving several million farmers are represented in the Council membership.

I myself am a farmer and reside at Liberty, Illinois. Since my return from active duty in World War II, I have in partnership with my brother operated our family farm in Adams County, Illinois. My livelihood comes from farming and I am not now and have never been a salaried employee of any of the cooperatives with which I have been affiliated.

I became interested in cooperative work when I began farming in the 1940's because I learned early that only through cooperation can farmers hope to get a fair return for their products and share equitably in the national income. I have contributed much time, effort and capital to the local, state and regional cooperatives of which I have been a member and an officer. I have done this because I have learned through experience that self-help is the only sound and enduring basis on which farmers can hope to protect their interests in building a stronger agriculture free from government aid and domination.

In appearing before you today on behalf of the Council, I speak as one of hundreds of thousands of farmers who cannot be here in person but who are seeking daily through their own cooperative business organizations to get a fair return from their farming operations through their own efforts. I speak as one of that laıge group of farmers who have built their own cooperative organizations and whom the sponsors of the cooperative section of this bill profess they seek to help. I know that their proposal would do us irreparable harm.

POSITION

We are opposed to Section 531 of H.R. 13270 which would substantially and adversely change the present methods of financing cooperatives and we urge your Committee to delete this section in its entirety when you report the bill to the Senate. In support of our position I shall summarize what the section provides, shall discuss the background to inclusion of this section in the bill and shall explain the substantive reasons why the section should be deleted.

WHAT SECTION 531 PROVIDES

The present minimum 20 percent required to be paid in cash of patronage refunds of all cooperatives and non-patronage distributions of "exempt" cooperatives in order to qualify the total patronage refunds and non-patronage distributions for deduction by the cooperatives would for taxable years beginning in calendar 1970 and for ten years thereafter be increased 3 percent annually. Thus for taxable years beginning in 1979 and thereafter the required total minimum cash payment would be 50 percent of the total patronage refunds of all cooperatives and non-patronage distributions of "exempt" cooperatives instead of the present 20 percent in order to qualify the total patronage refunds and such non-patronage distributions for deduction by the cooperatives. However, the amounts in excess of 20 percent required to be paid out in cash in future years could be paid to patrons of the current year or could be paid in redemption of past allocations.

In addition, for taxable years beginning in calendar year 1970 and thereafter (1) that part of patronage refunds of all cooperatives and non-patronage distributions of "exempt" cooperatives not paid currently in cash and (2) permit retain allocations, in order to be qualified and thus deductible currently by the cooperative would have to be payable in money within a 15-year period beginning with the close of the taxable year. This requirement, under the bill, could be met by appropriate By-Law provisions requiring such payment or by an unconditional written evidence of indebtedness issued for the remainder not paid in cash which matures within the 15-year period.

BACKGROUND TO INCLUSION OF THIS SECTION IN THE BILL

The present basic tax treatment of cooperatives and their patrons was enacted by the Congress in the Revenue Act of 1962. Preceding this enactment there were public hearings on the subject before the House Ways and Means Committee on 13 hearing days in the consecutive years 1958–61 at which 1,090 pages of public testimony were presented. Thereafter, 272 pages of public testimony were presented before your Committee on two hearing days in 1962 prior to the enactment in the Revenue Act of that year of the current tax treatment of cooperatives and their patrons.

Section 531 of the current bill comes to you from the House without one word of public testimony or without any opportunity for one word of public testimony by any representative of any cooperative in the country on the subject before *the House Ways and Means Committee.* Our search of the 5,690 pages of the fifteen volumes of the printed hearings before the House Ways and Means Committee on Tax Reform, 1969, discloses reference to the subject by only one witness.

That witness, Mortimer M. Caplin, of the law firm of Caplin and Drysdale, a former Commissioner of Internal Revenue when the Revenue Act of 1962 was enacted, testifying on behalf of the National Tax Equality Association on February 24, 1969, before the House Ways and Means Committee, advocated that which the National Tax Equality Association has advocated unsuccessfully for over 20 years—that the earnings generated by farmers through their cooperatives should be subjected to a double tax, first at the cooperative level and that what then is left at the farmer level. This long time aim of the National Tax Equality Association was rejected clearly and we thought finally by the Congress in 1962 when it established a detailed procedure for the obtaining of a single income tax either at the cooperative or patron level on all earnings generated by the operations of the cooperative.

This plea for double taxation of cooperatives by Mr. Caplin at the House Ways and Means Committee hearings was clearly extraneous to the announced subject of the hearings. In the press release of January 29, 1969, by the Chairman of the House Ways and Means Committee, announcing the public hearings to begin on February 18, 1969, there was given a complete outline of the subject matter of the hearings on which "*Testimony will be received.*" Under the 17 subjects including 62 sub-subjects announced in the press release there was not one word which directly or indirectly suggested that *any testimony would be received* or *any action would be considered* on the subject of taxation of cooperatives in development of a tax reform bill this year. There was sound reason why this subject was not included and was not contemplated to be included within the scope of action by the House Ways and Means Committee in the area of tax reform.

An honest effort has been made by cooperatives and their farmer members throughout the country to comply with the spirit and the letter of the provisions of the new tax treatment of cooperatives and their patrons provided by Congress in 1962. The complaints concerning this tax treatment have been few and have come largely from the competitive business interests which want to handle a larger share of the farmers' business. There has been practically no litigation over these provisions.

Secondly, and more important, there has been no published study on a nationwide basis by the Internal Revenue Service, the U.S. Department of Agriculture, any government agency or anyone else as to the capital structures and methods of financing of all farmer cooperatives in the country for *any year* or for the full six-year period since the current tax treatment of cooperatives became effective for fiscal years beginning after December 31, 1962. Congress did have full facts before it in 1962 in the form of two studies by the Farmer Cooperative Service, U.S. Department of Agriculture, "Methods of Financing Farmer Cooperatives," published as General Report No. 32 in June, 1957 and "Revolving Fund method of Financing Farmer Cooperatives," published as General Report No. 41 in March 1958. Your Committee and all interested parties then had recent facts as to the pertinent operations of farmer cooperatives upon which to base decisions. But they do not have any such facts today.

Suddenly, in the absence of any published or known facts on which to base an informed decision, after the executive session of the Ways and Means Committee on July 23, 1969 as it was nearing the end of its executive sessions, it was announced that the Committee had decided tentatively to increase the current required cash payment of cooperatives to members and patrons beginning in 1970 from 20 percent to 50 percent within a three year period and to require cash payment of all retained earnings in five years. After the members of the Committee heard from the grass roots as to how quickly such a requirement would liquidate most of the farmer cooperatives in the country, the Committee, six days later on July 29, in its final decision adopted the proposal which is now before you.

I shall now discuss the substantive practical reasons why this proposal should be rejected in its entirety.

WHY SECTION 531 SHOULD BE DELETED

1. *It is based on the erroneous premise that the members and patrons of a farmers' cooperative do not individually have a choice as to investment of part of their patronage refunds in the cooperative.*

The Ways and Means Committee report accompanying this bill states in part as to reasons for the changes proposed by Sec. 531 that under the methods of consent by the patron to contribute part of the patronage refund to the capital of the cooperative, "the patron often does not have an independent choice between investing each patronage allocation or per-unit retain allocation in the cooperative or retaining it for his own use." The report also states that "This choice is frequently made by the members as a group, and it may govern the use of a patron's funds even though he is not a member, or became a member after the cooperative's practices in this regard were established." These statements are not in accord with present law and practice.

Of course the members of every business enterprise adopt rules and operating procedures for the conduct of the business. Those rules and operating procedures are, as to cooperatives, adopted by their members or by the members of the Board of Directors elected by the members in accordance with the specific requirements of the governing state statutes. Those rules and operating procedures when adopted by the majority or other legally required percentage of the Board or of the members are binding upon all members and not only on those who favor their adoption. In such mannet are all democratic business enterprises operated. Indeed, decisions by a majority permeate the whole fabric of our economic, political and social structure.

But with respect to the part of a patronage refund that a member or patron is required by a cooperative to invest in the capital of his association and include in his taxable income, he does have *individual choice*, indeed an "independent" choice. Under Sec. 1388(c) of the Internal Revenue Code, adopted by the Congress in 1962, members of cooperatives have to be furnished "*a written notification and copy of such bylaw*" requiring capital contributions of parts of their patronage refunds *before* the obligation is effective as to them. Indeed, the Income Tax Regulations (§ 1.1388–1 (c) (3) (ii) issued by the Internal Revenue Service for the administration of this provision in the law go a step further to insure that members and prospective members of a cooperative have an individual and fully informed choice by providing that:

> "The written notification from the cooperative organization must inform the patron that this bylaw has been adopted and *of its significance*. The notification and copy of the bylaw shall be given *separately* to each member (or prospective member); thus, a written notice and copy of the bylaw which are published in a newspaper or posted at the cooperative's place of business are not sufficient to qualify a written notice of allocation under this subdivision." (Emphasis added)

Thus, it is up to *each member* or *prospective member* to make an *individual* and fully informed decision under existing law whether he will retain or obtain membership in the cooperative with the obligation for capital contribution accompanying it. If he makes the individual, independent and voluntary choice to obtain or retain membership after receiving written notice of the required capital contribution accompanying membership, he thereby consents to the investment in the capital of the association from his patronage refund income.

As to patrons of a cooperative who are not members but deal with it as nonmember patrons they have the right under Sec. 1388(c) of the Code enacted in 1962 to decide individually whether they will make a comparable contribution to the capital of the cooperative and include it in their taxable income. As to those individual nonmember patrons who do not elect to do so they incur no current tax liability with respect to the patronage refund. As to these nonmember patrons who do not thus consent the cooperative and not the patron pays the current income tax thereon.

Contrary to statements on page 168 of the House Ways and Means Committee Report on this bill, under present law the members of a cooperative "*as a group*" do not and cannot make the choice for a patron who is not a member between investing his patronage allocation or per-unit retain allocation, or a part thereof, in the cooperative or retaining it for his own use. The nonmember patron must give his consent *individually* in a written agreement and if such consent is not given the cooperative pays a current corporate tax on the patron's patronage refund, or part thereof, which is not paid in cash. (Sec. 1388(c) (2) (A) I.R.C.)

Members of a cooperative have an *individual* choice under existing law (Sec. 1388(c) (2) (B) I.R.C.) as to whether they want to continue membership in the cooperative and assume the obligations as well as reap the benefits of membership *after* they have received "a written notification and copy of [the] bylaw." advising them of the required capital contribution of all members.

Thus, the members and the members alone and the nonmember patrons of cooperatives make the *individual* decisions whether they remain or become members and patrons of a cooperative and whether they thus assume the obligations for capital contributions that accompany their membership and patronage.

2. *It is arbitrary and would be an unwarranted dictation by the federal government to the members of cooperatives as to how to finance and operate their business.*

It is clear on the basis of the recorded action of the House Ways and Means Committee that the final selection of the additional mandatory minimum cash payment of 3 percent per year for 10 years until a minimum of 50 percent is reached and the final selection of 15 years as the period within which the remainder not currently paid in cash must be paid are *arbitrary*. We use this word thoughtfully on the basis of its dictionary meaning of "*selected at random and without reason.*"

First, the Ways and Means Committee announced a tentative decision following an executive session on July 23, 1969 to propose an increase in the present requirement for cash payment of 10 percent per year in 3 years to reach the 50 percent figure and to propose payment of the remainder in cash in 5 years. Then 6 days later, the committee changed the period in which the increase in cash payment from 20 to 50 percent should be accomplished from 3 years to 10 years. Likewise, in the same short period of 6 days the time within which the retained capital must be paid out was increased from 5 to 15 years.

Not one "reason" is given by the Ways and Means Committee for the selection of any of these increased percentages or periods. There is no indication that the Committee gave any consideration whatsoever as to the effect upon the operations of farmers' own business associations of such dictation to them of how much the members should contribute to the capital of their associations and when they must pay out the capital thus contributed.

The Ways and Means Committee Report states only the *conclusion* that:

> "Your committee believes that patrons should be given assurance of a larger share of the patronage allocations that are included in their taxable income, and that amounts retained by the cooperative which have been included in a patron's income, whether patronage allocations or per-unit retains, should be paid to him not later than 15 years after the close of the taxable year with respect to which the allocation is made or the retain certificate is issued."

In striking contrast to the absence of any known or stated "reason" for adoption of the proposed ultimate minimum 50 percent cash payment figure by the House Ways and Means Committee, the Senate Committee on Finance in 1962 had and stated *a specific reason* for adopting the 20 percent figure which became law and is now in the statute.

Some of you who were members of this Committee in 1962 will recall that when the Revenue Act of 1962 (H.R. 10650) came to your Committee from the House of Representatives it provided for withholding on interest, dividends and patronage dividends at the rate of 20 percent. The specific changes on this point which were made by your Committee and later enacted into law were reported at page 112 of the Report of the Committee on Finance on H.R. 10650 (Report No. 1881, 87th Congress, 2d Session) as follows:

> "Your committee's bill has substituted for the withholding provision a reporting system for dividends, interest, and patronage dividends. However, in the case of patronage dividends, withholding also served the purpose of providing the patron with at least enough funds to pay the full first bracket tax on any qualified allocations taxable to him. Your committee believes that it would be unfortunate to require the patrons to report these qualified allocations for tax purposes without being sure that the cooperative made available to the patrons *enough cash to pay at least the first bracket income tax*. To give assurance that the cooperative provides the patron with *at least enough money to pay this first bracket tax*, your committee has provided that cooperatives must pay at least 20 percent of their patronage dividends (and in the case of tax-exempt cooperatives other income distributed on a patronage basis) in cash if the cooperatives are to receive any deductions for allocations (and the patrons are to be required to include any such amounts in their income)." (Emphasis added)

Let us look at the results of the application of the reasoning of your Committee in 1962 to the situation today. For 1968, I am informed that the first bracket income tax rate was 15.4 percent, including the surtax. Under the provisions of the bill as sent to you from the House of Representatives, I understand the effective first bracket rate would be substantially less.

Let us examine the pertinent factual situation a bit further. The *average* realized net farm income per farm operator in the U.S. in 1962 was $3,424.[1] For the *average* farm operator with such farm income in 1962 who was single and took the standard deduction, his net taxable income would have been $2,481.60 with a tax of $496.32 at an effective rate of 20 percent.

How does this compare with the current situation?

The *average* realized net farm income per farm operator in the U.S. in 1968 was $4,841.00.[1] For the *average* farm operator with such farm income in 1968 who was single and took the standard deduction, his net taxable income would have been $3,756.90 with a tax of $708.19 at an effective rate of 18.8 percent.

From 1965 to 1968, net taxable income of at least $22,000 would be required to be subject to an effective tax rate of at least 50 percent.

Hence it is unmistakably clear on the basis of these facts and the *reasons* stated by your Committee in 1962 for setting the minimum required cash payment at 20 percent, that there is no justification for the proposal to increase the minimum cash payment in order to qualify the patronage refunds for deduction by the cooperative.

We have been unable to learn any *reasons* for the selection of the 50 percent cash payment figure or the 15-year figure. There has come from some members of the House Ways and Means Committee reference to one point that might have had some influence on the action taken.

Mention has been made of a Report issued in 1966 by the Canadian Royal Commission on Taxation which *recommended* in effect that the Canadian law be changed so that patronage dividends would be deductible by cooperatives in computing taxable income only to the extent that half of them had been paid in cash. We are informed that this and the other far-reaching recommendations of the Canadian Royal Commission on Taxation are *recommendations* and *recommendations only* and that many of the recommendations of this Commission are unlikely to be adopted when a bill is proposed by the Canadian Government. Aside from the fact that there is no relationship between a *recommendation* of a Canadian Commission and the formulation of a fair tax treatment for cooperatives and their farmer members in the United States, it is significant that even this Commission in Canada has *not recommended* any time limit on the retirement of cooperatives' membership capital as is now proposed in Sec. 531 of the bill before you.

3. *The proposed requirement that cooperative corporations retire the capital contributed by members and patrons within 15 years or any other specific period of time is discriminatory and punitive in that no such requirement is made of other corporations, partnerships or other business enterprises.*

It is quite clear that the capital invested in non-cooperative corporations or other business enterprises is subject to no regulatory or other requirement by the federal government that it be retired at any particular time or within any specified period as is now proposed for cooperatives.

The practices and policies of cooperatives vary widely in their capitalization plans as determined by their members on the basis of their individual needs. In some cooperatives there is a continuing need for new and improved facilities to efficiently serve the marketing and purchasing needs of their members. Cooperatives cannot find outside of their members and other patrons adequate sources for providing the capital to meet these needs. Hence farmers know and are willing out of the earnings of their cooperatives to contribute this needed capital to furnish the base on which to finance the needed facilities. They do this in many cases with the intent to provide a permanent or long-term capital base and with no expectation that their capital investment will be retired at any specific time in the future.

By thus singling out cooperatives in compelling retirement of equity capital by arbitrary federal edict, the 15 year retirement requirement would greatly restrict or cause abandonment of beneficial services historically provided by cooperatives to farmer patrons which benefit not only themselves but consumers and the entire public.

The historical method by which farmers have generated the needed capital to finance their cooperatives is from their operations. Sale or issuance of securities

[1] Farm Income Situation, July, 1969, Table 3D, page 70, Economic Research Service, U.S. Department of Agriculture.

to the investing public has not been feasible or practicable for cooperatives. Limited permissible returns on investment in cooperatives, the fixed value of the securities and the seasonal hazards of farming operations have had no appeal to growth minded investors. Hence farmers have found that the only sound and practical way to finance their off-the-farm businesses is to reinvest monies otherwise payable to them from their self-help business enterprises to provide the capital required for facilities, operations and as a basis for credit.

Some of the larger, older and stronger cooperatives could perhaps survive with a 15 year requirement for retirement of their membership equity capital. Many however would suffer a continuing strangulation, become ineffective and finally collapse.

4. While Section 531 is not estimated to yield any revenue gain or loss to the federal government, it will actually result in the loss of revenue.

Under many sections of H.R. 13270, the Report of the Ways and Means Committee gives the "Revenue Effect", estimating the revenue gain or loss which would result from the adoption and application of the proposed changes. The report is entirely silent as to any "Revenue Effect" estimated to result from the adoption of the proposed changes pertaining to "Cooperatives."

In theory, and in theory only, it is estimated that these proposed changes would not have any significant effect on tax revenue. This is because the imposition of a requirement for a larger current cash payment and of a specified time for retirement of the equity capital would not change the amount of the current or ultimate tax liability thereon.

However, in actual practice it is inevitable that the damage that would be done to the operations of cooperatives through the undermining of their capital structures would gradually retard and impede their operations with decreasing earnings subject to tax either to the cooperative or its members and patrons. This is the practical and predictable consequence of the application of the proposed new rules. While some of the larger and older cooperatives might be able to weather the storm, at least for awhile, the ones which would suffer the most are those operating at the local level serving the small and medium size family farmers who need their services most. Many of these would gradually disappear and be liquidated through the undermining of their capital structures.

In at least one area, the proposed requirement that membership capital be changed from equity to debt would definitely cause the loss of some tax revenue to the government. In some instances non-exempt cooperatives pay limited dividends on the stock or other certificates issued to evidence invested patronage refunds by members and patrons. These dividends are paid out of net earnings *after* payment of taxes. Through the conversion of these investments from equity capital to debis by the proposal in Section 531, the payments thereon would be *interest* and deductible in determining the net taxable income of the cooperative. Hence the taxes payable by the cooperative in such cases would be correspondingly reduced.

5. The required conversion under Section 531 of Membership capital from equity to debt would seriously and immediately impair and ultimately destroy the borrowing ability of cooperatives to soundly finance growing farmer demand for services and facilities.

There are several sources from which farmer cooperatives borrow capital to finance their operations. While some cooperatives can obtain limited financing through commercial banks and other sources the major source of credit is the Banks for Cooperatives of the Farm Credit Administration which were established in 1933 to provide a specialized credit service to farmers' marketing, supply and service cooperatives.

There are no recent statistics on the amount of total borrowed capital by the farmer cooperatives in the United States from sources other than the Banks for Cooperatives. The latest study by the Farmer Cooperative Service of the United States Department of Agriculture indicated that almost 58 percent of the outstanding borrowed capital of farmer cooperatives was supplied by the Banks for Cooperatives.

According to the latest information from the Farm Credit Administration, the Banks for Cooperatives had loans outstanding as of June 30, 1969, in the aggregate amount of $1,594,400,000 to 2,955 cooperative associations. Of this total, $649,200,000 (40.7%) was in "Seasonal" loans and $945,200,000 (59.3%) in "Term" loans. The number of cooperative associations with *term* loans outstanding as of June 30, 1969 was 2,705 or 91.5% of the borrowing associations. Although a specific breakdown on the maturity periods of these outstanding loans is not available we understand from officials of the Farm Credit Administration that in some instances the maturities run up to 20 years, the range on the majority of these loans is from 4 to 12 years, a significant number mature within 12 to 15 years and a relatively small number mature within 15 to 20 years.

The latest information on the financial structure of the farmer cooperatives of the country is included in a study by the Farm Cooperative Service of the U.S. Department of Agriculture for the year *1962* which is expected to be published in the near future. Although this is not current information and its does not reflect the situation for a year after the new tax treatment for cooperatives and their patrons became effective in 1963, it is the most recent information which we have been able to obtain on a nation-wide basis. Pertinent information resulting from that study is as follows:

Total number of associations	8,522
Assets	$5,322,000,000
Liabilities and equity capital:	
Equity capital (60.4 percent)	$3,215,000,000
Borrowed capital (19.4 percent)	1,032,000,000
Other liabilities (20.2 percent)	1,075,000,000
Total	5,322,000,000

What do these figures show? They disclose the inescapable fact that the capital structure of farmer cooperatives would be immediately impaired and undermined and gradually destroyed through the imposition of a 15 year requirement for the retirement of their equity capital.

If the proposal for a due date within 15 years or any other fixed time on all membership capital should become effective, members' investments would cease to be equity and instead become debt capital. As the past investments of members in the equity capital of their associations are retired and with no new investments by current members in the equity capital, there would necessarily be a continued shrinkage and ultimate disappearance of their net worth. Obviously the sources of credit for financing their operations would gradually disappear.

The real victims of this arbitrary and discriminatory action by federal edict would not be the cooperative corporations but the farmers themselves who have built and are building these self-help business enterprises and would then be denied the services and facilities they have joined together to provide through their own investments and patronage.

It is beyond our comprehension that any committee of the Congress or any Administration would single out this one type of business—cooperatives—and dictate to their farmer members when their investments from their own tax paid dollars must be retired from the business. Certainly the federal government has not attempted to so regulate the investments of partners in partnerships or the investment of stockholders in their proprietary corporations. The 15-year proposal in no respect can be classified as a revenue measure or tax reform. It can properly be classed only as a regulatory measure which would bring about the ultimate destruction of farmers' self-help cooperative business enterprises and reverse the declared policy of Congress which states:

> "It is declared to be the policy of Congress to promote the effective merchandising of agricultural commodities in interstate and foreign commerce so that the industry of agriculture will be placed on a basis of economic equality with other industries, and to that end protect, control and stabilize the currents of interstate and foreign commerce in the marketing of agricultural commodities and their food products * * * (3) by encouraging the organization of producers into effective associations or corporations *under their own control for greater unity of effort* in marketing and by promoting *the establishment and financing of the farm marketing system of producer-owned and producer-controlled cooperative associations and other agencies.*" 12 U.S.C. 1141(a)(3) (Emphasis added)

6. Section 531 would produce grave and costly enforcement problems for the government and compliance problems for farmer cooperatives.

The Secretary of the Treasury in his testimony before your Committee on September 4, 1969, stated that "The additional 30 percent requirement is complex and creates serious administrative problems." He recommended "that the additional 30 percent pay-out rule be eliminated."

With this recognition on the part of the Treasury Department which would be responsible for administering such provision, we believe no more need be said to establish the complete lack of justification for such provision on the basis alone of the administrative problems that would be encountered in an attempt to administer it. Administration and compliance under present law is relatively simple compared to what it would be under the new proposals. We ask the members of your Committee to try to visualize the utter chaos and exorbitant expense in government auditing procedures and cooperative bookkeeping in attempts to respectively audit and maintain records on cash patronage refund payments *which vary percentage-wise each year over a ten-year period* and which might under the proposal be used *either as payments to current patrons or in retirement of allocations of past years*. It can properly be asked "For what purpose would this exercise in extravagance and futility be undertaken?" In many cases, the costs in record keeping would far exceed the amounts of the patronage refunds involved. This would be particularly true in the cases of cooperatives operating over a wide area with thousands of small farmers receiving patronage refunds in comparatively small amounts.

It is regrettable that the Secretary of the Treasury in his appearance before your Committee on September 4 did not point out the complex and serious problems that would be imposed on cooperatives by adoption of the 15-year cash payment rule and recommend that it too be eliminated. Let me point out just one example of the divisive effects upon many cooperatives that would be certain to result from the application of just one provision in Section 531 for implementing the 15-year rule.

Section 531 provides as one way to implement the 15-year rule, as follows:

> "At all times on and after the date of issuance of such written notice of allocation, the bylaws of the organization require the remainder of such patronage dividend, or such payment, to be paid in money within the 15-year period beginning with the close of the taxable year with respect to which such written notice of allocation is made, and the *bylaws provide that such requirement shall in no event be changed without the consent of those adversely affected,* . . ." (emphasis supplied)

What do the underlined words mean and how would the Internal Revenue Service interpret them if such provision should be enacted into law? Let's take the case of Cooperative A with 1,000 members. These 1,000 members receive for fiscal year 1970 patronage refund allocations averaging $80 each amounting to a total of $80,000. The By-Laws of Cooperative A contain the provisions in Section 531 of the bill as quoted above. The By-Laws also provide that amendments thereto may be made by the affirmative vote of 75 percent of the members present at a meeting, at which a quorum is present. In 1985, there is a severe drought. Cooperative A operates at a loss and is unable to retire the patronage refund allocations issued for fiscal 1970. A membership meeting is duly called. 800 members are present. 90 percent of the members present consent to extend the time for retirement of the 1970 patronage refund allocations and 10 percent of the members present do not consent. What happens then? What happens when the Board of Directors of a proprietary corporation votes not to declare a dividend to the stockholders by a vote of 90 percent because there have not been earings from which to pay a dividend? What happens when 90 percent of the members of the Senate vote for a bill and 10 percent vote against it?

The answer is obvious. All the members of a legally constituted body are bound by the decisions of the majority or other legally prescribed percentage. But Section 531 would as to cooperatives by federal law repudiate decisions by a majority in their application to a minority who do not consent.

This 15-year proposal in Section 531 when analyzed in its practical application would represent a flagrant abuse of federal power and unprecedented interference with private business. It would tend to divide rather than encourage farmers to cooperate to help themselves. At this period in our national life when so much is being done materially by the federal government to assist disadvantaged groups in our nation, it is beyond comprehension that the Congress would spend any time in even considering a proposal which could only add handicaps, burdens and problems for farmers who are trying to help themselves through their own efforts.

CONCLUSION

I appreciate the opportunity that has been given for me to present this statement on behalf of the Council.

For the reasons documented in the statement, we respectfully urge your Committee to eliminate Section 531 in its entirety from H.R. 13270. We also respectfully urge that the conferees from your Committee maintain this position without compromise when the bill may be considered and action taken in conference.

We recognize that there is a general disposition to seek compromise when controversial issues are at stake. We sincerely believe that there is no justification for any compromise with respect to Section 531 solely on the basis of the fact of *no* public hearings on this issue before the House Ways and Means Committee and *no* adequate time now for thorough analysis in public hearings before your Committee of any compromise which may be suggested.

The operations of many farmer cooperatives today are being disrupted because of difficulties in the interpretation of hastily drawn provisions inserted by the Senate in the Revenue Act of *1926* to amend what is now Section 521 of the Internal Revenue Code, authorizing specific deductions for farmer cooperatives which meet certain stringent requirements in that section. Since February, 1965—over 4 years ago—the Council has been trying to get the National Office of the Internal Revenue Service to publish an official interpretation of certain provisions of that section for compliance purposes. About five years ago Internal Revenue agents in their auditing functions began placing interpretations on certain provisions in that section different from the interpretations that had been followed since 1926. To date we have no answer from the Service because of differences in the National Office between the attorneys and administrative officials as to what the provisions in question were intended by Congress to mean. We urge your Committee in the interest of sound legislation and its subsequent proper interpretation not to compound the problems for government and farmer cooperatives that now exist through further hastily drawn legislation which characterizes Section 531 as referred to you from the House of Representatives.

There are defects and problems inherent in Section 531 in addition to those already covered in this statement. An appendix to this statement describes some of these defects and problems as additional evidence why Section 531 should be entirely striken from H.R. 13270. The appendix also gives factual information concerning certain opinions which have been rendered concerning the so-called constitutional question involved in the tax treatment of cooperatives and their patrons.

Appendix

A. SECTION 531 WOULD UNDERMINE THE "CAPITAL FUND METHOD OF FINANCING" WHICH HAS BEEN ADOPTED BY AN INCREASING NUMBER OF COOPERATIVES WITH APPROVAL OF THE INTERNAL REVENUE SERVICE

It has already been pointed out to members of the Senate Finance Committee that the provisions of the Tax Reform Act of 1969 adopted by the House of Representatives includes a section relating to taxation of cooperatives which was adopted without sufficient consideration of the impact of this proposal on government revenues or on operations of cooperatives. There is, however, one specific method of financing of cooperatives which was apparently not taken into consideration in any way by the House Ways and Means Committee at the time Section 531 of the bill was adopted. This is the "Capital Fund Method of Financing." We feel that exploration of the unanswered questions which are raised in connection with the capital fund approach by Section 531 of the bill will further demonstrate that the portion dealing with cooperative taxation should be removed from the bill by the Senate Finance Committee.

Description of "Capital Fund" Approach

A basic precept in a farmers' cooperative is that equity capital should be provided by the grower-members. The capital fund approach is deemed by many cooperatives to be the fairest and most equitable way to determine what share of capital needs should be borne by each of the grower-members. Under this plan, a grower's capital contributions are directly related to his use of the cooperative facilities.

The plan essentially works like this. A period of time is established for measurement of total crop deliveries by the cooperative's grower-members. This time period consists of a sufficient number of years to equalize the impact of varying external factors affecting crop deliveries, such as unusual weather conditions, pest damage, etc.

After each delivery season, a tabulation is made of total crop deliveries for the entire period, customarily dropping off amounts delivered in the oldest outstanding year of the period of measurement and adding deliveries for the current year. Then a calculation is made for each grower-member of his proportion of deliveries during this time period. Also, during each accounting period, the capital needs of the cooperative are determined. Each member is then responsible for a portion of the capital needs which is in direct ratio to his proportion of deliveries of product to the cooperative.

This is then translated into a dollar amount for each grower-member. If an individual's prior capital fund contributions equal his newly calculated requirements, there will be no retain or assessment for capital purposes and he will receive 100% of his proceeds in cash. However, because of the pattern of crop deliveries from year to year, it is likely there will be adjustments in each individual grower's account every year. For example, if in a particular year a grower has delivered a larger proportion of the total crop received by the cooperative than he has in prior years, his share of the capital needs (assuming a static capital structure) will tend to increase. Thus on a per-unit basis of calculation he will be assessed or will have withheld a dollar amount to bring him up to his equitable share of the capital needs. Conversely, if he has used the cooperative's facilities to a lesser extent, it will tend to reduce the amount of capital established as his proportionate share and he will be refunded the amount which represents an excess over his established level of capital contribution.

In the event a member withdraws from the organization or ceases to produce the crop handled by the cooperative he will have received his entire capital contribution at the end of the period used by the cooperative to calculate the individual's capital contributions. Thus, if the period of measurement of deliveries is six years, at the end of that time the individual grower who is no longer delivering to the cooperative will have received full repayment for capital contributions earlier made.

The basic question which is raised in conjunction with the Tax Reform Act of 1969 is how the 15-year limitation period involved in Section 531 of the bill affects this capital fund operation, particularly in the case of a new member or one who continues to use the cooperative facilities.

Full Disclosure and Approval by Internal Revenue Service

Prior to adopting the capital fund method of financing, the cooperatives which have gone to this approach have obtained rulings from the Internal Revenue Service. In all instances the rulings have indicated full approval of this approach. They further have indicated that there are no taxable consequences to the cooperative at the time of creation of Capital Fund credits so long as any amounts retained or assessed against the individual member are fully disclosed to him and the member includes these amounts in his income at the time the credits are created.

Applicability of Proposal to Capital Fund Credits

At the time of creation, then, the full tax is paid on these credits in accordance with existing provisions of the Internal Revenue Code and regulations issued thereunder. It should further be pointed out that a member who has withdrawn or ceased to deliver products to the cooperative will receive repayment of his capital contributions within the period of time established for measurement of the percentage of use of the cooperative's facilities by each individual grower-member.

A question which is totally unanswered and apparently received no consideration whatsoever from the House Ways and Means Committee is how the 15-year period for repayment of per unit retains will apply to a cooperative whose members have adopted the capital fund approach. Perhaps an illustration will be helpful.

Let us assume a member of a cooperative who has capital credits standing in his name in the amount of $2,000 as of the year 1970. As a result of the pattern of his crop deliveries and calculation of his equitable share of capital needs in 1971, he must contribute an additional $100 in capital. In 1972, again because of the factors noted above, his calculated share of capital contribution decreases by $100 and this amount is repaid to him in cash. Now let us assume a very hypothetical situation, namely that for the next 13 years no adjustments are required in his capital fund. Then in 1986, 15 years after creation of the credit in 1971, must the cooperative redeem the $100 which was created in 1971? Does the adjustment that was made in 1972 qualify as such a redemption? If the cooperative does not redeem the 1971 credit in 1986, what are the tax consequences to the member and the cooperative? Do we get a different result depending upon whether the capital fund credit is created as a result of a per-unit retain or as a retain from a patronage dividend or by assessment?

Conclusion

It is obvious that the House Ways and Means Committee gave no consideration at all to the complex problems and disruptive results that would flow from the application of a 15-year limitation period (or any other limitation period) on the capital fund method of financing which has been adopted and is now in operation with the approval of members of an increasing number of cooperatives.

This is an additional compelling reason why Section 531 should be deleted in its entirety by the Senate Finance Committee and no action be taken to change the present tax treatment of cooperatives unless and until there has been an adequate opportunity to consider the full impact of any changes proposed.

B. SECTION 531 WOULD IMPOSE HARDSHIPS AND INEQUITIES ON THE MEMBERS AND PATRONS OF MANY COOPERATIVES THROUGH THE PROPOSED LIMITATION OF THE APPLICATION OF CASH PAYMENTS IN EXCESS OF 20 PERCENT TO RETIREMENT OF "ANY QUALIFIED WRITTEN NOTICE OF ALLOCATION"

Section 531 would amend Section 1388(c)(1) of the Internal Revenue Code to provide in part that the additional three percent required to be paid in cash each year for ten years beginning in 1970, until an *additional* 30 percent is paid in cash in 1979 and subsequent years, is paid either:

> "(i) as a part of such patronage dividend, or such payment,
>
> "(ii) *or in redemption* (to the extent allocated by the payor to such patronage dividend for the purpose of meeting the requirements of this clause, if not previously allocated to any other patronage dividend) *of any qualified written notice allocation previously paid as a part of a patronage dividend*, or such payment, for any taxable year, and . . ." (Emphasis added)

The term "*qualified written notice of allocation*" was first introduced in the Internal Revenue Code in Subchapter T enacted by the Congress in the Revenue Act of 1962 to provide a new tax treatment of cooperatives and their patrons. Hence, "qualified written notices of allocation" exist to evidence the patronage refund investments of members and patrons in their cooperatives only for fiscal years of cooperatives beginning after December 31, 1962.

Many cooperatives have adopted systematic plans for redeeming or revolving their equity capital and these plans in large part provide for such retirement in the order of the years in which the equity capital was invested.

Application of the underlined provision in Section 531, quoted above, would mean that the current cash payments in 1970 and thereafter used in retirement of past patronage refund investments would have to be applied in retirement of such investments made for 1963 and thereafter even though some pre-1963 investments had not been retired.

The inequities that would thus be imposed as to the members and patrons of the pre-1963 years compared to the treatment of the members and partons in 1963 and thereafter are clear and could not, we believe, be intended or justified. This is another glaring example of the defects inherent in Section 531 and a further specific reason why Section 531 should be deleted from the bill.

OPINIONS ON THE CONSTITUTIONAL QUESTION

When Mortimer M. Caplin testified before your Committee on September 19, 1969, on behalf of the National Tax Equality Association, permission was given at the request of a member of your Committee for the inclusion in the record of the hearings of two opinions related to the taxation of cooperatives.

Although these opinions appear to have no pertinency to the policy question before your Committee, we deem it important that the members of your Committee have factual information as to the identity of those opinions and their basic conclusions. It is also important that your Committee be informed of another opinion that has been rendered on the same subject and its basic conclusion.

I. "The Power of Congress to Tax Cooperatives on Net Margins"

Prepared by the Staffs of the Treasury and the Joint Committee on Internal Revenue Taxation—April, 1951

This staff report prepared over 18 years ago was first released by the House Ways and Means Committee for publication in 1960.

The basic conclusion of the staff opinion implicit in its title is that Congress does have the *power* under the Constitution to tax cooperatives on net margins.

Two significant statements in that opinion supplementing the basic conclusion are as follows:

"Congress has an equally broad power to determine, on practical grounds to whom income should be taxed."

"This shows that Congress may use *any reasonable standard* in measuring the taxable income of a cooperative, and the mere fact that the corporation is a cooperative does not impose a constitutional restraint on Congress in the measurement of its taxable income." (Emphasis added)

II. "Taxing the Net Margins of Cooperatives: Application of Basic Tax Principles and Analysis of Constitutionality"

This is an opinion by Mortimer M. Caplin made for and published by his client, the National Tax Equality Association, on May 22, 1969. His basic conclusion to the 51-page opinion is that:

> "There can be no serious question that net margins constitute income to cooperatives under basic tax principles and that taxation of that income would violate no rule of constitutional law. Any discussion of the tax treatment of cooperatives must begin with these conclusions. Proceeding from that basis, the essential *policy issue at stake*—whether the income of today's large-scale cooperatives should continue to receive a special tax preference—must be subjected to careful and rigorous re-examination on its own merits." (Emphasis added)

III. "Constitutionality of Legislation Taxing to Patrons Income Equal to the Face Amount of Non-Cash Patronage Refunds Distributed to them by Cooperatives"

This opinion was prepared by Mac Asbill, Jr., a partner in the law firm of Sutherland, Asbill and Brennan, Washington, D.C., January 25, 1962 for the National Council of Farmer Cooperatives.

In his 18-page opinion Mr. Asbill reached the basic conclusion that:

"For the reasons set forth above, legislation requiring patrons to include in income the face amount of documents evidencing their share of current patronage income of the cooperative enterprise would clearly be constitutional."

Mr. Asbill testified before your Committee on April 16, 1962, at public hearings on the Revenue Act of 1962 and his opinion is included in the part 5 of the printed hearings on that bill at pages 1709–1728. We are attaching to this statement a copy of his opinion with the request that it, too, be included in the printed record of these hearings.

What is the unanimous single conclusion drawn from these opinions? It is simply that the issue before your Committee in 1969, as in 1951 and 1962 is not a constitutional question. It is solely a matter for basic policy determination.

In 1962, after extensive hearings your Committee and the Congress decided as a basic policy matter that net earnings generated through the operations of cooperatives should be taxed to the members and patrons to the extent that their individual patronage created such net earnings. You also decided that such net earnings not distributed in cash as patronage refunds on the basis of patronage should be taxable to the members and patrons currently only where there is individual *agreement* on the part of such members and patrons to invest the part of the patronage refund not paid in cash in the capital of their association. We believe that after careful consideration of all the facts before you, your Committee will reach the basic policy decision that the action taken by your Committee and the Congress in 1962 is fair to farmers, their cooperatives and in the public interest and should not be changed.

(The opinion of Mac Asbill, Jr., referred to above follows:)

Constitutionality of Legislation Taxing to Patrons Income Equal to the Face Amount of Non-Cash Patronage Refunds Distributed to Them by Cooperatives

(Prepared by Mac Asbill, Jr., Sutherland, Asbill & Brennan, Washington, D.C.—for National Council of Farmer Cooperatives, 1616 H St., N.W., Washington D.C.—January 25, 1962)

Permission to reproduce or distribute this memorandum must be obtained from the National Council of Farmer Cooperatives.

FOREWORD

It has been asserted by some interested persons, both in and out of Government, that under the decisions in the *Carpenter* and *Long Poultry Farms* cases by the Fifth and Fourth Circuit Courts of Appeals on March 2, 1955 and November 8, 1957, respectively, as well as other cases decided by the Supreme Court, Congress does not have the power under the Sixteenth Amendment to the Constitution to require patrons to include in their income amounts equal to the face amounts of non-cash patronage refunds distributed to them by cooperatives.

In view of the fact that this issue, which has never been presented to the Supreme Court, is involved in legislative proposals now under Congressional consideration, we have had Mac Asbill, Jr. a partner in the law firm of Sutherland, Asbill & Brennan, who as co-counsel successfully argued for the patrons before the Circuit Courts of Appeals in both the *Carpenter* and *Long Poultry Farms* cases, make a thorough and impartial study and prepare for us a memorandum on the constitutional question involved. Mr. Asbill's analysis and conclusions which follow should be of value in removing doubt, where any has existed, as to the constitutional aspects of the question and should be helpful to members of Congress in developing legislation which will be fair to farmers and their cooperatives.

HOMER L. BRINKLEY,
Executive Vice-President,
National Council of Farmer Cooperatives.

CONSTITUTIONALITY OF LEGISLATION TAXING TO PATRONS INCOME EQUAL TO THE FACE AMOUNT OF NON-CASH PATRONAGE REFUNDS DISTRIBUTED TO THEM BY COOPERATIVES

In 1951 the Congress enacted legislation limiting the exemption from corporate tax of farmer cooperatives which had theretofore been wholly exempt. This legislation provided that such cooperatives could reduce their gross income for tax purposes by patronage refunds, whether paid in cash or in revolving fund certificates, retain certificates, letters of advice or some other document that disclosed to the patron the dollar amount of the refund, in the same manner and to the same extent as their taxable counterparts had done for years. The amount by which gross income was reduced was the face amount of such document, regardless of its value. Congress had been told, and it thought, that the patron receiving such a document would be required under the then existing income tax laws to include in his income the face amount of the document. Thus it was thought that Congress had achieved its purpose of subjecting to a single tax, either at the level of the cooperative or at the level of the patron, all income resulting from operations of farmer cooperatives.

However, several court decisions (e.g., *Carpenter* v. *Commissioner*, 219 F. 2d 635 (CA 5, 1955), and *Long Poultry Farms* v. *Commissioner*, 249 F. 2d 726 (CA 4, 1957)) reached conclusions inconsistent with the representations that had been made in this regard to the Congress. These decisions held that the patron receiving such a document had income, under the then existing Internal Revenue Code, only to the extent of the fair market value of the document. Thus, since the cooperative could reduce gross income by the face amount of such a document, there was no current tax, on the cooperative or the patron, to the extent that the fair market value of the document was less than its face amount.

These cases, as indicated above, were decided under the Internal Revenue Code of 1939, which (as is true also of the 1954 Code) contained no provision specifically dealing with the taxation of patrons of cooperatives. The cases were decided on the ground that the generally applicable provisions of the Code did not impose a tax on such patrons except to the extent of the fair market value of documents received by them. The Courts were not presented with the issue whether Congress had the *power* under the Constitution to tax patrons on income equal to the face amount of such documents.

We have now been asked for our opinion on that issue—i.e., the constitutionality of legislation which would accomplish the intent of Congress as expressed in the legislative history of the 1951 Act. *We are referring in this memorandum to legislation which would provide specifically that patronage income resulting from the operations of a cooperative in any year is to be included in the income of the patrons of that year to the extent of the face amount of documents, issued to such patrons within the time required by law, apprising them of their share of such income, without regard to the terms of such documents or the consent of the patrons.* (Such legislation is hereinafter referred to as "the proposed legislation" or "the proposed tax treatment of patrons".)

We believe such legislation would clearly be constitutional.

I. THE POWER OF CONGRESS TO TAX INCOME

The power of Congress to tax *income* is derived from Art. I, sec. 8, cl. 1, of the Constitution, which grants Congress the power "to lay and collect taxes, duties, imposts and excises. . . ." The only pertinent constitutional limitations upon this general taxing power are set forth in Art. I, sec. 2, cl. 3, and Art. I, sec. 9, cl. 4, both of which provide that "direct" taxes must be apportioned among the several states according to population. In *Pollock* v. *Farmers Loan & Trust Co.*, 158 U.S. 601 (1895), the Supreme Court held that a tax upon the *income from property* was in effect a direct tax upon the property itself, and hence beyond the power of Congress to impose without apportionment. The sole purpose of the Sixteenth Amendment, adopted in 1913, was to overcome the limitations which the *Pollock* case had placed upon Congressional power to tax *income*. It provides that:

> "The Congress shall have the power to lay and collect taxes on incomes, from whatever source derived, without apportionment among the several states, and without regard to any census or enumeration."

Thus the Sixteenth Amendment was not designed to grant Congress any power which it did not already have. If the tax was truly a tax on "income," rather than a tax on property, the Sixteenth Amendment merely removed any possible basis for imposing the constitutional requirement of apportionment, whatever the source from which the "income" was derived. See *Brushaber* v. *Union Pacific R. Co.*, 240 U.S. 1, 16–20 (1916).

II. CONGRESS HAS THE POWER TO SELECT THE LEVEL AT WHICH CURRENT BUSINESS INCOME WILL BE TAXED

In any situation involving a group of individuals who join together in an entity to conduct a common business undertaking, the "income" which is earned as a result of the joint undertaking is subject to tax. Insofar as the Sixteenth Amendment is concerned, Congress has the power to tax such "income," as earned, either at the level of the entity or at the level of the individual participants. The only constitutional limitation on the power of Congress to select the level of taxation (i.e., the person or entity on whom the tax will be imposed) is the Fifth Amendment's prohibition against the taking of property without due process of law. This means merely that the relationship between the income and the person taxed must be sufficiently close to justify, in fairness the imposition of the tax on such person.[1] In the setting of an individual-entity business relationship, where the individual is the beneficial owner of any income produced, it is entirely clear that both the entity and the individual participants are so closely related to the income that this requirement is satisfied and that the selection of the level of taxation is merely a matter of legislative policy. The history of the taxes which have been imposed on "income" derived within the framework of an individual-entity relationship makes these points convincingly clear.

A. ILLUSTRATIONS OF THE EXERCISE OF SUCH POWER

1. Partnerships

In the case of a partnership, for example, Congress originally levied the tax on income against the partnership itself, but then shifted the tax directly to the individual partners, whether or not the income had been distributed to them. The power of Congress to tax partners directly on their undistributed shares of partnership income was expressly upheld in *Burnet* v. *Leininger*, 285 U.S. 136 (1932), where the Supreme Court stated:

> "The Congress, having the authority to tax the net income to partnerships, could impose the liability upon the partnership directly as it did under the Revenue Act of 1917 . . ., or upon the 'individuals carrying on business in partnership,' as in the statutes here involved." (p. 142)

A later case, *Heiner* v. *Mellon*, 304 U.S. 271 (1938) reached the same result although the partnership was prohibited by state law from making any distribution of partnership earnings during the year in question.[2]

[1] Compare, for example, *Hoeper* v. *Tax Commission*, 284 U.S. 206 (1931), holding that a husband cannot be taxed on his wife's income, with *Burnet* v. *Wells*, 289 U.S. 670 (1933), sustaining the taxation to the grantor of a trust of trust income used to pay premiums on insurance on the grantor's life, although others were named as beneficiaries of the insurance.

[2] Interestingly enough, the Court there cited with approval Section 220 of the Revenue Act of 1918, taxing directly to shareholders the income of a corporation improperly accumulating earnings.

2. Corporations

Under the Act of June 30, 1864, the annual undivided profits of a corporation were taxed directly to its shareholders. In *Collector* v. *Hubbard*, 12 Wall. 1 (1870) the Supreme Court upheld the power of Congress to provide such treatment.[3]

For many years Congress has followed the general policy, with various exceptions, of levying the tax on business income produced by a corporation upon the corporation itself, and has taxed the shareholders individually only upon dividends paid to them. This treatment has been applied, and its constitutionality upheld, even in situations involving unincorporated associations which were not treated as corporations under state law. The power of Congress to tax income earned through such associations at the entity level, rather than at the individual level, was upheld in *Burk-Waggoner Oil Asso.* v. *Hopkins*, 269 U.S. 110 (1925).

With respect to foreign personal holding companies, Congress has undertaken since the Revenue Act of 1937 to tax United States shareholders directly on current earnings, even though undistributed, and its power to tax such shareholders in this manner was expressly upheld in *Eder* v. *Commissioner*, 138 F. 2d 27 (CA 2, 1943). Although this issue has never been presented to the Supreme Court, in *Helvering* v. *National Grocery Co.*, 304 U.S. 282, 288 (1938), which upheld the constitutionality of the undistributed profits tax on corporations, the Supreme Court stated that Congress, if it had chosen to do so, could have taxed the shareholder directly on the year's undistributed profits of the corporation.

*   *   *   *   *   *   *

As the situations referred to above illustrate, in every instance in which the Courts have been called upon to review the action of Congress in selecting the level at which a tax on current business income will be imposed, the constitutionality of *whatever action* Congress has taken has *always* been upheld.[4] Moreover, whenever parties join together to create income, it is inconceivable that Congress, having complete power to tax the income, would be limited by the particular form of the organization in choosing whether to tax the income to the entity or to the individual. There is nothing in the Constitution which could, by any stretch of the imagination, be thought to have that effect.

B. APPLICABILITY OF THE FOREGOING PRINCIPLE TO PROPOSED TAX TREATMENT OF PATRONS

Against this background the pertinent questions involved in determining the constitutionality of the proposed tax treatment of patrons are clear. Does the statute impose a tax on "income"? If so, can this tax constitutionally be imposed at the patron level rather than at the cooperative level? We think the answer to both quesions is clearly "Yes."

There is no question but that the current net margins earned through the operation of a cooperative constitute ~~income which~~ is constitutionally subject to tax without apportionment. Nor is there any doubt, under the authorities referred to above, that the imposition of such a tax on each patron based on his share of total current net margins would be a constitutionally permissible exercise by Congress of its power to select the level at which such income should be taxed. This would be true even though—as in the case of a partnership—the patron received no document apprising him of the amount of his share and even though that share was not distributed to him. Since income can be taxed to the patron without the issuance of such a document, it is certainly constitutional, as the proposed legislation would contemplate, to limit the amount so taxed to that

[3] Later, in *Pollock* v. *Farmers Loan & Trust Co.*, 158 U.S. 601 (1895), the Court held that a tax on income from property was equivalent to a direct tax on the property and was therefore unconstitutional unless apportioned among the several states (the Sixteenth Amendment not yet having been adopted). Although the Court in *Eisner* v. *Macomber*, 252 U.S. 189 (1920) indicated that, even after the adoption of the Sixteenth Amendment the *Pollock* case must be considered as having overruled the *Hubbard* case with respect to the power of Congress to tax *accumulated* corporate earnings direct to stockholders (since such *accumulated* earnings constitute *property* and not *income* of the shareholder) there has never been any indication that, since the adoption of the Amendment, *Hubbard* is not still sound authority concerning the power of Congress to tax *current* earnings direct to stockholders. See discussion of *Macomber* case, below.

[4] As we shall demonstrate, *Eisner* v. *Macomber* is not authority to the contrary.

portion of the net margin with respect to which the patron is given notice in the form of a document.[5]

The actual issuance of a document is unnecessary, as a matter of constitutional law, to render valid a statute taxing to the patron his share of the net margins of a cooperative. The crucial points, in the constitutional sense, are that income has been earned through business activity of the patron and others associated with him in the cooperative enterprise, and that such income can be taxed at the level chosen by Congress.[6] However, it would seem desirable as an administrative matter to provide for the issuance of such documents, and, as the proposed legislation would contempiate, to make such issuance the event which entitles the cooperative to a reduction of its gross income and which requires the income represented by the documents to be included by the patrons. Under this procedure each patron is informed of the amount which he is required to report as income.[7]

Some have suggested that the analogies referred to above in the partnership and corporate areas do not support the conclusion that the proposed tax treatment of patrons would be constitutional. It has been claimed, for example, that in the case of a partnership, a small group of partners is normally in control and can force the distribution of partnership earnings, whereas in the cooperative situation the number of patrons is usually large and the element of control is lacking. Therefore, the argument goes, the fact that Congress can tax partnership income directly to the partners does not mean that it can tax cooperative income directly to patrons. This observation, we submit, will not stand analysis. Many partnerships—note, for example, the real estate syndicate currently in vogue—have a great many partners, no one of whom is in control. Moreover, in a limited partnership the limited partners are not even entitled to a voice in partnership management; and yet they are clearly taxable on their share of partnership earnings, whether or not distibuted.

It has been suggested that the pass-through of corporate income to shareholders of foreign personal holding companies is constitutional only because it is necessary to prevent evasion and avoidance. Although the prevention of tax avoidance was what motivated Congress to impose a tax on shareholders of foreign personal holding companies, we submit that the constitutional *power* to provide such treatment is no more dependent on such considerations of policy than is the power to tax partners on undistributed earnings of a partnership. It has also been pointed out that the foreign personal holding company situation is one

[5] Some of the witnesses before the Ways & Means Committee have contended that the *Carpenter* and *Long Poultry Farms* cases, although decided under present law, mean that a statute specifically taxing the patron on income equal to the face amount of a patronage refund certificate would be unconstitutional. They reason that the definition of income in the present Code is intended to be as broad as the Sixteenth Amendment permits and that, consequently, decisions to the effect that under present law a patron realizes no income except to the extent of the fair market value of the document are decisions that the patron could not constitutionally be taxed on any greater amount. Such reasoning is patently fallacious. Although the definition of gross income in the present statute is seemingly all-embracing, it is obviously not intended to tax every taxpayer on all income that constitutionally could be attributed to him. Thus a cash basis taxpayer is not taxed on accrued, but unreceived, income; nor is a corporate stockholder, as a rule, taxed on undistributed corporate income. This does not mean that a statute, specifically taxing certain undistributed corporate income to stockholders, such as the foreign personal holding company provision, is unconstitutional. Similarly the *Carpenter* and *Long Poultry Farms* cases have no bearing on the constitutionality of the proposed tax treatment of patrons. They merely hold that the present law contains nothing which authorizes such treatment.

[6] Those who have expressed doubt as to the constitutionality of the proposed legislation have not analyzed the problem correctly: they have erroneously looked to the document itself for the constitutional justification for taxing the patron. The writer of this memorandum, before he had given any study to the constitutional issue and before he had placed that issue in focus, also took this approach. See Asbill, "Cooperatives: Tax Treatment of Patronage Refunds", 42 Va. L. R. 1087, 1112 (1956), where the question was posed: "Does a worthless piece of paper represent 'income' within the meaning of the Sixteenth Amendment?" If one starts with the false premise that the document is the constitutional *sine qua non,* it is not surprising that one questions whether a patron can realize any income when the document he receives is without fair market value. The doubt disappears, however, when one realizes that the document is merely evidence of previously earned income which could be taxed to the patron regardless of the issuance of any document.

[7] For a similar notification requirement, see Subchapter M of the Internal Revenue Code, dealing with regulated investment companies, which provides for the taxation at the level of the individual stockholders of certain capital gains realized, but not distributed, by such companies. Sec. 852(b)(3)(D). This treatment applies to such amount of capital gain as the company shall designate in a written notice mailed to its shareholders within 30 days after the close of its taxable year. Section 852 provides for payment of the capital gains tax by the corporation and grants a credit to the shareholder for the amount paid. This provision is similar to the provision in the Discussion Draft of the Revenue Bill of 1961 for withholding on patronage refunds.

where a small group of shareholders controls the corporation, and it has been suggested that this fact has an important bearing on the constitutionality of the foreign personal holding company provisions of the statute. It is, of course, true that for a corporation to qualify as a foreign personal holding company, more than 50% of the stock must be owned directly or indirectly by not more than 5 persons who are citizens or residents of the United States. However, it may well be that no one member of this group can control the corporation. Moreover, the tax is imposed on shareholders whether or not they are members of this group, whether or not they have voting stock, and whether or not the corporation was a foreign personal holding company at the time they acquired their stock. Consequently, it can be imposed on a minority shareholder who has no voice in the management or control of the corporation, who acquired his stock before the corporation became a foreign personal holding company (by subsequent changes in the stock ownership of other stockholders), and who is not even aware that the corporation is a foreign personal holding company.

Thus, we submit, the above examples of the pass-through of income from the entity level to the individual level are square authority for the constitutionality of the proposed tax treatment of patrons.[8] They support conclusively the proposition that Congress' power to choose the level of taxation cannot be controlled or limited by the label given by state law to a particular form of business operation. It is inconceivable that Congress can tax the individual associates when the state denominates the entity a partnership, but cannot do so when the state calls the entity a corporation or a cooperative. As the Supreme Court, in *Burk-Waggoner Oil Asso.* v. *Hopkins, supra*, stated with respect to unincorporated associations:

> ". . . . Neither the conception of unincorporated associations prevailing under the local law, nor the relation under that law of the association to its shareholders, nor their relation to each other and to outsiders, is of legal significance as bearing upon the power of Congress to determine how and at what rate the income of the joint enterprise shall be taxed." (269 U.S. at 114)

This language is unquestionably applicable to any form of business organization.

These examples also make it clear that it is unnecessary as a constitutional matter, to require specific consent by the patron to the proposed tax treatment, just as it is unnecessary to require such consent in the partnership and foreign personal holding company areas.[9]

III. EISNER V. MACOMBER IS NOT AUTHORITY TO THE CONTRARY

The only case which has been viewed as casting any doubt upon the power of Congress, in a business situation like that here involved, to impose the tax on current income at whichever level it considers most appropriate is *Eisner* v. *Macomber*, 252 U.S. 189 (1920). This case, perhaps more than any other in the tax field, has been offered over and over again, without analysis, in support of propositions upon which it does not even bear. Upon analysis, it is clear that the case does not touch upon the question here involved.

The issue there before the Court was whether a stock dividend which made no change in the stockholders' interests in the corporation constituted income

[8] They are also authority, if any be needed, for the proposition that dominion and control over property is not essential to the realization of income. Cases such as *James* v. *U.S.*, 366 U.S. 213 (1961) (holding embezzled funds to be taxable income), which have been cited to the Ways & Means Committee as authority against the constitutionality of the proposed legislation, merely say that dominion and control may give rise to realization of income; they by no means hold, or say, that income cannot be realized without such dominion and control.

[9] It has been pointed out by others that several Code provisions taxing undistributed corporate profits to shareholders require the individual consent of the shareholder. See, for example, Section 565 (Consent Dividends) and Subchapter S. The existence, in these provisions, of the requirement of individual consent does not, of course, mean that such a requirement is demanded by the Constitution; it simply means that Congress, as a matter of legislative policy, has deemed it advisable in those situations to tax undistributed corporate earnings to shareholders only when such shareholders have consented to such treatment. These examples involve situations where the number of shareholders is usually relatively small and where their consent can be obtained by the corporation without great administrative difficulty. Entirely different questions of policy are involved in determining the desirability of imposing the individual consent requirement in the cooperative area, where the number of patrons is often extremely large, and where the administrative problems in obtaining consent may be very costly and disruptive of the cooperative's operation and financial structures.

within the meaning of the Sixteenth Amendment. The Court held that it did not. That holding—that the splitting of two certificates of stock into three does not generate income—does not even remotely touch the question here involved, namely, whether income flowing *currently* to a cooperative can be taxed directly to the patrons whose patronage resulted in the realization of the income.

It is true that in the *Macomber* opinion, the Court discussed the question whether earnings of a corporation could be taxed directly to its stockholders. Aside from the fact that the statute there involved did not present such a question, since it purported to tax only the stock dividends themselves,[10] a careful consideration of the language of the Court and of Justice Brandeis' dissent clearly reveals that the Court was referring only to the taxation of *accumulated* corporate earnings, and that it was not considering—nor was it expressing any opinion on—the question whether a stockholder may be taxed on income of the corporation *as it is currently earned.*

The Government had argued in the alternative that the constitutionality of the statute imposing a tax on stock dividends could be sustained on the theory that corporate earnings could be taxed directly to stockholders, irrespective of the power of Congress to tax a stock dividend as such. That this argument was directed toward the taxation of the earliest earnings *accumulated* after March 1, 1913, not *current* earnings, is clear from the record of the case[11] and from the following statement by the Court:

> "Upon the second argument, the government, recognizing the force of the decision in Towne v. Eisner, 245 U.S. 418, and virtually abandoning the contention that a stock dividend increases the interest of the stockholder or otherwise enriches him, insisted as an alternative that, by the true construction of the Act of 1916, the tax is imposed not upon the stock dividend, but rather upon the stockholder's share of the undivided profits *previously accumulated* by the corporation; the tax being levied as a matter of convenience at the time such profits become manifest through the stock dividend. If so construed, would the act be constitutional?" (p. 217) (Emphasis supplied.)

The majority expressed the view that a statute which purported to tax the *accumulated* earnings of a corporation directly to its shareholders would not be constitutional, for the reason that ". . . what is called the stockholder's share in the *accumulated* profits of the company is *capital,* not income." (p. 219) (Emphasis supplied.) The opinion concluded with the following paragraph:

> "Thus, from every point of view, we are brought irresistibly to the conclusion that neither under the 16th Amendment nor otherwise has Congress power to tax without apportionment a true stock dividend made lawfully and in good faith, or the *accumulated* profits behind it, as income of the stockholder. The Revenue Act of 1916, in so far as it imposes a tax upon the stockholder because of such dividend, contravenes the provisions of article 1, § 2, cl. 3, and article 1, § 9, cl. 4, of the Constitution, and to this extent is invalid notwithstanding the 16th Amendment." (Emphasis supplied.) (p. 219)

Nowhere in the course of its opinion did the Court consider—or have occasion to consider—the constitutionality of a statute which taxed the *current* earnings of a corporation directly to its stockholders.

When one considers the dissenting opinion of Mr. Justice Brandeis, it is entirely clear that he also recognized that the Government's alternative argument was based upon the theory that Congress had the power to tax to share-

[10] The Court stated, at pp. 199–200 that the statute "(notwithstanding a contention of the government that will be noticed) plainly evinces the purpose of Congress to tax stock dividends as income."

[11] The stock dividend was declared on January 1, 1916, in the amount of approximately $25 Million. Of this amount, $20 Million was a capitalization of pre-March 1, 1913 earnings, which the statute did not purport to reach. The remaining $5 Million was a capitalization of the *earliest* post-1913 earnings (total post-1913 earnings being about $25 Million). It was Mrs. Macomber's share of this $5 Million of *accumulated* earnings which the Government sought to tax. This is clear from the following statement in the Government's brief on reargument:

> ". . . If Congress had levied an annual tax on the stockholder's share of corporate profits *accruing during each year,* then, of course, no one would say that any part of the profits accruing during a particular year could be carried forward and treated as income of a succeeding year. But that is not this case. . . . The result is that instead of an *annual tax on accruing profits,* we have a *single tax on accumulated profits* levied when they are distributed." (pp. 25–26).

holders *accumulated earnings*, rather than *current* earnings, of their corporation. He stated (p. 232):

> ". . . serious question of the taxability of stock dividends would probably never have been made if Congress had undertaken to tax only those dividends which represented profits earned during the year in which the dividend was paid, or in the year preceding."

Thus, since the question presented by the alternative arguments in *Eisner* v. *Macomber* was not the power of Congress to tax *current* corporate earnings directly to shareholders but its power to tax *accumulated* earnings when represented by the declaration of a stock dividend, it would indeed be erroneous to accept the case as any authority whatever on the question of the constitutional power of Congress to tax directly to shareholders the earnings of a corporation (or to patrons the earnings of a cooperative) *as they arise.*

In view of the above, it seems unnecessary to discuss at any length the subsequent history of *Eisner* v. *Macomber.* Suffice it to say that, even with respect to the matters to which the Court was actually addressing itself—such as the taxability of stock dividends, and the definition of income—the decision has been limited by subsequent cases to such an extent that it now must be considered as encompassing very little, if any, more than its own precise factual situation.[12]

Thus, a stock dividend is taxable if there has been a segregation of assets at the corporate level (*U.S.* v. *Phellis*, 257 U.S. 156 (1921) and *Rockefeller* v. *U.S.*, 257 U.S. 176 (1921)), or if there has been any change in the stockholders' proportional interests in the corporation (*Marr* v. *U.S.*, 268 U.S. 536 (1925) and *Koshland* v. *Helvering*, 297 U.S. 441 (1935)), even though nothing has been "severed from capital" and distributed to the stockholder for his own "separate use and benefit." See *Helvering* v. *Bruun*, 309 U.S. 461 (1940).

IV. FACTORS PECULIAR TO COOPERATIVES

It is clear from the foregoing that, notwithstanding *Eisner* v. *Macomber*, Congress has the power to tax the shareholders of a regular business corporation on the undistributed *current* earnings of the corporation. It is equally clear, if not clearer, because of the closer business relationship of patron and cooperative, that Congress can tax the patron on his share of current net margins derived from patronage.

In the cooperative situation the patron is not merely a passive investor—he plays a leading role in the transactions producing the income; he furnishes the products or purchases the supplies or services from which the income is derived. The patron must take affirmative action (i.e., he must do business with the cooperative) in order to create any patronage income which is taxable to him. Under these circumstances his relation to net margins received at the cooperative level is closer than that of a stockholder to corporate earnings. Indeed, this relationship is closer, economically, than that of many partners—and certainly all limited partners—to the earnings of their partnership. Since partnership income can be taxed directly to the partners, there is no logical or legal basis whatever for concluding that patronage income cannot be taxed directly to patrons.

* * * * * * *

For the reasons set forth above, legislation requiring patrons to include in income the face amount of documents evidencing their share of current patronage income of the cooperative enterprise would clearly be constitutional.

SUTHERLAND, ASBILL & BRENNAN,
By MAC ASBILL, Jr.

Senator CURTIS. Thank you very much.

Mr. Patrick B. Healy.

You understand that dairymen are used to working from early to late, and so you probably don't mind.

[12] Indeed, if the continued validity of the *Macomber* decision on the exact issue there involved were squarely presented to the Court today, we believe the case would be overruled. In *Helvering* v. *Griffiths*, 318 U.S. 371 (1943) the Government urged that *Eisner* v. *Macomber* be overruled, but a majority of the Court refused to reach the Constitutional issue because it concluded that the statute there involved was not intended by Congress to encompass the type of stock dividend involved in the *Macomber* case. Three Justices dissented on the ground that the *Macomber* case should be overruled.

Erwin Griswold, Dean of Harvard Law School, in "Cases on Federal Taxation" (5th ed. 1960) stated: "The [majority] opinion [in *Griffiths*] left little room to doubt that a statute explicitly taxing all stock dividends would be upheld." (p. 710).

STATEMENT OF PATRICK B. HEALY, SECRETARY, NATIONAL MILK PRODUCERS FEDERATION

Mr. HEALY. We are very happy to be here.

Senator CURTIS. Mr. Healy, we are delighted to have you here. This tax bill probably to many people is just so many pages, but to a great segment of our economy it is very important, and we assure you that what you have to say will be followed through when the committee deliberates.

You may proceed.

Mr. HEALY. Thank you, Mr. Chairman.

In the interests of time, I will attempt to summarize the summary we prepared.

My name is Patrick B. Healy, and I am the secretary of the National Milk Producers Federation, with offices at No. 30 F Street NW in Washington, D.C.

The statement which I am going to present here accurately reflects the farmers' viewpoint, because 75 percent of our board of directors are required to be farmers, and therefore any policy position which we adopt at meetings is adopted by a preponderance of farmers.

Furthermore, the board of directors of cooperatives are all farmers. Therefore, farmers do in fact set the policies under which cooperatives operate.

Arguments to the effect that Congress must protect farmers from themselves, or from their own cooperatives, are unsound and are merely an excuse to undermine cooperatives so processors and middlemen can take greater profits at the farmers' expense.

Farmers must be permitted to operate their own organizations, financed with their own funds, in whatever manner they deem best.

Congress should not undertake to substitute its judgment in the operation of a farmers' cooperative for the sound judgment and experience of its farmer members, who have at stake not only their own capital, this is the farmers' money we are talking about, but also their own welfare and future as dairy farmers.

Business requirements change from time to time. An inflexible across-the-board rule prescribed by Congress would be impractical.

What are cooperatives?

Cooperatives are a basic form of a self-help program in which farmers acting together in the marketplace seek to solve their own problems, improve the quality and service of their produce, and try to obtain a more reasonable return for the labor and investment required to produce the Nation's food.

Congressional approval of cooperatives:

There is a long history in Congress of legislation to encourage farmers to improve their own position by organizing and operating their own cooperatives.

That cooperatives have justified the confidence placed in them by Congress is amply attested by the fact that this policy of encouragement has been maintained consistently for 50 years.

Not only in the interests of the cooperative and the farmer, but also in the interests of our Nation as a whole, in order to provide for a healthy agriculture, it must be everyone's duty to protect and develop farmers' cooperatives and see to it that these associations prosper.

Farmers use cooperatives to keep processing marketing margins in line and to keep the cost of farm supplies in line. They do this by setting up and operating their own businesses when margins charged farmers by others become excessive.

The reason cooperatives meet with strong opposition is because the opportunities for others to take large profits at the expense of farmers is greatest when farmers are disorganized, and when there is no yardstick in the marketplace against which these other organizations must measure themselves.

The tax treatment of farmer cooperatives is not unique. It is not unusual, and it is not applicable to cooperatives alone. It is followed by businesses operated by individuals, by partnerships, and by small corporations, in that only one level of tax is assessed against their profits.

Large corporations are in fact subject to a double tax. We think this is wrong. But certainly we don't think the way to correct it is to put a double tax on everyone else.

We do not believe that there is one valid tax objective, one valid revenue objective, to be achieved by the cooperative provisions of the bill which is before this committee.

All savings which are made by farmers, when they market their product on a cost basis through their own cooperatives' are taxed. They are taxed at full value to the members and the patrons of the cooperative. This was settled in 1962, when we passed the legislation concerning the patronage refunds of cooperatives.

The provisions of this bill which are now pending before the Congress are an unwarranted attack upon farmer cooperatives. They are designed to undermine the capital of cooperatives and their financial structure thus making it easier for others to operate in the market alongside these institutions and to take a better profit at the farmers' expense.

We therefore recommend that section 531 be stricken from the bill. We think it should be because, first, it serves no valid tax objective. There will not be one additional penny of revenue to the Government, if this thing is passed—none.

Secondly, we feel that it is destructive and discriminatory, and it is an attack upon cooperatives which are operated by farmers in their own behalf.

Third, we think its real effect, rather than to provide for Federal revenue, would be to undermine the capital and the financial structure of the cooperatives.

Fourth, it would be an attempt to interpose the judgment of Congress for that of the farmer boards of directors of each of these cooperatives.

It would do this by prescribing an across-the-board rule which would be inflexible and inadequate to meet the changing conditions with which these cooperatives are confronted, conditions which are different maybe for each cooperative which must make up its mind as to what it should do.

We believe that problems relating to the internal operations of cooperatives, and here we are talking about the accrual, use, and revolving of the capital structure of these cooperatives, should be left to the farmer cooperatives, because they are the people who have the problem.

Finally, we feel that as long as one full level of tax is paid currently in the year in which it is earned, as is now the case, that farmers should be free to managa their own cooperatives, and to finance them with their own money, in whatever manner they deem best.

That concludes our summary, Mr. Chairman.

Senator CURTIS. Thank you.

Mr. Miller?

Mr. Hansen?

Mr. Healey, do you have anything further to say?

Mr. HEALY. Yes. I had thought perhaps that Mr. Miller would pursue his question with me as he did heretofore.

In answer to that question, I would like to say that this is what farmers do every day. This is the decision that they make every day.

They decide who will sit on their board of directors. They assemble at annual meetings and elect officers and directors. In effect they decide each year whether the capital shall be revolved or whether it shall be retained.

Furthermore, in 1962, and again in 1964, we went to each cooperative in this country, not only we in the dairy field but all cooperatives, and we explained this tax bill to them.

They all amended their bylaws to conform to the 1962 act, and again in 1964 to conform to the act which related to per unit retained capital. All of them are directly and explicitly aware of how their capital is used and of how their cooperative is operated.

All of them, or at least the majority in each cooperative, have agreed that this is something that the cooperative must be left free to judge. It is something that they have just recently been confronted with; and we see absolutely no reason to impose this 15-year deadline on cooperative capital, thereby making it debt instead of capital, and subordinating all other debt to it.

It makes it difficult for them to serve farmers and meet expanding agricultural needs. I understand the governor of the Farm Credit Administration was here today. He probably said that it would make it more difficult for cooperatives to obtain loans from an organization put in business by Congress to lend money only to them. I see no reason to turn this capital, which farmers invest so they can run their own business, into debt so that it becomes more difficult for them to borrow money elsewhere.

They make this decision every year, and each year they decide, "We need this to promote our business," or "We can afford to return a portion of it to you and still have an ongoing business."

Senator MILLER. Who says that?

Mr. HEALY. The boards of these cooperatives; which are elected by the farmers, and which are farmers themselves.

Senator MILLER. Yes. That gets to my point. These other statements which you are making, I think all of us on the committee recognize.

I am getting at this matter of the members themselves on an annual decision basis, because it is annual income we are concerned with. I understand how they operate, and the thing that troubles me is that I can see where this idea of annual income and dominion over annual income might well be exercised by a majority of the members rather than by a board which might not be able to be ousted for some time.

Frankly, I have not in my area seen where any boards have been ousted. But at the same time when you are dealing with annual income, perhaps the annual meeting of the board, of the membership, is the place to merely put the stamp of approval of the majority of the members on the disposition of the annual income.

Mr. HEALY. I think, Senator Miller, that in effect, this is what we do. We go to the annual meeting and we continue the boards in office, the boards which have taken these decisions. Furthermore, I know of no other place where we require all the stockholders, and that is in substance what we are talking about, of organizations to decide how much of that stock shall be called each year. Therefore, I cannot see why, when we get a small group of farmers, as is the case in your State particularly, why we should not trust these men to decide for themselves how best they can operate their own business.

Senator MILLER. When you say, "decide for themselves," are you talking about the boards of directors?

Mr. HEALY. I am talking about the board of directors elected by farmers, and who are subject to the people who elect them.

Senator MILLER. What is the matter with the members themselves?

Mr. HEALY. We have just been to the membership in 1964 and in 1962, and explained this tax issue to them in the greatest detail. We got their individual consent in many cases. In many cases we got, under the requirements for amending bylaws, which are quite rigid in some organizations——

Senator MILLER. Right. That is exactly what I am getting at.

Mr. HEALY. We just went through that, Senator, and I see no reason to impose rules on cooperatives that we do not impose on any other business. I can see no objective in it, nothing that would be served by it, except to create a feeling that perhaps the Congress of the United States does not trust cooperatives.

You see, I know the dairy business quite well, and I know of no market in this country where a man has only one cooperative to which he can sell his milk. He has a choice, and if he does not like what one cooperative does, he can sell elsewhere. If he doesn't like what any cooperative does, he can ship as an individual shipper to some milk dealer, who is doggone glad to get him.

This competition keeps the decisions of the Board, and the revolving of money, at the very best pace that the cooperative can develop and still continue to operate a business.

Senator MILLER. I understand that a revision of the bylaws can be quite an undertaking sometimes. It might even take years. It depends a lot on what the membership wants to do. But I must say that a majority of the members would have to make a decision on this matter instead of the Board, I can't see how that would impede the cooperative at all.

Mr. HEALY. Well, if that were the case, and we are unalterably opposed to that, the farmers would approve the financing of their cooperatives. There is no question about that; but, it would be an unnecessary burden every year, and we just shouldn't have to do more than we are doing now.

Senator MILLER. Yes, but it might be good for the members to be a little more active sometimes. I know you have troubles, sometimes all managers, all cooperative managers, have on one occasion or another a little trouble getting the members out, like they should, or getting them to participate like they should.

They are generally pretty well satisfied. But this fits with the concept of the democracy of the cooperative, and all I am suggesting to you is that this might be something that will be taken up with the conferees on the other side.

Mr. HEALY. As regards the conferees, I would hope this bill would come out of the Senate without section 531. I would judge that by this time many individual Members of the House have talked to people on the Ways and Means Committee, and I would hope that the Senate would send such resolute men to the conference that they would get their way.

Senator MILLER. Of course, you never know what the House is going to do.

Senator CURTIS. Thank you, Mr. Healy.

STATEMENT OF PATRICK B. HEALY, SECRETARY, NATIONAL MILK PRODUCERS FEDERATION

SUMMARY

1.—The federation

There is no conflict of interest between farmers and their agricultural cooperatives.

The Federation's statement accurately reflects the farmers viewpoint, because 75 percent of our board of directors are required to be farmers and policy positions are adopted at meetings where farmers predominate.

2.—Farmers control cooperatives

The boards of directors of cooperatives are all farmers elected by farmers. Farmers set the policies of their own cooperatives by democratic process.

3.—The farmers freedom of choice

Arguments to the effect that Congress must protect farmers from themselves, or from their own cooperatives, are unsound and are merely an excuse to undermine cooperatives so processors and middlemen can take greater profits at the farmers' expense.

Farmers must be permitted to operate their own organizations, financed with their own funds, in whatever manner they deem best.

Congress should not undertake to substitute its judgment in the operation of a farmers' cooperative for the sound judgment and experience of its farmer members, who have at stake not only their own capital but also their own welfare and future as dairy farmers.

Business requirements change from time to time. An inflexible across-the-board rule prescribed by Congress would be impractical.

4.—What are cooperatives

Cooperatives are a basic form of a self-help program in which farmers acting together seek to solve their own problems, improve the quality and service of their produce, and try to obtain a more reasonable return for the labor and investment required to product the Nation's food.

5.—Congressional approval of cooperatives

There is a long history in Congress of legislation to encourage farmers to improve their own position by organizing and operating their own cooperatives.

That cooperatives have justified the confidence placed in them by Congress is amply attested by the fact that this policy of encouragement has been maintained consistently for 50 years.

6.—Cooperatives help farmers

Cooperatives provide services for farmers when needed services are not otherwise available.

Farmers keep processing and marketing margins in line, and also the cost of farm supplies, by setting up and operating their own cooperative businesses when margins charged by others are excessive.

Cooperatives check the weights and tests of their members milk to assure fair treatment in an area which otherwise is easily subject to mistreatment.

7.—Cooperatives are important to consumers

Cooperatives have not sought unduly high prices. They ask only for a price level which will reflect to the farmer a fair return for his labor, taking into account the investment and risk involved.

Hourly returns for the labor of dairy farm operators, as reported by the Department of Agriculture, range from $.91 to $1.08 in the three test areas reported.

Cooperatives keep middlemen's margins under reasonable control.

Cooperatives help provide the abundant supplies of high quality food which consumers enjoy.

8.—Opposition to cooperatives

Cooperatives meet with strong opposition because the opportunities for processors and middlemen to take large profits at the expense of the farmer is greatest when farmers are disorganized, when there are no checks on weights and tests, and when there is no regulating influence on processing and purchasing margins.

9.—Tax equality

Businesses operated by individuals, by partnerships, by cooperatives, and by small corporations are all taxed alike in that only one level of tax is imposed.

Large corporations are subject to a double tax. This is wrong. But extending the double tax to cooperatives and then, in turn, to small corporations, partnerships, and individual businesses is not the proper way to correct it.

Large corporations can use the tax advantages available to cooperatives if they choose to operate on a cost basis as cooperatives do.

10.—No tax issue in the present bill

There are no valid tax objectives to be achieved by the cooperative provisions of the pending bill.

All savings made by farmers when they market their produce, or purchase their farm supplies, on a cost basis, through their own cooperatives are taxed at full value to the members and patrons of the cooperatives. This is true, under the present law, regardless of what percentage is paid in cash or left in the cooperative as capital.

11.—Discriminatory and destructive legislation

The cooperative provisions of the pending bill are an unwarranted attack upon farmers cooperatives, and are designed to undermine their capital and financial structures, thus making it easier for processors and middlemen to reap a greater profit at the farmer's expense.

12.—The federation's position

We recommend that Section 531 be stricken from the bill for the following reasons:

(1) It serves no valid tax objective;

(2) It is a destructive and discriminatory attack upon farmers agricultural cooperatives;

(3) Its real effect would be to undermine the capital and financial structure of agricultural cooperatives;

(4) It would interpose the judgment of Congress for that of the farmer boards of directors of cooperatives;

(5) It would prescribe an across-the-board rule which would be inflexible and inadequate to meet changing requirements;

(6) It is an attempt by Congress to interfere in the internal affairs of farmers' organizations;

(7) Problems relating to the internal operation of cooperatives should be considered by the agriculture committees and not the tax committees;

(8) As long as one full level of tax is currently paid, as it now is, farmers should be free to manage their own cooperatives and to finance them with their own money in whatever manner they deem best.

THE FEDERATION

The National Milk Producers Federation is a national farm organization. It represents dairy farmers and the dairy cooperative associations which they own and operate.

The policies of the Federation accurately reflect the viewpoint of dairy farmers who are members of cooperatives as well as the viewpoint of cooperative associations which dairy farmers have organized and joined.

This is true, because our bylaws require that at least 75 percent of the Federation's board of directors must be active dairy farmers. Attendance at our annual meetings, where our basic policy resolutions are determined, is predominantly that of the active dairy farmer.

The men who serve on our board of directors, and those who serve as voting delegates when our policies are adopted, are all chosen, either directly or indirectly, by farmers and they must be responsive to the wishes and thinking of the dairy farmers they represent.

This is most important in this hearing, because it will be argued that Congress must protect farmers against their own cooperatives.

FARMERS CONTROL COOPERATIVES

The boards of directors of dairy cooperatives, in practically every case, are all active dairy farmers. The directors are elected by farmers, and they must be responsive to the welfare of the dairy farmers they represent and also to their own welfare as dairy farmers themselves.

The bylaws of the cooperatives require their boards of directors to be active farmers, thus assuring control of the cooperative by farmers. This further assures that the cooperative will be operated in the best interest of farmers and that its policies will reflect accurately the farmer viewpoint.

The principle of one-man one-vote is traditional with cooperatives, and democratic control by the farmers themselves is a fundamental concept in these organizations. We know of no situation among our members, over many years of experience, where a few large producers have dominated a cooperative to the detriment of smaller producers. The one-man one-vote principle precludes this; and, in any event, farmers just don't operate that way in cooperatives. The reason they have combined together in a cooperative is to promote the common good of all through their united efforts.

THE FARMERS FREEDOM OF CHOICE

The control which farmers exercise over the Federation and over their own cooperative associations, as we have pointed out, is most important to a proper evaluation of the issues presented in this hearing.

Some will argue that farmers must be protected against their own cooperatives and that, unless Congress intervenes, cooperatives will take unfair advantage of the farmers that own and control them.

This is the same as saying that farmers must be protected against themselves and that farmers must not be permitted to use their own best judgment in the management of their own affairs.

It will be our position, and that of the dairy farmers we represent, that farmers should be permitted to operate their own organizations, financed with their own funds, in whatever manner they deem best.

Congress should not undertake to substitute its judgment in the operation of a farmers' cooperative for the sound judgment and extensive knowledge and experience of its farmer members, who have at stake not only their own capital but also their own welfare and future as dairy farmers.

We are not impressed with the argument that Congress should protect the farmer against himself—by making him do what he does not want to do—and by making him handle his own business in his own organization in a manner which is contrary to his own best judgment and contrary to the wishes of a majority of his co-members.

An examination of the present proposal, along with similar proposals that have been made in the past, will disclose that the real objective of such legislation is not to help farmers but to undermine ~~the effectiveness~~ of agricultural cooperatives and thus enable nonfarmer enterprises to reap a greater profit at the expense of disorganized farmers.

This is particularly true of the pending legislation, because it serves no tax objective whatever. Its sole result would be to undermine the capital and financial structure of important agricultural cooperatives, thus leaving farmers at the mercy, if any such quality exists, of the purchasers and processors of their produce.

Farmers must be free to make their own decisions in their own cooperatives—and Congress must not attempt to make decisions for them by a general rule of law—because the facts are different in practically every case.

For example, in a new or expanding cooperative, or in one planning to set up a new plant, it might be most important to farmers to build up capital in substantial amounts and to leave capital funds in the cooperatives for a relatively long period of time. In a cooperative already fully financed, the farmers may prefer to withdraw a large percentage of their current savings in cash.

In one cooperative, farmers may prefer to take a large proportion of their current savings in cash and leave their invested capital in the cooperative for longer periods. In another, the farmers may prefer to leave their current savings on deposit in the capital of the cooperative in order to bring about a more rapid revolving of older capital certificates.

Business requirements change from year to year. The right to make business decisions must be flexible and not hampered by general across-the-board rules prescribed by Congress, which in many cases would be impractical to meet current problems.

As long as the current payment of one level of tax is adequately provided for, as it now is, we see no reason why farmers should not be permitted to make their own decisions concerning their own funds in their own organizations.

It is entirely out of order, and most inappropriate, in such cases, for Congress to substitute its judgment for the business decisions of the farmers and thus meddle in the internal affairs and operations of these important agricultural cooperatives.

WHAT ARE COOPERATIVES?

Agricultural cooperatives are organizations of farmers who have banded together in an effort to improve their own economic lot.

They are entirely voluntary; and no farmer needs to join one, or to remain a member, unless he wishes to do so. In practically all cases, membership is open and any farmer who wishes to avail himself of the services of the cooperative and to participate in it is welcome to do so.

Cooperatives are a basic form of a self-help program in which farmers acting together seek to solve their own problems, improve the quality and service of their produce, and try to obtain a reasonable return for the labor and investment required to produce the Nation's food.

Some cooperatives are bargaining associations through which farmers can bargain as a group for the sale of milk to processing and distributing plants. Without such associations, farmers have no group bargaining power and are in the position of having to take for their milk whatever price the dairy companies may choose to pay.

Cooperatives als. check weights and butterfat tests of the milk sold by their members, thus eliminating the possibility of false or inaccurate tests and weights.

Other dairy cooperatives are manufacturing units. These are simply groups of farmers who, instead of selling their milk as a raw agricultural product, have organized cooperatively to manufacture it, on a cost basis, in their own plants, built with their own capital, in order to obtain a better return by selling it in the form of finished dairy products.

Cooperatives also purchase for their members, on a cost basis, the supplies and equipment needed on their farms.

CONGRESSIONAL APPROVAL OF COOPERATIVES

There is a long history in Congress of legislation to encourage farmers to improve their own position by organizing and operating their own cooperatives. The policy of Congress in this respect is well established by many enactments. To mention just a few, the Capper-Volstead Act was passed in 1922, the Agricultural Marketing Act was passed in 1929, numerous provisions relating to cooperatives were enacted in the 1930's, and legislation relating to cooperatives and to the Farm Credit Administration has continued to the present time.

That cooperatives have justified the confidence placed in them by Congress is amply attested by the fact that this policy of encouragement has been maintained consistently for approximately 50 years.

COOPERATIVES HELP FARMERS

Cooperatives have rendered a tremendously valuable service for agriculture over many years. Through them, farmers have provided services for themselves where needed services were not otherwise available.

They have kept processing and marketing margins in line by processing and marketing their own produce in their own plants when the margins charged by others were excessive. In the same manner, when prices charged for feeds and fertilizer and farm equipment have been excessive, farmers have set up their own purchasing operations.

The savings farmers have made by performing their own marketing and purchasing service for themselves in their own cooperatives runs into many, many millions of dollars. This has benefited not only the agricultural economy of the Nation but the economy as a whole, because agriculture is an important part of the total economy.

Cooperatives provide a yardstick for measuring excessive processing margins and provide a brake on middlemen's excessive profits.

Even in areas where there are no cooperative plants, the fact that farmers can set up their own plant if processing margins become too excessive serves as a strong influence to keep the margins within reasonable bounds.

Farmers do not organize cooperatives for the fun of it. In most cases, they are driven to do so for their own protection, either because the services they need are not being provided or because excessive profits are being taken at their expense. Dissatisfaction with weights and tests is another factor. Unless there is a very real need for farmers to organize, the setting up of a new cooperative is quite likely to fail.

COOPERATIVES ARE IMPORTANT TO CONSUMERS

Although farmers' cooperatives have been reasonably successful in the agricultural field, as Congress intended them to be, they have neither achieved nor sought unreasonably high prices.

Controls against undue enhancement of prices are provided in Section 2 of the Capper-Volstead Act, but in actual practice it has never been necessary to use this section.

This country is so large, and its agricultural resources are so great, that cooperatives could not have unduly enhanced prices, even if they had desired to do so.

But cooperatives have not sought unduly high prices. Basically they have taken the position that prices should be at a level which would reflect to the farmer a fair return for his labor, taking into account the investment and risk involved.

Consumers have no right to enjoy food at prices which do not provide reasonable compensation to farmers any more than they have a right to enjoy industrial products made with sweatshop labor.

Hourly returns for the labor of dairy farm operators, as reported by the Department of Agriculture, have been far below $1.00 per hour in many of the past years. The most recent figures for the three test areas reported are $1.07, $1.08, and $.91 (Agriculture Information Bulletin No. 230, September 1968).

Actually cooperatives perform a valuable service to consumers by keeping middlemen's margins under reasonable control.

Furthermore, the cooperatives are an important and vital factor in the production of the abundant supplies of high quality foods which this country enjoys.

OPPOSITION TO COOPERATIVES

It is not difficult to see why farmers' cooperatives meet with strong opposition and why such determined efforts are made to hamper or destroy them.

As we have indicated above, the cooperatives provide a control on excessive processing margins and on excessive middlemen's profits, both with respect to farm marketing and the purchasing of farm supplies.

The opportunity for processors to take large profits is greatest when farmers are disorganized, when there are no checks on weights and tests, and when there is no regulating influence on processing and purchasing margins.

TAX EQUALITY

Businesses operated by individuals, by partnerships, by cooperatives, and by small corporations are taxed alike in that only one level of tax is imposed. This tax is paid by the individual, by the partners, by the members of cooperatives, and by the stockholder members of small corporations.

Businesses operated by large corporations are double taxed, because one level of tax is charged to the corporation and another to its stockholders.

The same tax treatment that is accorded to cooperatives is available to big corporations if they choose to operate on a cost basis, as cooperatives do, and return to their patrons gross receipts less operating costs. In such a case, no profit would accrue to the big corporation and there would be no corporate tax. Cooperatives must operate on a cost basis and no profit can accrue to the cooperative.

All of the savings made through the operation of a cooperative must be passed back to its patrons, and the patrons are taxed on all such savings currently and at the full amount.

The double tax on corporations is wrong, and it should be gradually eliminated. It would merely compound the wrong to extend a double tax to cooperatives and then, in turn, to small corporations, partnerships, and individual businesses.

NO TAX ISSUE IN THE PRESENT BILL

There is no tax issue in the present bill, insofar as it applies to farmer cooperatives.

All savings made by farmers when they market their produce, or purchase their farm supplies, on a cost basis, through their own cooperatives are fully taxed to the members and patrons of the cooperative.

This tax is charged currently, without deferment, and all such savings are taxed at full value. This is true whether the farmers elect to receive their savings in cash or to leave them invested in the cooperative as capital funds of the coopratlve.

The tax result is unchanged, whether the savings paid in cash is 20 percent or 50 percent, because the farmer pays taxes currently on the full value of his share of the savings made.

There is, therefore, no valid tax objective to be achieved by the cooperative provisions of the pending bill.

DISCRIMINATORY AND DESTRUCTIVE LEGISLATION

The cooperative provisions of the pending bill are highly discriminatory and destructive and serve no useful tax purpose.

They are an unwarranted attack upon farmers' cooperatives, and are designed to undermine their capital and financial structures.

As long as one full level of tax is being paid currently by farmers on the savings made through their cooperatives, there is no valid basis for Congress to meddle in the internal affairs of the cooperatives.

Neither is there any valid basis for Congress to substitute its judgment for the business judgment of the farmer boards of directors of agricultural cooperatives. These men are well informed and they are farmer oriented. They know what is best for themselves as farmers and for the successful operation of their cooperatives.

An across-the-board rule imposed by Congress without knowing the day-to-day and year-to-year needs of each individual cooperative would be dangerous and ill-advised.

There is no need to protect the farmer from his cooperative, because the farmer controls the cooperative and membership in it is voluntary. A cooperative whose capital and financing arrangements did not have the support of its membership could not possibly survive.

We are not impressed by those who profess to want to help the farmer by undermining one of his most effective tools, his own cooperative.

This legislation is a thinly disguised attempt to permit processors and middlemen to take unwarranted and excessive profits from the farmer by crippling the farmers ability to perform services for himself, when such margins get out of hand.

THE FEDERATION'S POSITION

The Federation, and the dairy farmers we represent, have consistently supported the principle that one level of tax should be paid currently by farmers on the savings they make when they process their own produce through their own cooperative plants on a cost basis.

We have vigorously opposed, and continue to oppose in this bill, attempts to undermine the capital and financial structure of cooperatives under the guise of tax legislation.

We recommend that all of Section 531 of H.R. 13270, relating to Agricultural Cooperatives, be stricken from the bill for the following reasons:

(1) It serves no valid tax objective, since it neither increases nor decreases the tax liability of cooperatives or farmers or in any way changes the tax revenue as a whole;

(2) It is a destructive and discriminatory attack upon farmers agricultural cooperatives, wholly unwarranted by any valid tax objective;

(3) It is designed to undermine agricultural cooperatives by impairing their capital and financial structure in a manner not necessary to any revenue purposes;

(4) It undertakes to impose the judgment of Congress for that of the farmer boards of directors of cooperatives;

(5) It prescribes an across-the-board rule which does not take into consideration the fact that the capital requirements of cooperatives vary as between cooperatives and also vary from time to time in the same cooperative, depending upon its expansion and building programs;

(6) It is an attempt by Congress to interfere, unnecessarily, in the internal affairs of farmers' organizations;

(7) If there were any problems relating to the internal operation and financing of cooperatives, this would be a matter for the consideration of the agriculture committees and not the tax committees of Congress;

(8) As long as one full level of tax is being paid currently, as it now is, farmers should be free to manage their own cooperatives and to finance them with their own money in whatever manner the farmers prefer and in whatever manner the farmers themselves, in their own sound judgment, deem best for themselves as farmers and best for their cooperatives, which are so very important to them.

Senator CURTIS. Mr. Irving Clark.

STATEMENT OF IRVING CLARK, ON BEHALF OF THE FARMERS UNION CENTRAL EXCHANGE, INC., FARMERS UNION GRAIN TERMINAL ASSOCIATION, GREAT PLAINS SUPPLY CO., LAND O'LAKES CREAMERIES, INC., LIDLAND COOPERATIVES, INC., NORTHERN COOPERATIVES, INC., NORTH STAR DAIRY, TWIN CITY MILK PRODUCERS ASSOCIATION, AND THE MINNESOTA ASSOCIATION OF COOPERATIVES; ACCOMPANIED BY THOMAS STEICHEN, GENERAL MANAGER, FARMERS UNION CENTRAL EXCHANGE; AND RICHARD MAGNUSON, COUNSEL, FARMERS UNION CENTRAL EXCHANGE

Mr. CLARK. I have with me Thomas Steichen, the general manager of the Farmers Union Central Exchange, and Mr. Richard Magnuson, the counsel of the Farmers Union Central Exchange. I had with me earlier in the day a number of general managers of the other companies who are listed as being represented here with me, but they had to leave. Notwithstanding the lateness of the hour, we appreciate the opportunity to be here and to speak our piece.

I was prepared to raise a remark with the chairman a little while ago that not every person can be the first witness, and I realize that not every one can be the last witness, so I have that privilege.

Senator CURTIS. Some people turn to the last page of the book to see how it comes out, so maybe in these hearings you might not have such a bad spot.

Mr. CLARK. Thank you, Mr. Chairman. I hope the book comes out well.

In the interests of brevity, and out of respect and appreciation for your coming back and taking this additional time, I am not even going to summarize my summary, but I do wish to say four or five of our positions on the subject, which have been presented in great detail in my statement, and the statement of witnesses who immediately preceded me.

It seems to us—and of course it is in an oversimplified way—that you can say section 531 of the bill is a non-revenue-producing bill or section.

It seems to us that section 531 will destroy cooperatives, not merely prevent their growth. It will destroy them by eliminating their capital, as is clearly demonstrated in the rather objective statement of Mr. Jaenke of the Farm Credit Administration, as well as I think in our statements on file.

It will eliminate their ability to borrow, as Mr. Jaenke also pointed out, and in tables in his prepared statement, it shows that in 5 years it will be down to a nonborrowing posture.

The patrons of the cooperatives do have dominion and control over the affairs of the cooperative, including the matter of what portion of their earnings they shall distribute in cash, either as a straight patronage refund or recommendations of prior patronage refunds. The patrons, as Mr. Healy was just mentioning, have consented to take these distributions into their income.

They can withdraw their consent. They can cease to do business with the cooperative. They can amend the bylaws. They can come to the annual meeting, and I have attended a few, perhaps not as many as Senator Miller, and I have seen patrons not hesitate to get up on the floor and ask why a larger cash amount could not be distributed, and it was the job of management and the directors to satisfy those patrons, and they did so by showing them the facts of life relating to the financial statements and abilities of that organization.

As someone said earlier in the testimony today, the farm economy is at the bottom of the economy, and if a change of policy is to be made, policy adopted over many years by the Congress in many respects assisting cooperatives as a tool for the farmers, that change of policy we feel should come only after very careful and thorough study and consideration and testimony by a committee such as this or the Committee on Agriculture, as a policy matter, not as a decision on one page in this 360-page bill.

We urge respectfully that section 531 should be stricken from the bill by this committee and brought to conference in that way, and as the last witness said, we hope that the Senate conferees can stand firm on that proposition.

Thank you, Mr. Chairman.

Senator MILLER. Thank you.

Your entire statement, of course, will be in the record.

Mr. Hansen, do you have any questions?

Senator HANSEN. I have no questions.

Senator CURTIS. We thank you for your contribution to this testimony, and your associates.

(Mr. Clark's prepared statement follows:)

STATEMENT OF IRVING CLARK

I am Irving Clark of the law firm of Doherty, Rumble & Butler of Saint Paul, Minnesota. This statement is made on behalf of Farmers Union Central Exchange Inc., Farmers Union Grain Terminal Association, Great Plains Supply Company, Land O'Lakes Creameries, Inc., Midland Cooperatives, Inc., Northern Cooperatives, Inc., North Star Dairy, Twin City Milk Producers Association, and the Minnesota Association of Cooperatives. Those organizations conduct marketing and farm supply activities for farmers primarily in Wisconsin, Minnesota, Iowa, North Dakota, South Dakota, Montana, Washington, and Idaho. They are owned by approximately 2800 local cooperatives and approximately 800,000 individual rural patrons.

My firm is also General Counsel for National Federation of Grain Cooperatives, a federation of 20 regional grain marketing cooperatives which are farmers' marketing organizations serving approximately 2,800 local grain marketing associations. You have already heard testimony on behalf of that organization and its members. I am authorized to say that it also concurs in the opinions I am about to express.

After a thorough and careful consideration by Committees and the Congress, the Revenue Act of 1962 established a fair and workable basis for taxation of cooperative earnings. It accepted the principle that earnings of cooperatives should be taxed either to the cooperative or the patron, but not both. It required that the cooperative pay at least 20 percent of its patronage distributions in cash, and obtain the consent of the recipients to treat the entire dividend as income—or else the cooperative would pay tax on its entire earnings.

Following enactment of the 1962 Act, tens of thousands of cooperatives amended their by-laws and took other steps to comply with the Act. Their patrons have been paying the income taxes on patronage dividends contemplated by the Act.

In other words, the 1962 Act is working. Now Section 531 of the Tax Reform Bill would add new and impossible burdens to those placed on the cooperatives by the 1962 Act.

If the purpose of this legislation is to *destroy* cooperatives, it will succeed in its purpose.

If the purpose is to *help* the American farmer, it will fail miserably.

The Congress has repeatedly established that farm cooperatives are essential to American agriculture. Those experienced in the cooperative movement are now using that experience to assist *urban* cooperatives—in the ghettos of our big cities and wherever the problems of the poor can be aided by the American principles of self-help.

This bill would bring about the liquidation of that essential tool needed for both agricultural and urban workers—the cooperatives.

It must be, we conclude, that those who voted for the insertion in the Bill of Section 531 thought they were "helping the patron."

It is our purpose to show you in what respects they were mistaken.

Section 531 is not a revenue-producing measure. The objective was stated to be to put a bigger portion of the earnings of the cooperatives into the hands of the patrons, in cash. The Report of the Committee on Ways and Means says in part:

"Farmers today have little dominion over the treatment of patronage dividends despite the fact that they must pay tax on them as if they did."

This rests upon the illusion that the patrons want the cash, but their cooperatives are withholding it—as though by a small group of willful directors. But there is no such situation in the cooperatives. Unlike the case of a business corporation, each stockholder or member of the cooperative typically has one vote, regardless of the number of shares held. They elect directors personally known to them, who share their views. They attend the annual meetings. If a majority of them insist upon a large proportion of earnings being paid in cash, they have the power.

So—the patrons control the cooperative. They have power to decide how much of its earnings the cooperative shall pay in cash. Legislation to compel an increase will simply bust the cooperatives. Some will go broke sooner than others, but it is only a question of time for all of them—if this provision is enacted.

In the guise of helping the patron, it will force liquidation of a tool he needs—now more than ever.

How is this so? It is a matter of cash requirements—of pressing needs for capital.

Of the approximately 2800 local cooperatives which are the owners and patrons of the groups for which I appear, two-thirds have earnings of $25,000 or less. As with all small businesses, annual earnings do not come in the form of cash. They are soaked up in increased accounts receivable, in increased costs of facilities, and in increased investment in the regional cooperatives.

Traditionally, the capital for these requirements has been provided by patrons agreeing to reinvest their patronage dividends in the cooperative. The patrons have not had spare cash. But they have been willing to let the cooperative treat their patronage earnings as a reinvestment, after paying 20 percent in cash to the patrons to enable them to pay their income taxes. This is because the cooperatives have been a needed source—in many places, the only source—of supplies, of marketing services, and of other services.

The cooperatives need to retain the largest part of their earnings, as they are not able to attract cash investments in the way a business with profit potential for investors, can. In other words, they are a service, a tool, not a profit venture.

Two-thirds of our local cooperatives have net earnings of $25,000 a year, or less. A sample of 400 of the stronger ones showed that their net earnings had increased very slightly during the last five years. Many of the 2800 cooperatives have been barely able to survive, using 80 percent of their earnings during the last five years for capital needs and redemption of older outstanding equities. The Bill would permit them to retain only 50 percent. Yet an ordinary business corporation earning $25,000 or less can retain 78 percent of its earnings, and usually does.

The problem is compounded by the provision that the cooperative must obligate itself to redeem all non-cash dividends within 15 years from date of issue. Our typical local cooperative has *more than* ten years' past equities outstanding. In order to be in position to redeem in 15 years those equities issued hereafter, many of them must first redeem all of their present equities during the next 15 years. They are required to by their by-laws, and by simple principles of fairness. That requirement, plus the 20 percent cash payout, will require a total cash payout of 85 percent of average earnings. That is *impossible.*

It is impossible for the local cooperative because it is necessary to plow back somewhere between 50 and 80 percent of earnings into inventories, receivables, and facilities just to keep even.

This brings us to the regional cooperatives. It is charged that these organizations are giants, expanding into manufacturing, oil refining, and other enterprises and competing unfairly with private business. The fact is that the "regional" or "federated" cooperative is made up of local cooperatives which own it and control it. They have banded together to extend their purchasing power, or marketing power. To allow farmers to join together in the ownership of a petroleum storage tank and a delivery truck while denying them the right to join together in the ownership of an oil refinery is to deny both history and the facts of modern economic life. Local farmers' cooperatives have always been provided services and supplies through regional coöperatives. Nearly all business organizations have had to grow larger in recent years in order to be competitive, and farmers' regional cooperatives have had to grow with them in order to survive. The regionals' cash tied up in receivables, inventories, and facilities has also increased, and the amount of their cash has correspondingly declined. Most important, any regional cooperative, no matter how well managed, can have a loss year. That means that they will be unable to redeem patronage refunds previously issued, which cuts down still further the flow of cash to the local cooperatives.

All this comes down to the proposition that Section 531 of the Bill is based on a series of fallacies:

The fallacy that earnings are cash.

The fallacy that there are no prior claims on that cash which is in fact realized—such as outstanding debt, or equities which the cooperative is obligated to redeem ahead of the new ones.

The fallacy that cooperatives don't have to acquire new facilities and equipment in order to provide services to keep their members alive.

The *basic* fallacy that Congress will help the patrons by putting their cooperatives in a straitjacket. We urge that Section 531 should be stricken from the Bill.

APPENDIX TO STATEMENT OF IRVING CLARK

ANALYSIS OF COOPERATIVE PROVISION (SECTION 531) OF TAX REFORM BILL OF 1969

This analysis has been prepared on behalf of the following cooperatives, their 2800 local cooperatives, and their over 800,000 individual rural patrons:

Farmers Union Central Exchange, Inc.
Farmers Union Grain Terminal Association
Great Plains Supply Company
Land O'Lakes Creameries, Inc.
Midland Cooperatives, Inc.
Northern Cooperatives, Inc.
North Star Dairy
Twin City Milk Producers Association
and the Minnesota Association of Cooperatives.

This statement is intended to give factual information regarding the effect of the provisions of Section 531 of the Tax Reform Bill of 1969, H.R. 13270, and to show the fatal damage it will do to many cooperatives.

1. What the bill provides

The entire proposed change of law as it relates to cooperatives is contained in one Section of the Bill—Section 531. It would amend only one section of the Internal Revenue Code, Section 1388. The present Section 1388 contains various definitions of terms used in Sections 1381 through 1388, IRC, which with Section 521 set forth the tax status of cooperatives. One of those definitions is a complex one, defining the term "qualified written notices of allocation." A portion of the definition, subsection (c)(1) of Section 1388, now provides that at least 20 percent of the amount of the patronage dividend distributions of a cooperative must be paid to the patrons in cash, and certain other requirements must be met, or the document representing the balance of the patronage dividend (sometimes called the "non-cash portion") will not be a "*qualified* written notice."

The Bill would amend that definition by adding two requirements:

New Requirement One. The amount paid out in cash must increase at the rate of 3 percent a year until 50 percent is reached. This amount of increase is called in the Bill "the applicable percentage," and it is stated at 3 percent for taxable years beginning in 1970, 6 percent for those beginning in 1971, etc., until it reaches 30 percent for years beginning in 1979 or any subsequent year. Together with the existing 20 percent, the applicable percentage makes a total of 50 percent of current earnings which must be paid out in cash for years beginning in 1979, and thereafter.

While the present 20 percent in cash now required must be paid out as part of the *current* patronage dividend, that is not true of the "applicable percentages," or increased amounts. They may either be paid out in cash as part of the current patronage dividend, or be paid out in cash "in redemption . . . of any qualified written notice of allocation" previously issued.

Comment. We are informed that this may not have been the intent of the framers, but the provision as now drawn has the effect of limiting redemptions which would be credited against the "applicable percentages" to redemptions of documents issued in 1964 or later. Older documents which may have been distributed prior to 1964 are not "qualified written notices of allocation" within the present Code definitions nor in the Bill. This would mean that although a cooperative may have older evidences of patronage distributions outstanding, and may be obligated by law or by its by-laws or other contractual arrangement to redeem them before it can redeem the 1964 and later documents, such redemptions would not "count" toward the "applicable percentage." This disadvantage, which perhaps could be corrected by a change of wording, is pointed out here as a matter of construction or interpretation of the language of the Bill. Correction of it by altering the language would *not* correct the drastic hardships imposed by the Bill—see below.

New Requirement Two. The Bill also adds to the definition of "qualified written notice of allocation" a requirement that the issuing cooperative must be obligated to redeem the "written notice" in cash within 15 years. The *obligation* may be created in either of two ways:

(a) The cooperative may adopt a by-law so providing, with a further provision that this obligation cannot be changed "without the consent of those adversely affected;" or

(b) The written notice may be in the form of "an unconditional written evidence of indebtedness . . . which matures within such 15-year period."

The Bill also requires that "qualified per-unit retains" issued by a cooperative include the same obligation of redemption within 15 years, either by by-law or by being in the form of an evidence of indebtedness which matures within 15 years. Thus, those cooperatives which use the method of distribution of earnings called "retains," or "capital retains," or "per-unit retains" would be subject to the same new requirements as those cooperatives which use the patronage dividend method alone—namely, the required increase in the percentage of earnings paid out in cash, until it reaches 50 percent (see below as to the true effect of this), and also issuance of obligations with fixed maturities of 15 years or less.

2. The provisions of the section would not work

Many of the illustrations in this analysis are based upon published summarized data covering 400 farm supply cooperatives. These cooperatives are not typical, but are among the strongest of the 2,800 cooperatives in the upper Midwest. The harsh impact of the provisions of Section 531 would apply with even greater force to the 2,400 cooperatives not covered by the published data. The data covering these 400 cooperatives is set forth at the end of this analysis as Exhibit A.

A. Most of the 2,800 local cooperatives in the upper Midwest have annual earnings of less than $25,900. Such organizations cannot be expected to survive under a 50 percent cash distribution requirement.

Available information on these upper Midwest local cooperatives indicates that 65 percent of them had annual net earnings of less than $25,000 each. The vast majority of them are small businesses operating in small rural communities. They were organized by their patrons, and perform a vital function as a source of supplies, of marketing services, and of other services at reasonable prices.

Like all small business organizations, nearly all of their relatively small annual earnings may be required in a given year for the repayment of loans or for the replacement of facilities and equipment. Inflationary pressures alone result in the necessity for additional working capital to finance larger dollar amounts of receivables and inventories.

The Congress has long recognized the economic necessity for small businesses to retain a major portion of their earnings, by the smaller corporate tax rate of 22 percent on the first $25,000 of net income. This is especially true in the case of cooperatives, which cannot attract equity investments motivated by profit potential.

The effect of the proposed 50 percent cash requirement on a cooperative with annual earnings of $20,000 would be as follows:

	Annual earnings	Income tax	Cash distributions	Retained earnings
Current rules:				
Ordinary corporation	$20,000	$4,400		$15,600
Cooperative	20,000		$4,000	16,000
Proposed rules:				
Ordinary corporation	20,000	4,400		15,600
Cooperative	20,000		10,000	10,000

Thus this provision of the Bill would allow the small cooperative to "plow back" into its operations *less* of its earnings than an ordinary business of the same size. This is not good economics, good tax policy, nor good farm policy, as well as being obviously unfair to the cooperative.

B. *Section 531 of the Bill appears to be based on the erroneous assumption that, in the case of cooperatives, "Annual earnings" are somehow equivalent to "additional cash."*

Section 531 imposes arbitrary cash distribution requirements on cooperatives based upon patronage dividends which are annual earnings. These cash requirements are stated at 50 percent, but together with the 15-year revolving requirement, they may easily amount to 100 percent, as will be illustrated later.

Nearly all cooperatives in our area are business organizations handling inventories of farm produce or of supplies. Under the provisions of the Internal Revenue Code they are required to compute earnings on the "accrual" basis. They are not on the cash basis of accounting.

There is no necessary correlation between accrued earnings and cash. In individual cases 100 percent of accrued earnings may be represented by a combination of increased inventories, increased accounts receivable, additional facilities, or reduced debt.

Nevertheless, under Section 531, they would be required to make cash distributions of from 50 percent to 100 percent of annual earnings regardless of the amount of available cash.

The data on 400 local cooperatives illustrates a 52 percent increase in earnings tied up in non-cash forms, in a period of five years. These increased items were accounts receivable, inventories, facilities, and investments in their regional cooperatives.

Portions of the above increases were financed by increased liabilities. However, the example illustrates the dramatic changes that can occur in any business organization, with substantial amounts of earnings reflected in a non-cash form.

These changes are compelled by necessity. Technological changes in farming, such as increased numbers of classes of fuel, increased kinds and mixes of fertilizer, chemicals and other supplies have compelled local cooperative associations to put additional money into facilities.

The Regulations under Section 537 of the Code give full recognition to all of the above factors for accumulation of earnings to meet the reasonable needs of the business, in the case of an ordinary business corporation, in the following words:

"(b) *Reasonable accumulation of earnings and profits.* Although the following grounds are not exclusive, one or more of such grounds, if supported by sufficient facts, may indicate that the earnings and profits of a corporation are being accumulated for the reasonable ends of the business provided the general requirements under §§ 1.537-1 and 1.537-3 are satisfied:

"(1) To provide for bona fide expansion of business or replacement of plant;

"(2) To acquire a business enterprise through purchasing stock or assets;

"(3) To provide for the retirement of bona fide indebtedness created in connection with the trade or business, such as the establishment of a sinking fund for the purpose of retiring bonds issued by the corporation in accordance with contract obligations incurred on issue;

"(4) To provide necessary working capital for the business, such as, for the procurement of inventories; or

"(5) To provide for investments or loans to suppliers or customers if necessary in order to maintain the business of the corporation." (Reg. § 1.537-2(b)).

Section 531 of the Bill, contrary to this Regulation and to all business experience, equates annual earnings with ability to make cash distributions.

C. *In the case of the fairly level earnings experienced by most cooperatives in recent years, the 15-year redemption provision amounts to an impossible requirement of annual cash distributions of up to 100 percent, which is a great many cases will begin at once, rather than in 15 years.*

Despite substantial increases in sales volume, the published data on 400 strong local supply cooperatives shows relatively level average earnings during the past 10 years:

[Dollar amounts in thousands]

Operations (averaged)	1958	1963	1968
Sales to patrons (400 local cooperatives)	$243	$308	$445
Local operating earnings	14	13	13
Regional patronage dividends	14	19	22
Net earnings (averaged)	27	33	35
Percent to sales	11.2	10.7	7.9

During 1968 the above cooperatives issued patrontage dividends of approximately 20 percent in cash and 80 percent in qualified notices. Assuming continuation of the trends of the past 10 years from 1970 through 1985, these cooperatives would face a *100 percent cash* distribution requirement in 1985:

Assumed net earnings in 1985	$35,241
Cash di tribution requirements:	
20 percent of 1985 net earnings in cash	7,048
Qualified notices of,1970 (80 percent of $35,241)	28,192
Total (100 percent)	35,240

The necessary cash would simply not be available unless all of the following impossible assumptions were made for 1985 and all subsequent years:

100 percent of the dividends received from regional cooperatives were in cash; accounts receivable did not increase; inventories did not increase; no replacements or additions were required for facilities and equipment; all patrons' equities issued prior to 1970 had already been redeemed.

Local cooperatives are owned and controlled by their patrons. In general, they have followed the equitable procedure of retiring patronage equities in the order of their issuance—oldest first. It can be fairly assumed that they would desire to continue this procedure. Many of them are obligated to do so by provisions in their by-laws. To do so (in order to retire such presently-outstanding equities before the *compulsory* redemptions called for by the 15-year requirement of the Bill), the 400 cooperatives covered by the data would somehow have to make average annual redemptions of the following dimensions beginning in 1969:

Assumed net earnings for 1969	$35,241
20 percent of 1969 net earnings, in cash	7,048
1/15 of presently outstanding patronage equities of $344,925 ,in cash	22,995
Total	30,043
Percentage of 1969 earnings	85

An 85 percent cash distribution can *not* be made because none of the necessary assumptions are true for 1969. In other words, it is simply *not true* that the dividends from the regional cooperative are all in cash. It is *not true* that accounts receivable, inventories and facilities investments fail to increase. On the other hand, they must inevitably increase.

In at least one state (Wisconsin), a dairy marketing cooperative is required by law to maintain a ratio of current assets to current liabilities of 1.25. The issuance of notices of allocation with a fixed maturity will alter that ratio adversely, putting the cooperatives subject to that law into receivership within the first few years.

Thus, the 15-year requirement has *immediate* impact on the many cooperatives of our area which are already obligated to retire their oldest outstanding equities first. It will force them to strive to retire those existing equities at a pace they cannot achieve or maintain, with many inevitable failures far sooner than 15 years.

D. *Recent business trends have diminished the ability of increasing numbers of cooperatives to revolve patrons' capital on any sort of predetermined basis.*

The ability of any business organization to make cash distributions is not determined by either net earnings or by cash on hand. Assuming no plans for facility additions and no shortages of working capital, it is determined by the "acid test" ratio: The ratio of the total of cash and accounts receivable to current liabilities.

This concept applies in the case of cooperatives and of ordinary business organizations. The factors involved are ignored by Section 531 of the Bill, even though they are given full recognition in the Regulations under the present Section 537 of the Internal Revenue Code, determining whether accumulations of earnings by ordinary corporations are reasonable or unreasonable.

As indicated previously, the data on the sample of 400 strong local cooperatives reveals increasing amounts of capital tied up in receivables, inventories, facilities and investments in regional cooperatives during the past 10 years. During the past 10 years these strong cooperatives have, on the average, been able to make cash distributions and redemptions averaging 50 percent of their total earnings, but the ability to continue such payments has been markedly diminished, as these figures show:

Acid test ratio (averaged)	1958	1963	1968
400 local cooperatives:			
Cash and receivables	$49,989	$69,915	$83,284
Less current liabilities	13,435	26,524	74,197
Available for cash redemptions, investments, and facility additions	31,554	43,391	9,087

Average 1968 earnings were $35,241 and non-cash patronage dividends distributed averaged $28,192.

Further analysis shows that 155 of the 400 "strong" cooperatives had *no* excess cash and receivables, and would be *unable* to make any cash redemptions without further increasing their present financial difficulties.

By disregarding such changes in overall business trends and changes in financial ability of individual cooperatives, the requirements of Section 531 would *render insolvent* the majority of the 400 strong local cooperatives covered by the summarized data, and even more certainly, the majority of the 2400 cooperatives not covered by the data.

E. *The Bill ignores the fact that as a matter of economic necessity substantial portions of the annual earnings of individual cooperatives are represented by increased investments in regional organizations.*

Local farmers' cooperatives have banded together to form regional organizations to provide them with marketing services or a source of farm supplies at reasonable prices. The regional organizations are a necessary extension of the operations of the local cooperatives.

In the case of the 400 farm supply cooperatives, earnings developed through their regional organizations have increased to over 60 percent of their total average earnings. To develop their sources of supply at reasonable costs the patrons, who first joined together in the ownership of petroleum storage tanks and delivery trucks, have had to join together in the ownership of interests in oil refineries and pipelines.

The maintenance of these regional organizations is essential to the operation of the local cooperatives. The necessary investments to finance these organizations have increased substantially in recent years to finance increased working capital needs and more complex and costly facilities and equipment. Regional cooperative investments account for approximately half of the capital investments required of the patrons of local cooperatives.

The regional organizations have obtained the cash needed for their facilities investments, receivables, etc., by retaining a portion of the cash and distributing the equivalent in "qualified written notices of allocation." To require the regionals to increase their distributions to an ultimate 100 percent cash would result in their *insolvency* and the loss of both the regional investments and the necessary part they play in the operation of the local cooperatives.

Changing economic conditions of recent years (higher volume, lower margins, increasing costs of facilities) have seriously reduced the ability of the regionals to make cash distributions of as much as 50 percent. Consequently, a major part of the total earnings of each local cooperative has been in the form of non-cash earnings, which diminishes its own ability to make cash distributions of a major part of its own total earnings.

Furthermore, any regional cooperative, no matter how well managed, can have a loss year. Two of the regionals in our Midwestern group have had loss years within the last five years, and it can happen again. That means that they will be *unable* to redeem patronage refunds previously issued, even though they may have a "due date" under the provision of Section 531 of the Bill.

F. *The arbitrary cash distribution provisions of Section 531 ignore the business needs of individual cooperatives to repay necessary loans, replace facilities and equipment, build up working capital, or to meet unforeseen financial problems.*

The ability of any business organization to make substantial cash distributions is determined by its financial position and not by its annual earnings. By ignoring this fact, Section 531 of the Bill becomes a possible source of eventual insolvency to all cooperatives under certain circumstances. The following table shows that even the healthiest of the three cooperatives, Cooperative A, will be trapped by the obligations imposed by the Bill, and will be unable to meet those obligations in spite of an increase in annual earnings. Cooperative B, having level earnings, will be even farther behind. Cooperative C, whose earnings have dropped, will fail that much sooner:

	Co-op A	Co-op B	Co-op C
Aenual earnings:			
1970	$10,000	$10,000	$10,003
1985	20,000	10,000	5,000
1985 earnings represented by increased accounts receivable, increased inventories, investmemts in regionals, replacements of equipment, payments on long-term debt	12,000	12,000	12,000
Cash available for distributions and redemptions	8,000	(2,000)	(7,000)
Sec. 531 requirements:			
(a) At least 50 percent in total, or	10,000	5,000	2,500
(b) 20 percent of total 1985 earnings	4,000	2,000	1,000
Plus redemption of 1970 noncash distribution	8,000	8,000	8,000
Subtotal	12,000	10,000	9,000
Total cash shortage in 1985	(4,000)	(12,000)	(16,000)

While these particular cases are hypothetical, the factors which cause the failures are *not* hypothetical. The data on the 400 strong local cooperatives shows that average financial positions of such organizations have been seriously weakened in recent years.

As a group, they face increasingly severe financial problems under present conditions. This is clearly shown by the data for the 400 strong local cooperatives and applies with even more force to the 2400 weaker local cooperatives not covered by the data. For example, the 400 cooperatives are strong supply cooperatives. A sample of grain marketing local elevators showed a *decline* of 31 percent in local earnings in the five years 1963 to 1968. At the same time the regional to which they belong suffered a *decline* in earnings of 40 percent. A similar sampling of dairy cooperatives showed a *decline* of 11 percent in combined local and regional earnings in the same period This is a highly critical period of time in the financial affairs of cooperatives and their patrons.

It would be indeed ironic if Section 531, in the name of aid to the patrons, is allowed to wreck financial havoc upon such cooperatives resulting in the loss to patrons of the necessary service they require together with their accumulated investments in these organizations.

G. *The arguments advanced in favor of the provision are mistaken.*

The Staff Report of the Joint Committee on Internal Revenue Taxation and the Committee on Finance, dated August 18, 1969, attempted to summarize "Arguments For" and "Arguments Against" Section 531 of the Bill (page 93).

The first "Argument For" reads:

"(1) By requiring the cooperative to pay to the patron all of the patronage dividends within fifteen years, the Bill assures the patron that he will eventually receive the patronage income on which he has been taxed.

In fact, the Bill assures the patron nothing of the sort.

Instead, it requires that all patronage dividends not paid in cash shall be in the form of fixed obligations due within fifteen years or sooner. Since the effect of this provision must be the eventual replacement of all of the equity capital of each cooperative with a form of long-term debt with a fixed due date, the more probable result is to assure the patron that he will lose both the services of his cooperative and all of his accumulated investments in it in some future year when it has low earnings or a loss, causing its insolvency and forced liquidation. The report recognizes this to a degree in its "Arguments Against," saying:

"(4) The requirements for an early payout of patronage dividends and retains will impair the working capital of the cooperative, since these amounts represent, in effect, the cooperative's equity capital and serve as a base to support its borrowings."

The second "Argument For" reads:

"(2) Farmers today have little dominion over the treatment of patronage dividends despite the fact that they must pay tax on them as if they did. The Bill will give them full control over one-half of the patronage dividend immediately with assurances that the remaining one-half (retained by the cooperative) will be paid out to them in 15 years This greater control over the income on which they are taxed makes the tax more equitable."

This is simply not so. The patrons *do* have control, unlike the situation in an ordinary business corporation.

Dominion over treatment of patronage dividends is vested in Boards of Directors of members elected by members at annual meetings with one vote per stockholder. Most local cooperatives have less than 500 members. Their directors are neighbors who share their viewpoints and are personally known to most of them. Their control and voice in the affairs of their cooperative is real, unlike that of stockholders of large business corporations.

Patrons of a local cooperative who pay the tax on their share of the earnings of the cooperative do so voluntarily under the 1962 Act. They have consented to this tax treatment voluntarily. Under the 1962 Act they may withdraw their consent if they are not a member, or revoke their membership if they are a member, and the cooperative will pay the tax on their share of the earnings. They are aware of this right but, except for a very small number of cases, have not withdrawn their consents.

Through their elected Directors, the members of each cooperative currently do have full control of the patronage dividends taxed to them The Directors are able to determine the amount of cash that needs to be retained to meet the needs of the business and the amount available for payment to farmer patrons in the form of distributions and redemptions. This is reported to the members at well-attended annual meetings, and the members accept the decision because it is based on the facts.

The third "Argument For" reads:

"(3) By requiring cooperatives to pay out more of their income currently the amounts they can retain tax-free for expansion of facilities in competition with fully tax-paying businesses is lessened. This is a desirable way of limiting the tax-free growth of business enterprises."

This is mistaken policy, and unfairly discriminatory. Ordinary corporations, under current law, are required to pay income taxes at the rate of 22 percent of the first $25,000 of taxable income and at the rate of 48 precent of their taxable income in excess of $25,000. Ordinary corporations are not required to make any payments to stockholders of earnings required in the operation of their business.

Two-thirds of our local cooperatives have earnings of less than $25,000 per year. They are now required to pay out 20 percent of the amount of their patronage dividends in the form of cash. Under the proposed Bill they would be required to pay out 50 percent of their earnings in the form of cash. The result of this is that the cooperatives will be able to retain a maximum of 50 percent of their earnings for the needs of the business—and often less. Ordinary business corporations of comparable earnings will, on the other hand, be able to retain 78 percent.

That this discriminatory policy is a mistaken one is well stated in the "Arguments Against" as follows:

"(2) The Bill ignores the roll farm cooperatives play in improving the incomes of farmers by providing them with alternative methods of marketing their crops or of acquiring farm equipment, machinery and supplies at reasonable prices.

"(3) There is no showing that the present balance between farm cooperatives and regular businesses should be upset to the detriment of the cooperative movement."

It is a myth that cooperatives and regular businesses are "in balance"; cooperatives are, in fact, losing ground. While active business corporations as a whole gained 52.4 prcent in sales in the period 1960 to 1966, farmer cooperatives gained 29.6 percent. Statistical Abstract of the United States, 1969, Tables 694 and 903.

3. SUMMARY

a. The Bill requires a "phased" step-up in percentage of earnings paid out in cash from 20 percent to 50 percent in ten years. It also requires that the cooperative issue non-cash patronage dividends in a form which it is obligated to redeem within 15 years.

b. These provisions would not work:

A. Most of the local cooperatives have annual earnings of $25,000 or less. Their cash requirements are in excess of 50 percent of their earnings. A business corporation having earnings of the same level is permitted to retain 78 percent of the earnings.

B. It is erroneous to treat "annual earnings" as equivalent to "cash." They come to the enterprise tied up in the form of assets, and remain tied up in such form.

C. In the case of fairly level earnings, the requirement for redemption in 15 years has the effect of forcing annual cash distributions in excess of 50 percent, often 100 percent of earnings. This will begin in the near future, not in 15 years.

D. The ability of cooperatives to revolve patrons' capital on any "due date" basis is diminishing, rather than increasing. The legislation would put them in a straitjacket.

E. The investments in regional organizations are a matter of economic necessity for the local cooperatives.

F. The cash distribution requirements of the provision ignores existing debt and other business needs.

G. The arguments advanced in favor of the provision are mistaken and illusory.

SUMMARIZED DATA ON 400 LOCAL SUPPLY COOPERATIVES

				5-year increases	
	1968	1963	1958	1964-68	1959-63
Financial position (averaged):					
Current assets:					
Cash	$28,149	$33,963	$28,918	($5,814)	$5,045
Receivables	55,135	35,952	21,071	19,183	14,881
Inventories	89,693	49,671	38,508	40,022	11,163
Prepaid expense	1,643	1,040	754	603	286
Subtotal	174,620	120,626	89,251	53,994	31,375
Less current liabilities	74,197	26,524	18,435	47,673	8,089
Net working capital	100,423	94,102	70,816	6,321	23,286

Senator Curtis. The committee will stand adjourned until 9:30 tomorrow morning.

(Whereupon, at 7:05 p.m., the committee adjourned, to reconvene at 9:30 a.m., Tuesday, September 23, 1969.)

TAX REFORM ACT OF 1969

TUESDAY, SEPTEMBER 23, 1969

U.S. SENATE,
COMMITTEE ON FINANCE,
Washington, D.C.

The committee met, pursuant to recess, at 9:25 a.m., in room G-308, New Senate Office Building, Senator Russell B. Long (chairman) presiding.

Present: Senators Long, Anderson, Talmadge, Byrd, Jr., of Virginia, Williams of Delaware, Bennett, Curtis, Jordan of Idaho, Fannin, and Hansen.

The CHAIRMAN. The hearing will come to order.

This morning the Committee on Finance takes up the difficult question concerning the tax treatment of income earned on obligations of State and municipal governments. Heretofore, the Federal Government has refrained from taxing this interest income. The House tax reform bill does not attack the exemption for this interest in any direct manner. Rather, it includes State and local government bond interest in the so-called minimum income tax provision and also in the allocation of deductions provision.

In addition, there is another amendment in the House bill which would extend Federal subsidies to State governments to help them pay the higher interest costs which would be needed if they should choose to issue their bonds on a taxable basis.

In testimony before this committee on September 3, the Secretary of the Treasury recommended that this subsidy feature be deleted. He also recommended that State and municipal bond interest not be included in the minimum income tax provision.

However, he did recommend that this bond interest be continued in the allocation of deduction rules, advising the committee that the Supreme Court had already decided in litigation involving a similar allocation rule in the Life Insurance Income Tax Act of 1959 that this sort of allocation would not involve the imposition of a tax on this bond interest.

More than 250 witnesses requested to be heard on these features of the House tax reform bill. Unfortunately, time did not permit the committee to hear all of them. However, I do want to include in the record the names of many of those who felt this matter was important enough that they should seek to testify on it. This list is not complete. Many other witnesses who decided to testify on different aspects of the bill, as well, were also concerned about these provisions.

In addition, let me include in the record an enumeration of the many petitions submitted to the Senate by State, county, and local governmental units all across the country, expressing their objection to any Federal tax on State and local bond interest.

(The list of witnesses referred to and the list of governmental units submitting petitions to the Senate follow:)

Listing of Persons Requesting Opportunity To Be Heard at Tax Reform Hearings on the Subject of Bonds Who Were Not Scheduled

Bernard J. Ach, Attorney for School District 68, Friend, Nebraska
Joseph P. Adams, Port of Seattle, % Suite 242, Wyatt Building, Washington, D.C.
Honorable Ernest L. Albertsen, Mayor, City of South Sioux City, Nebraska
Honorable Harry P. Andersen, Mayor, City of Millard, Nebraska
Richard H. Austin, Wayne County Auditor, 1220 City County Building, Detroit, Michigan
Honorable Phil J. Bagley, Jr., Mayor of Richmond, Virginia
Gil Barrett, County Commissioner, Dougherty County, Albany, Georgia
William H. Beasley, Rankin-Beasley, Inc., Suite 220, Healey Building, Atlanta, Georgia
Bill B. Betz, Enright, Elliott and Betz, Suite 703, 606 S. Hill Street, Los Angeles, California
Herbert J. Binham, Executive Secretary, Tennessee Municipal League, Nashville, Tennessee
Honorable G. T. Blankenship, Attorney General, State of Oklahoma, Oklahoma City, Oklahoma
Johnny Bowman, Chairman, Eddy County Commissioners of New Mexico, Carlsbad, New Mexico
Henry L. Bridges, Auditor, State of North Carolina, Raleigh, North Carolina.
Honorable Chauncey H. Browning, Jr., Attorney General, State of West Virginia, Charleston, West Virginia
Cecil S. Brubaker, General Counsel, Metropolitan Utilities District, 1723 Harney Street, Omaha, Nebraska
Honorable Eugene W. Buch, Mayor, City of Fremont, Fremont, Nebraska
Honorable Francis B. Burch, Attorney General, State of Maryland, Annapolis, Maryland
Jack S. Burk, President, Barnard and Burk, Inc., Baton Rouge, Louisiana
William Carey, Chairman, Delegation Board of Sarasota County Commissioners, Sarasota, Florida
Richard Carpenter, Executive Director and General Counsel, League of California Cities, 1108 O Street, Sacramnto, California
Stanley R. Cowle, Administrator, County of Hennepin, 136 Court House, Minneapolis, Minnesota
Robert Q. Crane, Treasurer and Receiver General, State of Massachusetts, Boston, Massachusetts
Judge Charles E. Curry, Jackson County Court, Jackson County, Missouri
E. B. Davis, Auditor, State of Georgia, Atlanta, Georgia
Honorable Frank H. Davis, Treasurer, State of Vermont, Montpelier, Vermont
Honorable Don Deboodt, Mayor, City of Kimball, Kimball, Nebraska
Fred Denton, Jr., 114 St. Louis Street, Baton Rouge, Louisiana
Honorable John Ditter, Mayor, Grand Island, Nebraska
C. O. Donahue, Hawkins, Delafield and Wood, 67 Wall Street, New York, NY
Honorable Joseph A. Doorley, Jr., Mayor, City of Providence, Providence, Rhode Island
Robert L. Ehlers, Ehlers and Associates, Inc., Municipal Finance Consultants, 507 Marquette, Minneapolis, Minnesota
Marvin Ellis, President, Board of Education, Bellevue Public School, 2009 Franklin, Bellevue, Nebraska
Joseph O. Evans, Suite 707, 1028 Connecticut Avenue, Washington, D. C.
Honorable Earl Faircloth, Attorney General, State of Florida, Tallahassee, Florida
Houston I. Flornoy, Controller, State of California, Sacramento, California
R. D. Ford, Legal Officer, Port of Seattle, Seattle, Washington
Harold Fouts, Chairman, Board of Public Works, Nebraska City, Nebraska
Honorable William B. French, Mayor, City of Ord, Grand Island, Nebraska
Arnold E. Furlding, Auditor and Director of Budget, City of Waterbury, Waterbury, Connecticut

S. P. Gaillard, Jr., Gaillard, Wilkins and Smith, PO Box 164, Mobile, Alabama

Miss Evelyn Gandy, Treasurer and Member, Bond Commission, State of Mississippi, Jackson, Mississippi

Honorable W. F. Gettman, Mayor, City of Hastings, Hastings, Nebraska

Joseph E. Gibson, Supervisor, Albemarle County, Charlottesville, Virginia

Robert D. Gilberts, Superintendent of Schools, School District No. 1, City and County of Denver, Colorado

William G. Berge, President of Board of Education, School District No. 1, City and County of Denver, Colorado

Edwin Gill, Treasurer, State of North Carolina, Raleigh, North Carolina

Honorable Louis L. Goldstein, Comptroller of the Treasury, State of Maryland, Annapolis, Maryland

Cornelius W. Grafton, Attorney at Law, 310 West Liberty Street, Louisville, Kentucky

Honorable Milton H. Graham, Mayor, City of Phoenix, Arizona

William Greene, CPA, 300 Central Park Avenue, Hartsdale, New York

Thomas P. Guerin, General Manager, Commission of Public Docks, 370 N.W. Front, Portland, Oregon

William Hackman, President, Board of Education, Gering, Nebraska

William T. Hackett, Jr., Executive Director, Louisiana State Department of Commerce and Industry, Baton Rouge, Louisiana

E. R. Hafner, Executive Secretary, Association of County Commissioners of Florida, Tallahassee, Florida

Raymond H. Hawksley, General Treasurer, State of Rhode Island, Providence, Rhode Island

Honorable Robert M. Haworth, Mayor, City of Bellevue, Nebraska

Douglas M. Head, Attorney General, State of Minnesota, St. Paul, Minnesota

Honorable Norman E. Heine, Mayor, City of Baker, Baker, Louisiana

Lewis R. Holcomb, Executive Secretary, Washington Public Ports Association, 210 East Union Avenue, Olympia, Washington

Joseph F. Hughes, Director of Finance, Municipal Building, Edison, New Jersey

Robert Hutches, Chairman, Manatee County Port Authority, Court House, Bradenton, Florida

Orvil J. Johnson, City Manager, City of West St. Paul, Minnesota

Ralph T. Keyes, Executive Secretary, Association of Minnesota Counties, St. Paul, Minnesota

Paul G. Kinkelspiel, Stone and Younger, 1314 Russ Building, San Francisco, California

David E. Hartley, Stone and Younger, 1314 Russ Building, San Francisco, California

Honorable Carl T. Langford, Mayor, City of Orlando, Florida

Gordon L. Larson, Mayor, City of Chadron, Nebraska

Honorable Arthur Levitt, Comptroller, State of New York, Albany, New York

Otto H. Loser, City Comptroller, Room 504, City Hall, Chicago, Illinois

Dean A. Lund, Assistant Executive Secretary, League of Minnesota Municipalities, 314 Social Sciences Building, Minneapolis, Minnesota

A. Barry McGuire, Executive Director, Michigan Association of Counties, 319 W. Lenawee, Lansing, Michigan

Robert B. McLeaish, Jr., County Auditor, County of Hidalgo, Edinburg, Texas

Russ Marchner, Executive Director, Dade County League of Municipality, Miami, Florida

Honorable Crawford C. Martin, Attorney General, State of Texas, Austin

Edward J. Martin, Director of Finance, City of Philadelphia, Pennsylvania

Carlton C. Massey, County Executive, County of Fairfax, Fairfax, Virginia

George Mathews, General Counsel, Greater Baton Rouge Port Commission, Baton Rouge, Louisiana

Carl Meissner, Cottage Grove Village Administrator, 7201 14th Avenue, Cottage Grove, Minnesota

Honorable Floyd C. Miller, Mayor, City of Seattle, Washington

Richard E. Moore, Certified Public Accountant, 1615 Bonanza Street, Walnut Creek, California

G. A. Morrison, Commissioner of Revenue, Juneau, Alaska

Nebraska State School Boards, 1320 J Street, Lincoln, Nebraska

Hon. Gary K. Nelson, Attorney General, State of Arizona, Phoenix, Arizona

Honorable James H. Norick, Mayor, City of Oklahoma City, Oklahoma

William J. O'Brien, Auditor, State of Minnesota, St. Paul, Minnesota

Peck, Shaffer and Williams, Cincinnati, Ohio

Fioravante G. Perrotta, New York City Finance Administrator, New York

Mario A. Procaccino, Comptroller, City of New York, New York

Donald J. Reeb, State University of New York, Graduate School of Public Affairs, Sayles Hall, 179 Partridge Street, Albany, New York

James G. Richardson, Secretary, Community Affairs, State of Florida, 2200 N.W. 9 Place, Gainesville, Florida

Osee R. Fagan, City Attorney, City of Gainesville, 212 S.E. 1 Street, Gainesville, Florida

Robert C. Riehle, President, Wainwright and Ramsey, Inc., 70 Pine Street, New York, New York

Honorable David H. Rodgers, Mayor, City of Spokane, Washington

Jack Rogers, Executive Secretary, Washington State Association of County Commissioners, 106 Maple Park, Olympia, Washington

Marvin Rohrer, President, Arizona Supervisors and Clerks Associated, Court House, Prescott, Arizona

Fred W. Rosenfield, Phoenix, Arizona

Daniel F. Ruge, Director, Washington Office. State of New York, 1200 Eighteenth Street, N.W., Washington, D.C.

Honorable Sam Schwartzkopf, Mayor, City of Lincoln, Nebraska

Duane N. Scott, Director, Ohio Municipal Advisory Council, 508 Terminal Tower, Cleveland, Ohio.

Honorable Edward Sedlock, Mayor, City of Woodhaven, 21869 West Road, Woodhaven, Michigan

Vincent M. Simko, Treasurer, City of Bridgeport, Connecticut

Herbert H. Smith, Executive Director, County Officers Association of the State of New York, 248 State Street, Albany, New York

Richard L. Stoddard, Director, Division of Investment, Trenton, New Jersey

O. N. Strobel, Deputy City Controller, City of Milwaukee, Wisconsin

Honorable James E. Sudduth, Mayor, City of Lake Charles, Louisiana

A. F. Summer, Attorney General, State of Mississippi, Jackson, Mississippi

N. Maxson Terry, Jr., Terry and Terry, 48 The Green, Dover, Delaware

James Tipton, Executive Director, Tennessee County Services Association, Nashville, Tennessee

Joe E. Torrence, 308 Metro Courthouse, Nashville, Tennessee

Richard VanHoose, Superintendent, Jefferson County Public Schools, 3332 Newburg Road, Louisville, Kentucky

Honorable Edward I. Vrzal, Mayor, City of Norfolk, Nebraska

William F. Wallace, Jr., Box 1820, 500 Vaughn Plaza, Corpus Christi, Texas

Honorable Roy L. Webber, Mayor, City of Roanoke, Virginia

Honorable Kevin H. White, Mayor, City of Boston, Massachusetts

Robert P. Will, Legislative Representative, The Metropolitan Water District of Southern California, 1111 Sunset Boulevard, Los Angeles, Calif.

Thornley Wills, Chairman, Clay County Board of Commissioners, Clay County Court House, Moorhead, Minnesota

Hon. Leo. Winters, State Treasurer, Oklahoma City, Oklahoma

Judge L. D. Word, County Judge, Courthouse, Knoxville, Tennessee

Ralph Wulz, City Manager, 204 South Main Street, Wichita, Kansas

Albert Alfred, Chairman, Board of Brown County Commissioners, New Ulm, Minnesota

John E. Egan, President, Metropolitan Sanitary District of Greater Chicago, Chicago, Illinois

Honorable Albert P. Brewer, Governor of Alabama, Montgomery, Alabama.

Herbert W. Lehfeldt, Administrative Assistant, Office of the Governor, Juneau, Alaska

Honorable John Dempsey, Governor of Connecticut, Hartford, Connecticut

Honorable Russell W. Peterson, Governor of Delaware, Dover, Delaware

Honorable John A. Burns, Governor of Hawaii, Honolulu, Hawaii

Honorable Donald Samuelson, Governor of Idaho, Boise, Idaho

Honorable Edgar D. Whitcomb, Governor of Indiana, Indianapolis, Indiana

Honorable Robert D. Ray, Governor of Iowa, Des Moines, Iowa

Honorable Louie B. Nunn, Governor of Kentucky, Frankfort, Kentucky

John A. Jackson, Office of the Governor of Massachusetts, Boston, Mass.

Honorable Walter Peterson, Governor of New Hampshire, Concord, N.H.

Honorable William L. Guy, Governor of North Dakota, Bismark, N.D.

Honorable Dewey F. Bartlett, Governor of Oklahoma, Oklahoma City, Okla.

Honorable Raymond P. Shafer, Governor of Pennsylvania, Harrisburg, Pa.

Honorable Buford Ellington, Governor, State of Tennessee, Nashville, Tenn.
Honorable Calvin L. Rampton, Governor of Utah, Salt Lake City, Utah.
Honorable Mills E. Godwin, Jr., Governor of Virginia, Richmond, Virginia
Honorable Arch A. Moore, Jr., Governor of West Virginia, Charleston, W. Va.
Honorable Warren P, Knowles, Governor of Wisconsin, Madison, Wisconsin
Honorable Stan Hathaway, Governor of Wyoming, Cheyenne, Wyoming.

STATEMENT OF HON. W. W. DUMAS, MAYOR-PRESIDENT, PARISH OF EAST BATON ROUGE, CITY OF BATON ROUGE

The CHAIRMAN. Woodrow Dumas, the mayor of Baton Rouge. We are waiting for the other people to arrive, Mayor. You served as the president of the Council of State Governments and County Governments, I believe.

Mayor DUMAS. National Association of Counties. If you are ready, sir?

The CHAIRMAN. Go right ahead. Go ahead, Mr. Mayor.

Senator Long, Honorable Chairman of the Senate Finance Committee, I am Mayor W. W. Dumas, mayor-president of Parish of East Baton Rouge, city of Baton Rouge, La.

The Senate of the United States, represented by this committee deserves an expression of appreciation for its patience and adherence to democratic principles in affording the present public hearing—a procedure not allowed by the House Ways and Means Committee. If such a hearing had been conducted and more time taken in the study of H.R. 13270, the shattering damage to the ability of local governments to finance capital improvements which has occurred since the middle of August of this year might have been avoided.

As a consequence of the precipitous and extremely ill-advised action of attempting to impose taxation indirectly on municipal bonds, irreparable harm has already occurred to an increasing number of municipalities in the State of Louisiana. Passage of H.R. 13270 by the House of Representatives has compounded the difficulties in the Louisiana bond market. Within the past few days in order to sell a 20-year "A" rated bond it has been necessary for the governing authority to accept a requirement that the bond proceeds be deposited for a period of time of from 6 to 18 months before the bond proceeds may be expended. Such deposits are interest free to the issuing authority, and the investment of the idle funds inures to the benefit of the initial bond buyers.

The chaos and confusion generated by H.R. 13270 in the bond market has prevented many cities, including Baton Rouge, from proceeding with vital works of public improvement. For example, street paving certificates, secured by local or special assessments and additionally by a pledge of the full faith and credit of the parish of East Baton Rouge, have not been successfully sold within the maximum 6 percent interest limit since public advertisement several weeks ago. As a matter of fact, for the past 6 or 7 weeks we have been unable to do any kind of construction of this sort because of the unavailability of someone to buy the bonds.

Having a maturity of only 10 years, this short-term debt would ordinarily bring in the bond market prior to H.R. 13270 a sale price within 6 percent per annum. The delay in this particular project prevents the paving of a section of a graveled dirt street running between a large, new motel complex near the LSU campus known as the "Prince Murat House" and a large public housing project recently completed. Blowing dust from the traffic makes life almost unbearable in that portion of the public housing and motel properties facing the street. The public health, welfare, and safety is directly and adversely affected.

For an example, Senator, which I am sure you would be interested in the East Cameron Harbor and Terminal District offered its 20-year full faith and credit secured bonds for sale on November 1, 1969, and a copy of the official prospectus is offered for filing in the minutes of the hearing. The purpose of the project is to dig a barge canal from the navigable portions of the Mermentau River to a navigable depth in the Gulf of Mexico to permit shrimp and other fishing boats and offshore oil boats to utilize the natural harbor facilities of the Mermentau River. The mouth of the river has never been navigable, and the opening up of this new territory holds untold potential for the development of natural and human resources. This project, like many others in Louisiana, is denied to the people because bonds cannot be sold within the lawful rate of interest of 6 percent per annum, and the bond market of the United States will not purchase any more so-called tax-exempt bonds until the Congress has made it very plain that such bonds are, in fact, tax exempt for all times.

The government of the parish of East Baton Rouge which I represent has in progress large building programs costing many millions of dollars requiring the continued borrowing of money. On an open and free market, this could be accomplished. On a Government-controlled market, functioning through an urban development bank or some other similar scheme, it is not at all certain what could be accomplished.

The ability of East Baton Rouge Parish to borrow money is predicated on years of good fiscal management, development of an excellent credit reputation, the winning of outstanding ratings by national bond rating firms, prompt payment of debts when due. The advantage of such hard-earned good rating and the consequent ability to borrow money at advantageous interest rates in a private market should not be taken away by Government planners who seek to substitute or superimpose the judgment of an all-central agency or bank to determine priorities between States and local issuing authorities.

The elimination of the tax-exempt status in whole or in part, directly or indirectly, immediately or step by step, is nothing more or less than an attempt by the planners to destroy the ability of local government as we know it today to finance improvement and thereby render such government substantially impotent. Such an impotent government would then be replaced by the central planning and financing agency.

Local government officials thoroughout Louisiana are of the opinion that the blatant grab for power, disguised under the cover of "tax reform," is really an attempt to finally, once and for all, establish the central government as supreme, even on the level of local government. The effort should be turned back here in the Senate Finance Committee, Mr. Chairman, and by the thinking Members of both Houses of Congress. The damage—already done—irreparable in some places—can only be stopped by the strongest possible pronouncement by this committee and by your Senate colleagues that any attempt to tax municipal bonds to any degree will not be allowed now or at any other time in the future. The loss and chaos generated by the precipitous action of H.R. 13270 can be repaired only if all bond buyers for all time are given unconditional and unqualified assurance that the promise of the United States that such obligations are tax exempt will be honored, and that future years will not see a repetition of the debacle of 1969.

The officials in Louisiana are not confused as to who really benefits from the tax exemption advantages afforded local government. The real benefit is not to the few millionaires held up as the target. The real beneficiary is the little man, the poor man, the middle class, the average American taxpayer who carries the primary burden for essential cost of improvement. For example, in Baton Rouge we passed a $53 million, the school board has just passed a $63 million bond issue. That means we have gone to work and told the people of our community that it is going to take this number of dollars to do the work that we think ought to be done. Well, with the tax exemption taken off these bonds that means instead of $53 million it may take $63 million and then we have got to go and pass another $10 million bond issue which bond issues are not easily passed, they are not too well liked by the people in the community anyway. So it only puts another burden on the people.

The thinking citizens and public officials of Louisiana are not confused by the suggestion that a Federal subsidy plan will be more efficient than the present free and open market system. The volume of activity necessary to support the demands of modern innovative and creative local government would require the development of a Federal agency so large as would absorb any theoretical increase in Federal income tax savings. The cumbersome effort of the central bureau proposed to be created could not possibly match the private money market in its ability to promptly and efficiently meet almost any demand, as is judged on the basis of the honest law of supply and demand in a free enterprise system. There is nothing that cannot be accomplished in such a free society. There is much that cannot be accomplished in the controlled central government bureau.

Many projects in the State of Louisiana would simply not be subject to financing if it were not for the advantage of tax exemption. If these projects were required to compete on the open market without the tax exempt advantage, the burden of increased interest rates would be so great as to delay financing for years or perhaps prevent it forever. The States of the Deep South, including Louisiana and other lower population areas, would not fare well in competition for the interest of the central bureau planners.

The Government which I represent has issued and has outstanding millions of dollars of bonds represented to be "tax exempt." The "tax exempt" representations were printed in newspapers, in official documents, in contracts including the bonds and coupons. The representation of tax exemption was predicated on the fundamental concept of the inviolability of contract—on the historic constitutions principle of full faith and credit to the sanctity of contract.

Purchasers throughout the United States have acquired obligations of this local government in reliance upon such representations. At the time of their respective purchases, there was a sharp disadvantage between the interest rates offered on one hand for the "A" rated bonds of my local government and the much higher interest rates available otherwise in the open market. To suggest now that these obligations are taxable is to violate every concept of the obligations of contract which, in the Civil Law State of Louisiana, is an unconscionable and an indefensible act.

The breach of good faith with the holders of these obligations presents such an outrageous departure from the practice of civilized western man in adhering to the law of written contract, that the local government which I represent would feel constrained, if not legally obligated, to bring suit resisting in every possible lawful manner the unconscionable and unconstitutional encroachment here.

Litigation of this type by many parties in interest and the consequent publicity will have the effect of destroying the reputation—reliability of the tax exempt promise for a long period of time, if not permanently. In the meantime, chaos will result in unheard of high interest rates and discounts, as is now occurring in Louisiana.

If the historic concept of intergovernmental immunity is violated by H.R. 13270, it logically and ethically follows that the obligations of the U.S. Government should similarly be subject to tax and assessment by State and local government. In examples too numerous to enunciate, local government does not collect from the United States local or special assessments for street paving and other improvements levied on an abuting property front foot or square foot basis. Street paving or other local improvements directly benefiting U.S. property is simply donated, in deference to the long-standing and supposedly immutable doctrine of intergovernmental immunity.

This committee is urged to complete these hearings at the earliest possible time and to recommend to the Senate that conclusive action be taken to defeat the entire package of H.R. 13270; that the Congress undertake and adopt at the earliest possible date a reaffirmation and confirmation of the doctrine of intergovernmental immunity, of the inviolate status of the tax exemption on State and local bonds, and that such action be couched in such terms as shall stand out as an unconditional assurance and guarantee that the fiasco of 1969 will not be repeated at any time in the future. And, Mr. Chairman and gentlemen of the committee, as the mayor of Baton Rouge I tell you we are in dire trouble in making our budgets. We are up very shortly—our few finances are down, our construction is down, our sales tax revenue is down, and I don't think, I see hardly any way that we can meet our 1970 budget, and if we are going to be continued to be harrassed in such ways as this, why the construction in our community, and the sales tax, are tremendous; 45 percent of our revenues in our Government come from the sales tax, and if we continue to drop as we are right now that not only Baton Rouge but every city in the United States which is vital to the continuance of this great Nation we are going to be in one, I would say hell but I am before the committee here, but I won't say that, but in a heck of a fix.

So, gentlemen, all I can ask you for is not only the city of Baton Rouge, the city of New Orleans, Shreveport, Monroe, Jackson, Mississippi, Pittsburgh, Philadelphia, New York it doesn't make any difference our cities are in trouble. As a matter of fact, if I had my way about it I would recommend to you instead of an 8½ percent interest we go back to 2½ percent because the cities need the money.

Gentlemen, we are in trouble, that is all I can tell you. I appreciate you, Senator Long, for giving me this opportuntiy to come this far to tell you about our problems. I do keep you pretty well informed on Louisiana and you are certainly, to me, one of the finest representatives we have ever had, and we have been friends a long time and I have never lied to you and I don't intend to start now. But I will tell you this, if you really want to hurt the cities and to destroy government, then I am sure that if you let this tax pass then you are making a big mistake. Thank you very much, sir.

The CHAIRMAN. Mr. Mayor, what is your reaction to the provision in the House bill where they would make up the difference—in effect subsidize the difference—in interest rates. What you would have to pay and what a taxable bond would pay.

Mayor DUMAS. I have spoken with both county and municipal officials, and they are opposed to it. They don't believe it can work. I would like it to remain as it is in the event that the Federal Government would be short on funds, then why should they give us in Baton Rouge or anywhere else more consideration in Louisiana than they would their own bonds. I don't think it is good. The only thing that this committee and the Senate can do is just completely kill this provision and let it remain as is. The cities are already in acute financial difficulty and we feel that this is going to compound the problems rather than alleviate them.

The CHAIRMAN. The thought that occurs to me is that as soon as the Federal Government starts subsidizing the subsidies there will be a temptation to look at a State like Alaska. We passed a Federal law that caused them to get 90 percent of the resources. With a $9 billion windfall, why should we subsidize Alaska and give them the subsidy. Someone would then say, why must you have a multibillion-dollar subsidy for these cities. Here is where we could save some money. It seems to me that once the principle is established from that time forward it is always subjected to a motion to cut it in half or reduce it. On the floor yesterday Senator Williams made a strong and determined effort to cut the maritime subsidy bill which I was managing. Fortunately we beat him. It would seem to me that once you put the States and cities on a subsidy basis, then it could not be taken away.

Mayor DUMAS. I think the best example is that for over 10 or 12 years, now, the U.S. Senate and Congress voted to give a gasoline tax to construct the Interstate Highway System throughout the Nation. Now we learn as of April 1, 1970, that the President is going to curtail all construction work. If they can take something like that away from us, you can imagine what that will do to the subsidization of the bonds. We feel that the only answer to it is to completely kill this bill and get back where the bond buyers will give consideration to the purchase of municipal bonds so that we can continue the improvements of our cities and counties that are so badly needed.

The CHAIRMAN. You were an officer of the National Association of Counties—former president, I believe. You then became president of the National Association of Counties.

Mayor DUMAS. I am mayor-president of East Baton Rouge Parish, former president of the National Association of Counties, and am presently serving as a member of the board of directors of the National Association of Counties. I met with Bernie Hillenbrand, executive director of the National Association of Counties and John Gunther, executive director of the U.S. Conference of Mayors, and Pat Healey, executive director of the National League of Cities and other distinguished mayors and officials throughout the United States, and they all opposed any tampering with the tax-exempt bonds and appeal to the Senate Finance Committee and Members of Congress to kill this measure once and for all.

I will be sending you a copy of our 1970 budget. It will show the problems we are having. Baton Rouge has enjoyed the construction era—the reason why the construction has dropped is because of high interest rates and the continuance of the surcharge tax, and the possibility of the tax-free bonds being tampered with. We just cannot make it.

The CHAIRMAN. You recently tried to issue tax-exempt bonds——

Mayor DUMAS. I have a list of bonds we have not been able to sell. (He mentions the situation with gravel.) We have not authorized the parish attorney to negotiate. We can't even negotiate for them at a 6 percent interest rate. At that interest rate, we just cannot move them. People are going to be affected by it. People who ordinarily would be working, the laborers, contractors, and so forth, are going to be retarded. Construction work can't go on. I just hope that your wisdom and the Finance Committee's wisdom would see that this thing is killed once and for all, as it did in 1933 when it came up.

The CHAIRMAN. Please introduce the distinguished citizens accompanying you.

Mayor DUMAS. I would like to introduce Joseph Keogh, parish attorney, Ernest Eldred, assistant parish attorney, E. O. Bauer, chief of police, Capt. Robert Temple, captain of the city police.

The CHAIRMAN. I am proud that you have these fine citizens of Baton Rouge here today. I hope you can keep Baton Rouge in fine shape.

Mayor DUMAS. Senator I appreciate your giving us this consideration and we are all for you.

The CHAIRMAN. So far as I know, Mayor Dumas is the only person who can beat me in a swimming contest.

Thank you, sir.

Mayor DUMAS. Thank you, Mr. Chairman.

(The committee subsequently received the following letter, relevant to Mayor Dumas' testimony:)

STATEMENT OF FRED BENTON, JR, BENTON & MOSLEY BOND COUNSEL. BATON ROUGE, LA.

The written statement for the appearance of W. W. Dumas, Mayor-President, Parish of East Baton Rouge, City of Baton Rouge, filed with the Senate Finance Committee has been reviewed and the statements of fact therein contained in respect to impairment of the bond market in Louisiana are true and correct and adopted for the purposes of this statement as if set out in full herein.

Respectifully submitted.

FRED BENTON, JR.

Senator ANDERSON (now presiding). Governor Love.

STATEMENT OF HON. JOHN A. LOVE, GOVERNOR OF COLORADO; ACCOMPANIED BY CHARLES F. SCHWAN, JR., CONSULTANT FOR GOVERNORS' CONFERENCE

Governor LOVE. Senator Anderson, distinguished members of the committee, I am joined today by Governor Tiemann of Nebraska on my right, Governor Kirk of Florida, and Governor Evans of Washington and Governor McKeithen of Louisiana will soon be here.

We also have Mr. Charles F. Schwan, Jr., at the table, who is a consultant to the National Governors' Conference, and the Council of State Governments.

I will attempt, of course, to make my testimony as brief as possible.

Senator CURTIS. Mr. Chairman, I would like to welcome these Governors here, all of them, and particularly I am happy that on this panel is the Governor of Nebraska, who serves us well, the Honorable Norbert Tiemann. While I have the mike, I want to remind these witnesses as well as all others who appear on this municipal bond issue that this committee didn't originate that idea.

I do not know what the others think but as for myself I am opposed to the House bill. I am opposed to what the Treasury recommends. What they recommend would bring in $49 million, that is 25 cents for every individual here, in order to mess-up, and I can't think of any other word, the traditional situation where the Federal Government has kept hands off of the interest on State and municipal bonds.

Governor LOVE. Mr. Chairman, I am delighted to hear the statement of the Senator, and I hope it is shared by other members of this committee and by the entire Senate when the appropriate time comes.

It is almost inevitable that part of our testimony is going to be repetitious but we all feel so strongly about it that we want to be sure it becomes a part of the record.

Our concern is with each of the several provisions to which your committee is devoting its attention today—the proposed minimum income tax, allocation of deductions, and Federal subsidization of interest payments if State and local bonds are isued as taxable obligations. My remarks will be limited, in the main, to the tax and fiscal consequences if these provisions are enacted.

We appreciate your problem, we think we do. To reform the Federal income tax laws is a very difficult task. In so doing, however, we hope you will avoid disturbing the market for State and local bonds.

As you know, the pressure is enormous on State and local governments to furnish more and better services and facilities. Our capital requirements continue to grow at a rapid rate. Only 13 years ago, in 1956, total State and local bonds outstanding totaled less than $50 billion. Today that total has reached $140 billion—an increase of 180 percent. A Federal Reserve Board estimate is that it will approximate $210 billion in 1975. In other words, in 20 years the total of State and local bonds outstanding is estimated to increase by 320 percent. These figures should impress anyone who has doubts about the overwhelming capital needs of States and localities.

H.R. 13270 would enact a "limit on tax preferences," a form of minimum income tax for individuals, in the base of which would be State and local bond interest.

Treasury witnesses testified against the inclusion of State and local bond interest in the minimum tax. They did so for two reasons. Inclusion, they said would: (1) raise a constitutional issue and (2) have an adverse effect on the municipal bond market.

Both H.R. 13270 and the Treasury would require that individuals allocate deductions between taxable income and tax preference amounts. Both would include State and local bond interest. In the House bill this provision would apply to future bond issues only, and be phased in over a 10-year period, as I understand it. The Treasury, on the other hand, would have this requirement cover outstanding as well as future issues and make it fully effective immediately.

H.R. 13270 contains a plan for a Federal subsidy of a portion of State and local government interest costs if they chose—and the plan is optional with them—to issue taxable obligations. The Treasury promised to submit a substitute proposal for the House-approved plan.

Mr. Chairman, the revenue yield from inclusion of municipal bonds in the House LTP provision, according to the Treasury's estimate, would be $35 million, and that is a little less even than Senator Curtis was mentioning, and for its own allocation of deductions proposal, $45 million. These are not, as the Senator has said, comparatively large sums, but the impact on the market of these provisions would be disastrous.

Attached to my statement are certain exhibits. Most of them indicate what has happened as a result of the threat of taxation. Should the threat prove real, we may expect an even more severe impact.

Historically the yield relationship of comparable municipal and corporate bonds has been in the vicinity of 70 percent. In other words, if a corporate bond were sold at 8 percent, one would expect a comparable municipal to yield 5.6 percent.

Graphs Nos. 1 and 2, employing different indexes, illustrate the municipal-corporate bond yield relationship over the past 2 years. Please note that they show a yield relationship of about 80 percent, today. In other words, if a corporate bond were to be sold at 8 percent, a comparable municipal might be expected to bear an interest rate of 6.4 percent. As a matter of fact, that is slightly out of date. The relationship, instead of 80, was 84 percent as of yesterday.

Graphs Nos. 3 and 4 show the yields of tax-exempt and taxable bonds over the past 2 years as indicated by representative indexes. Again the closing of the gap can be seen.

Tables No. 1–3 show in tabular form the same data as graphs 1–4. Please note on table No. 1 the interest spread, 1.77 percent. By July 1969, the gap had shrunk to 1.39 percent. On table No. 2 a similar change can be seen. The respective interest rate differences were 1.80, 1.87, and 1.51. Table No. 4 shows that the yield relationship between municipal and U.S. Government 20-year bonds has been altered drastically, too. The interest rate differences were 0.93, 0.95, and 0.19, respectively.

Mr. Chairman, tight money presumably caused all these interest rates to climb. But the much more rapid climb in municipal bond interest rates can only be ascribed to the threat of taxation.

Also attached to my statement are two schedules. Turning first to schedule II, it shows in columns 1–4 the issuance of tax-exempt municipal securities for the years 1965–68 on a State-by-State basis as reported in the IBA Statistical Bulletin. The figures shown include issuances by local units of government as well as the State.

Columns 5 and 6 represent projections of bond sales by State for 1969 and 1970. They assume what I think is a conservative 10 percent per year increase over 1968 in the amount, that is, 5 percent probably due to inflation and 5 percent due to a real increase in outlays. To put it more accurately, they represent reasonable estimates of need. Based on first quarter statistics, bond sales in 1969 on an annual basis will be less than $11 billion, 40 percent below what might have been expected, reflecting what other witnesses have mentioned, I am sure, the difficulty of marketing these bonds now.

Turning now to schedule I, it shows estimates of interest costs increases that would be incurred if the provisions of H.R. 13270 relating to municipal bonds were enacted. Two estimates are made—one based on actual volume for 1968, the other on projected volume for 1970.

Column 2 represents calculations of the annual debt service on bonds issued in 1968. The interest rate used—4.5 percent—approximates the average of the Bond Buyers' Index for 1968. As can be seen, debt service totaled $1.24 billion for all States.

Column 3 shows debt service on a taxable basis. Columns 4 and 5 show additional interest costs by year and over the assumed 20-year life of the bonds. The interest rate increase assumed for purpose of computation is 2 percent. I think that is a reasonable assumption. Given these assumptions, the additional interest costs for 1 year would be $22 million, and over the life of the bonds the interest, the increased payment, would be $4.45 billion.

Columns 6 through 10 contain information similar to that of columns 1–5, but based on projected issuances for 1970. Please note the total of column 9, the assumed interest cost increase, approximately $270 million. If the same total were issued in 1971, the increase would be $540 million. By the 10th year, increased interest costs would add up to $2.7 billion, assuming no year-by-year increase in State and local financing.

Mr. Chairman, members of the committee, some may feel we have overestimated the increase in interest costs that would result from enactment of H.R. 13270. Some may feel that the Treasury proposals would result in a smaller increase. But if one reduces the estimated increase by one-half or even more, what remains is an undeniably heavier debt service burden that must be borne by State and local governments and by their taxpayers, and in most instances predominantly by their property taxpayers.

Secretary Kennedy testified that the impact on the market of the Treasury allocations of deductions proposal would be minimal. I submit that neither he nor we know if his opinion is valid. We know he estimated the revenue yield to be $45 million. Presumably that would be based on total bonds outstanding in 1969 of $154 billion, $140 billion in 1968 plus 10 percent. Assuming an additional 10-percent increase in bonds outstanding at the end of 1970 would mean a total of $170 billion. On such amount, revenue accruing to the Treasury would increase by 10 percent, also, to $49.5 million.

Look now at what the increased State and local debt service cost would be for 1970. Would it be 1 percent, $135 million or one-half of 1 percent, $67 million? That additional cost, whatever it might be, and I think undoubtedly it would be far above 1 percent, would continue over the life of the bonds.

No one can know until after the fact what the actual debt service cost increase would be. It would be in any case greater—and probably much greater—than the revenue yield.

Let me state at this point that the Treasury allocations of deductions proposal would have a very damaging effect. For one thing, allocation of deductions affects many more people than the House minimum tax. The latter is applicable only when total income from tax preference items exceeds $10,000 and regularly taxable income. The former is applicable to any amount of tax preference income in excess of $10,000. Moreover, allocation of deductions has particular relevance to banks—much the largest customers for State and local bonds. A banker might reasonably calculate if allocation of deductions is required of life insurance companies and of individuals and if the requirement with respect to banks were in the all-but-final House bill, can banks be far behind?

Mr. Chairman, those who purchase State and local bonds, in a sense, pay a tax. It is not paid to the United States, but it is paid to State and local governments in the form of lower interest rates. True, investors may hope to gain more in Federal income tax savings than in interest forgone. But have we not shown that the principal beneficiaries of low State and local bond interest rates are the issuing government? Have we not shown that to correct an alleged inequity in Federal income tax laws will cost State and local governments far more than the Treasury will realize in revenue? Immediately there would ensue postponement, cancellation, or reduction in scope of many public building projects—schools, hospitals, highways, water and sewer facilities, and other vitally needed items. Eventually, of course, these projects would be built. They would be paid for, however, largely out of increased sales and property taxes and utility fees. These are regressive in nature, but they would have to be relied on even more heavily than at present to supply the funds State and local governments could not afford to borrow.

Other witnesses who appear for the States will cover other aspects. I have tried to show, and I believe I have shown, certain of the dire results that Federal taxation would achieve. I do not believe that this committee, its parent body, or the Congress itself wishes to accomplish such results.

I appreciate, Mr. Chairman and members of the committee, your giving me this time and attention.

Thank you.

(Hon. John A. Love's prepared statement follows:)

Statement of the Honorable John A. Love, Governor of Colorado, Chairman, National Governors' Conference

SUMMARY

Mr. Chairman, Members of the Committee: Our concern is with each of the several provisions to which your Committee is devoting its attention today—the proposed minimum income tax, allocation of deductions and federal subsidization of interest payments if state and local bonds are issued as taxable obligations. My remarks will be limited, in the main, to the tax and fiscal consequences if these provisions are enacted.

We appreciate your problem. To reform the federal income tax laws is a very difficult task. In so doing, however, we hope you will avoid disturbing the market for state and local bonds.

As you know, the pressure is enormous on state and local governments to furnish more and better services and facilities. Our capital requirements continue to grow at a rapid rate. Only 13 years ago, in 1956, total state and local bonds outstanding totaled less than $50 billion. Today that total has reached $140 billion, an increase of 180 percent. A Federal Reserve Board estimate is that it will approximate $210 billion in 1975. In other words, in 20 years the total of state and local bonds outstanding is estimated to increase by 320 percent. These figures should impress anyone who has doubts about the overwhelming capital needs of states and localities.

H.R. 13270 would enact a "limit on tax preferences," a form of minimum income tax for individuals in the base of which would be state and local bond interest.

Treasury witnesses testified against the inclusion of state and local bond interest in the minimum tax. They did so for two reasons. Inclusion, they said would: (1) raise a constitutional issue, and (2) have an adverse effect on the municipal bond market.

Both H.R. 13270 and the Treasury would require that individuals allocate deductions between taxable income and tax preference amounts. Both would include state and local bond interest. In the House bill this provision would apply to future bond issues only, and be phased in over a 10-year period. The Treasury would have this requirement cover outstanding as well as future issues, and make it fully effective immediately.

H.R. 13270 contains a plan for a federal subsidy of a portion of state and local government interest costs if they chose—and the plan is optional with them—to issue taxable obligations. The Treasury promised to submit a substitute proposal for the House-approved plan.

Mr. Chairman, the revenue yield from inclusion of municipal bonds in the House LTP provision, according to the Treasury's estimate would be $35 million and for its own allocation of deductions proposal, $45 million. These are not large sums, but the impact on the market of these provisions would be far greater.

Attached to my statement are certain exhibits. Most of them indicate what has happened as a result of the threat of taxation. Should the threat prove real, we may expect an even more severe impact.

Historically the yield relationship of comparable municipal and corporate bonds has been in the vicinity of 70 percent. In other words, if a corporate bond were sold at 8 percent, one would expect a comparable municipal to yield 5.6 percent.

Graphs No. 1 and 2, employing different indices, illustrate the municipal-corporate bond yield relationship over the past two years. Please note that they show a yield relationship of about 80 percent. Today, if a corporate bond were to be sold at 8 percent, a comparable municipal might be expected to bear an interest rate of 6.4 percent. Note, too, that virtually all the change in relationship has occurred in 1969—the period during which this legislation has been under consideration.

Graphs Nos. 3 and 4 show the yields of tax exempt and taxable bonds over the past two years as indicated by representative indices. Again the closing of the gap can be seen.

Tables No. 1–3 show in tabular form the same data as Graphs 1–4. Please note on Table No. 1 the interest spread of 1.78 percent in August 1967. In January 1969, tıere was about the same spread, 1.77 percent. By July 1969, the gap had shrank to 1.39 percent. On Table No. 2 a similar change can be seen. The respective interest rate differences were 1.80, 1.87 and 1.51. Table No. 4 shows that the yield relationship between municipals and U.S. Government 20-year bonds has been altered drastically, too. The interest rate differences were 0.93, 0.95 and 0.19 respectively.

Mr. Chairman, tight money caused all these interest rates to climb. The much more rapid climb in municipal bond interest rates can only be ascribed to the threat of taxation.

Also attached to my statement are two schedules. Turning first to Schedule II, it shows in columns 1–4 the issuances of tax exempt municipal securities for the years 1965–1968 on a state-by-state basis as reported in the *IBA Statistical Bulletin*. The figures shown include issuances by local units of government as well as the state.

Columns 5 and 6 represent projections of bond sales by state for 1969 and 1970. They assume a conservative 10 percent per year increase over 1968, 5 percent due to inflation and 5 percent to a real increase in outlays. To put it more accurately, they represent reasonable estimates of need. Based on first quarter statistics, bond sales in 1969 on an annual basis will be less than $11 billion, 40 percent below what might have been expected.

Turning now to Schedule I, it shows estimates of interest costs increases that would be incurred if the provisions of H.R. 13270 relating to municipal bonds were enacted. Two estimates are made—one based on actual volume for 1968, the other on projected volume for 1970.

Column 2 represents calculations of the annual debt service on bonds issued in 1968. The interest rate used—4.5 percent—approximates the average of the *Bond Buyer's Index* for 1968. As can be seen, debt service totaled $1.24 billion for all states.

Column 3 shows debt service on a taxable basis. Columns 4 and 5 show additional interest costs by year and over the assumed 20 year life of the bonds. The interest rate increase assumed for purpose of computation is 2 percent.

Given these assumptions, the additional interest costs for one year would be $222 million, and over the life of the bonds $4.45 billion.

Columns 6–10 contain information similar to that of columns 1–5, but based on projected issuances for 1970. Please note the total of column 9, the assumed interest cost increase, approximately $270 million. If the same total were issued in 1971, the increase would be $540 million. By the tenth year increased interest costs would add up to $2.7 billion, assuming no year-by-year increase in state and local financing.

Mr. Chairman, Members of the Committee, some may feel we have overestimated the increase in interest costs that would result from enactment of H.R. 13270. Some may feel that the Treasury proposals would result in a smaller increase. If one reduces the estimated increase by one-half or even more, what remains is an undeniably heavier debt service burden that must be borne by state and local governments and their tax payers.

Secretary Kennedy testified that the impact on the market of the Treasury allocations of deductions proposal would be minimal. Neither he nor we know if his opinion is valid. We know he estimated the revenue yield to be $45 million. Presumably that was based on a total of bonds outstanding in 1969 of $154 billion ($140 billion in 1968 plus 10 percent). Assuming an additional 10 percent increase in bonds outstanding at the end of 1970 would mean a total of $170 billion. On such amount, revenue accruing to the Treasury would increase by 10 percent, also, to $49.5 million.

Look now at what the increased state and local debt service cost would be for 1970. Would it be one percent, $135 million or one-half of one percent, $67 million? That additional cost, whatever it might be, would continue over the life of the bonds.

No one can know until after the fact what the actual debt service cost increase would be. It would be in any case greater—and probably much greater—than the revenue yield.

Let me state at this point that the Treasury allocations of deductions proposal would have a very damaging effect. For one thing, allocation of deductions affects many more people than the House minimum tax. The latter is applicable only when total income from tax preference items exceeds $10,000 and regularly taxable income. The former is applicable to any amount of tax preference income in excess of $10,000. Moreover, allocation of deductions has particular relevance to banks—much the larger customers for state and local bonds. A banker might reason, if allocation of deductions is required of life insurance companies and of individuals and if the requirement with respect to banks were in the all-but-final House bill, can banks be far behind?

Mr. Chairman, those who purchase state and local bonds pay a "tax." It is not paid to the United States, but it is paid to state and local governments in the form of lower interest rates. True, investors may hope to gain more in federal income tax savings than in interest foregone. But have we not shown that the principal beneficiaries of low state and local bond interest rates are the issuing governments? Have we not shown that to correct on alleged inequity in federal income tax laws will cost state and local governments far more than the Treasury will realize in revenue? Should direct or indirect taxation be voted, what would be the result? Immediately there would ensue postponement, cancellation or reduction in scope of many public building projects—schools, hospitals, highways, water and sewer facilities and others vitally needed. Eventually, of course, these projects would be built. They would have to be paid for, however, out of increased sales and property taxes and utility fees. These are regressive in nature, but they would have to be relied on even more heavily than at present to supply the funds state and local governments could not afford to borrow or to pay the increased debt carrying costs on what they would have to borrow.

Other witnesses who appear for the States will cover aspects of taxation of State and local obligations that I have not covered. I have tried to show, and I believe I have shown, certain of the dire results that Federal taxation would achieve. I do not believe that this committee, its parent body or the Congress wishes to accomplish such results.

Mr. Chairman, members of the committee, I appreciate your giving me your time and attention. Thank you.

STATEMENT

Mr. Chairman, members of the committee, I am John A. Love, Governor of Colorado and Chairman of the National Governors' Conference. I am pleased to have this opportunity to appear before you on behalf of the State of Colorado and the National Governors' Conference to testify on H.R. 13270, the Tax Reform Act of 1969. Appearing with me as representatives of the states are my colleagues, Governor Richard J. Hughes of New Jersey, Governor Daniel J. Evans of Washington, Governor Claude R. Kirk of Florida, Governor Norbert T. Tiemann of Nebraska, and Governor John J. McKeithen of Louisiana.

Mr. Chairman, it is no secret that we are seriously concerned about several sections of H.R. 13270, and substitute provisions for them suggested by the administration. At the most recent National Governors' Conference, 51 of the 52 Governors attending the Conference—all who were present at the time—sent a wire to the President expressing our concern. Copy of the telegram is attached, but I should like to quote part of it at this time.

We wired the President:

One crucial matter which we did not have an opportunity to discuss with you is the taxation of state and municipal bonds. The infringement upon what we consider the constitutional prerogatives of state and local government would be a setback of major proportions to our mutual goal of governmental balance in the "Spirit of '76".

The staggering blow of increased costs for all public construction would either add to the tax burden of the people or stop construction of much needed public facilities.

Very simply, Mr. President, if the ability to market state and municipal bonds is jeopardized in any way, it will be a setback that for years to come will overshadow any positive proposals.

As citizens and taxpayers, we welcome the effort to reform our tax laws in which this Committee and the Congress are engaged. Inequities and imperfections that have grown up over the years should be corrected. The task you have set for yourselves is a difficult and complex one. We are here to urge that in its accomplishment, however, you do nothing to disturb the market for state and local government bonds.

I am referring, of course, to the provisions of H.R. 13270 relating to a limit on tax preferences, allocation of deductions and the subsidization of interest payments if state and local bonds are issued as taxable obligations, Sections 301, 302 and 601 and 602 respectively. I should like also to refer to the administration proposals on these subjects.

In the main, I shall limit my remarks to the tax and fiscal consequences of what is proposed. Other aspects will be discussed by those appearing with me.

Mr. Chairman, as I know you know, the pressure is enormous on state and local governments to furnish more and better services and facilities. Our population and our expectations continue to grow. To build the schools, highways, hospitals, water and sewer facilities and all the other projects we want and need means that state and local governments must have a healthy, readily available capital market. We are a Nation that builds on credit, and few, if any, of our public or private institutions are more dependent on credit than states and localities. At the end of 1956—only 13 years ago—state and local securities outstanding totaled less than $50 billion, according to Federal Reserve Board data. Today that total has reached $140 billion—an increase of 180 percent. The Federal Reserve Board estimates that the total outstanding in 1970 will be about $147 billion, and nearly $210 billion in 1975. Parenthetically, I assume that these estimates are based on there being no damage done to the market. In any event, the Federal Reserve Board estimate is that in 20 years—1956 to 1975—state and local government bonds outstanding would increase by about 320 percent. If there were any question concerning the need of state and local governments for capital funds, these data should put it to rest.

H.R. 13270 proposes enactment of a minimum tax on individuals, a "limit on tax preferences", in the base of which would be state and local bond interest. Witnesses for the Department of the Treasury testified that it would produce $85 million a year when fully effective. Of that amount, revenue from taxation of state and local bonds was estimated to produce $35 million. Application of LTP to bonds would be at a gradual rate of 10 percent per year over 10 years.

The Treasury witnesses urged this Committee that it not include state and local bond interest in this minimum tax. They cited two reasons for not doing so: (1) it would raise a constitutional question, and (2) it would have an adverse effect on the market for such bonds.

With respect to allocation of deductions, the House bill would require that individuals allocate deductions between taxable income and tax preference amounts, including in the latter state and local bond interest. The provision would apply to bonds issued after July 12, 1969, and be phased in over a 10-year period.

The Administration similarly would include municipal bond interest in the allocation of deductions requirement, but would extend it to cover interest on outstanding issues as well as future issues, and make it fully effective immediately.

The House included in its bill a plan to provide a subsidy to state and local governments—exercisable at their option—if they chose to issue taxable bonds. The Treasury opposed this plan, promising to submit a substitute proposal.

Mr. Chairman, although the revenues that the proposed inclusion of state and local bond interest in the limit on tax preferences—$35 million the Treasury estimated—and allocation of deductions—$45 million for the Treasury plan—would be small, the market impact of these provisions would be great.

Attached to my statement are certain graphs and tables. They illustrate the impact on the market that the *threat* of taxation has had. I wish to emphasize what they represent is the market reaction to the possibility of taxation. Should that possibility be realized, the impact could be expected to be even more severe.

Historically, comparable municipal and corporate bonds have been considered to have a relationship as to yield in the vicinity of 70 percent. This is to say, municipal yields have run at about 70 percent of those on comparable corporates. To put it another way, if a corporate bond were to be sold at 8 percent, one would expect a comparable municipal to yield 5.6 percent.

Graph No. 1 illustrates the relationship over the past two years. Please note that the latest data indicate a yield relationship of 80 percent. Today, if a corporate bond were to be sold at 8 percent, a comparable municipal would bear an interest rate of 6.4 percent—not 5.6 percent. Note also the extent of the change in the relationship that occurred in 1969.

Graph No. 2 illustrates the same basic change. It is based on different indices.

Graphs No. 3 and 4 show the yields of tax exempt and taxable bonds over the past two years as indicated by representative indices. Again the closing of the gap can be seen.

Tables No. 1–3 show in tabular form the data shown on the several graphs. Please note on Table No. 1 the difference of 1.78 percent in August 1967 (4.06 and 5.84 percent), which remained about the same, 1.77 percent, in January 1969, had by July shrunk to 1.39 percent. On Table No. 2, a similar change can be seen. The respective differences are 1.80, 1.87 and 1.51. Both Table No. 3 and Graph No. 4 indicate the yield relationship of one representative municipal bond index and U.S. Government 20-year bonds. Just to round out the story, a difference in interest rate of 0.93 percent in August 1967 (0.95 percent in January 1969) had shrunk in July 1969 to 0.19.

These data indicate a general increase in interest rates which may be ascribed to the tight money market. The time during which most of the change in yield relationship took place, i.e. when this bill was before the other body, make it abundantly clear that the threat of taxation of municipal bonds was the cause for that change.

Also attached to my statement are two schedules. If we may turn first to Schedule II, columns 1–4 reflect the issuances of tax exempt municipal securities for the years 1965–1968 on a state by state basis as reported in the *IBA Statistical Bulletin*. The figures shown for each state include issuances by local governmental units as well as those of the state itself.

The figures shown in columns 5 and 6 are projections of bond sales by state for 1969 and 1970. They assume a 10 percent per year increase over 1968, 5 percent due to inflation and 5 percent in real governmental outlays. They assume further that nothing in the tax situation would disrupt the issuance of municipal securities.

I should observe that the latter assumption is unwarranted. The ominous tax situation and attendant high interest rates—interest rates in some instances high enough to exceed legal interest ceilings and in others to force issuers out of the market—reduced the annual rate of issuances to less than $11 billion based on first quarter statistics. That is a level 40 percent below what might reasonably have been expected for this year. The figures in columns 5 and 6, in other words, represent reasonable estimates of need for state and local government capital financing.

If we may turn back to Schedule I now, it shows estimates of the additional interest costs that would be incurred by state and local governments were the provisions relating to municipal bonds of H.R. 13270 enacted. Two estimates are made—one based on actual volume for 1968, the other on projected volume reasonably have been expected for this year. The figures in columns 5 and 6, in for 1970. Inclusion of the 1968 figures and estimates is justified on the grounds that they represent a year unaffected by the current market uncertainties due to the threat of taxation and, therefore, represent an actual expression of state and local financing needs. As discussed above, the volume for 1970 undoubtedly is over-stated because of the taxation threat.

Column 2 of Schedule I represents calculations of the annual debt service on bonds issued in 1968. Inasmuch as it would be impossible to calculate the actual debt service on each of the over 5,400 separate issuances, a 20-year bond with equal annual payments of principal and interest was used for these computations. The interest rate used—4.5 percent—was the approximate average of the *Bond Buyer's Index* for 1968. This well-known index consists of 20 municipal bonds picked for their representativeness of the overall market. As can be seen, debt service was $1.24 billion for the entire 50 states.

For purposes of computation, an increase of two percentage points of interest has been employed. If this appears to be too large an increase, please remember that the January through July 1969 increase based on the threat of taxation only was 0.96 or 0.85 percent, depending upon which index is used. In any case, a two percent increase would have resulted in an annual debt service of $1.46 billion (column 4) or an increase of $222 million over the tax exempt cost. The figures in column 5 show that for debt issued in 1968 the additional interest cost over the life of the bonds would have amounted to the staggering sum of $4.45 billion. As appalling as these figures are, they relate to issuance of a single year.

Columns 6–10 contain information similar to that of columns 1–5, but based on projected issuances for 1970. Please note the assumed interest cost increase, approximately $270 million. If the same total in bonds were issued in 1971, the increase would be $540 million. By the tenth year, and making the unrealistic assumption that state and local financing would not grow from year to year, an additional $2.7 billion in interest costs would have to be paid that year from state and local government budgets.

Mr. Chairman, Members of the Committee, some may feel that we have over-estimated the increase in interest costs that would result from enactment of H.R. 13270 as it came to you. Some may feel that the Treasury proposals would result in a smaller increase. If one reduces the estimated increase by one-half or even more, what remains is an undeniably additional heavy debt service burden that must be borne by state and local governments and their taxpayers.

Mr. Chairman, neither Governors nor their fiscal officers nor Members of Congress make the market. Investors do. In their wisdom or unwisdom they determine what interest rates will be. The Treasury estimates of the actual revenue impact of the limit on tax preferences provision of H.R. 13270 as only $35 million, and its own allocation of deductions proposal as $45 million are not controlling. Investors decide for themselves. They can decide that if Congress breaches the tax exemption dike or reduces the value to them of their deductions, they will bid on bonds at sharply increased interest rates. They can and they do as we have seen from studying what happened to state and local bond interest rates while the Ways and Means Committee and the House were considering H.R. 13270.

Secretary Kennedy testified that the market impact of the Treasury allocation of deductions proposal would be minimal. Neither he nor we know if his opinion is valid. We do know, however, that the Treasury estimates the revenue yield in the first full year of operation of the proposal to be $45 million. We know too that this estimate is based on a requirement that deductions be allocated with respect to all bonds, outstanding as well as prospective. We may assume for present purposes that it was based on the total of bonds outstanding at the end of 1969—$140 billion at the end of 1968 plus our assumed 10 percent increase for 1969 or $154 billion. Let us then assume an additional 10 percent increase in bonds outstanding at the end of 1970, or approximately $170 billion. The revenue accruing to the Treasury would then amount to $49.5 million.

Let us now look at what the increased debt service cost would be to states and localities for just one year, 1970. Assume the increase to be—not two—but one percent. That would be $135 million. Assume it would be one-half percent. That would be $67 million. And remember, that is for that year only. The additional debt service cost would continue for the life of the bonds.

No one can know until after the fact what the actual debt service cost increase would be. There is reason to believe, however, that it would be much greater than the increase in federal revenue would be. As we have pointed out, the threat of enactment of H.R. 13270 with its phasing in of both LTP and allocation of deductions and its application of the latter only to future issues pushed interest rates up nearly one percent. The Treasury proposal, if enacted, would have nearly the same—possibly an even greater—damaging impact. For one thing, allocation of deductions affects many more people than the minimum tax. The latter is operative only when the total income from tax preference items exceeds both $10,000 and regularly taxable income. The former is applicable with respect to any amount of tax preference income in excess of $10,000. Moreover, and this seems to have been overlooked by both the House of Representatives and the Treasury, allocation of deductions can easily be made to apply to banks, by far the largest buyers of state and local bonds. As a matter of fact, in the all-but final House bill, banks were required to allocate deductions. If life insurance companies can be made to allocate, as Treasury witnesses pointed out the Supreme Court has held, and Congress chooses to require individuals to allocate, would bankers feel that they would be forever immune?

Mr. Chairman, another point overlooked or ignored is that those who buy state and local bonds pay a "tax" as long as they hold the securities. True, they do not pay it in the form of income tax to the United States, but they pay it to state and local governments by accepting a lower rate of interest than they would receive if they bought taxable securities. True, also, they expect to gain more in federal income taxes not paid than in interest foregone in many if not most instances.

But, have we not shown that the principal beneficiaries of low state and local government bond interest rates are the issuing governments? Have we not shown that to correct an alleged inequity in federal income tax laws will cost state and local governments in interest costs far more than the Treasury will realize in revenue?

If the Congress does not heed our warning, what will be the result? The immediate result will be the postponement, cancellation or reduction in scope of many public building projects—schools, hospitals, highways, water and sewer facilities and others vitally needed. Eventually, of course, these projects will be built. They will have to be paid for, however, out of increased sales and property taxes and utility fees. These taxes and fees—regressive though they may be—will have to be relied on even more heavily than at present to supply the funds state and local governments could not afford to borrow or to pay the increased debt carrying costs on what they would have to borrow.

Mr. Chairman, in my statement I have chosen not to speak on a number of aspects of what is involved in the direct or indirect taxation of state and local obligations by the Federal Government. Other witnesses appearing for the states will cover them. I have tried to show, and I believe I have shown, certain of the calamitous results that federal taxation would achieve. I do not believe that this Committee, its parent body or the Congress wishes to accomplish such results.

Mr. Chairman, Members of the Committee, I appreciate your giving me your time and attention. Thank you.

[Telegram]

SEPTEMBER 2, 1969.

Hon. RICHARD NIXON,
President of the United States,
The White House, Washington, D.C.

DEAR MR. PRESIDENT: Your presentation to the Nation's governors Monday night was a tremendous contribution to the meaningful establishment of the "new federalism." We are convinced, Mr. President, that we have before us the opportunity for a monumental breakthough to a positive partnership in government. You very ably outlined the paramount issues which are challenging our system of government, and laid the groundwork upon which all elected officials can join together in a common cause. That cause is, of course, a governmental system that can effectively deliver services to our people.

You can be assured of the complete cooperation of the Nation's governors in these vital issues.

One crucial matter which we did not have an opportunity to discuss with you is the taxation of State and municipal bonds. The infringement upon what we consider the constitutional prerogatives of State and local government would be a setback of major proportions to our mutual goal of governmental balance in the "Spirit of '76."

The staggering blow of increased costs for all public construction would either add to the tax burden of the people or stop construction of much needed public facilities.

Very simply, Mr. President, if the ability to market State and municipal bonds is jeopardized in any way, it will be a setback that for years to come will overshadow any positive proposals.

We urge your careful consideration of this vital matter, and by copy of this telegram call on the congressional leadership for their cooperation and support.

Again, we appreciate so much your presence at our conference, and the tremendous contributions you are making to provide order and balance in our federal system.

/s/ Gov. Buford Ellington, Tennessee, chairman of the National Governors' Conference, joined by all other governors present at today's business session: Gov. Albert P. Brewer, Alabama; Gov. Keith H. Miller, Alaska; Gov. John M. Haydon, American Samoa; Gov. Jack Williams, Arizona; Gov. Winthrop Rockefeller, Arkansas; Gov. Ronald Reagon, California; Gov. John A. Love, Colorado; Gov. John Dempsey, Connecticut; Gov. Russell W. Peterson, Delaware; Gov. Claude R. Kirk, Jr., Florida; Gov. Lester G. Maddox, Georgia; Gov. Carlos G. Camacho, Guam; Gov. John A. Burns, Hawaii; Gov. Don Samuelson, Idaho; Gov. Richard B. Ogilvie, Illinois; Gov. Edgar D. Whitcomb, Indiana; Gov. Robert D. Ray, Iowa; Gov. Robert Docking, Kansas; Gov. Louie B. Nunn, Kentucky; Gov. Kenneth M. Curtis, Maine; Gov. Marvin Mandel. Maryland; Gov. Francis W. Sargent, Massachusetts; Gov. William G. Milliken, Michigan; Gov. Harold Levander, Minnesota; Gov. Warren E. Hearnes, Missouri; Gov. Forrest H. Anderson, Montana; Gov. Norbert T. Tiemann, Nebraska; Gov. Paul Laxalt, Nevada; Gov. Walter Peterson, New Hampshire; Gov. Richard J. Hughes, New Jersey; Gov. David F. Cargo, New Mexico; Gov. Nelson A. Rockefeller, New York; Gov. Robert W. Scott, North Carolina; Gov. William L. Guy, North Dakota; Gov. James A. Rhodes, Ohio; Gov. Dewey F. Bartlett, Oklahoma; Gov. Tom McCall, Oregon; Gov. Raymond P. Shafer, Pennsylvania; Gov. Luis A. Ferre, Puerto Rico; Gov. Frank Licht, Rhode Island; Gov. Robert E. McNair, South Carolina; Gov. Frank L. Farrar, South Dakota; Gov. Calvin L. Rampton, Utah; Gov. Deane C. Davis, Vermont; Gov. Mills E. Godwin, Jr., Virginia; Gov. Melvin H. Evans, Virgin Islands; Gov. Daniel J. Evans, Washington; Gov. Arch A. Moore, Jr., West Virginia; Gov. Warren P. Knowles, Wisconsin; Gov. Stanley K. Hathaway, Wyoming; *and further joined by:* Conrad Fowler, president, National Association of Counties; Jack D. Maltester, president, U.S. Conference of Mayors; and Beverly Briley, President, National League of Cities.

Senator ANDERSON. I will next call Gov. Dan Evans of the State of Washington, who I believe is next in line.

STATEMENT OF HON. DANIEL J. EVANS, GOVERNOR OF THE STATE OF WASHINGTON

Governor EVANS. Mr. Chairman, and members of the committee. I will just add briefly to the remarks of Governor Love.

I serve or rather have just finished serving as chairman of the National Governors' Conference Committee on Fiscal Affairs and Executive Management. We have dealt with this problem of taxation of municipal bonds, and the Governors' Conference expressed their opinions in opposition to taxation, as I am sure the chairman of the conference, Governor Love, has pointed out.

Let me not reiterate testimony he has given or testimony that I am sure my colleagues will give but rather describe to you a most recent and very important thing that has happend in our own State of Washington that, I think, will drive home the point. We have had authorized by the legislature in January of 1969 a series of bond issues, and we are in the process now of trying to sell them. One of them deals with the very necessary construction of community colleges, in our State. Those bonds came to the market just a couple of weeks ago.

For the first time in our State's history we were forced to reject bids on tax-exempt bonds because of the rate. These were well protected bonds. They had a good rating. They were tax-exempt, and the low bid was 7.4 percent. We were incapable of issuing those bonds, and we will have to do one of two things in the near future—either rebid and hope that the rate somehow is lower or fail to construct necessary community college facilities for our students.

Now, the pay-off, if we ultimately have to go to that kind of rate, is from the tuition paid by community college students. I think this just reemphasizes what Governor Love has pointed out that the extra costs to State and local governments are not just costs of those governments themselves, but costs to property taxpayers, to youngsters who are going to community colleges and paying the higher tuition. To those who pay sales tax and other rather regressive forms of taxation, this is where the burden is going to fall, and it is our considered opinion that the extra costs to the taxpayers of this country, particularly the low-income taxpayers on whom this burden falls, will be far, far greater than any benefit to be gained by the Federal Government in terms of this portion, at least, of tax reform.

Governor LOVE. Thank you very much, Governor.

(Hon. Daniel J. Evans' prepared statement follows:)

STATEMENT OF GOV. DANIEL J. EVANS, CHAIRMAN, NATIONAL GOVERNORS' CONFERENCE ON EXECUTIVE MANAGEMENT AND FISCAL AFFAIRS

SUMMARY

1. The provisions of H.R. 13270 dealing with taxation of state and local bonds will result in a basic change in our governmental structure arising from immediate economic pressure.

2. The provisions insure a narrowing of the difference between the cost of taxable and non-taxable issues. The current chaotic condition of the market can, in specific part, be attributed to the proposed provisions, and has already resulted in serious financial problems in construction programs in the State of Washington and substantial increased cost of borrowing throughout the country.

3. The provisions do not represent tax reform, but shift to more regressive state and local tax burdens and utility charges.

4. The basis of exemption is constitutional, and enactment will result in legal challenge, with continuing chaos in the bond market and severe intergovernmental conflict.

5. The purchaser of municipal bonds now pays a minimum tax by accepting a lower interest rate.

6. There is no indication that tax exemption of municipal bonds was a significant factor in the failure by wealthly individuals cited by the Treasury Department to pay income taxes.

7. Further study needs to be undertaken on the role of tax exempt securities in the tax system and on ways to broaden the market for municipal bonds before changes in the tax exempt status of municipal bonds should be considered. ACIR has suggested such a study in which the National Governors' Conference would be desirous of participating.

Statement of Governor Daniel J. Evans

I sincerely appreciate the decision of this Committee to hold public hearings on the provisions of H.R. 13270 which deal with taxation of state and local bonds. Seldom has an issue of such intergovernmental importance and sensitivity been before you. The decision by the House of Representatives without any public opportunity for Governors and local officials to express themselves is an unfortunate chapter in the history of the federal system.

Others who will appear before you in future hearings will deal with the technical features of the optional issuance of exempt or non exempt bonds, the allocation of deductions and the minimum tax provisions of H.R. 13270. I believe that taken separately or together, their result will be a change in the basic structure of government resulting from immediate economic pressure and demagogic appeals. Therefore, I urge the members of this Committee to weigh most carefully the effect of this issue.

The effect of the provisions of H.R. 13270 is, by gradual stages, to tax the interest on state and local bonds. The much discussed local choice to issue either tax exempt bonds or taxable bonds with an interest subsidy is an illusory choice. The requirement that the Secretary of the Treasury fix the interest subsidy for fully taxable bonds each quarter on the basis of the difference between the interest yield on such fully taxable bonds and the yield on "tax exempt" bonds as determined by the market at that time, makes it apparent that this difference would gradually decline and the cost of borrowing to state and local governments *even under the subsidy option* would substantially increase.

The effect on the municipal bond market of this legislation can be viewed dramatically today by each of us and can be separated from the general financial market instability. The Dow Jones municipal bond index rose from 6.02% to a record 6.23% in one week in September. Within the past month in the State of Washington we have increased the burden to our present taxpayers by markedly shortening the maturity period on one issue of bonds which *must* be sold by December 31 and has an interest rate limitation, and the timely construction of vitally needed vocational education and general educational facilities in our community colleges has been placed in jeopardy by rejecting all bids on a $22 million issue because they were based upon interest rates which the state could not accept. We can only hope that when we reissue a call for bids on this issue, some order will have returned to the market.

Financial experts in my state have stated that the interest rate differential between taxable and non taxable bonds has narrowed from 30% to 20% since this legislation came under consideration. Based on the supportable assumption of the issuance of $10 billion in state and local bonds throughout the country during the year, the portion of the increase in cost attributable to the potential effect of this legislation will cost local taxpayers of the nation more than $1 billion over an average 25 year life of the bonds issued in one year alone. This cost will be compounded each year in which additional bonds must be issued under the present market conditions.

The net effect of the enactment of these provisions will be to increase slightly the tax yield to the federal government at the expense of substantially increasing the cost of borrowing by state and local government. It will increase the federal *income* tax yield at the expense of higher *property* taxes and higher *utility charges* for the local residents who pay the cost of municipal and state borrowings. It is not overall tax reform, but enforced local tax regression. It is a *shift* of the tax burden to the advantage of the federal treasury but the disadvantage of renters, home-owners, and utility users, regardless of their ability to pay. I cannot too strongly express my view that the result of these provisions are inimical both to the concepts of federal-state relations expressed by Presidents Nixon and Johnson, and to the views of those who most urgently desire real tax reform. The Federal Treasury cannot be viewed as the single entity in the nation's tax structure. When the entire tax system is viewed, these provisions will prove regressive in effect.

Tax deductions are generally permitted as a matter of Federal policy to encourage charity and investment and stimulate discovery of natural resources or similar worthwhile activities. But exemption of state and local bond interest does not derive from such Federal policy. It stems from the constitutionally mandated doctrine of inter-governmental immunity which is designed to permit the continued functioning of States and their political subdivisions. There is no doubt that litigation will ensue if this bill is enacted. By making this litigation inevitable, the Congress will doom the municipal bond market to several years of chaos which can only result in costing the public taxpayer hundreds of millions of dollars in additional interest cost. At a time when close intergovernmental relationships are being encouraged, a bitter and divisive battle will ensue, causing possibly irreparable harm to the Federal system.

It should be pointed out that the House of Representatives did not take cognizance of the fact that the buyer of State and local government bonds is now paying a "minimum tax" (in effect) to local government bonds by accepting a lower interest rate than he would demand if the bonds were taxable. Individuals with incomes in excess of $200,000 per year who pay no taxes are cited by the U.S. Treasury Department as examples of the need for reform. However, in the vast majority of cases cited by the Treasury Department this non-taxpaying status was achieved through depreciation, charitable contributions and other deductions and *not* through municipal bond holdings. The only study which has been conducted of which I am aware supports the conclusion that a minor portion of the income of most persons with large incomes is derived from this source. Action should be taken by this Committee to have timely information on this subject before it should consider accepting the provisions of H.R. 13270. The Advisory Commission on Intergovernmental relations has expressed interest in dealing with the subject of taxation of municipal bonds and I urge the Committee to utilize this prestigious body on which all levels of government are represented to bring more realistic recommendations before us. I assure you that the Nation's Governors will participate constructively in such a study. Given the crippling condition of today's bond market, this Committee and the Treasury Department, in conjunction with ACIR and the National Governor's Conference Committee on Executive Management and Fiscal Affairs should be reviewing ways to broaden the market for municipal bonds. The use of urban development bonds and the authority for investment of unemployment compensation trust funds in municipal bonds are among suggestions which deserve further study.

The recent National Governors' Conference unanimously adopted a policy statement originating in the Committee of which I was Chairman, affirming its support of the constitutional freedom from taxation of municipal bonds by the Federal Government and affirming its opposition to the provisions of H.R. 13270 which so obviously affect the marketability of state and local securities, and thereby the provision of needed public services and facilities. I appreciate the opportunity to share with you this view on behalf of the nation's Governors.

Governor Love. Next on the schedule is Governor Norbert T. Tiemann of Nebraska.

STATEMENT OF HON. NORBERT T. TIEMANN, GOVERNOR OF NEBRASKA

Governor Tiemann. Mr. Chairman and members of the committee, thank you very much for allowing me to speak on behalf of tax treatment of State and local bonds.

On very few issues would there be found possible a greater degree of agreeement among representatives of State and local governments than the one we are considering today. We are firmly opposed to any proposal to tax our bonds, be it a minimum tax, allocation of taxes or some other scheme. I should be less than candid if I did not report that we are divided in our views on the efficacy or desirability of a plan embodying a Federal subsidy of one kind or another in exchange for the issuance of municipal bonds on a taxable basis. About this I will have more to say in just a moment. I am not here to argue the legal case for tax exemption of securities. But I do wish to emphasize that we believe strongly that any Federal tax on the bond interest of a State or its local governments without the State's consent, is unconstitutional, and clearly so.

The doctrine of reciprocal immunity from taxation was enunciated by the Supreme Court almost as many years ago as the Republic is old. In the intervening century and one-half, it has resisted successfully many assaults.

The Congress has complete discretion in determining what the tax treatment shall be for capital gains, charitable deductions, depletion allowances and other items. The tax immunity of State and local governments, however, is part of the warp and woof of our federal system.

Be that as it may, my reasons for urging the continuing inviolability of reciprocal immunity will be cast solely in policy terms.

On March 11 of this year, I was afforded the opportunity to appear before the Ways and Means Committee on the subject of tax reform. As the representative of the National Governors' Conference, I urged strongly that the committee not include in its bill provisions to tax State and local bonds. Other witnesses and I warned that the inevitable result of such provisions would be an escalation in bond interest rates. Unfortunately, we have been proved to be excellent prophets.

In February, before we testified, the Bond Buyers' Index of 20 representative municipal bonds was 5.04 percent. On August 21, the index breached 6 percent to reach 6.02. The Bond Buyers' Index of 11 bonds—more highly rated issues—showed yields in February to be 4.84 percent. On August 21, it hit 5.92. These are increases of 0.98 and 1.08 in the short space of 6 months. In the period February–July, corporate issues and 20-year U.S. Government bonds experienced interest rate increases of 0.44 and 0.12 respectively.

I am not here to assert a claim to be regarded as a seer. I am not here to argue that tight money has not caused interest rates to rise. But I do assert, however, that the only thing that could have caused State and local bond interest rates to increase so much more greatly than those of these other long-term securities is the consideration the House gave to taxation of State and local bonds. I'll make one more prophecy. Should the Senate and then the entire Congress decide to tax our bonds—be the form minimum tax, allocation of deductions or some other—our interest rates will continue their climb both absolutely and relatively.

You have heard, Mr. Chairman, testimony that the House provisions on a "limit on tax preferences" and allocation of deductions and the Treasury scheme with respect to the latter will have only minimal revenue consequence. We do not quarrel with this view. What we fear is that the market will react—as it has already—to a much greater degree than the revenue consequences would appear to justify.

One of the Treasury witnesses referred to the market reaction as being primarily psychological. Well, of course it is psychological. So labeling it does not make it any less severe, however. Whether the Congress, Governors, mayors, the Treasury or anyone else feels the actual and potential reaction to be justified is beside the point. Investors make their own decisions. And their decisions determine what the State and local bonds interest rate will be.

They might decide that a minimum tax rate established, and I am talking about the investors now, might decide that a minimum tax rate established by this Congress could be increased by a subsequent Congress. They might decide that an allocation of deductions requirement for individuals applicable only to future issues of bonds and phased in over 10 years, as provided by H.R. 13270 enacted by this Congress, might be changed to be effective immediately with respect to both outstanding and future issues at the behest of a future Secretary of the Treasury. They might decide that once absolute immunity is abridged they must fear later additional abridgements.

Their fears might prove to be groundless, ' ut personally I find it hard to criticize investors for entertaining suc fears when they contemplate investing their money for 10 or 20 or up to 50 years.

Mr. Chairman, if ultimately Congress decides not to include State and local bond interest in a minmum tax or an allocation of deductions requirement, the mere considerations of these items has already cost State and local governments and their taxpayers $13.8 million annually. This can be shown very clearly.

Assume, if you will, that the yield relationship that existed last February between the Bond Buyers' Index and the Average of Yields on Industrial Bonds were to obtain today. The yield relationship then was (73.3). Today it is (81.0). Assume that municipals issued in the intervening period had an average date of maturity of 20 years.

The difference between what might have been and what will be—what will be, members of the committee—is $276 million.

That difference allows for the general increase in interest rates. It can be ascribed only to the consideration that the Congress has given to taxation of State and local bond interest. It represents the "hedge" that those who bought the bonds decided they needed to guard against the possibility of taxation.

Were the investors overcautious? Well, each one of can judge for himself.

Commercial banks constitute the largest category of investors in State and local bonds, as I am sure you have been told many times. A banker confronted with a choice among investments might conclude that he needed such a "hedge." His reasoning might be that since the Supreme Court has held that life insurance companies must allocate deductions, as Assistant Secretary Cohen testified, since the House determined that individuals must do so, and since the House Ways and Means Committee anounced shortly before it reported the tax reform measure a "tentative decision" to require banks to allocate, Congress might decide that banks must allocate deductions long before the bonds he bought would mature.

Mr. Chairman, in testifying before the Ways and Means Committee, I said:

> In approaching this issue we do not intend to be merely negative or to defend the status quo simply because it is the status quo. Rather we seek—with you—a reexamination of the common objective and possible alternatives open to us * * *.

This was my attitude at that time and it still is.

Following the hearing, I was given an opportunity to submit a supplementary statement. In it, I outlined my views on what possible means might be found to satisfy the objective of the committee while protecting the State and local bond market. With your permission, Mr. Chairman, I shall indicate briefly what the statement contained and file with you its complete text.

First, I urged that, since the matter was both of enormous complexity and of vital concern to State and local governments, it be given sufficient study. I suggested that the Advisory Commission on Intergovernmental Relations might be asked to make the study. Incidentally, I understand it is doing so. I pledged the complete cooperation of State and local governments in such a study.

Second, I suggested that if the committee felt impelled to act without further study, it consider:

(1) A system employing a Federal-State agreement in which the Federal Government would agree to pay a percentage of the interest cost of future issues of State and local securities if they were issued as taxable obligations, and waive immunity from State and local taxation of income from future issues of its own securities. A State, in turn, would agree to waive tax immunity for its obligations and those of its political subdivisions if it or they chose to issue taxable securities; or

(2) A Federal system of urbanks. This would be a variation of the urban development bank proposal introduced by a number of Members of Congress.

In the statement, I listed four specific criteria that I felt any plan must contain. They were:

(1) State and local governments must be able to determine all policy questions relative to bonding free of Federal control.

(2) State and local governments must have the opportunity to choose between the alternative plan, whatever it might be, and reliance on the private market.

(3) Reliability must be assured. If inaugurated, the scheme must be continued unless 3 years' notice of its intended termination were given.

(4) The plan must provide for a minimum processing time.

With your further permission, I am attaching to my statement an amplification of the proposal for Federal-State agreements.

It seems ironic to me that we give serious consideration now at this time to revenue sharing, a mass transit fund, reformation of our welfare system, and other proposals that indicate an appreciation of the serious financial plight of State and local governments—and to taxing State and local bond interest. The last could cost us most or all of what we hope to receive from the others.

At the State and local level, we are aware of the difficult decisions you must make in order to reform our tax laws. We wish you well. Our only additional desire is that you understand that we are pleading the case for State and local governments—not industry, not banks, not individuals, not any class of investors. The beneficiaries of the continued tax exemption of State and local bonds will be State and local government. Only marginal benefits will accrue to investors as testimony by witnesses for the Treasury has indicated.

Mr. Chairman and members of the committee, thank you very much.

(Hon. Norbert T. Tiemann's prepared statement follows:)

STATEMENT OF HON. NORBERT T. TIEMANN, GOVERNOR OF NEBRASKA

SUMMARY

Mr. Chairman, Members of the Committee, my name is Norbert T. Tiemann. I am Governor of Nebraska. I appreciate your permitting me to speak on the tax treatment of state and local bonds.

On March 11 of this year, I was afforded the opportunity to appear before the Ways and Means Committee on the subject of tax reform. As the representative of the National Governors' Conference, I urged strongly that the Committee not include in its bill provisions to tax state and local bonds. Other witnesses and I warned that the inevitable result of such provisions would be an escalation in bond interest rates. Unfortunately, we have been proved to be excellent prophets.

In February, before we testified, the *Bond Buyers' Index* of 20 representative municipal bonds was 5.04 percent. On August 21, the index breached 6 percent to reach 6.02. The *Bond Buyers' Index* of 11 bonds—more highly rated issues—showed yields in February to be 4.84 percent. On August 21, it hit 5.92. These are increases of 0.98 and 1.08 in the short space of six months. In the period, February-July, corporate issues (Moody's Average of Yields on Corporate Bonds) and 20-year U.S. Government bonds experienced interest rate increases of 0.44 and 0.12 respectively.

I am not here to assert a claim to be regarded as a seer. I am not here to argue that tight money has not caused interest rates to rise. I do assert, however, that the only thing that could have caused state and local bond interest rates to increase so much more greatly than those of these other long-term securities is the consideration the House gave to taxation of state and local bonds. I'll make one more prophecy. Should the Senate and then the entire Congress decide to tax our bonds—be the form minimum tax, allocation of deductions or some other—our interest rates will continue their climb both absolutely and relatively.

You have heard, Mr. Chairman, testimony that the House provisions on a "limit on tax preferences" and allocation of deductions and the Treasury scheme with respect to the latter will have only minimal revenue consequences. We do not quarrel with this view. What we fear is that the market will react—as it has already—to a much greater degree than the revenue consequences would appear to justify.

One of the Treasury witnesses referred to the market reaction as being primarily "psychological." Of course it is. So labeling it does not make it any less severe, however. Whether the Congress, Governors, Mayors, the Treasury or anyone else feels the actual and potential reaction to be justified is beside the point. Investors make their own decisions. And their decisions determine what the state and local bonds interest rate will be.

They might decide that a minimum tax rate established by this Congress could be increased by a subsequent Congress. They might decide that an allocation of deductions requirement for individuals applicable only to future issues of bonds and phased in over 10 years, as provided by H.R. 13270, enacted by this Congress might be changed to be effective immediately with respect to both outstanding and future issues at the behest of a future Secretary of the Treasury. They might decide that once absolute immunity is abridged they must fear later additional abridgements.

Their fears might prove to be groundless, but personally I find it hard to criticize investors for entertaining such fears when they contemplate investing their money for 10 or 20 or up to 50 years.

Mr. Chairman, if ultimately Congress decides not to include state and local bond interest in a minimum tax or an allocation of deductions requirement, the mere considerations of these items has already cost state and local governments and their taxpayers $13.8 million annually. This can be shown very easily.

Assume, if you will, that the yield relationship that existed last February between the *Bond Buyers' Index* and the Average Yields on Industrial Bonds (Moody's) were to obtain today. The yield relationship then was (73.3). Today it is (81.0). Assume that municipals "issued in the intervening period had an average date of maturity of 20 years.

The difference between what might have been and what will be—*what will be*, Members of the Committee—is $276 million.

That difference allows for the general increase in interest rates. It can be ascribed only to the consideration that the Congress has given to taxation of state and local bond interest. It represents the "hedge" that those who bought the bonds decided they needed to guard against the possibility of taxation.

Were the investors overcautious? Each one of us can judge for himself.

Commercial banks constitute the largest category of investors in state and local bonds, as I am sure you have been told repeatedly. A banker confronted with a choice among investments might conclude that he needed such a "hedge." His reasoning might be that since the Supreme Court has held that life insurance companies must allocate deductions, as Assistant Secretary Cohen testified, since the House determined that individuals must do so, and since the House Ways and Means Committee announced shortly before it reported the tax reform meassure a "tentative decision" to require banks to allocate, Congress might decide that banks must allocate deductions long before the bonds he bought would mature.

Mr. Chairman, in testifying before the Ways and Means Committee, I said. "In approaching this issue we do not intend to be merely negative or to defend the status quo simply because it is the status quo. Rather we seek—with you—a reexamination of the common objective and possible alternatives open to us . . ."

That was my attitude. That continues to be my attitude.

Following the hearing, I was given an opportunity to submit a supplementary statement. In it I outlined my views on what possible means might be found to satisfy the objective of the Committee while protecting the state and local bond market. With your permission, I shall file with you its complete text, and a memorandum outlining an alternative subsidy plan.

Mr. Chairman, Members of the Committee, to me it is ironic that serious consideration is being given to revenue sharing, a mass transit fund, reformation of our welfare system and other proposals that indicate an appreciation of the serious financial plight of state and local governments—and to taxing state and local bond interest. The last could cost us most or all of what we hope to receive from the others.

At the state and local level, we are aware of the difficult decisions you must make in order to reform our tax laws. We wish you well. Our only additional desire is that you understand that we are pleading the case for state and local governments—not industry, not banks, not individuals, not any class of investors. The beneficiaries of the continued tax exemption of state and local bonds will be state and local government. Only marginal benefits will accrue to investors as testimony by witnesses for the Treasury has indicated.

Thank you, Mr. Chairman, Members of the Committee, for permitting me to testify.

Statement of Hon. Norbert T. Tiemann

Mr. Chairman, members of the committee, my name is Norbert T. Tiemann. I am Governor of Nebraska. I appreciate your permitting me to speak on the tax treatment of state and local bonds.

On very few issues, Mr. Chairman, would it be possible to find a greater measure of agreement among representatives of state and local governments than the one we are considering today. We are firmly opposed to any proposal to tax our bonds, be it minimum tax, allocation of deductions or some other scheme. I should be less than candid if I did not report that we are divided in our views on the efficacy or desirability of a plan embodying a federal subsidy of one kind or another in exchange for issuance of municipal bonds on a taxable basis. About that I shall have more to say later.

I am not here to argue the legal case for tax exemption of our securities, but I do wish to emphasize that we believe strongly that any federal tax on the bond interest of a state or its local governments without the state's consent is unconstitutional. The doctrine of reciprocal immunity from taxation was enunciated by the Supreme Court almost as many years ago as the Republic is old. In the intervening century and one-half, it has resisted successfully many assaults.

The Congress has complete discretion in determining what the tax treatment shall be for capital gains, charitable deductions, depletion allowances and other items. The tax immunity of state and local governments, however, is part of the warp and woof of our federal system. Be that as it may, my reasons for urging the continuing inviolability of reciprocal immunity will be cast solely in policy term.

On March 11 of this year I was afforded the opportunity to appear before the Ways and Means Committee on the subject of tax reform. As the representative of the National Governors' Conference, I urged strongly that the Committee not include in its bill provisions to tax state and local bonds. Other witnesses and I warned that the inevitable result of such provisions would be an escalation in bond interest rates. Unfortunately, we have been proved to be excellent prophets.

In February, before we testified, the *Bond Buyers' Index* of 20 representative municipal bonds was 5.04 percent. On August 21, the index breached 6 percent to reach 6.02. *The Bond Buyers' Index* of 11 bonds—more highly rated issues—showed yields in February to be 4.84 percent. On August 21, it hit 5.92. These are increases of 0.98 and 1.08 in the short space of six months. In the period February–July, corporate issues (Moody's Average of Yields on Corporate Bonds) and 20-year U.S. Government bonds experienced interest rate increases of 0.44 and 0.12 respectively.

I am not here to assert a claim to be regarded as a seer. I am not here to argue that tight money has not caused interest rates to rise. I do assert, however, that the only thing that could have caused state and local bond interest rates to increase so much more greatly than those of these other long-term securities is the consideration the House gave to taxation of state and local bonds. I'll make one more prophecy. Should the Senate and then the entire Congress decide to tax our bonds—be the form minimum tax, allocation of deductions or some other—our interest rates will continue their climb both absolutely and relatively.

You have heard, Mr. Chairman, testimony that the House provisions on a "limit on tax preferences" and allocation of deductions and the Treasury scheme with respect to the latter will have only minimal revenue consequences. We do not quarrel with this view. What we fear is that the market will react—as it has already—to a much greater degree than the revenue consequences would appear to justify.

One of the Treasury witnesses referred to the market reaction as being primarily "psychological." Of course it is. So labeling it does not make it any less severe, however. Whether the Congress, Governors, Mayors, the Treasury or anyone else feels the actual and potential reaction to be justified is beside the point. Investors make their own decisions. And their decisions determine what the state and local bonds interest rate will be.

They might decide that a minimum tax rate established by this Congress could be increased by a subsequent Congress. They might decide that an allocation of deductions requirement for individuals applicable only to future issues of bonds and phased in over 10 years, as provided by H.R. 13270, enacted by this Congress might be changed to be effective immediately with respect to both outstanding and future issues at the behest of a future Secretary of the Treasury. They might decide that once absolute immunity is abridged they must fear later additional abridgements.

Their fears might prove to be groundless, but personally I find it hard to criticize investors for entertaining such fears when they contemplate investing their money for 10 or 20 or up to 50 years.

Mr. Chairman, if ultimately Congress decides not to include state and local bond interest in a minimum tax or an allocation of deductions requirement, the mere consideration of these items has already cost state and local governments and their taxpayers $13.8 million annually. This can be shown very easily.

Assume, if you will, that the yield relationship that existed last February between the *Bond Buyers' Index* and the Average of Yields on Industrial Bonds

(Moody's) were to obtain today. The yield relationship then was (73.3). Today it is (81.0). Assume that municipals issued in the intervening period had an average date of maturity of 20 years.

The difference between what might have been and what will be—*what will be*, Members of the Committee—is $276 million.

That difference allows for the general increase in interest rates. It can be ascribed only to the consideration that the Congress has given to taxation of state and local bond interest. It represents the "hedge" that those who bought the bonds decided they needed to guard against the possibility of taxation.

Were these investors overcautious? Each one of us can judge for himself.

Commercial banks constitute the largest category of investors in state and local bonds, as I am sure you have been told repeatedly. A banker confronted with a choice among investments might conclude that he needed such a "hedge." His reasoning might be that since the Supreme Court has held that life insurance companies must allocate deductions, as Assistant Secretary Cohen testified, since the House determined that individuals must do so, and since the House Ways and Means Committee announced shortly before it reported the tax reform measure a "tentative decision" to require banks to allocate, Congress might decide that banks must allocate deductions long before the bonds he bought would mature.

Mr. Chairman, in testifying before the Ways and Means Committee, I said, "In approaching this issue we do not intend to be merely negative or to defend the status quo simply because it is the status quo. Rather we seek—with you—a reexamination of the common objectives and possible alternatives open to us. . . ."

That was my attitude. That continues to be my attitude.

Following the hearing, I was given an opportunity to submit a supplementary statement. In it I outlined my views on what possible means might be found to satisfy the objectives of the Committee while protecting the state and local bond market. With your permission, I shall indicate briefly what the statement contained and file with you its complete text.

First, I urged that, since the matter was both of enormous complexity and of vital concern to state and local governments, it be given sufficient study. I suggested that the Advisory Commission on Intergovernmental Relations might be asked to make the study. Incidentally, I understand it is doing so. I pledged the complete cooperation of state and local governments in such a study.

Second, I suggested that if the Committee felt impelled to act without further study, it consider:

1. A system employing a federal-state agreement in which the Federal Government would agree to pay a percentage of the interest cost of future issues of state and local securities if they were issued as taxable obligations, and waive immunity from state and local taxation of income from future issues of its own securities. A state, in turn, would agree to waive tax immunity for its obligations and those of its political subdivisions if it or they chose to issue taxable securities; or

2. A Federal System of Urbanks. This would be a variation of the Urban Development Bank proposal introduced by a number of Members of Congress.

In the statement, I listed four specific criteria that I felt any plan must contain. They were:

1. State and local governments must be able to determine all policy questions relative to bon'ing free of federal control.

2. State and local governments must have the opportunity to choose between the alternative plan, whatever it might be, and reliance on the private market.

3. Reliability must be assured. If inaugurated, the scheme must be continued unless three years notice of its intended termination were given.

4. The plan must provide for a minimum processing time.

With your further permission, I am attaching to my statement an amplification of the proposal for federal-state agreements.

Mr. Chairman, Members of the Committee, to me it is ironic that serious consideration is being given to revenue sharing, a mass transit fund, reformation of our welfare system, and other proposals that indicate an appreciation of the serious financial plight of state and local governments—and to taxing state and local bond interest. The last could cost us most or all of what we hope to receive from the others.

At the state and local level, we are aware of the difficult decisions you must make in order to reform our tax laws. We wish you well. Our only additional desire is that you understand that we are pleading the case for state and local governments—not industry, not banks, not individuals, not any class of investors. The beneficiaries of the continued tax exemption of state and local bonds will be state and local government. Only marginal benefits will accrue to investors as testimony by witnesses for the Treasury has indicated.

Thank you, Mr. Chairman, Members of the Committee, for permitting me to testify.

SUPPLEMENTARY STATEMENT OF HON. NORBERT T. TIEMANN, GOVERNOR OF NEBRASKA

This is a supplementary statement to that which I presented to the Committee on Ways and Means, March 11, 1969, on behalf of the National Governors' Conference. I thank the Chairman for giving me the opportunity to submit this more detailed statement.

Since March 11 representatives of State and local governments have met frequently to discuss ideas and proposals to further the objectives of the Committee on Ways and Means while protecting the market for municipal securities. I believe that several exciting proposals have been formulated that warrant further examination and refinement. These proposals are outlined later in this statement.

It is not necessary to enlarge on our belief that any Federal tax on the bond interest of a State or its local governments without that State's consent is unconsitutional. The doctrine of reciprocal immunity from taxation was enunciated by the Supreme Court almost as many years ago as the Republic is old. In the intervening century and one-half it has resisted successfully many assaults. It goes without saying that we could support no proposal that raises this constitutional issue.

We are convinced that the doctrine of reciprocal immunity extends to the inclusion of the interest paid on State and local obligations in the calculation of a minimum tax, allocation of deductions to such tax exampt income or any similar proposal the effect of which would be to levy a tax on such securities.

Eschewing the constitutional argument except to point out that tax treatment of capital gains, charitable deductions and depletion allowances are matters over which the Congress has complete discretion while the tax immunity of State and local governments is part of the warp and woof of our federal system, we shall state our reasons for the continuing inviolability of reciprocal immunity solely in policy terms.

Our reasons have to do largely with the marketability of State and local securities and consequences flowing therefrom. Investors in securities are sophisticated. They would not be confident that a minimum tax rate, for example, would not be increased or, if the interest paid on State and local securities were taxed as income to individuals, it would not be taxed as income to banks, other financial institutions and corporations. Not being confident, they would not buy or would buy only if interest rates were boosted sufficiently to safeguard their investment.

As a consequence, interest rates would have to be raised appreciably. Some capital improvements would be postponed, others limited in scope, still others abandoned. To take up some of the slack, State and local taxes—particularly sales and property taxes, both regressive in nature—would have to be raised. Additional pressure would be brought on the Congress to increase the range of programs supported by grants-in-aid, to raise authorizations for current grant-in-aid programs and to appropriate sums more nearly comparable in size to authorized amounts. Nor would there be much benefit to the United States Treasury from the much higher interest rates. As individuals and entities subject to tax moved out of the municipal bond market, tax exempt pension and welfare funds, foundations and other tax exempt institutions would move in.

It is particularly ironic that, at a time when State and local governments are under such intense financial pressure, the integrity of their securities—the means by which they finance most of their capital expenditures—should be threatened. The "urban crisis" is not an invention of city hall publicists. The urgings of some that the Federal government assume entire responsibility for welfare costs or States assume entire responsibility for elementary and secondary education costs are prompted by an awareness of the serious nature of the fiscal crisis faced by States and localities. In Congress similar recognition is represented by the many bills to share Federal revenues with the States and local governments. We believe that the Committee on Ways and Means does not wish to bring about a marked increase in interest costs for State and local capital expenditures, to cause an increase in regressive taxes, and to benefit the United States Treasury only marginally—all to tax more heavily an uncertain number of millionaire tax evaders. The proposals described below would avoid such dire consequences.

PROPOSALS UNDER CONSIDERATION

Study of Proposed Methods of Taxation.—The matter of taxation of State and local obligations is a complex one as the Committee on Ways and Means is aware. Equity is not to be achieved by the simple expedient of providing for taxation of such securities as if they were private obligations. Vying with this objective are constitutional and policy issues that must be resolved satisfactorily. Obviouly this matter is of great interest to the Congress. Even more obvious is its interest to State and local governments. It is their capital improvements that would be jeopardized were an unwise Federal policy to be elected. The Federal interest is represented by an undetermined amount that may run into millions of dollars annually. To State and local governments, the annual stake is literally billions of dollars worth of capital improvements.

For these reasons, if it is not possible within a relatively brief period to find a satisfactory way to safeguard the integrity of State and local securities within a Federal tax system that is equitable to the generality of taxpayers, we believe that it would be wise to refer this matter to a study group. Should this prove necessary, we pledge our entire cooperation in the study.

We propose that such a study be concerned with devising alternative methods of financing capital needs of State and local governments which will expand available capital and reduce reliance on tax exempt bonds, but not imperil the Federal tax immunity of State and local bonds when their use is necessary. Possible expansion could include the purchase of State and local obligations by the Federal Reserve Board and the Unemployment Compensation Fund.

To make such a study we suggest the Advisory Commission on Intergovernmental Relations. It is unique in having as members representatives of Federal, State and local governments from both the Legislative and Executive Branches.

With respect to specific proposals below, obviously much work must be done if they are to be perfected. Others equally worthy or better might be developed. To this end, we shall devote as much time and energy as may be needed, and will be available for consultation with the Committee on Ways and Means or its staff.

Federal-State Agreements.—One proposal that is being considered would provide for a Federal-State agreement. The Federal government would agree to pay a percentage of the interest cost of future issues of State and local securities, if they were issued as taxable obligations, and waive immunity from State and local taxation of income from future issues of its own securities. A State, in turn, would agree to waive tax immunity for its obligations and those of its political subdivisions if it or they chose to issue taxable securities. The Federal percentage might be 50 percent. Since in effect corporate interests costs are subsidized by the Federal government in the amount of 50 percent, Federal participation in the interest rate costs of State and local government bonds at this level appears not to be unreasonable.

The method of issuance would involve a dual set of coupons for each State-issued bond. The investor would clip the Federal coupon and present it for payment as if the bond were an issuance of the United States. The other coupon would be presented for payment to the disbursing agent of the State or political subdivision.

This proposal appears to offer several advantages. Since immunity would be waived, a confrontation would be avoided on the issue of the constitutional basis for immunity of Federal obligations from taxation by States and State obligations from taxation by the Federal government. Since there would be taxation of future issuances only, there would be no question of equity to purchasers of earlier issues who assumed in good faith that income from Federal, State and local obligations was not subject to taxation. Finally, were such securities made taxable, the allegation of tax avoidance could not be raised.

Federal System of Urbanks.—Another suggestion that has been advanced involves the establishment of a Federal System of Urban Development Banks. As the name implies, this is a variation of the Urban Development Bank proposal that has been introduced in the Congress. It would require each State to establish a bank to purchase obligations issued by the State and its political subdivisions. Obligations of the State Urbanks would be sold to private purchasers as taxable securities with a Federal coupon as proposed above or as tax exempt securities. If the demand on a given State Urbank were too great, it could call on a Federal Development Bank to serve as a secondary market. An additional responsibility of the Federal Urbank would be to act as the insuring agent for local bonds in return for a premium to be paid on each issue.

Possible advantages of this suggested arrangement are several. First, in having a series of 50 State Urbanks, as opposed to only one Federal institution, there would be a minimum of delay in a bank's determining that the credit of the issuing government was adequate to support the issue of the securities in question. Second, by providing that the obligations would be insured, there would be no need for a Federal "guarantee" of payment with the consequent possible exposure of the Federal government to make good on its warranty. Third, by assigning to the several Urbanks responsibilities of banker and, in the case of the Federal Urbank, insurer, there would be no need or occasion for interference with the policy decisions of the issuing unit.

ELEMENTS OF A PROPOSAL

Any proposal that is adopted must meet constitutional limitations and provide for equity among taxpayers. In addition to these obvious requirements in our view it should meet certain other specifications. Some of them have been suggested or implied above. However, at the risk of repetition, we believe they should be stated explicitly.

Freedom from Federal Control.—It is a mark of our system of government that power is widely dispersed. Decisions with respect to public policy are made at each of the several levels of government. Means to insure that the electorate is heard are familiar at all levels. By such means we insure both an optimum measure of popular participation and an optimum responsibility to popular control. Both are impossible of realization, however, if decisions which should be made at the State or local level are made at the Federal level. The decision to build a court house or a school, where to build it, what size it should be and how to raise the money for its construction are not questions that can be answered properly by a Federal official. Any scheme that may be developed must permit such basic policy decisions to be made by responsible State or local officials and legislators.

Alternative Markets.—To this point in time State and local governments have been able to borrow from the private bond market the funds they need for capital expenditure requirements. Of late interest rates on municipal securities have risen markedly, but so have they for housing mortgages, corporate bonds and United States Government bonds. Assuming that the credit "squeeze" does not become appreciably tighter, there is no reason to suppose that State and local governments will not be able to continue to place their primary reliance on the private bond market.

On the other hand, an alternative market, particularly one that might offer preferential rates, would be a welcome additional source to satisfy the continually growing State and local capital needs. It must be an alternative, however. State and local governments must retain the option to go to the private market if they choose.

Reliability.—Assuming a method can be devised that meets other expectations, it also must be reliable. Credit cannot be turned on and off like a faucet. Any scheme that depends for its funds on annual appropriations cannot be relied upon. If the Congress proposes to make a commitment, it must be met in full and it must be continued for at least three years after notice of termination is given. Should a satisfactory alternative capital market plan be developed State and local governments will expect to utilize it. They would be unable to do so—or would do so at their peril—if they could not anticipate that money would be available when they needed it. If the alternative were to be established and then abruptly discontinued or radically reduced in scope, the effect would be disastrous. Private markets would have to be reestablished—a process that would require time. State and local governments would have lost valuable time at a minimum and possibly all chance to sell their securities.

Freedom from Delay.—The next requirement is one which more properly might be addressed to the agency made responsible for administering any of the alternative plans. Nevertheless, it is an important element in the successful operation of any plan that might be adopted. Provision must be made for a minimum processing time. Delay can add to interest costs at a time when rates are climbing. Inevitably it adds to building, land acquisition and other costs. Even at favorable interest rates an appreciable delay in processing could offset completely any savings in interest rate reduction.

CONCLUSION

In discussing our position regarding taxation of state and local bonds I mentioned—and I now underscore—the irony of proposals to subvert the tax exempt status of said bonds while at the same time the recognition of State and local fiscal crises is being expressed in proposals and actual legislation to provide for block grants, revenue sharing, and grant consolidation. The National Governors' Conference has stated its firm support of these varying means of relieving the fiscal crises, as I indicated in answer to questions from Committee members at the hearings of March 11. At that time Chairman Mills inquired whether the States would exchange the tax-exempt status of their bonds in return for some form of revenue sharing and block grants. In reply I indicated that I would submit this question to the Executive Committee of the National Governors' Conference. This matter will be on the Executive Committee's agenda when it meets in mid-May. But I do not anticipate any specific action by the Executive Committee at its forthcoming meeting. It should be noted that the National Governors' Conference has a Standing Committee on Executive Management and Fiscal Affairs. That Committee is now at work on revenue sharing, block grants, grant consolidation and related matters. Specifically that Committee is gathering data from the states regarding their capital improvement programs and the effect of the tight money market on the marketing of State bonds and State programs. The survey results will be made known to the House Committee. Thus it is my view that the Executive Committee will request that the Committee on Executive Management and Fiscal Affairs give careful attention to this important question raised by the distinguished Chairman of the Committee on Ways and Means.

FEDERAL-STATE AGREEMENTS

The Problem.—To avoid inequities from the exemption of state and local government bond interest in a manner which is constitutional, fair and not harmful to state and local governments and local taxpayers.

The Solution.—An optional double coupon plan, can accomplish a voluntary termination of the issuance of exempt bonds. With such termination the inequities would become impossible for future issues and would come to an end as outstanding issues are paid off. Elements of amplification are set forth below.

A WORKABLE DOUBLE COUPON PLAN

(a) To be constitutional the plan must be completely optional with the affected states. Therefore the technique of a federal-state agreement is recommended, authorized by legislation of both the Congress and the affected state legislature. The agreement should prohibit withdrawal by either the federal government or the state except on five years notice.

(b) In the agreement the state would authorize its local governments to elect to issue taxable bonds and would also authorize taxable bonds at the state level. The United States would authorize each such issuer of taxable bonds to attach coupons for the federal share of the interest.

(c) The United States coupons would be the direct obligation of the United States and not of the issuer. This is necessary because:

(i) It avoids conflict with innumerable constitutional and statutory limits on the interest rate a local government can pay.

(ii) It avoids the problems of local government having to pay more interest and waiting to get the excess back from Washington.

(iii) It will give investors in a new kind of security, more confidence.

(d) The United States coupons would be for half the interest payable. Fifty percent is fully justified because:

(i) A private corporation can cost the United States 52.8 percent of the interest paid on private bonds. This results from the deductibility of the interest payments from the base for corporate income tax at the present 52.8 percent rate.

(ii) The Treasury estimates the United States will recover 42 percent of the interest payment on taxable state and municipal bonds. Since the purpose is reform, all this should be returned to the issuers. The additional 8 percent is well justified as a needed contribution to the local government crisis.

(iii) Since the plan must be optional to be constitutional, the federal percentage should be large enough to make sure that all issuers will opt for taxability to assure that the reform will be accomplished.

The cost to the local issuers in recent years has been around 33 percent. A substantial increment above the figure is required for the option to work.

(iv) Adding municipal bonds to the taxable market will probably raise all taxable interest rates, so that just to break even requires more than the present 33⅓ percent.

(e) The Federal Goverment would reaffirm that state and local issuance would be subjected to no controls. The federal coupon authorization would not be withheld from any true state or municipal bond regardless of the purpose of issuance, interest rate or any other factor.

Industrial development bonds, properly defined, and arbitrage bonds are not true exercises of the state or municipal borrowing power and would be ineligible for the federal coupon.

Governor LOVE. Mr. Chairman, we would next like to have Gov. McKeithen of Louisiana testify.

STATEMENT OF HON. JOHN J. McKEITHEN, GOVERNOR OF LOUISIANA

Governor MCKEITHEN. Mr. Chairman, and members of the committee, I am John McKeithen of Louisiana.

I have come here today to convey to you the deep concern of the State of Louisiana and its political subdivisions on the proposed change in the tax-exempt status of State and municipal bonds.

At the outset, let me again reiterate that it is the State and its political subdivisions which are charged with the duty to furnish schools, streets, roads, water supply, sewerage disposal, and hospital facilities, as well as many other services and facilities, all of which, of course, require capital outlays. One can only expect that the demand on the State and local governments to supply such facilities is going to continue to increase, and that the need for capital facilities will likewise increase. Given this situation, there seems to be no justification for the Federal Government to take action which will only serve to increase the cost of supplying these services. Let me cite you three examples to illustrate the difficulties inherent for the State of Louisiana in the impairment of the tax exemption on its bonds.

In 1968, the Legislature of Louisiana authorized a $300 million general obligation bond issue to finance an extensive highway capital improvement program for the State. In order to provide the funds to service these bonds, the legislature authorized an increase in the gasoline tax of 1 cent per gallon. It was awfully hard to get it passed. It requires a two-thirds vote in our State, a monstrosity that just stifles in Louisiana. We are hoping to do something about that with the help of the Federal courts. Obviously any increase in the interest rate which the State of Louisiana must pay will result in an impairing of the State's ability to service this bond issue out of the gasoline tax. The alternatives will be either to reduce the construction program and the amount of the bonds issued, thereby keeping within the funds earmarked to service the bonds, or to proceed with the program, issue the full amount of bonds, and obtain the additional funds required to service the bonds from other existing sources of revenue which are very small in our State, with a consequent reduction in other much needed programs or to go back and ask for additional taxes. For the last, I have just about lost my nerve.

By any alternative the citizens of Louisiana are bound to suffer. The last session of the legislature concluded in June of this year. A bond issue of over $100 million was provided to finance a capital outlay program primarily for port and harbor development. Senator Long, I found in our State it is much easier to have bond issues than it is for the money to pay for them. We want to improve our ports. The great Port of New Orleans, the second largest port of the United States, is suffering for lack of funds. If we pass the bond issue we hope we will sell the bonds to improve that port, and we want to help our State universities. Part of that bond issue will be for State universities, for hospitals, and our schools for exceptional children.

Our State badly needs this program, particularly for our harbor and port facilities, and I cannot overemphasize the fact that the passage of this bill will make the program more expensive to the State to the detriment of other vitally needed services since debt service on bonds has a first lien on the general fund in Louisiana.

As an additional consideration, the Constitution of Louisiana imposes an interest rate limitation of 6 percent on many of the political subdivisions. This limitation and current bond market conditions have prevented many political subdivisions from embarking on any capital outlay programs. And certainly, the fear of loss of tax exemption on municipal bonds will not improve the marketability of these bonds. Thus, the outlook is for an additional postponement of the day upon which these municipalities can hope to finance their much needed capital improvement programs.

Those knowledgeable in this field have informed me that there are over 81,000 State and local governmental units in the United States. It has been estimated that the number of State and local issuers who might be expected to be able to compete with the bonds of private corporations is probably less than 500, and certainly not more than 1,000. Is it the intent of this bill to deny over 80,000 State and local government units the ability to finance their capital outlay programs through the issuance of bonds?

Some of those with whom I have conferred about this bill refer to the provision which seeks to eliminate the injury which will be done to State and local governments by offering to States and municipalities the right to issue fully taxable bonds in return for an interest subsidy. One interesting point is that this provision seems to place no limits upon the amount which may be paid out by the U.S. Treasury, nor does it establish any conditions for qualification for such subsidy. It would not seem possible that such an uncontrolled drain upon the U.S. Treasury could be permitted to continue very long, and we think sooner or later, the Congress, you distinguished Members of the Congress and of the U.S. Senate, would have to place some limit upon the amount of funds which could be withdrawn from the Treasury through this interest subsidy. Once Congress recognized the need for limiting expenditures in this area, it would necessarily establish conditions and limitations and restrictions upon eligibility for such funds.

Inevitably, some Federal agency would make the determination of the nature and location of such projects for which a subsidy would be paid. At that point, effective control over most capital construction by State and local governments will have been transferred to the Federal Government. It seems incredible to me that this proposal, raising as it does the very real possibility of Federal control over each and every construction program of every State and every local governmental unit throughout the country, should come at a time when the need for local control, more flexible and more responsible to those most immediately affected, is becoming increasingly more evident.

As an incidental matter, it should be pointed out that this interest subsidy would be of no assistance at all to any municipality unable to borrow money, or for that matter the State, because of constitutional or statutory limitations on the interest rate, or because of the disappearance of a market for the bonds themselves.

Let's look at the effect of this bill from a practical standpoint. As a result of the tax exempt status of State and local bonds, lower interest rates are obtained, and therefore, the taxpayers benefit by having less taxes needed to service the bonds. If the tax exempt status is removed, interest rates will increase and additional taxes will be required to service the bonds. Even if the interest subsidy will substitute for the increased taxes, why tamper with a system that has worked so well in this country for 150 years merely for the purpose of substituting a different method of tax savings for public improvement projects?

In conclusion, let me say that the best legal minds in our State have serious reservations about the constitutionality of the interest subsidy.

Thank you very much, Mr. Chairman, and members of the committee.

Governor Love. Thank you, Governor.

(Hon. John J. McKeithen's prepared statement follows:)

Statement of Hon. John J. McKeithen, Governor of Louisiana

Summary

Mr. Chairman, Members of the Committee, I am John J. McKeithen, Governor of Louisiana. I appreciate your hearing me on the subject of the tax treatment of state and local bonds—a subject of intense interest and concern to our state and its local governments.

We appreciate the difficulty and complexity of what you are trying to accomplish. As taxpayers and citizens, we wish you well in this undertaking.

Mr. Chairman, state and local governments from their own resources support services in such areas as education, highways and highway safety, crime prevention and control, health, water and natural resources, and a host of others. In all these program areas, they receive federal grants-in-aid. Major federal construction grants include those for highways, airports, hospitals, water pollution abatement, urban renewal and others. They represent national policy decisions relative to national goals. Total grants-in-aid approximate $25 billion. Grants for capital purposes total $6.457 billion (estimated) for fiscal year 1970.

These grants must be matched by state and local governments. If capital expenditure is involved, almost always bond financing is used.

Many bills have been introduced providing for sharing federal revenue with states and localities. The administration is about ready to offer its plan. Other aid programs have been proposed. Their proponents are undoubtedly sincere in arguing that they are necessary to ease the severe financial pressure on state and local governments.

You may imagine then how astonished we were when H.R. 13270 included state and local bond interest in its provisions for a limit on tax preferences and allocation of deductions. Our wonderment was increased by the administration's "instant" allocation of deduction plan, and its proposal that it be applied to both future and outstanding issues.

Are you surprised that we rub our eyes or shake our heads in wonder?

On the one hand, we see national policies to give aid to state and local governments to achieve national goals. Additional programs are proposed—some with the avowed purpose of relieving the fiscal crisis of these governments. On the other hand, we see provisions in the House bill that would impair the ability of state and local governments to raise needed capital. Then the administration proposes an even harsher allocation of deductions plan.

Mr. Chairman, there are many reasons to oppose these provisions, but I shall limit my remarks to policy considerations.

The genius of the federal system lies in its mutual forebearance from taxation of instrumentalities, property, revenue or income derived from securities. We have a system of parallel governments. It is no more right that the Federal Government interfere with or impede the states in the performance of their governmental functions than it is for a state to interfere with or impede the Federal Government in the attainment of its governmental aims.

Governments raise money by various means. Taxation is the largest revenue producer, but borrowing is of great significance. In 1968, state and local governments issued more than $16 billion in debt instruments. Such a sum supports the assertion that the power to borrow is as essential to government as the power to tax.

If the Congress takes action to impair state and local capacity to borrow, how shall we raise capital funds, including those required to match federal grants? Shall we raise taxes to build schools and hospitals? Shall we accommodate to increased debt service costs by reducing our contributions toward the building of highways and airports?

If it is felt that these questions represent an overreaction, I should like to call your attention to certain information from the tables presented by Governor Love.

INTEREST RATES, SEVERAL INDICES, SELECTED DATES

[In percent]

	20 municipals		Industrials		11 bonds		AAA corporates		U.S. government 20	
August 1967	4.06		5.84		3.82		5.62		4.99	
January 1969	4.97	(0.91)	6.74	(0.90)	4.72	(0.90)	5.59	(0.97)	5.92	(0.93)
July 1969	5.93	(.96)	7.32	(.58)	5.57	(.85)	6.08	(.49)	6.12	(.20)
Aug. 21, 1969	6.02		....		5.92		....		....	

Please note that between August 1967 and January 1969, figures in parentheses indicate the range of rate increases was very narrow—.90 to .97. Note, however, that from January to July this year, the municipal bond indices rose by .96 and .85. Private issues rose .58 and .49, U.S. Government obligations .20. Note, too, from the August 21 date that municipal bond interest rates continue to rise.

The change in market behavior can be explained only by the consideration that has been given to taxing state and local obligations. If the decision to tax is affirmed, even higher rates will result.

Necessarily taxes ultimately will be relied upon to pay these increased rates. Who are the taxpayers? They are those who pay federal taxes—those who anticipate relief from enactment of the tax reform bill.

Does that sound like we are chasing our tail? We are.

We are, that is, except for two reasons.

One reason is that the cost to state and local taxpayers will be far greater than will be realized in revenue if these provisions are enacted.

The second is that the bill would reduce income tax rates—a progressive tax. By far the largest part of local government revenue comes from real property taxes. States rely primarily on sales taxes. Both are regressive taxes.

To enact these provisions would achieve a modest increase in federal revenue. This would be achieved at the expense of higher state and local taxes—taxes far larger in total than the revenue realized. Enactment may help to reduce a progressive tax—but would raise regressive taxes.

Mr. Chairman, tampering with the tax exempt status of state and local bonds is justified on the grounds that wealthy persons escape their fair burden of taxation by their owning municipal bonds. Sometimes it is stated that the revenue loss exceeds state and local savings.

As to the former, this has not been proven. Possibly wealthy persons have large holdings. Neither they nor other taxpayers report income derived from such ownership. As a matter of fact, one might wonder why they should. The Ways and Means Committee reported that the 154 individuals with adjusted gross incomes of $200,000 or more in 1966 did very well under other provisions. They claimed as deductions, the Committee showed, large charitable deductions, interest payments, real estate depreciation and farm losses. That half of capital gains not taxed was another bonanza. Why should these people invest heavily in what were until recently low-yield securities?

Gentlemen, do those who buy state and local bonds realize savings in taxes? One may assume some do. Is the aim to make a profitable investment different from that of other investors? Or are they attracted to our bonds because they are a safe investment? Some do. State and local governments honor their obligations. Who knows why investors pick particular securities? Some local banks buy their local government bonds from a sense of civic duty.

Mr. Chairman, the so-called "taxpayers' revolt" is not confined to the national level. Despite it, however, reasonably and logically, we must point out that tax dollars are required to rebuild our cities, protect our environment, improve our transportation system, and assure our people adequate diets, health care and educational opportunities. These and other domestic programs are supported primarily by state and local governments. To endanger them by endangering our capacity to borrow would be folly. We need your help—help you have already determined is in the national interest. We trust you will serve your real, long-term interests and ours by rejecting these proposals.

Mr. Chairman, Members of the Committee, I thank you.

Statement

Mr. Chairman, Members of the Committee, I am John J. McKeithen, Governor of Louisiana. I appreciate your hearing me on the subject of the tax treatment of state and local bonds—a subject of intense interest and concern to our state and its local governments.

We appreciate that the Committee on Finance in considering means to reform our tax laws is endeavoring to accomplish a difficult and tremendously complex assignment. We are aware that current national policy may dictate your recommending certain changes. We understand your desire to remove or minimize certain inequities. As taxpayers and citizens, we wish you well in this undertaking.

What you decide—what the Congress decides—will have very far-reaching effects. Among those that will be affected will be state and local governments.

Mr. Chairman, state and local governments from their own revenues support services in such areas as education, highways and highway safety, crime prevention and control, health, water and natural resources and a host of others. In all these broad categories they administer programs for which they receive federal grants-in-aid. Major federal construction grant programs include those for highways, airports, hospitals, water pollution abatement, urban renewal and others. These programs represent policy decisions by the National Government in the attainment of national goals. Total grants-in-aid approximate $25 billion. Grants for capital purposes total $6.457 billion (estimated) for fiscal year 1970.

Formulas vary, but these grants must be matched by the recipient state and local governments. If capital expenditure is involved, almost always bonds are issued to raise the necessary funds.

Many Members of Congress have introduced bills to share federal income tax revenue with state and local governments. The administration is about ready to offer its plan, we are told. Proposals have been made for a mass transit fund. The President has asked that welfare laws be reformed to increase aid to the states. Many other financial assistance schemes have been advanced. Their proponents are obviously sincere in their support of these measures as being necessary to ease the severe financial pressure on states and localities.

Perhaps you can imagine our astonishment when the Ways and Means Committee and then the House of Representatives approved the inclusion of state and local bond interest in the limit on tax preference and allocation of deductions provisions of H.R. 13270. Those feelings were compounded when the administration unveiled its "instant" allocation of deductions plan and proposed it be applied to both future and outstanding issues.

Are you surprised that we rub our eyes or shake our heads in wonder?

On the one hand, we view declared national policies to give aid to state and local governments to achieve national goals. In addition, other aid programs are urged—some with the avowed purpose of relieving the fiscal crisis of these governments. On the other hand, we are witness to House passage of LTP and allocation of deductions formulas that would impair the ability of state and local governments to raise needed capital. Then the administration proposes an even harsher allocation of deductions plan.

The situation appears to be another illustration of the left hand's not knowing what the right hand is doing.

Mr. Chairman, I do not propose to argue that the consideration of these provisions has had a severe impact on municipal bond interest rates. If the material submitted by Governor Love does not prove that point, no words of mine will do so. Nor shall I show that the administration's allocation of deductions formula will be even more damaging than the one in H. R. 13270. Its specifications make that clear. It is not my intention to argue the constitutional issue. Presumably that will be done by others. I shall limit my remarks to policy matters.

The genius of the Federal system is in its mutual forbearance from taxation of instrumentalities, property revenue or income derived from securities. No specific provision in the Constitution forbids such taxation. It is inherent in the concept of federalism. We have a system of parallel governments in other words. It is no more right or appropriate that the Federal Government interfere with or impede the states in the performance of their governmental functions than it is for a state to interfere with or impede the Federal Government in the attainment of its governmental aims.

Governments raise money by various means—taxes, borrowing, fees for services, licenses, various enterprises, and others. Taxation is the largest revenue producer, but borrowing is of great significance. As has been pointed out, in 1968 state and local governments issued more than $16 billion in debt instruments. This is no small sum. It supports the assertion that the power to borrow is as essential to government as the power to tax.

It the Congress takes action to impair the capacity to borrow of state and localities, how shall we secure the capital funds we need, including what is required to match federal grants? Shall we raise taxes to build schools and hospitals? Shall we accommodate to increased debt service costs by reducing our contributions toward the building of highways and airports?

If it is felt that these questions represent an overreaction, I should like to call your attention to certain information from the tables presented by Governor Love.

INTEREST RATES, SEVERAL INDICES, SELECTED DATES

[In percent]

	20 municipals	Industrials	11 bonds	AAA corporates	U.S. Government 20
August 1967	4.06	5.84	3.82	5.62	4.99
January 1969	4.97 (0.91)	6.74 (0.90)	4.72 (0.90)	6.59 (0.97)	5.92 (0.93)
July 1969	5.93 (.96)	7.32 (.58)	5.57 (.85)	7.08 (.49)	6.12 (.20)
Aug. 21, 1969	6.02		5.92		

Please note that in the period August 1967–January 1969, the range in interest rate increases was very narrow—.90 to .97, the figures shown in parentheses. Note, on the other hand, that between January and July of this year, the municipal bond indices rose by .96 and .85. The indices showed that rates for private issues rose .58 and .49, for U.S. Government obligations .20. I have added the reports on municipal bond interest rates for August 21, 1969, to show that they are continuing to rise.

The change in the behavior of the market must be ascribed to the consideration that has been given to taxing state and local obligations. Should the decision the House has made be affirmed by the entire Congress, even higher rates must be expected.

How will state and local governments secure the revenue to pay these increased rates? Ultimately, it would be raised by taxes.

Who are the taxpayers? They are those who pay federal taxes—those who anticipate relief from the enactment of the tax reform bill.

Does that sound like we are chasing our tail? We are.

That is, we are except for two reasons.

One reason is that the cost to state and local governments and their taxpayers will be far greater than the Federal Government will realize in revenue if the provisions you are considering are enacted.

The second is that you are contemplating rate reductions in the income tax—a progressive tax. By far the greatest portion of local government revenue is raised by taxes on real property. States rely primarily on sales taxes. These are regressive taxes.

To enact these provisions would achieve a modest increase in federal revenue. This achievement would be at the expense of higher state and local taxes—taxes far larger in total than the revenue realized. In other words, enactment may help to reduce a progressive tax—but raise regressive taxes.

Is this achievement in line with what most people regard as wise tax policy? Do we feel that to cause regressive taxes to be raised by a reduction in a progressive tax serves our social purposes?

Criticism may be leveled at state and local governments because their tax structures are not more progressive. Even so, they cannot be changed overnight. Nor will the situation be improved by their being forced to bear the burden of increased bond interest rates.

Mr. Chairman, tampering with the tax exempt status of state and local bonds is justified on the grounds that wealthy persons escape taxation by having large investments in such bonds. Sometimes it is stated that the cost to the Treasury from income not taxed is greater than the savings realized by state and local governments in the lower interest rates they pay.

As to the former—large municipal bond holdings by the wealthy—this has not been proven. (Possibly they have such holdings, but we just don't know.) Neither they nor other taxpayers report income derived from such ownership. As a matter of fact, from the information contained in the Report of the Ways and Means Committee, one might wonder why they should. The 154 individuals with adjusted gross incomes of $200,000 or more who paid no federal income tax in 1966 seem to have done all right by claiming as deductions large charitable contributions, interest payments, real estate depreciation and farm losses. The excluded half of capital gains was another bonanza, the Committee stated. Why should those so skilled in minimizing their taxes invest heavily in what were until recently investments with low yields?

Incidentally, the Ways and Means Committee in justifying the bill made its first reference to municipals on page 9 of the Report. It stated, "It is believed that still other high-income individuals paid no tax and did not even file tax returns since virtually their entire income was from tax-exempt State and municipal bonds."

By page 11, what the Committee "believed" had become a "fact." There it said, "Also, despite the fact that tax-exempt State and municipal bond interest is a prime way for well-to-do individuals to escape the burdens of taxation, . . ."

What the Committee "believed" had become a "fact" and a "prime way"—in the short space of two pages.

In fairness, I should point out that thereafter the actions and statements of the Committee were consistent. It acted and justified its actions on the basis of the "facts."

Gentlemen, is it true that those who buy state and local obligations realize or hope to realize, savings in taxes? One may assume some do. Is their aim to make a profitable investment different from that of any investor? Or are they attracted to our bonds because they are a safe investment? Again one may assume this to be a motivating factor. The record of state and local governments is that they honor their obligations. Who knows why investors pick particular securities? Some local banks, for example, buy the bonds of their city or county—or in Louisiana, parish—out of a sense of civic duty.

Members of the Committee, you have heard much about the "taxpayers' revolt." No doubt your correspondence has been heavy on this subject. Let me assure you that it is not confined to the national level. State and local tax rates have been rising. Except for the surtax, Congress has been able to reduce tax rates several times in the past 15 years. We have not been so fortunate. We have been increasing rates and instituting new taxes.

We may deplore the restiveness of the taxpayer. We may be aware that governmental expenditure can be supported only by comparable taxation. We may agree with Justice Holmes that taxes are the price we pay for civilization. Reason and logic may sustain our position. Unfortunately, taxpayers in revolt have little time for reason and logic.

About a year ago, Governor Rockefeller of New York said that states and localities supported from their own revenues 64 per cent of the governmental expenditures for domestic programs. It is these expenditures that we need to make to rebuild our cities, protect our environment, improve our transportation system and assure that our people have adequate diets, health care and educational opportunities.

Gentlemen, to endanger even to a minor degree our capacity to sustain these programs is folly. To do so to raise the paltry sums—$35 million from LTP and $45 million from allocation of deductions—would compound the folly. We need your help—help you have already determined is in the national interest. We trust yours will serve your real, long-term interests and ours by rejecting these proposals.

Mr. Chairman, Members of the Committee, I thank you.

The Chairman. We will next hear from Governor Kirk of Florida.

STATEMENT OF HON. CLAUDE R. KIRK, JR., GOVERNOR OF FLORIDA

Governor Kirk. Thank you.

Mr. Chairman, I would like to appear here not only as a Governor, but perhaps as an insurance executive and financial analyst and investment banker in case I have to go back to that. [Laughter.]

I would like to point out that perhaps what I am going to say may be redundant, but it is for emphasis and I think the closing part of my talk may have some novelty within it that I hope you hear it clearly when I arrive at that point.

I think what the House has done is much like your hospitality here. You have extended us water without glasses. [Laughter.]

Gentlemen, we are all here today to consider a matter far more basic than the details of a proposed tax bill. Changing the historic tax-exempt status of municipal bonds would have a deep and penetrating consequence which we should recognize, and that is loss of faith in the integrity of our government.

Even while Congress has been discussing the enactment of a law to tax interest on State and local security, we have seen the steady deterioration of the investing public's confidence in their value.

It is time, once and for all, to lay this matter to rest, by deciding to abide by the assurances given all States over 50 years ago when the income tax constitutional amendment was admitted to the States. That assurance was that the Federal Government could not and would not directly or indirectly tax this income source——

The Chairman. If I might just interrupt you for a moment, some of our committee is already suffering sunburn from these lights and I am going to ask the TV to take the lights off the committee. You gentlemen might not have had quite that much exposure to the sunny climate of Louisiana and Florida but inside this room we have just about had all the bright lights our eyes can take and I would like to urge that this light over here be turned off and any other light in the eyes of the committee members. We are perfectly happy to have you gentlemen on television, but we have had enough of it ourselves. I would like to ask these lights be turned off for the committee members. Thank you very much. Go ahead Governor Kirk.

Governor KIRK. That assurance was that the Federal Government could not and would not directly or indirectly tax this income source, and we now find ourselves faced with the very thing the States were assured would never happen.

This is a breach of faith which, if permitted, would destroy the very foundation of our federal system; that is, sovereign status but mutual trust in each other.

Another trust which is even more important than that between governments is the trust of the people in their government at all levels, Federal, State and local. All too frequently this trust has been violated and this proposal flies in the face of assurance, given time and time again, that the Federal Government will not tax the interest on local and State bonds. The credibility of the Federal Government has too frequently been successfully attacked, and I am sure you do not want to add to this credibility gap.

If you now take the back door approach by indirectly taxing State and local bonds, the investing public will be forewarned that the fiscal integrity of the States no longer exists. The results will be chaotic.

The proposal to subsidize a portion of the interest costs accruing to the States and local governments, if they agree to issue taxable bonds, would give the Federal Government in Washington control over all such State and local borrowing for capital outlay programs. The effect of this proposal would be increased Federal control rather than increased Federal revenues, although offered under the guise of tax equity. Federal regulations and the necessity for prior Federal approval will inevitably result.

President Nixon has emphasized the importance of the "New Federalism" under which the States will be called upon to assume an increasing share of the responsibility for providing the public services citizens have come to expect from their Government. These tax proposals, by shifting authority and control of capital outlay borrowing to Washington, and by making it more difficult and costly for State and local governments to do their job of building needed public facilities, are in conflict with the goal of decentralizing authority and responsibility as urged by the President.

The minimum income tax and the allocation of deduction proposals, as they relate to the interest on State and municipal bonds, would increase the cost of borrowing for the needed improvements for which State and local governments are responsible and would, therefore, necessarily increase State and local taxes. These higher taxes would have to be paid by the same taxpayers supposedly being benefited by the so-called tax reform package. Every taxpayer in America would have to pay more taxes to his State, county, school district, and city if these proposals become law, thus increasing tax inequity in the name of tax equity. The increased cost which would have to be paid by the taxpayers under these proposals would be in excess of the amount of additional revenue to be collected by the Federal Government under these indirect forms of taxation of presently tax-exempt bonds. The total cost of government to the taxpayer would thereby be increased.

The effect upon growth States, such as Florida, would be particularly harmful, because of the great need for financing education, antipollution, transportation, health, and rehabilitative facilities for which

State and local governments are responsible. Such growth States have critical needs for such facilities and would, therefore, suffer disproportionately the consequences of the increased cost of borrowing. These needs cannot be ignored if the States are to assume their proper responsibilities. These proposals would impose unfair burdens upon those States which have the greatest needs and make the greatest efforts to solve them. The impact of this burden would be even greater as the local level with smaller communities whose credit ratings are not as well established in the bond market. Every local taxpayer in States with rapidly growing populations would pay the price of these attempts at tax reform in increased property and excise taxes.

There is one other inevitable consequence of the proposed legislation about which you should be forewarned. The constitutional doctrine of reciprocal immunity from taxes has been held sacred by both the States and the Federal Government since the drafting of our Constitution. If the Federal Government chooses to unilaterally circumvent or abort this doctrine by legislation such as this, so then should the States be free and anxious to tax the instruments of the Federal Government. This would open a Pandora's box of incalculable proportions. The negative effect on the desirability of U.S. Treasury obligations would impose the same burden on the Federal Government which this legislation would place on the States. Let us not break this delicate balance of powers which has been so wisely cherished and maintained by our forefathers.

Thank you.

The CHAIRMAN. Thank you very much.

Now, gentlemen, perhaps you didn't all hear this, but let me explain our problem to you. We have had requests by more than 700 witnesses, including some very fine and distinguished Governors who are not here today but whom you are representing, to testify before this committee with regard to things that are in this House bill.

Out of 700 witnesses we tried to limit our witness list to 300, and we have printed here every prepared statement of every witness who appears so we have each of your statements already in print and if we haven't read it we should; I have. Now, in order that these witnesses might have an opportunity to appear in a morning session while the news media are present rather than testifying sometime after 6 or 7 o'clock this evening when most of the press and television have gone home, I am trying today to have the statements-in-chief presented in this room, and the interrogation in our regular committee room, that is 2221.

Now, I should think that quite a number of the Senators here are going to want to ask questions of this panel of Governors who are representing, as I understand it, 50 Governors of all 50 States of this Union. I see you are nodding.

Governor LOVE. That is true, Mr. Chairman.

The CHAIRMAN. You are not only speaking for your five States, but you are speaking for 50 States, and that being the situation those who would like to interrogate the panel of witnesses, I am going to request to move to our regular committee room and the television and press will be represented there and then we will proceed to hear the other witnesses. But with regard to the Governors, if we don't get through with interrogation of the Governors this morning I would like to ask if you gentlemen can be available at 2 o'clock this afternoon in this room?

Senator WILLIAMS. Mr. Chairman, the Governors have been very cooperative here, their statements have been short and they are presenting a statement which is of vital importance to the States. I am just wondering, we have completed seven witnesses here this morning, and on a matter of this importance, I think that all of the members would be interested in asking questions and I think we could make better time if we proceed with a brief interrogation of these Governors right here in which we can all participate. This is of vital importance to the States.

The CHAIRMAN. I will make this proposition to you, Senator Williams, I will let each Senator ask one question and let any Governor respond to it and then we will come back at 2 o'clock or else move the interrogation over to our committee room.

Senator WILLIAMS. I have no questions myself but I thought this would be the more orderly procedure because the Governors would be interested in the comments of each of the members of the committee.

The CHAIRMAN. One of the most severe limitations put on Senators is 10 minutes on each round of interrogation, 17 Senators by 10 is 170 minutes. That would put us to about 1 or 2 o'clock in the afternoon. I would like to ask my own Governor a few questions in this matter. I have a great admiration for him. He is the first Governor in our century to be reelected, may I say. We had to change the constitution to allow it. If that is acceptable I would let each Senator ask one question.

Senator WILLIAMS. Whatever you say. I have no questions. I might say to the Governors that this is the first time our committee has ever operated under a restriction directed from the policy committee as to how much time was can have and how we can conduct committees.

The CHAIRMAN. I don't like that, but I am bound by it, and——

Senator WILLIAMS. We are not bound on this side.

The CHAIRMAN. I understand that, but we are in the majority.

Senator Byrd, do you have any questions?

Senator WILLIAMS. I just wanted the Governors to know why this is being throttled.

Senator BYRD. Thank you, Mr. Chairman.

May I put this question, which I put to the Secretary of the Treasury when he appeared before the committee? First, let me preface it in this way: This committee is faced with a dilemma, as I see it. It is important, I think, that all individuals who earn a substantial income should pay some tax to the Government. Now the problem the committee faces, as I see it, do we—well, let me say this first, if the present status of tax-exempt State and municipal bonds is changed, I believe you will agree that that will increase the cost of State and local government. Now, if that is correct, do we gain enough either in dollars or in principal to change the present status of tax-exempt bonds. I would be pleased if one or more of the Governors would respond to that.

Governor LOVE. Senator, we, I am sure I speak for not only all of the Governors here but all 50 Governors in saying, no, we don't think in balancing those kinds of equities and looking at those alternatives that it is anywhere near equal.

We have in our statements and in the printed portion here some of the specific numbers. I think that the revenues forecast from the proposed action under the House and/or Treasury approach is in the $30, $40, $50 million area, and we have many graphs, statistics that indicate that the offsetting liabilities which would fall on the taxpayers of the States and localities, primarily the property taxpayers and the sales taxpayers and so on, would exceed those numbers by great amounts, tens of times. We recognize there seems to be a surface inequity for a person to have a large income all of which is tax exempt. In order to get at that seeming inequity, to penalize the States and localities and create the chaos that is already beginning to occur in the municipal bonds market, is clearly not worth it.

Senator BYRD. You feel that it would definitely increase the costs of State and local government?

Governor LOVE. It already has. Simply the threat of taxation has increased it very materially. We have looked, for example, at the percentage of interest that has historically been paid by the tax free municipal bonds compared to a comparably rated industrial, historically it has been about 70 percent. It is now 80 and above. It is an increase not only that can be attributable to the growing increase in interest rates but also an increase that reflects the threat of taxation, the uncertainty. If taxation really did occur, we would be confident it would go up more.

Senator BYRD. Do you feel too, that it raises a serious constitutional question?

Governor LOVE. Very definitely. We haven't devoted any major portion of our testimony today to the constitutional question. We understand that you will be hearing from our attorneys general at some portion of these hearings. Nevertheless, we have each of us, I think, mentioned that there is no doubt that there is, at the very least, a serious question. I think all of us here feel that it is unconstitutional.

Senator BYRD. This matter is a very complex one for me, at least, and I want to try to plug the so-called tax loophole, but I certainly am not anxious to increase the tax burden on the average citizen throughout our Nation, in every State and county and city in the country, so I am glad today to get your appraisal and your feeling, and the feeling of the five Governors representing the 50 Governors.

As I understand, you feel it would seriously increase the cost of government in the localities and thus would work a hardship on the individual taxpayer?

Governor LOVE. Governor Evans.

Governor EVANS. Just two very brief points: One, in going back to the particular bond issue I mentioned, which is a very clear case in our own State of the problems this proposal has caused, we estimate that that one bond issue alone, which is by no means a major share of our own State's borrowing, will over the life of the issue cost the people of the State of Washington, basically the youngsters who are paying tuition or the general taxpayers if we have to go beyond tuition, some $20 million.

I think that is a very significant element and when multiplied by all of the taxing units in the country far outweighs any benefits to the Treasury.

I think the other point that is so important is that none of us, and as far as I can tell, no experts from the Treasury or from any Federal agency, really knows whether there are significant tax dodgers in terms of tax-exempt bonds because they are not reported on income tax returns.

Now, there is some conjecture that this is the case but I think very little knowledge. Those who do invest in tax-exempt bonds are in effect paying the tax of lower interest. Certainly there are better investments for them to make than tax-exempt bonds. I suspect that a large share of the income to those who have very high incomes and low taxes come from other sources rather than tax-exempt bonds.

Governor KIRK. I think by definition, Senator, if I may add, the only description you can make of this is regressive taxation. I am dead serious about ability of the States to tax income from Treasury obligations. We have our people working on that now, and that will run the costs up.

Senator BYRD. Thank you.

The CHAIRMAN. Thank you.

Working from the end of the table in this direction, I think you will have the opportunity of getting about four former Governors in succession. Senator Hansen, the newest member of our committee, is a former Governor, and I am sure he will find some sympathy with your position.

Senator HANSEN. Thank you very much, Mr. Chairman. I am very pleased to greet former colleagues of mine and for whom I have the highest regard.

I read the statements of each of you and I am very much impressed with the points you make.

I would like to ask Governor Love a question. Two of the proposals that have been made propose that the limit on tax preferences apply to State and local bond interest as well as the allocation of deductions requirements.

Now, in your judgment, does not each of these proposals make it more difficult to finance the proper operations of State government in all of the ramifications, including junior colleges, to which Governor Evans referred?

Governor LOVE. I don't think there is any doubt that that is true, Senator. I am confident, too, that we are speaking for all 50 Governors when we say that we are opposed not only to the House measure, but we are opposed to the Treasury provisions or suggestions, too.

We feel that it is vitally important that it be made clear soon, as a matter of fact, that we are not going to change the rules in midstream on the taxation of State and local bonds, because there is chaos in the market to a certain extent already. Governor Evans indicated the difficulty in the sale of that issue.

We have in the State of Colorado, I think, something like $40 to $50 million now in authorized school bond issues which are not salable, in part because again of a limitation on interest that the State has set. We are going to have things come to a grinding halt unless this issue can be made clear quickly, I believe.

Senator HANSEN. Would it be indicated, if this committee felt so disposed, to spell out clearly and unequivocally its conviction that insofar as municipal bonds are concerned, none of these provisions which tend to depress the market for this type of State financing, would be applicable.

Governor LOVE. I am sure that would be most helpful, Senator Hansen, if that can be done.

Governor TIEMANN. Mr. Chairman, may I interject a comment here. Nebraska in her 102-year history now for the first time is able to issue revenue bonds for road construction. We have now in Omaha the most beautiful ski jump in the Missouri River Valley, and we are trying to complete this thing by using revenue bonds. Suddenly we run into this buzz saw of a depressed market. Bonds for various States, subdivisions outside the State of Nebraska can't be sold.

I would surely think that a clear-cut, forceful statement from this committee would bring some semblance of order out of the chaos we have presently. I think it is an excellent suggestion.

Senator HANSEN. Thank you, Mr. Chairman.

The CHAIRMAN. Senator Fannin.

Senator FANNIN. We are pleased to have you all here this morning. You have made some very impressive statements and vital statements, I believe.

I know you are vitally concerned about the impact on the present and future issues. I am also advised we have had quite an effect from the House bill on the bonds outstanding. I wonder if you would have any specific examples in your own State as to what has happened regarding the salability of the bonds that are outstanding. Here we have $140 billion of bonds outstanding, and I have been really frightened by some of the reports that have come forth as to the salability of those bonds at the present time.

Governor LOVE. Do we have any specifics on that?

I don't think we have the specifics at this moment, Senator. But obviously the change in the interest rate on new issues is going to be reflected in those outstanding; we are not going to be——

The CHAIRMAN. I would suggest you provide that for the record? I am sure you will have no difficulty when you discuss it.

Governor LOVE. We will be delighted to do it.

Senator FANNIN. Thank you.

(Information supplied for the record follows:)

Since it is a highly technical and difficult problem to determine the loss in our market value of outstanding State and local bonds which has been occasioned by the various tax reform proposals, we have consulted the Investment Bankers Association. They inform us that, during the period from 1 January to 1 October, 1969, the total market value of such securities declined about $17.6 billion of which between $5.9 billion and $8.8 billion was conservatively estimated to be attributable to tax reform proposals. This constituted between 5.8% and 8.7% of the market value in early January, 1969. We understand that, in their supplemental testimony to be submitted to the Committee, the Investment Bankers Association will present such an estimate in detail.

The CHAIRMAN. Senator Jordan.

Senator JORDAN. Thank you.

Gentlemen, yesterday, we had testimony yesterday, from one witness, Mr. Meany, suggesting that in order to make certain that bonds would be marketable at State and local levels that the Federal Government guarantee payment of future issues of State and municipal bonds. He further recommended that the Government subsidize State and local governments for the difference in the interest rate between municipal bond rates and investors. Which of you would like to comment on that suggestion?

Governor Love. I am sure each of us would. If I can very briefly speak to the two points. The guarantee of the bond issued by the State or the local government, it seems to me, clearly would affect very little to the interest rate at which it would be sold. I simply point to the interest rate currently being paid by Government bills. I think it is about 7 at the present time. So the guarantee would add little, in my opinion. It is not the credit of the local government that is the problem, it is the interest rate.

Now, the subsidy provision, I think each of us has devoted a little time to that, pointing out among other things that it would put the State and local governments completely at the mercy of the continuing appropriations. It is my understanding that this body can't bind future Congresses, and there would be no certainty in our mind, no legal guarantee, that the amounts, and they would be very large amounts, would be forthcoming, and the marketability would therefore be hurt.

I also would suggest that the amount of such a subsidy would be large enough that you would find it difficult to fit within what I believe, I have been informed, is a rather tight and stringent budget situation.

Senator Jordan. What do you calculate the difference between municipals and industrials of the same grade to be now on the market, Governor?

Governor Love. As of yesterday, I think, the Bond Buyers' Index as of the 18th, you correct me here Charlie, shows an interest rate of 6¼ percent. As of the 22d, 7.44, on Moody's.

Mr. Schwan. The first of course is municipals, the second is the industrials, and the difference is what you are asking.

Governor Love. The difference, then we are talking about, is a 6¼ on a municipal, and a 7.44 on a comparably rated industrial bond. This indicates about, contrary to the roughly 70-percent relationship that has existed, the municipal rate is 84 percent of the industrial.

Senator Jordan. And you ascribe that sudden increase in the cost of financing municipals partly to the activities of the Congress in treating this subject.

Governor Love. Yes, indeed. I think there is no other way to account for it, that the investor in making his decision about whether he will buy a 20-year bond has a certain justified concern that perhaps that interest will no longer be tax free and he, therefore, cranks that into his decision about what he is willing to pay.

Senator Jordan. Thank you.

Thank you, Mr. Chairman.

The Chairman. Senator Talmadge.

Senator Talmadge. Mr. Chairman, I have no questions. I do want to congratulate each of you distinguished Governors on your statements. I think you made very impressive statements.

The Chairman. Senator Curtis.

Senator Curtis. Mr. Chairman, I just want to thank these busy Governors for appearing here in behalf of all their constituents and I will waive questions.

The CHAIRMAN. Senator Anderson.

Senator WILLIAMS. No questions, except to thank the Governors for being here, and concurring in what Senator Talmadge said in saying that you made an excellent case.

The CHAIRMAN. I just want to ask one question which didn't occur to me until we met today. Governor McKeithen can comment on it if he wants to. The best I can make of it is that in the effort to make up about $80 million over a long period of time that the provisions would phase in, actually means in effect that every State in this Union will be required either to raise taxes or to reduce services.

Governor MCKEITHEN. Senator Long, it will wreck us in Louisiana if this bill is enacted. It will wreck us in our State. For all of our construction, we will have to come back and ask for additional sales taxes and gasoline taxes. The very people I think this committee would like to help are going to end up picking up the tab.

The CHAIRMAN. Now, let me ask this further question. Do any of you Governors know any source of Federal revenue that is being directed toward you at the present time that doesn't have some kind of Federal strings attacked to it?

Governor MCKEITHEN. That is another point I made, Senator Long. We feel if the Congress adopts the subsidy plan we think clearly we will be told where we can spend, where we must spend every dollar, how it must be spent. We would like to avoid that if we possibly can.

The CHAIRMAN. I know President Nixon has suggested that we should start sharing some revenue with the States, no strings attached. I am also aware of the fact every time somebody becomes a great enthusiast for his particular program he wants to put a condition on it that no money will go to any State government unless the State does what the Federal Government thinks what it ought to do. Whether we can ever have a Federal aid program with no strings attached remains to be seen. We might try it but I for one think it will have to be tried and proved before we can believe it.

If I were the Governor, I would take the view that, "Thanks just the same for your offer of a subsidy but we would just as soon that you let the whole matter drop."

Governor MCKEITHEN. That is our position, I think, Senator Long.

Governor EVANS. Mr. Chairman, one other point that has not been brought up. We happen to have in the State of Washington an exceptionally high amount of investments already, we have very high unemployment compensation reserve funds, we have very large teachers' retirement funds and State employees' retirement funds and we have over a billion dollars of securities we own as a State in trust for these various funds.

The wreckage of the municipal market has sent down the value of those investments we now hold in trust. Because we have the authority to invest in municipals ,we hold a great many of them of other States, other municipalities. The decline in their value is something else that has happened without even the passage of this act, but with merely the threat of it. The passage, I am sure, would hamper us on a very long-term basis in that very important field.

The CHAIRMAN. Do any of you gentlemen know——

Governor KIRK. Following Governor Evans' answer, I wonder if I might ask the committee a question myself since as a financial analyst I can tell you the minute you get a positive statement out of this committee the market will turn and we will be happy and joyous again, how early might we get an early positive statement from this committee? [Laughter.]

Because every day is costing Florida money.

Governor EVANS. We have got some bonds to sell.

The CHAIRMAN. It will be right soon.

Governor KIRK. How about now? [Applause.]

The CHAIRMAN. I can only speak for myself. Stanley Surrey is the initiator of this scheme and he is supposed to be here to testify for it tomorrow, and so far as I am concerned tomorrow will be soon enough.

Senator CURTIS. Mr. Chairman, we might call attention to the fact we cannot bind the Senate.

Governor KIRK. I understand that, Senator.

Senator CURTIS. Nor can we bind the conferees.

Governor KIRK. But I will tell you the team speaks strongly now.

The CHAIRMAN. I want to ask you one question. You gentlemen represent the Governors in the Governors' conferenc [illegible] you know of any Governor who favors this deal where we put t [illegible] on and then proceed to subsidize it?

Governor LOVE. No.

The CHAIRMAN. In other words, your reaction is that you are not asking for the subsidy and you would appreciate being left alone on the tax, I take it that is your attitude?

Governor LOVE. Yes.

The CHAIRMAN. That is true.

Senator Miller is recognized for 5 minutes.

Senator MILLER. Thank you very much, Mr. Chairman. I appreciate the fine statements we have had from the panel, and I would just add this as a point, that I assume the panel would instead of merely a statement out of the committee indicating its position, infinitely rather have action by the Congress as a whole on the tax bill which would put Congress on record on this point.

Governor KIRK. No question about it.

Senator MILLER. The sooner the better.

Governor KIRK. But the market would turn tomorrow just by a positive statement of this committee.

Senator MILLER. Now, we received testimony from the Treasury representatives indicating that if tax-exempt municipal bond interest was included in this so-called limit on tax preference approach, which would enable us to assure the taxpayers of this country that nobody could invest all of their money in tax-exempt bond interest and receive a large amount of income without having to pay some Federal tax, that if we did this, this would amount to a tax of about $35 million, and that the total interest take by individuals would amount to about $2 billion, so that we would have an impact of $35 million of tax on a $2 billion annual payout. Now I can well understand the uncertainty of the market and I can well understand the concern of the

Governors with respect to this tax and subsidy approach about which Governor McKeithen was most persuasive.

I can understand the uncertainty and concern if we tax the securities purchased by banks. But if you look at only the limit on tax preference item and realize this is a $35 million impact out of a $2 billion payout, if there is nothing more to it than that, I am wondering how severe this impact really would be. I am wondering how uncertain the market would be if that is all there is to it.

Now, I will grant you, you add up all of the provisions of the House, and I can well understand the market situation and I can well understand the concern that you have and I have, too, with respect to the Federal Government getting into a position of eventual control, but if we are only going to talk about the limit on tax preferences which would enable the Congress to go before the people and to say to the general taxpayers, "No longer are you going to pick up stories in the newspapers indicating that somebody has $200,000 of income and hasn't paid 1 red cent to the Federal Government for all of the services that the Federal Government is supplying that person." I am wondering if we are talking about a very serious problem. I am wondering if that was all there was to it, and you were able to forget about all these other little goodies in the tax bill of the House, if we wouldn't come out to a fairly good balance on this preserving the interests of the States.

Governor KIRK. No one has ever proven your statement, though. No one has even proven your statement, Senator, that there are those who are making this horrendous profit and that their entire portfolio is made up of municipals.

Senator MILLER. I must tell you that we have testimony of the Treasury officials on this.

Governor LOVE. Even assuming this is true, I think I can safely speak for all the Governors in saying we would still be opposed. Even if you say it is going to have a limited effect and will only generate some 35 million, it nevertheless throws, it may be psychological to a certain extent, whatever it is it throws, a cloud upon the tax-free status of the bonds. I think that the most persuasive thing is even without anything being done now that already the thought that bonds could be taxed has made a great difference in the market.

Governor KIRK. We could take the same theory in Florida and say why don't we tax income on Federal paper, and that is exactly what we will have to do and that is what we are preparing to do now.

Senator TALMADGE. Mr. Chairman, if the Senator will yield at this point. There is one point which has not been made. While people who have a portfolio of municipals and nothing else may avoid the Federal income tax it has not been pointed out last year, the rate of inflation was 5 percent, this year the rate of inflation is 7 percent. While they may avoid income taxes to the Federal Government they are losing the corpus of their investments.

Governor LOVE. That is right.

Governor KIRK. Further than that there is the estate tax which they pay ultimately.

Governor MCKEITHEN. I think, Senator, you ought to remember who is going to pick up that tab, who is going to pay that additional high interest. It will be the man who paid the sales tax, the man who paid the gasoline tax.

Senator MILLER. The point I am making is that I can't see that there is going to be much, if any additional tax if you only got a $35 million impact on a $2 billion annual payout.

Now, the point the Senator from Georgia has made to me is perhaps the most important factor in the uncertainty of the municipal bond market, but I am trying to get this down to a matter of perspective, and I must tell you one reason we have this before us is because there is substantial sentiment, as you well know, certainly not from this source, but they are on the Hill and elsewhere, to make these bonds wholly taxable. When you have the president of the AFL-CIO coming before this committee and advocating that and when you have other Members of Congress advocating complete taxation of this interest, this is something I think is very serious, and I would like to see some way of getting this problem resolved, once and for all.

Governor KIRK. No one has ever accused Mr. Meany of being a financial analyst and I am quite serious about this thing. The way it is being proposed, you have a regressive tax facing the poor people of Florida and they are really poor.

Senator MILLER. We don't say Mr. Meany is a financial analyst.

Governor KIRK. He is part of the problem.

Senator MILLER. But they have a lot of political power and I can't take the——

Governor KIRK. We can. We are working for the people.

Senator MILLER. I am saying for the sake of getting this problem off the books, a $35 million bite out of $2 billion annually.

Governor KIRK. Senator, Mr. Meany doesn't worry us.

Governor LOVE. If that is all, Senator, that it did accomplish was to provide in that great grouping $35 million in tax it is not worth any substantial risk in upsetting what has worked well and what we need to continue to have working well as far as the financing of our State and local governments.

The CHAIRMAN. May I just put one question here that is of concern to me? During this generation we have seen a great deal of powers and functions of State governments stripped away by Federal control. Now in some States there has been a lot of complaint about that. I know it is true in Louisiana, and I am sure it is true in some others. But most of that had been done without asserting the taxing power to do it, and most of it has been done by court decisions and things of that sort, in some cases asserting the regulatory power by the Government. We are well aware the power to tax is the power to destroy.

Do you five Governors, speaking for 50 Governors, see in this proposal for the Federal Government to tax State and local bonds, and instrumentalities of State and local governments, something of a threat to what little sovereignty still resides in the 50 States of this Union?

Governor MCKEITHEN. No question about that, Senator. I had "sovereign" in my statement and I struck it out because of my being from the Deep South. Yet we come up here with sovereign rights again. There is no question about that, particularly if you start subsidizing us and paying the interest for us you know we will be told then how to spend the money.

Governor EVANS. I think whether it is allocation of deductions or limitation on tax preference or subsidy, any of those, or all of them, and even the portion of it that Senator Miller mentioned, it is a breaching of the gap. We can lay out, and the Treasury can lay out, all of the nice figures they want to; they can't change the psychology of the bonds market. It is going to cost the citizens of the States, the little guy, a lot more money than he is paying now. As far as I am concerned, in direct answer to your question, I will testify tomorrow on revenue sharing, and I think I speak for all the Governors in being in favor of revenue sharing, but if it ever came to the point of trading, I think we would be buying a bum deal to get revenue sharing even on a very extensive basis in trade for any portion of taxation of municipal bonds.

The CHAIRMAN. Senator Hansen.

Senator HANSEN. Mr. Chairman, it seems to me that the central question we ought to be asking ourselves is simply this: How can we assure the 200 million people in this country that every person is paying some tax? We are talking amont 154 persons who are very wealthy and who reportedly paid no income tax last year. Bnt, in order to gain the slight advantage that we would seemingly gain by imposing this limit on tax preferences and the allocation of deductions, we are jeopardizing $140 billion worth of revenue that goes to all of the 50 States. I think we just have things completely out of perspective.

I don't agree at all that it makes sense to impose these extra limitations on municipal bonds and have all citizens suffer in order to gain the satisfaction of telling a few individuals they are going to have to pay a lot more taxes. [Applause.]

The CHAIRMAN. I regret it but we are not permitted to have demonstrations in this committee room. [Laughter.].

If we were I would be applauding myself. Go ahead.

Senator HANSEN. I was just going to conclude by saying that I don't think we ought to make such a foolish move in order to gain the slight advantage that seemingly would have accrued to us by jeopardizing this very vital function of the financing of all of the 50 States.

Governor KIRK. I point out too that the States can retaliate and if you want to finance New York State you are in trouble.

The CHAIRMAN. As a practical matter if we start doing this to the States don't you have the right to start taxing our bonds?

Governor KIRK. That is what I am telling you they haven't said that before and if you want to finance New York State you are wrong.

Senator WILLIAMS. Is it not true, it is not so much the $35 million tax that would be imposed that is creating this problem, as it is the uncertainty in the minds of investors as to what this Congress or some future Congress would do once we take the step in that direction?

Governor LOVE. I think that is absolutely right. Once the wall is breached, once we violate this immunity from taxation of the two sides of our federal system, I think it opens a Pandora's box and undoubtedly leads to uncertainty in the investors' minds.

Governor TIEMANN. These 154 people who have these great holdings of municipals, or the banks that hold so many municipals, are trying their hardest to get rid of them and they can't find the market for them. The secondary market in municipals, when everything is good, is bad, and now it is completely demoralized. I think, to sum up what has been said here and the sentiments of, I think, everyone, once you breach or violate reciprocal immunity then you have sold part of your soul and it is not worth it.

The CHAIRMAN. I want to indicate this, the 50 Governors indicated their willingness to testify here on this matter but agreed to let your testimony speak for them. You have presented a magnificent case and I think that would be the judgment of every member of this committee. I would say to the other 45 Governors who were not present here that they had been represented by the utmost of logic and dignity and I do think that in view of the threat that exists to State governments in this bill you have been most restrained in the way you have presented your case. As chairman I appreciate it very much and I am sure I speak for the entire committee.

Governor LOVE. Mr. Chairman, we are most appreciative of the time you have given. We appreciate the stringencies of your time and we appreciate the fact you have heard us out with patience and courtesy.

Thank you very much.

The CHAIRMAN. Thank you very much.

(Prepared statement of Hon. Claude R. Kirk, Jr., follows:)

STATEMENT OF HON. CLAUDE KIRK, JR., GOVERNOR, STATE OF FLORIDA

SUMMARY

Changing the historic tax exempt status of municipal bonds will reflect on the integrity of our government.

Proposal to subsidize a portion of interest costs would lead to Federal control over state and local borrowing and would be in conflict with President Nixon's goal of decentralizing authority and responsibility.

Proposals would increase the cost of borrowing to communities and would result in increased taxes at state and local levels.

The effect on growth states would be particularly harmful due to their critical need for financing.

If doctrine of reciprocal immunity from taxes is violated by Federal Government, it will lead to similar action by states to tax United States Treasury obligations.

STATEMENT

Gentlemen, we are all here today to consider a matter far more basic than the details of a proposed tax bill. Changing the historic tax exempt status of municipal bonds would have a deep and penetrating consequence which we should recognize, and that is loss of faith in the integrity of our government.

Even while Congress has been discussing the enactment of a law to tax interest on state and local security, we have seen the steady deterioration of the investing public's confidence in their value.

It is time, once and for all, to lay this matter to rest, by deciding to abide by the assurances given all states over fifty years ago when the Income Tax Constitutional Amendment was submitted to the states. That assurance was that the Federal Government could not and would not directly or indirectly tax this income source, and we now find ourselves faced with the very thing the states were assured would never happen.

This is a breach of faith which, if permitted, would destroy the very foundation of our Federal system; that is, sovereign status but mutual trust in each other.

Another trust which is even more important than that between governments is the trust of the people in their government at all levels, Federal, state, and local. All too frequently this trust has been violated and this proposal flies in the face of assurances, given time and time again, that the Federal Government will not tax the interest on local and state bonds. Credibility of the Federal Government has too frequently been successfully attacked, and I am sure you do not want to add to this credibility gap.

If you now take the back door approach by indirectly taxing state and local bonds, the investing public will be forewarned that the fiscal integrity of the states no longer exists. The results will be chaotic.

The proposal to "subsidize" a portion of the interest costs accruing to the states and local governments, if they agree to issue taxable bonds, would give the Federal Government in Washington control over all such state and local borrowing for capital outlay programs. The effect of this proposal would be increased Federal control rather than increased Federal revenues, although offered under the guise of "tax equity." Federal regulations and the necessity for prior Federal approval will inevitably result.

President Nixon has emphasized the importance of the "New Federalism" under which the states will be called upon to assume an increasing share of the responsibility for providing the public services citizens have come to expect from their government. These tax proposals, by shifting authority and control of capital outlay borrowing to Washington, and by making it more difficult and costly for state and local governments to do their job of building needed public facilities, are in conflict with the goal of decentralizing authority and responsibilty as urged by the President.

The minimum income tax and the allocation of deduction proposals, as they relate to the interest on state and muncipal bonds, would increase the cost of borrowing for the needed improvements for which state and local governments are responsible and would, therefore, necessarily increase state and local taxes. These higher taxes would have to be paid by the same taxpayers supposedly being benefited by the so-called tax reform package. Every taxpayer in America would have to pay more taxes to his state, county, school district, and city if these proposals become law, thus increasing tax inequity in the name of tax equity. The increased cost which would have to be paid by the taxpayers under these proposals would be in excess of the amount of additonal revenue to be collected by the Federal Government under these indirect forms of taxation of presently tax exempt bonds. The total cost of government to the taxpayer would thereby be increased.

The effect upon growth states, such as Florida, would be particularly harmful, because of the great need for financing education, anti-pollution, transportation, health and rehabilitative facilities for which state and local governments are responsible. Such growth states have critical needs for such facilities and would therefore suffer disproportionately the consequences of the increased cost of borrowing. These needs cannot be ignored if the states are to assume their proper responsibilities. These proposals would impose unfair burdens upon those states which have the greatest needs and make the greatest efforts to solve them. The impact of this burden would be even greater at the local level with smaller communities which are not as well established as credits in the bond market. Every local taxpayer in states with rapidly growing populations would pay the price of these attempts at "tax reform" in increased property and excise taxes.

There is one other inevitable consequence of the proposed legislation about which you should be forewarned. The Constitutional doctrine of reciprocal immunity from taxes has been held sacred by both the states and the Federal Government since the drafting of our Constitution. If the Federal Government chooses to unilaterally circumvent or abort this doctrine by legislation such as this, so then should the states be free and anxious to tax the instruments of the Federal Government. This would open a Pandora's box of incalculable proportions. The negative effect on the desirabilty and marketability of United States Treasury obligations would impose the same burden on the Federal Government which this legislation would place on the states. Let us not break this delicate balance of powers which has been so wisely cherished and maintained by our forefathers.

The CHAIRMAN. Senator Baker?

We will next hear from Senator Howard Baker, a very busy man.

Senator, I know how it is to run for these party jobs and the tremendous time that is necessary. [Laughter.]

I can also tell you how it works out sometime, both ways.

STATEMENT OF HON. HOWARD H. BAKER, U.S. SENATOR FROM THE STATE OF TENNESSEE

Senator BAKER. Mr. Chairman, I will do my very best not to reply at all one way or the other in that respect.

Mr. Chairman, and members of the committee, thank you very much. I appreciate the opportunity to appear here today and to testify in connection with one of the most vital fiscal matters that will address itself to the nature of federalism in the next several years.

Another matter that is of almost equal importance will come up today with the introduction of the Administration's Federal revenue-sharing bill on the Floor of the Senate which I am sure this committee will delve into very deeply indeed as time goes by.

If I may, I will at this time continue with my statement, Mr. Chairman.

Mr. Chairman, the Tax Reform Act of 1969 contains three sections which, if enacted, may adversely affect the ability of State and local governments to meet their capital requirements. The first would impose a limitation on certain tax preferences, including among such preferences interest on state and local securities. The second would require that individuals allocate their deductions between taxable and tax-exempt income, including interest on municipal bonds. The third would permit State and local governments to issue at their option taxable bonds, a portion of the interest on which would be paid by the Federal Government. In my judgment, these three provisions should be deleted from the House-passed bill.

As I have stated on numerous occasions, I believe that the immunity of State and local governments in the exercise of their legitimate functions from Federal taxation is necessary for the preservation of our constitutionally delineated dual sovereignty form of government. I further believe that if the Congress undertakes to encroach upon the tax exemption of State and local securities, it inevitably has the power to control State and local financing and without self-control of its own financing, no government can continue as an independent and autonomous body.

The Tax Reform Act is designed to provide a more equitable distribution of our tax burden. I support this legitimate objective. However, in attempting to insure a more evenhanded distribution of the cost of supporting our Government, we must consider not only the fair distribution of the Federal income tax burden but also the fair distribution of the total tax burden—Federal, State, and local.

It is apparent that the limit on tax preferences and the allocation of deductions provisions will, if adopted as passed by the House, result in an increase in municipal interest rates to levels close to those of corporate bonds of similar credit quality. In fact, since the House Ways and Means Committee opened hearings on this question, investment yields on new issues of local government AA-rated bonds have risen 70 base points or from about 5.50 percent to 6.20 percent. If the tax exemption is breached, investors would have little confidence that the advantages to them of holding tax-exempt securities would not be whittled away further, and they would, of course, demand higher interest rates to compensate them for the higher risk in purchasing these securities. As the cost of borrowing increases, State and local taxes, primarily property and sales taxes, will also increase, and the burden of thee taxes falls disproportionately on those in the low- and middle-income groups. Therefore, if the objective is to provide a more equitable distribution of the total tax burden, as I believe it is and should be, then the Congress should not revoke or alter this tax exemption in such a way as to increase the cost of borrowing to State and local governments.

It would be particularly unfortunate to increase the cost of borrowing at this time when the current operating revenue needs of State and local governments are such that proposals for Federal revenue sharing are being seriously advocated and widely supported. I believe that the provisions presently in the bill adversely affecting municipal financing are inconsistent with the concept of revenue sharing and the objectives it is designed to achieve. Underlying my strong support for both retention of this tax exemption and the enactment of revenue sharing is the basic conviction that strong and financially viable State and local governments are essential both to a healthy federalism and to the best possible performance of Government services.

I would like to make one additional point. A considerable amount of the sentiment for tax reform stems from the testimony given by former Secretary of the Treasury Joseph Barr concerning 154 individuals who in the year 1967 had adjusted gross incomes in excess of $200,000 yet paid no Federal income taxes. Unfortunately, the impression was allowed to form that this was accomplished to a large measure through municipal bond ownership, even though the data submitted by former Secretary Barr did not include interest on State and local securities among the tax-reducing factors utilized by the 154 individuals. Interest on State and local securities is not included within gross income and consequently does not appear at all on the income tax return. For this reason it is most difficult to determine the degree of tax avoidance by individuals holding State and local bonds.

A possible solution to this lack of data might be to require individuals and corporations to disclose on their income tax returns the amount of interest received from tax-exempt securities. If this information were to indicate substantial abuse of this exemption, then I would support a reasonable legislative solution designed to alleviate the problem without adversely affecting the ability of State and local governments to meet their capital requirements.

Mr. Chairman, this point was made very strenuously by Governor Evans, by Senator Miller, and by others in previous testimony.

I would add one addendum that I believe was touched on by the Chairman and possibly by others, including Senator Williams, I believe. The uncertainty of the fate of tax-exempt bonds, State, county, and city, is such that at this moment there is virtually no municipal bond market, and the capital borrowing authority of local governments is practically nonexistent at this point, primarily because of uncertainty.

If there is continuing uncertainty by reason of an encroachment in the nature of a minimum income tax at this point, then I think the bond market will continue to suffer, and correspondingly the ability of State, county, and local governments to finance their needed capital improvements will also suffer.

I believe we must come to terms with this particular aspect of the problem but frankly I do not think we have the data at hand to make an intelligent judgment.

In conclusion, Mr. Chairman, I earnestly feel that we are dealing with the heart of the nature of federalism, and that if we can't devise a way to preserve the independent fiscal status of the now semiautonomous lesser units of government, then I think we have struck at the very basis of governmental balance in this country, and if we are not very careful we will create an unwanted and an unwarranted additional burden of taxation through regressive taxes, by and large, on that class of people least able to afford to pay it, the wage earner, the low-and middle-income groups of this country.

Thank you very much.

The CHAIRMAN. Thank you very much, Senator Baker.

Senator Miller?

Senator MILLER. I take it that the thrust of your comment with respect to this limited tax reference and allocation of deductions is that the $35 million of revenue, on the one hand, and the $45 million, on the other hand given us by the Treasury represents soft figures, and before we move on this we ought to have what we call hard evidence based upon accurate statistical surveys.

Senator BAKER. I think you are entirely right, Senator Miller. As long as there is no inclusion of tax-exempt securities in the gross taxable income or as a declaration of nontaxable income on corporate and individual tax returns, it is, it seems to me, impossible to make a fair judgment of where we stand in this respect.

That is now the law. I think it very possibly should be the law, and that income be included, although not taxable, so we later can make a judgment in a more dispassionate way.

The CHAIRMAN. Thank you very much, Senator. We will be discussing it with you further on the floor of the Senate if we ever get it out there.

Senator BAKER. Thank you.

The CHAIRMAN. Now, the next witness will be the Hon rable C. Beverly Briley, who is the mayor of Nashville, Tenn., and president of the National League of Cities. He was to be accompanied by Mayor Tate who at this moment is tied up in conference, and I believe it was suggested that Mayor Ilus W. Davis, mayor of Kansas City, should accompany him on this panel to discuss this same problem as it affects the cities.

STATEMENT OF HON. C. BEVERLY BRILEY, MAYOR OF NASHVILLE, TENN., AND PRESIDENT, NATIONAL LEAGUE OF CITIES; ACCOMPANIED BY PATRICK HEALY, EXECUTIVE DIRECTOR, NATIONAL LEAGUE OF CITIES

Mayor BRILEY. Mr. Chairman, and gentlemen, I am going to abbreviate my statement considerably because the Governors so adequately covered the subject as it applies to cities.

As you announced I am the president of the National League of Cities and the mayor of Nashville, Davidson County, Tenn., and I am representing more than 14,600 cities in this country.

The CHAIRMAN. Incidentally, Mayor, your entire statement will be printed and what you say in addition to your statement will also be in the record.

Mayor BRILEY. Thank you, sir. We have not a great many mayors here to testify, for brevity, but we could have most of the 14,600 come if it was desired because all of us recognize the terrific impact of H.R. 13270's provisions upon our fiscal activities.

The CHAIRMAN. Yes.

Mayor BRILEY. Principally, what gives us this great concern stems from the important role that cities have had in the federal system of government, a role designed by the patriotic forebears of our time, who preserved this for us. There is very good evidence of the wisdom of the system, and there is no question about it, we have had at least some semblance of an organization whereby we could independently finance our local affairs in a free marketplace. But if we take a look at the market conditions since it was first announced that taxation of State and local bond interest was going to be an open question in the House Ways and Means Committee last fall, you will observe that the bond market took a serious stumble and has gone completely since that period of time.

Tax exemption is very important for many reasons. First, as I have mentioned, it is important to preserve our federal system of government.

Second, the principle of tax exemption has created an independent source of capital upon which cities, counties, and, of course, the States can depend and successfully compete with the other elements of the capital market. It is the only way we can compete in that broader market.

And, third, it has kept the facilities that we have to provide for our citizens at the lowest possible financing cost.

We could not very well compete in the bond market against A.T. & T. and the other corporations because their revenues are a whole lot more certain than the revenues we have for a schoolhouse we build or a highway that we build.

The equity question bothers us particularly.

It has been estimated that there could be maybe even as much as $80 million of income to the Federal Treasury through the LTP and ADR. But our studies indicate that the costs that we would have to pass on to the property taxpayers will run better than $150 million annually if this bill should pass. So we have a great deal of concern as to whether or not we should upset a delicately complex market that we know has worked, and worked very well during all these years in order to try to reach a few rich people.

We are going to pass this tax on actually to the poorest people in the Nation, the property taxpayer, the water user, and others. Gentlemen, we are all faced with the inflationary costs of construction. We are faced with this tremendous costs of environmental pollution and the need to physically rejuvenate our cities. Must we also add to these costs, additional interest costs and pass them along to the water consumer, and the property taxpayer, in order to provide what some have falsely called equity? We are doing a complete disservice, and I do not believe that we are talking in terms of tax equities if this is going to be the inevitable result as is now very obvious.

So we, following what the Governors said, add our amen.

We are opposed to the idea of the Federal subsidy. I think there are two very good basic reasons for it. In the first place, I don't think that any of us could agree that the Federal Government should completely underwrite all the bonds that every State, city, and other community might want to issue.

This suggests there would have to be some regulations involved, and that means we would shift some control outside of the local citizenship and the citizens in determining local prioriteis and what facilities are truly needed.

Second, we also, of course, are concerned over the fact that there would not be anything binding about this program, and we would have to rely upon future Congresses to continue the program and fund it.

We also believe a large number of smaller communities will not be able to market their bonds at all under the provisions of the subsidy program and there will have to be billions of additional dollars in Federal grants to those communities.

Even when the market was a normal market, in a good many instances the local banks were the only purchasers of bonds of small communities although it was competitive it was really a negotiated basis in order to have the funds available in the community in order to maintain a viable economic climate. Anything that would upset this degree of balance would drastically upset the basis of our Government.

We think ultimately we would be calling upon the Federal Government to participate far more heavily than any of us are willing to accept.

I will now let my colleague from Kansas City speak and then be available for any questions that you may have.

The CHAIRMAN. Mr. Mayor, have you seen the summaries that have been prepared by our committee on the testimony which has been presented?

Mayor BRILEY. No, sir; I have not.

The CHAIRMAN. I want to send you a summary and let you take a look at the summary of your testimony.

Mayor BRILEY. Incidentally, I have an article written by our executive secretary, Mr. Patrick Healy, that has been reproduced in the Congressional Record. I do want to file that because it was not filed in my statement.

The CHAIRMAN. Without objection.

(The article and Beverly Briley's prepared statement follow:)

THE ASSAULT ON TAX-EXEMPT BONDS

(By Patrick Healy)

"Property taxes will be increased 6 per cent across the board; charges to water and sewer users will have to be raised 10 per cent."

This statement by the mayor of one large midwestern city indicates what would be the effect on his city of making municipal bond interest subject to federal taxation. Similar effects will be felt throughout the country. Thus, hundreds of thousands, perhaps millions of homeowners, water users, and other users of local government services would be taxed under the terms of the hasty, ill-considered, and fundamental changes to the whole federal system contained in the innocent-looking tax bill recently passed by the United States House of Representatives. We hope that the Senate will remove from the bill what could cause a true "taxpayer's revolt" of mammoth proportions.

How did this alarming prospect come about? Not by a frontal assault on the immunity of the state and local government bonds from taxation by the federal government, as has failed miserably in the past. Rather, this time, a more devious device has been used to include income from municipal bonds in calculation of a minimum income tax on individuals (but not as yet on corporations). This takes form in the so-called "limit on tax preferences" and in the "allocation of deductions"—very technical and difficult to explain to members of Congress, not to mention the great mass of homeowners and other voters.

But the result of causing higher municipal bond interest costs to local taxpayers is the same, whether using the frontal assault or the devious device. Indeed, the mere announcement of decisions by the House Ways and Means Committee caused a major upheaval in the municipal bond market as investors in municipal bonds lost their confidence in the durability of tax exemption. Bond yields, already pushed to record high rates by the present inflationary character of the economy, jumped an additional ½ of 1 percentage point in response to Ways and Means Committee decisions, quickly ratified by the whole House.

The tax exemption of state and local government bonds has never been under such sustained, heavy attack from so many quarters. By riding the crest of an unprecedented public demand for general reform of the federal tax structure, itself an unquestionably laudable objective, the opponents of the tax-exempt status of state and local bonds, or "municipal bonds" as they are commonly called, have made considerable headway toward overturning the traditional, in fact historical, tax-free status of these bonds. These opponents have based their attack principally on two arguments:

1. That the federal government loses more tax revenue through tax exemption of municipal bonds than states and localities gain in lower financing costs which result from the tax-exempt feature of the bonds, and,

2. That the tax-exempt feature is some kind of major "loophole" in the federal tax system, the closing of which will produce greater tax equity.

Much of the misunderstanding with regard to the loophole question has come about from lumping tax exemption together with such currently unpopular tax avoidance devices as unlimited charitable contributions, accelerated real estate depreciation, hobby farming, mineral depletion allowances, and the like. Municipal bond interest is distinct from these other tax benefits in that it relates not to economic policy but to a constitutionally delineated sysem of government operation.

Now comes a new approach in the form of concern for the ability of the state and local governments to find a large enough market for their tax-exempt bonds to meet rising capital needs.

In the May-June, 1969, issue of Tax Policy, Professor Stanley S. Surrey of the Harvard Law School argues that a probable high level of new tax-exempt bond issues over the next decade will raise serious problems for states and localities in reference to their ability to raise capital funds, and raises problems for the equity of our federal tax system. He goes on to state that this rapidly increasing volume based on the tax-exempt privilege creates a powerful buyer's market that works against states and localities as they realize less and less advantage from the tax-exempt privilege. He also states that as interest rates increase as a result of this phenomenon, bond buyers will get even greater tax savings from their investments. He then calls on those interested in the financing plight of state and local governments to consider whether new financing techniques are available and appropriate to the needs of bond issues.

This subject is of paramount importance to citizens and government officials alike, and I am delighted to be accorded the opportunity to respond to the case put forward by Mr. Surrey. He has been regarded by many as among the foremost opponents of the tax-exempt feature of state and local bond financing. He does not, however, understand the complexities of the market place for securities issued by the state and local governments, nor does he appreciate the intricacies of intergovernmental finance which so clearly underlie discussions of proposed alternative financing methods as well as the basic rationale for tax exemption

CAPITAL FINANCING NEEDS IN PERSPECTIVE

State an dlocal debt outstanding has increased by 89 per cent since 1960. Unquestionably the greatest need for public improvement expenditure has existed recently and will continue to exist at the state and especially at the local level. While there does loom ahead a substantial increase in state and local capital borrowing the identifiable trend in this area does not warrant alarm.

Mr. Surrey estimates that net additions to tax-exempt financing will, within ten years, total two to three times the present net level of approximately 10 billion per year. He does not mention, however, that the present volume of municipal finanicng is, if anything, lagging somewhat behind the level projected by the Joint Economic Committee of the Congress in 1966,[1] certainly the most comprehensive and most recent estimate available. Table 1 shows three sets of actual and projected underwriting figures for the period 1960–1975.

TABLE 1

[In millions]

	Growth at at 8.7 percent	Growth at 10 percent (Surrey)	Actual	Joint Economic Committee
1960	$7,230	$7,230	$7,230	
1961	7,859	7,953	8,360	
1962	8,543	8,748	8,558	
1963	9,286	9,623	10,107	
1964	10,094	10,585	10,544	
1965	10,972	11,644	11,084	
1966	11,927	12,808	[1] 10,589	$14,200
1967	12,965	14,089	[2] 12,988	14,900
1968	14,093	15,498	[3] 14,044	15,700
1969	15,319	17,048		16,600
1970	16 652	18,753		17,600
1971	18,101	20,628		18,600
1972	19,676	22,691		19,500
1973	21,388	24,960		20,800
1974	23,249	27,450		21,800
1975	25,272	30,202		22,700

[1] Excludes $500,000,000 industrial aid financing.

[2] Excludes $1,300,000,000 industrial aid financing.

[3] Excludes $1,600,000,000 industrial aid financing, and $730,000,000 anticipatory financing to avoid provision of Revenue and Expenditure Control Act of 1968, Watson amendment in California, and similar measure in Oregon.

As shown in Table 1, Mr. Surrey estimates a growth of new issues of 10 per cent during the most recent period when, in fact, excluding industrial aid financing which for all practical purposes has now been terminated by the Revenue Control and Expenditure Act of 1968, the true growth of the most recent period is approximately 8.7 per cent. That does not at first glance seem to be a major differential; but by 1975, assuming a base of $15.0 billion normal financing this year, underwriting volume would be overstated by 7.4 per cent. By 1980 underwriting volume would be overstated by 14 per cent.

The important point, as economist Sidney Homer has stated. is:

> A basic rule of economics is that that "human wants are infinite." Nobody thinks of estimating next year's Gross National Product by adding up everything that everybody will want. Similarly it can be said that "Capital requirements are infinite," or that "State and municipal requirements are infinite." The determining factor of the volume of new facilities that will be created is not need; the limiting factor always is somebody's ability and willingness to finance new facilities and somebody else's ability and willingness to service the debt. Facilities are very expensive. Taxes are already high. Construction on credit costs vastly more than pay-as-you-go construction. Therefore, in explaining the moderate volume of state and municipal financing in recent years and in estimating its future volume, a catalogue of needs or wants (while useful) is not as important as an estimate of the future taxability of the community and the cost and availability of credit.[2]

[1] *State and Local Public Facility Needs and Financing,* Study prepared for the Subcommittee on Economic Progress of the Joint Economic Committee, 89th Congress, 2d Session, Washington: Government Printing Office, 1966. The National League of Cities, in conjunction with the Urban Institute, is currently engaged in updating data on anticipated capital outlays of states and municipalities through 1975. Data from this study are not yet available.

[2] *Ibid.,* Volume 2, pp. 276–77.

Thus, capital expansion by states and localities is tempered by the law of supply and demand and by sound financial planning and establishment of priorities by public officials. The plain truth of the matter is that, as has been true in the past, the highest priority water pollution problem, school building problems, housing problems, and other public service demands will be taken care of first and the less vital projects will have to wait their turn. As we are learning to our dismay, no nation is rich enough to fulfill all of its aspirations as opposed to all of its necessities. Thus "*enormous increase*" in state and local capital needs, and "exploding replacement needs" in schools, for example, are phrases which avoid giving any weight to the substantial replacement which has already been part of the post-war boom in school construction.

Ironically, the chief tangible item which would support any drastic increase in state and local debt relates to federal assistance programs such as water pollution control, airport construction, and so forth. Pressures on the federal government, to quote Mr. Surrey, have recently "caused attention to be focused on the potentialities of debt service grants to state and local governments . . . rather than the lump-sum grants that have been more traditional." What this means is that the federal government, in order to make a semblance of meeting unfilled financial commitments to states and localities, is really attempting to alleviate its own budget problems and avoid increasing federal debt. This pushes an added capital burden on to state and local governments by forcing them to raise the federal share of program costs in addition to their own share. Such a drastic shift in the federal aid delivery system would indeed give those who wished, one an opportunity to conclude that the market would have an insuperable problem.

What we need above all is the careful and painstaking approach manifested in the 1968 Joint Economic Committee study, certainly a landmark in the field. True, some of the assumptions underlying that pioneering study may need to be re-examined and possibly revised in the light of recent inflationary economic experience. A diversity of views exists among economists as to whether a substantial increase in state and local government financing in the period ending in 1975 will be experienced and whether adequate investment funds will be available to meet these needs. Certainly the potential market behavior of the commercial banks during this period is of the utmost importance, since they are the major buyers of state and local government securities. But hard facts and sound economic theories based on those facts are the answer, not unsubstantiated guesswork.

PRESENT COSTS OF MUNICIPAL BONDS

In discussing the present market, Mr. Surrey points to the "inevitable" rise in tax-exempt interest vis-a-vis corporate bonds of comparable quality. This process is not proved by any statistical evidence. As he himself admits elsewhere in his discussion, municipal rates have held remarkably steady at approximately 70 per cent of comparable taxable interest rates for a considerable period. Even now, in the fourth year of unexampled high rates of interest and under the pressure of monetary restraint, the present ratio is only 75 per cent. If the inflationary economic situation cools and Congress stops tampering with the tax-exempt status of municipal bonds, this ratio should once again stabilize at about 70 per cent and continue to offer its usual economic advantage to public bond issuers.

Since preparation of this article, the ratio has narrowed to 81 percent, mostly in response to market uncertainty caused by passage of the Tax Reform Act by the House of Representatives.

THE EQUITY QUESTION

In the course of this discussion, Mr. Surrey says: "Tax-exempt interest ranks second after capital gains taxation—perhaps third if we knew more about the magnitude of accelerated depreciation on buildings—among the factors enabling high-income taxpayers to reduce their effective rate of tax." This comment gives an impression that tax-exempt interest is a much more important factor in tax reduction for high-income taxpayers than is actually the case. The table cited by Mr. Surrey as the basis for his statement is in a study prepared in the Treasury Department and covers aggregate figures for taxpayers with adjusted gross incomes of $100,000 or more, 1967 level.

TABLE 2

	(In millions)
Amended adjusted gross income	$16,720
Less—personal deductions (taxes, interest, charitable contributions, etc.) but not including the unlimited charitable contribution	2,350
Amended taxable income	14,370
Less:	
One-half of capital gains on assets actually sold	3,775
Exempt interest on State and local bonds	440
Deduction for unlimited charitable contribution	105
Farm "tax losses"	70
Excess percentage depletion	60
Taxable income	9,870
Tax	4,715
Tax as percent of taxable income	47.8
Tax as percent of amended taxable income	32.8
Tax as percent of total income	28.2

Source: Tax Reform Studies and Proposals, U.S. Treasury Department, Joint Publication, Committee on Ways and Means, U.S. House of Representatives, and Committee on Finance, U.S. Senate, Washington, Government Printing Office, 1969, p. 83.

It shows (a) "amended adjusted gross income," defined as adjusted gross income after deductions for "proper business expenses," and increased by "the exempt part of capital gain, exempt interest, and excess percentage depletion." then (b) "amended taxable income" after taking out personal deductions (taxes, interest paid, charitable contribution, etc.), and (c) taxable income. The small element of truth in his statement depends upon highly selective statistical definition of the phrase "effective rates of tax," the particular definition being the ratio of tax paid to "amended taxable income." The deductions are eliminated from the comparison although they, too, are "factors enabling high-income taxpayers to reduce their effective rate of tax." Deductions totaled $2,350 million, and even if one-quarter were attributed each to *contributions* and *interest paid*, this would be $580 million each, compared with the $440 million interest on state and local bonds. Looked at in this way, interest on state and local bonds is probably no higher than the fourth or fifth largest factor instead of second or third.

The tabulated figures, if accurate, do disclose the relative importance of state and local interest as a factor of tax reduction to the individuals with incomes of over $100,000 a year, and its importance may be honestly computed by its relation to the total aggregate reduction in tax base—all factors—of $6,850 million ($16,720 million "amended adjusted gross income" less $9,870 million taxable income). State and local bond interest of $440 million is only 6.6 per cent of the total for all factors, and less than 12 per cent of the most important item, i.e., capital gains. To bill this as the "second" or "perhaps third" largest factor is at best to exaggerate beyond the bounds of ardent advocacy, and at worst to falsify the record.

EQUITY ISN'T EVERYTHING

Going to the guts of the matter, we are dealing with an issue far more complex and important than the role tax-exempt bond interest plays in tax avoidance. Attempting to tax income from municipal bonds automatically raises the complexities of:

1. Structural problems of the federal system itself and the allocation of powers and duties among three levels of governments—federal, state and local;
2. Complicated economic market relationships which involve the proper functioning of both the public and private sectors of the entire capital market;
3. Important legal problems which certainly would lead to protracted litigation ending in the Supreme Court; and
4. The problems of making the total tax structure—federal, and particularly state and local—function as fairly and effectively as possible by not further depressing financial resources of states and localities.

It is on the latter point, especially, that the so-called quest for equity falls on its face. As Nashville Mayor and National League of Cities President C. Beverly Briley stated recently, "It is the height of irony that an effort to tax a very few individuals receiving income from municipal bonds will boomerang against hundreds of thousands of local property taxpayers and users of municipal services who will have to bear the burden of increased debt service costs." As investors lose confidence in the integrity of tax exemption and the good faith of the federal government, their waning confidence will be reflected in higher interest rates bid for new bond issues. Higher interest costs added to an already heavily strained property tax system, a system known to be regressive, will neither contribute to taxpayer equity nor help financially hard-pressed cities meet mounting capital and operating revenue needs. Even if interest rates rise only 1 percentage point, it would cost on the order of an additional $150 million annually for a single year's volume of $15 billion. Over a 14 year period, the average life of long-term general obligation bond issues, this comes to about $2 billion.

I shall not dwell on the constitutional issue involved in the taxation of interest from municipal bonds. This is an issue which, I am confident, will be forced into the courts if the legislation proposed by the House Ways and Means Committee is enacted. Regardless of the outcome, lengthy litigation will cost a further stigma on municipal bonds which could even halt investment until the issue is resolved.

Mr. Surrey, however, has referred in his article to a statement made in 1942 by the Department of Justice before the House Ways and Means Committee to the effect that a tax on state and local bond interest "would be constitutional" and then makes the categorical claim that "certainly nothing has happened in the intervening years to cause lawyers to believe that such a prediction would, to say the least, be any less valid today." Presumably, Mr. Surrey meant to say that the Department of Justice in 1942 took the view that the Supreme Court would uphold an attempt to subject the income from municipal bonds to taxation and that no decisions have been rendered in the intervening years to change this prediction. Obviously, since there has been no direct attack on the tax status of municipal bond interest which has been the subject of litigation, "nothing has happened," to use the author's own words, to change this. In short, Mr. Surrey is stating only that the Department's opinion of 1942 has not been tested in court. The statement is really meaningless, but it has the effect of giving the reader the impression that it is all over but the shouting. Mr. Surrey only cites a "contrary argument" of the Attorney General of Maryland in a footnote, and makes no further reference to comments by attorneys deeply involved in the municipal bond business holding similar views. Without better information, the reader must feel that the only valid viewpoint is that set forth in the main body of the article and that "contrary" arguments are not to be considered seriously.

The facts, of course, are different. There is a substantial body of respectable legal opinion holding that an attack on the concept of intergovernmental immunity would be defeated in the Supreme Court. In fact, the present Administration, in proposing its "limit on tax preferences" program, recommended that the interest from municipal bonds not be included because of the market impact and doubtful constitutionality of such a move.[4] An attempt to conceal or downgrade the existence of such a viewpoint is misleading, particularly when the issue has already been clouded with misinformation and emotional appeals to "tax equity."

The reciprocal immunity doctrine is derived from the constitutional foundations of our federal system of government. The federal system is a remarkably durable system because each level of government has exercised a degree of independence of action within the framework established by the United States Constitution and the constitutions of the various states. This does not mean the actions of one level are isolated from or unaffected by those of another. Nevertheless, integrity of local policymaking must be respected and maintained in order that state and local governments can fulfill their primary responsibilities to the needs and demands of local citizens. If the federal government interferes with local fiscal decisions through federal taxation or supervision of local debt management, it interferes with the independence of judgment that local agencies must exercise in determining their own policies and programs which are dependent upon capital financing. Officials of local government will zealously preserve and protect the independence of local policymaking.[5]

[4] See the statement of the Honorable Charls E. Walker, Under Secretary of the Treasury, before the Committee on Ways and Means, U.S. House of Representatives, April 22, 1969.

[5] For an excellent brief on the constitutional issue, see the Statement of Northcutt Ely, General Counsel, American Public Power Association, in Hearings on the subject of tax reform before the Committee on Ways and Means, U.S. House of Representatives, 91st Congress, 1st Session, Washington: Government Printing Office, 1969, Part 6, pp. 2195-202.

PROPOSE ALTERNATIVES FOR CAPITAL FINANCING

This brings us to the central objective of Mr. Surrey's article and of this article, the need, and, do we know enough about such alternatives to adopt one at the present time?

To simplify, while differing in mechanics, most of these proposals revolve basically around an offer of a federal government subsidy on municipal bond interest rates in return for a waiver of tax exemption by state and local bond issuers.

Alternatives for capital financing should be viewed constructively. States and localities have utilized a relatively stable source of capital funds in the past and will continue to depend upon the tax exempt bond market in the future for an adequate supply of capital funds. While evidence suggests that this source will continue to meet the foreseeable needs of states and localities, it is the only source of capital financing available aside from the luxurious pay-as-you-go method.

In my opinion, any proposed alternative system of capital financing would have to meet the following criteria:

1. First, it must preserve the present federal system and protect the state and local governments from federal domination.

2. The state and local governments must preserve their freedom to act, independent of federal control, on matters of purely state and local concern.

3. Any federal subsidy must be at least as generous as the present financing advantage which the states and municipalities enjoy by virtue of tax exemption.

4. The federal government's obligation to provide a subsidy in lieu of tax exemption must be automatic and irrevocable.

5. The states and municipalities must have unrestricted access, at their own option, to both tax-exempt and taxable markets.

6. Financing precedures must not be subject to delay by federal red tape which might make state and local governments miss their best markets or involve them in increased capital costs as construction costs keep rising.

REAL COSTS OF TAX EXEMPTION

Mr. Surrey states in his article: "Those interested in the federal tax structure deplore the method of achieving this effect because of both the tax favoritism and the inefficiency or wastage involved in resorting to the technique of favoritism, in that more federal tax revenue is lost than the local governments obtained in aid." Again he states: "That exemption is a way of supplying federal aid—presently amounting to about $1.2 billion annually (at a revenue cost of $1.8 billion—to those governments through the lower interest rates."

The facts are quite otherwise. According to the United States Department of Commerce, gross state and local debt outstanding in the three most recent years an interest paid on that debt are estimated as follows:

TABLE 3

	1966	1967	1968
Beginning	$104,700,000,000	$111,600,000,000	$122,000,000,000
End	111,600,000,000	122,000,000,000	132,300,000,000
Total	216,300,000,000	233,600,000,000	254,300,000,000
Outstanding debt	108,150,000,000	116,800,000,000	127,150,000,000
Interest paid	3,451,000,000	3,813,000,000	4,437,000,000
Interest cost (percent)	3.19	3.26	3.46

Let us make the simplistic assumption that the United States Treasury makes, which we believe to be partially in error, but which probably represents their best case. Briefly stated, it is that present holders of tax exempts have a weighted average marginal tax rate of 42 per cent and that the federal government, therefore, loses the amount of increased tax revenue it would derive from those holders, if they should be forced, or had been forced, to purchase taxable securities instead.

It is ridiculous to assume, as Mr. Surrey apparently does, that the states and municipalities would ever have surrendered the 30 per cent financing advantage derived from tax exemption in the past or would ever surrender it in the future unless they received in exchange an irrevocable subsidy at least equal to the advantage surrendered. This is recognized by the proposal of Senator William Proxmire (D. Wisc.) and Congressman Wright Patman (D. Tex.) for a Municipal Capital Market Expansion Corporation, and the Urban Development Bank proposal offered by former President Johnson, both of which offered a subsidy of 33⅓ per cent. From the point of view of the state and local governments, it would be foolish to yield a financing advantage of 30 per cent *without federal control* for a subsidy of 33⅓ per cent *with federal control* merely because they are told there may be some hypothetical advantage by way of increased tax revenues to the federal government.

Indeed there is little economic inducement under normal conditions for public issuers to shift markets and they are unlikely to do so unless they receive a better *quid pro quo* than a subsidy of 33⅓ per cent. This is recognized by the emergence from the National Governors Conference of the so-called double-coupon proposal which envisages an irrevocable open-end 50 per cent subsidy to be paid by the federal Treasury. Actually, a good case can be made for a 50 per cent subsidy on grounds of equity. As pointed out by Sidney Homer in the 1966 JEC study:

> The fact that the gross interest rate usually paid on tax exempts is well below other interest rates is often misinterpreted as an inducement to borrow large sums. However, when municipalities or states borrow they often have to find additional revenues to meet debt service—immediately, not 30 years hence. And they cannot deduct their interest payments as corporations can so that Uncle Sam pays half. They pay it all.[*]

In all fairness, it must be pointed out that from an economic point of view the state and local governments would benefit substantially from an automatic irrevocable 50 per cent federal subsidy. It could scarcely be otherwise since they would be trading a 30 per cent financing advantage for a 50 per cent federal subsidy.

Mr. Surrey's analysis leaves the impression that the Treasury would gain a substantial amount of revenue if the present tax exemption for municipal securities were terminated and the federal government subsidized states and localities for the higher interest payments that they would have to make. It is not at all clear, however, that when the dust settles, this would in fact be the result. For termination of the exemption would result in vast upheaval in present financial markets. Many investors now drawn to municipal securities would no longer be attracted to them. These would tend to be taxpayers with high marginal tax rates. Individuals, in particular, would desert the municipal market in favor of equities. That is, individuals who now find municipal securities attractive because of the tax exemption would seek out investments with the next best tax advantage. They would probably turn, therefore, to investments which offered capital gains.

Other investors would be drawn into the municipal market by the increased yields which would be available if the tax-exempt status were terminated. These investors would be the ones who are themselves exempt from federal taxation, such as pension funds, foundations, and university endowment funds. Because they are tax exempt, these institutions would purchase fixed income securities which had a high yield relative to other securities offered in the market.

As a result of these shifts, taxable municipal issues would not be taxed at an average rate as high as 42 per cent. The rate would be much lower, probably no higher than 25 per cent. It would be unrealistic to assume, in other words, that the composition of a taxable municipal market would be the same as that of the tax-exempt municipal market.

If the average tax rate applied to interest on state and local government securities were less than the rate of the subsidy—which we think is the only reasonable assumption—then the cost of the subsidy to the Treasury would exceed the increased revenues due to the termination of tax exemption.

Let us for a moment assume that the marginal tax rate is 42 per cent. Table 4 shows calculations which demonstrate that if the most realistic subsidy rate of 50 per cent were utilized, the federal government would carry a net revenue loss on its subsidy program. Table 4 also shows that the federal government would realize a very serious loss if, as our studies show, the marginal tax rate of investors was 25 per cent. Only in the one instance of a 33⅓ per cent subsidy based on the incorrect assumption of a 42 per cent marginal tax rate would there be any federal revenue gain. But such a small subsidy would not be attractive enough, in light of potential dangers of the plan, to attract bond issuers.

[*] *State and Local Facility Needs and Financing, op. cit.,* Volume 2, p. 275.

Table 4

Savings to State and local governments because of tax exemption:	
$127,150,000,000, at 5 percent (taxable)	$6, 357, 500, 000
$127,150,000,000 at 3½ percent (tax exempt)	4, 450, 250, 000
Savings to State and local governments	1, 907, 250, 000
Range of subsidies:	
33⅓ percent of $6,357,500,000	2, 119, 167, 000
50 percent of $6,357,500,000	3, 178, 750, 000
Federal revenue gains (no tax exemption—'ncreased tax revenues):	
Increased revenue, at 42 percent of $6,357,500,000	2, 670, 150, 000
Increased revenue, at 25 percent of $6,357,500,000	1, 589, 375, 000
Case 1:	
Increased revenue, at 42 percent	2, 670, 150, 000
Subsidy, at 33⅓ percent	2, 119, 157, 000
Federal gain	550, 983, 000
Case 2:	
Increased revenue, at 42 percent	2, 670, 150, 000
Subsidy, at 50 percent	3, 178, 750, 000
Federal loss	508, 600, 000

Estimated property, the so-called revenue loss to the federal government dwindles to a loss of $551 million, the amount of the federal government's net gain after taking into account the federal subsidies in lieu of tax exemption it would have been compelled to pay. That is the most favorable case for the federal government.

Assume that it has to pay instead a subsidy of 50 per cent. It is now benefiting from past tax-exempt financing to the tune of $509 million, or the net loss it would otherwise sustain after accounting for federal subsidy in lieu of taxation.

The basic principle is that even using the United States Treasury's assumptions, the federal government is bound to lose if the subsidy rate on the taxable obligations is above the marginal average tax rate of those who presumably would be forced into the taxable market.

Let us see how this works out with current financing as calculated in Table 5.

Table 5

Present annual savings to State and local governments because of tax exemption:	
$15,000,000,000, at 8 percent (taxable)	$1, 200, 000, 000
$15,000,000,000, at 5.6 percent (tax exempt)	840, 000, 000
State and local government savings	360, 000, 000
Range of subsidies:	
33⅓ percent of $1,200,000,000	400, 000, 000
50 percent of $1,200,000,000	600, 000, 000
Range of Federal revenue gains or losses assuming no tax exemption:	
Increased revenues, at 42 percent of $1,200,000,000	504, 000, 000
Increased revenues, at 25 percent of $1,200,000,000	300, 000, 000
Case 1:	
Increased revenue, at 42 percent	504, 000, 000
Subsidy, at 33⅓ percent	400, 000, 000
Annual Federal gain	104, 000, 000
Case 2:	
Increased revenue, at 42 percent	504, 000, 000
Subsidy, at 50 percent	600, 000, 000
Annual Federal loss	96, 000, 000
Case 3:	
Increased revenue, at 25 percent	300, 000, 000
Subsidy, at 33⅓ percent	400, 000, 000
Annual Federal loss	100, 000, 000
Case 4:	
Increased revenue, at 25 percent	300, 000, 000
Subsidy, at 50 percent	600, 000, 000
Annual Federal loss	300, 000, 000

Thus, the maximum benefit to the federal government on the most favorable assumption shows an annual gain of $104 million. If it pays a 50 percent subsidy, it will lose $96 million.

The following table shows the cumulative effect:

[In millions of dollars]

	Annual financing	Cumulative annual financing	Cumulative annual gains case 1	Cumulative annual losses cases 2
1970	16,652	16,652	115,400	106,600
1971	18,101	34,753	240,900	229,400
1972	19,676	54,429	377,300	348,300
1973	21,388	75,817	525,600	485,200
1974	23,249	99,066	686,800	634,000
1975	25,272	124,338	862,800	795,700

The point is that the federal government's subsidy plan may not be all that it is cracked up to be.

Furthermore, Treasury costs would be increased in another way. Termination of tax exemption for municipal securities would narrow the market for long-term issues in general. Thus interest rates on Treasury bonds would be higher than they otherwise would be. The general increase in Treasury borrowing costs might be as high as 50 basis points. Applied to the very large total of federal debt held, such an interest cost increase would clearly be very significant. This higher interest cost might be incurred only gradually as new issues of taxable municipals replace outstanding tax-exempt issues, but it would be important nonetheless.

A general increase in long-term borrowing costs would also affect corporate borrowing and individuals securing a home mortgage. A strict accounting would take these added costs into consideration.

Mr. Surrey's implication that termination of tax-exempt status for municipal securities would involve a net saving to the Treasury is, therefore, clearly unrealistic if we consider the shape of the world after an adjustment had been made by the new law. Furthermore, in the interim period in which this adjustment was being made, there would be heavy added costs as underwriters struggled to discover the new configuration of the financial markets.

A MORE CONSIDERED APPROACH NEEDED

We would have hoped that the idea proposed by Mr. Surrey and the legislation prepared by the Ways and Means Committee could have awaited the results of a study currently under way by the Advisory Commission on Intergovernmental Relations. This study is expected to be completed by December. It involves a detailed examination of all the proposed alternatives and their effect on traditional capital financing, their relationship to tax reform, and their possible benefits to states and localities. This Commision, composed of representatives from all three levels of government—federal, state, and municipal—as well as distinguished representatives from the private sector, could render an important public service by impartially investigating the problems in this area and providing a rational and enlightened basis for their solution.

It seems incredibly ill-considered and hasty to make fundamental changes, as the Ways and Means Committee has proposed, in a system that has endured since the beginning of the Republic and served states and local governments well through many difficult times, merely on the basis of one day's hearings, very nearly the total extent of the House Ways and Means Committee's public consideration of this vital problem. The Investment Bankers Association, in its testimony before the Ways and Means Committee on March 11, 1969, raised important economic and market questions to which, as it candidly admitted, there were as yet no satisfactory answers. Nevertheless, no further investigation by the committee of these questions has, to our knowledge, taken place, and virtually all consideration of proposed legislation has proceeded behind closed doors. Such a method of procedure does little to inspire confidence that legislation emerging from this committee is based on a deliberate and impartial weighing of all the factors involved. On the contrary, it seems to bespeak a panic haste to shoot first and ask questions later. We hope the Senate will move more carefully when it begins consideration of these matters.

If the issuance of taxable municipal bonds in significant amounts does eventually prove necessary and desirable, we believe it extremely unwise in the interim to throw sand in the gears of the present tax-exempt market through the introduction of either the "limit on tax preferences" or the "allocation of deductions" proposals until such time as the proper legislative bases have been established in the various states and the initial problems of marketing such taxable securities have been worked out. It is foolish to burn down the old house before the new one is ready to live in.

Furthermore, if such proposals are intended to render the functioning of the present tax-exempt market difficult or impossible in order to force a recourse to the taxable markets, this immediately raises grave doubts about the "voluntary" nature of the new taxable financing device and the credibility of those who say they have no wish to destroy the institution of tax exemption as such.

CONCLUSION

The financing needs which state and local governments will face in the years ahead are admittedly great. Let us have careful investigation of these needs, updated regularly if necessary, and the priorities they will command in the hierarchy of all our needs as a nation, and balance against them the not unbounded national economic strength that can be mobilized. We will then be operating rationally as to the need for a major new capital financing mechanism.

Certainly it is not all that clear that the subsidy plans proposed thus far are well enough understood to work as favorably as their proponents suggest. Most fail to account for the large and growing subsidies which the federal government must provide to make a system of taxable state and municipal bonds workable. Second, no weight is given to the "across-the-board" rise in interest rates in the taxable market which will result from the large-scale introduction of taxable municipal bonds into the taxable sector. This development, from the federal government's point of view, will be unfavorable since the increased tax revenues will not compensate for the added interest costs and the necessary federal subsidies in lieu of tax exemption. And last, much more must be known about the impact of such proposals on traditional intergovernmental fiscal relationships.

STATEMENT OF C. BEVERLY BRILEY, MAYOR OF NASHVILLE, TENNESSEE, PRESIDENT, NATIONAL LEAGUE OF CITIES

SUMMARY

The cities of the nation are vitally concerned with the provisions of H.R. 13270 which affect municipal bond interest because they would increase the cost of city government and threaten the physical rejuvenation of our cities. Tax exemption is important to cities because it protects the integrity and independence of fiscal policy-making by cities, it provides a stable, adequate independent source of capital and saves states and cities billions of dollars in interest costs and tax dollars.

The market impact of mere House passage of H.R. 13270 has been great: increasing interest costs an average of ½ to 1 percentage point which in turn has added millions of extra dollars to local debt service costs. The actual and the psychological impact of the ADR and LTP will very severely curtail the market for municipal bonds.

The large extra cost of this action to local taxpayers and the very small return to the Federal government, coupled with the fact that extra costs must be paid through regressive property taxes hardly is equitable. Congress must take full responsibility for any increase in local property taxes. This action would really cause a taxpayers revolt.

The interest subsidy provisions do not meet certain criteria of acceptability established by bond issuers and would pose critical problems for both the federal and the local governments.

The cities call upon this Senate Finance Committee to delete provisions which include bond interest in the Limit on Tax Preferences and the Allocation of Deductions rule. They urge deletion of the interest subsidy program from the bill for consideration at a future time.

Statement

I am C. Beverly Briley, Mayor of Nashville, Tennessee and President of the National League of Cities. I am speaking on behalf of more than 14,600 cities of all sizes throughout the nation.

Reason for concern

In early August, the House of Representatives passed H.R. 13270 which contained provisions to tax directly and indirectly the interest from municipal bonds. This action has increased interest rates significantly on all state and local government bonds and will cost state and local taxpayers millions of additional tax dollars over the next ten to twenty years. If the Senate concurs with the House action, the effect on municipal capital financing will be devastating.

Surely no other issue has concerned city officials over the past several months to the degree that this has. The reason is simple. This action strikes at the very fiscal stability of our cities. This an insidious threat because the provisions of H.R. 13270 could increase taxes and add additional strain to already tight budgets. It will delay or perhaps halt altogether public works projects which are vital to the physical rejuvenation of our cities—in fact our entire physical environment. We thus attach the greatest importance to these hearings for the Senate must undo the damage contained in H.R. 13270. The alternative is to face a taxpayers' revolt of mammouth proportions that would put the current "revolt" to shame.

Importance of tax exemption

Tax exemption of municipal bonds is important for these reasons. First, it represents a clear determination on the part of those who designed our federal system and of succeeding governmental officials to protect the fiscal policy integrity and independence of each level of government. It is a hands-off policy which enables local officials to be fully responsive to local conditions and needs, not to the policies of another level of government. Second, the principle of tax exemption has created a special, independent source of capital upon which cities can rely without concern for competitive capital demands from the private sector or from the federal government. Third, and perhaps most important, tax exemption has kept the cost of capital relatively low, saving states and local governments billions of dollars in interest costs and tax dollars. The legislation before you jeopardizes all of these benefits.

It is obvious that the actions of one level of government are not isolated from or unaffected by another in our "marble cake system." But the integrity of local policymaking must be respected and maintained in order that state and local governments can fulfill these primary responsibilities to the needs and demands of local citizens. Interjecting the Federal government into local fiscal decisions through Federal taxation or any other form of influence on local debt management, the both of which are almost answered by H.R. 13270, interferes with the independence of judgment that local officials now exercise in the important area of capital financing.

Abandoning or severely constricting the tax exempt money market as envisioned through the interest subsidy provisions of the bill suggest serious political implications. When we consider that taxable local government bonds would have to compete with corporate securities and securities of the Federal government for available funds, we must ask, under such conditions, would local government bonds be well received by the investor? The clear answer is that the private sector competition could well place the collective needs of our communities, as determined by governmental processes, secondary to the interest of a corporate board of directors or the motivation of economic gain of an individual investor.

The economic return from the construction of a school or sewer project may not be as great as that from a steel mill or automobile plant, but the social importance is another matter. To require needed public projects to compete for the investor's dollar on equal economic terms with say, General Motors and AT&T is fiscal folly.

Market impact

I will return to the interest subsidy plan later. What has been and will be the specific market impact of the inclusion of bond interest in the Limit on Tax Preferences and Allocation of Deduction rules?

The tax exempt bond market, like all other segments of the economy, has felt the effects of inflation and tight monetary policies applied by the Federal government to cool off inflation. Commercial banks, the largest single investor group in the market, have curbed their municipal bond investment programs and in fact have been liquidating portions of their bond holdings to maintain reserves and lending capacity. However, extrapolating the effects of tight monetary policy, based roughly on bond price trends in periods prior to the House action and comparison to the effects of the 1966 credit crunch on municipal bonds, shows that the prospective action of Congress has had a noticeable effect on interest rates. This effect has been estimated conservatively at least at an average ½ of one percent increase in bond yields and is more likely on the order of one percentage point. We can only conclude from this that the investors' faith in the traditional security of municipal bond tax exemption has been breached and he is reacting to it.

If Congress enacts the specific provisions of H.R. 13270 which affect bonds (i.e. inclusion of bond interest in the allocation of deductions and the limit on tax preferences) it would probably remove individual investors from the market for tax exempt bonds altogether. Moreover, this action could have an irreparable psychological effect on institutional investors, namely the banks and fire and casualty insurance companies. Once the principle of tax exemption is breached, these investors in making long term investments in municipal bonds, would have to anticipate the day when some future Congress might apply the rules of H.R. 13270 against the bond investment practices.

The situation is made more difficult by the threat of litigation to test the constitutionality of bond interest inclusion in the Limit on Tax Preferences. Lengthy litigation all the way through the Supreme Court, taking as much as three years, would leave the status of tax exemption in total doubt and could very well discourage investment in municipal bonds altogether.

Cost impact

In dollars, the cost of the House action is immense. Assuming that final action on this bill did not occur until next year and that the effect on interest rates of House passage of H.R. 13270 is indeed an average of one percentage point increase, the additional cost on an annual volume of $15 billion of bonds is $150 million. The effect of actual enactment over the life of future bonds would be more and of course, cumulative. These figures are particularly striking when one considers that the Treasury Department will receive less than $80 million a year in tax revenue as a result of applying "ADR" and "LTP" to municipal bond interest. This is indeed a sad price to have to pay for very little accomplishment in either tax revenue or making the Federal income tax system more "equitable."

Where is the real equity?

This equity question rises continuously. Our studies show that based on the best estimates, interest from municipal bonds rate a very poor fourth or fifth in terms of all factions contributing to tax avoidance. In percentage terms, based on Treasury Department figures, it accounts for only 6.6% of all such factors and only 12% of the largest factor—capital gains.

Moreover, we have found from conversations with market experts that those few individuals now buying municipal bonds (less than 2% of new bond issues have been bought by individuals in recent years) are more likely to be in lower tax brackets—older persons seeking retirement investments, school teachers and so forth—not high tax bracket individuals who are naturally more interested in growth for their investments. Thus, your action would tax "the forgotten American" as he has been called, who may own 5 or 10 bonds.

On the other hand, local agencies would have to increase already strained tax rates on the regressive property tax to meet the additional costs. The diversion of additional scarce local funds to debt service would further aggravate the shortage of funds needed to finance other essential local services. Moreover, further aggravating an already regressive tax system is hardly equitable.

To tax a very few rich individuals, móst of whom do not now view municipal bonds as good investments anyway.

—risks complicating the structural problems of the Federal system itself.

—risks unbalancing highly complex economic market relationships in the entire capital market,

—raises important legal and constitutional questions which would lead to protracted litigation,

—and makes more difficult the problems of making the total tax structure—federal, state and local—function equitably and effectively while not further depressing local resources.

To us, it is unthinkable to take these risks which will boomerang against hundreds of thousands of local property taxpayers and users of municipal services who will have to bear the burden of increased debt service costs and whose governments will have to suffer the other consequences. This is not equity and we who are the first to feel the taxpayers revolt will be hard put to explain why the Congress of the United States took action which causes us to increase taxes.

The interest subsidy plan

The House has proposed in H.R. 13270 that the Federal government undertake to subsidize municipal bond interest in turn for a waiver of tax exemption on the part of the local bond issuer.

Alternatives to capital financing need not be viewed unconstructively. States and localities have enjoyed a relatively stable source of capital funds in the past and will continue to depend upon the tax exempt bond market in the future for an adequate supply of capital funds. While strong evidence shows that this source will continue to meet the foreseeable needs of states and localities, it is the only source of capital financing available aside from the luxurious pay-as-you-go method and, of course, is dependent largely upon future activity of institutional investors and the expectation that Congress will not attempt to tamper with the principle of tax exemption. To this end, the "alternative" adopted by the House is not really an alternative in that the other applicable provisions of the bill do much to curtail the tax exempt status of bonds.

Criteria for alternatives

Any proposed alternative system of capital financing would have to meet the following criteria:

1. First, it must preserve the present Federal system and protect the state and local governments from Federal domination.
2. The state and local governments must preserve their freedom to act, independent of Federal control, on matters of purely state and local concern.
3. Any Federal subsidy must be at least as generous as the present financing advantage which the states and municipalities enjoy by virtue of tax-exemption.
4. The Federal government's obligation to provide a subsidy in lieu of tax-exemption must be automatic and irrevocable.
5. The states and municipalities must have unrestricted access, at their own option, to both tax-exempt and taxable markets.
6. Financing procedures must not be subject to delay by Federal red tape which might make state and local governments miss their best markets or involve them in increased capital costs as construction costs keep rising.

We feel the interest subsidy program falls short of meeting these criteria and agree with the Administration in recommending that it not be enacted. This provision of the bill, we believe, was hastily constructed without consultation with public issuers, bond attorneys and market experts and presents problems for both the Federal Government and states and localities. Among its more serious question marks are:

—strong evidence that the program will cost the Federal government substantial amounts of money rather than add any profit to the Treasury.
—the marketability of taxable municipal securities.
—the fact that taxable municipal bonds will be directly competitive with Federal securities and corporate securities and will not bear the guarantee of the Federal government or the magic name of a powerful corporation.
—an impact of a large volume of taxable securities on the taxable bond market in terms of interest costs.
—state legal barriers.

I include for the record at this point an article written by Patrick Healy, Executive Director of the National League of Cities, entitled "The Assault on Tax Exempt Bonds," appearing in the July/August issue of *Tax Policy*. The article deals extensively with the so-called capital financing alternatives and will serve as detailed explanation for our opposition.

Allow me to expand on a subject I also referred to earlier when I used the word "manipulation" in connection with the subsidy arrangement embodied in H.R. 13270. As stated in the bill, the purpose of the subsidy is ". . . to encourage states and their political subdivisions voluntarily to relinquish the privilege of tax exemption . . ." In other words, the Secretary of the Treasury is empowered to offer an interest subsidy great enough to entice municipal issuers to sell taxable securities. Obviously, if no, or very few, tax exempt bonds were issued—as would probably be the case in the event of a 40% subsidy—the tax exempt market would soon shrink and perhaps dry up completely. After that came to pass, would the Secretary of the Treasury still feel obliged to continue offering a 40% subsidy? Unlikely. If there were no genuine tax exempt market against which to gauge a true yield differential—and therefore the size of an equitable subsidy—it is unlikely that the Secretary would feel obliged to offer more than the minimum subsidy of 25%. Carrying this to the next logical step, a case could be made in some future Congress that there is no need for *any* subsidy, inasmuch as there would no longer be any *visible* difference in tax exempt and taxable yields. But, even if the present subsidy arrangement were left unchanged and the proposed minimum of 25% left in effect, state and local governments would still have lost a goodly portion of their present "market" subsidy of 30–35%. This seems ironic when one considers that the Federal government is talking about "revenue sharing" at this same time. Perhaps even more harmful than the economic penalty which can be perpetrated under the present bill, is the very real prospect that the Federal government, through its ability to set the subsidy rate and the power that any such discretion inherently carries with it, would be in a position to exert real influence over policy matters heretofore considered the domain of local government.

The answer to the problem lies not in dismissing the subject of alternatives outright but in postponing its consideration until this committee and its House counterpart can fully study and understand its ramifications.

Prior to closing, I should like to address myself briefly to the [illegible] of "arbitrage." The House bill contains a provision designed to bar state and local governments from issuing bonds and investing the proceeds in U.S. obligations. In those few cases where such investment was attempted for the purpose of obtaining revenue from the difference in interest cost between municipal and United States bonds, the legal officers of the states concerned have stepped in and halted the process. The provision is unnecessary and dangerous, particularly because it contains no definitions of or standards relating to arbitrage. Rather, it leaves this whole question to the discretion of the Secretary of the Treasury. We recommend its deletion.

To summarize, we are convinced that the inclusion of any of the provisions affecting municipal bond interest will have a disastrous effect on the fiscal well-being of our states and cities and will serve to seriously impair the physical development of our cities. It is truly incredible how much damage so little a stroke of the legislative pen will wrought. This must not come to pass. The interest from municipal bonds should be deleted from the Limit on Tax Preferences Rule and from the Allocation of Deductions Rule. The interest subsidy program should be deleted and deferred to future hearings.

The CHAIRMAN. Mayor Davis.

STATEMENT OF HON. ILUS W. DAVIS, MAYOR OF KANSAS CITY, MO.

Mayor DAVIS. I appear here today not only as mayor of Kansas City, Mo., but as president of the Missouri Municipal League. I have been authorized to appear here on behalf of the city of Kansas City by the city council, and on behalf of the Missouri Municipal League by the board of directors of that organization. I am here to register a strong protest to any effort by the Congress of the United States to levy a tax on the income of municipal bonds.

At a time when local government is confronted with its hour of greatest financial need to provide not only essential public services but capital needs for various essential areas of local government responsibility, we are confronted with this proposed legislation, which in our opinion could destroy our ability to proceed with and plan any bond financed capital programs. The people of our areas are looking to local government for the development of streets, sewers, and airports, the financing of urban renewal, development of pollution control facilities, as well as the construction of schools, hospitals, parks, waterworks, and other basic facilities for expanding urban areas.

There is no doubt, as has been indicated by the bond market for the past several weeks, that due to the threat of taxation of municipal bonds, coupled with high interest rates, and the uncertainty which surrounds the purchase of those securities, the capital market for municipal facilities has almost been destroyed. If the interest from municipal bonds becomes taxable, there must be a complete reappraisal of the municipal bond as an instrument of financing by the market. There is little question that municipal bonds would then be competing directly with the vast requirements of private enterprise in its financing of corporate expansion. In view of the small size of most municipalities in this country, there is little question that the cost of debt financing for city government would exceed the cost of debt financing of private corporations. This is especially true when we are in the period of history where the cities are confronted with monumental social, economic, and political problems. The best estimate we can get in this area is that municipal bonds of good quality would require roughly 2 percent more interest rate than is being paid now, which if extended over a period of time to include all debts of Kansas City, would bring about a real estate tax increase of 6 to 8 percent to finance the additional interest cost. In the field of revenue there would be little doubt the net interest increase would amount to about 2½ percent.

Over a period of time, if this increase were extended to the present debt of Kansas City for water and sewer facilities, the water and sewer rates of this city would need to be increased by 10 percent to accommodate additional interest costs. It is quite apparent that instead of putting the burden of taxation onto the rich—which is the appealing but unrealistic political basis for this change—the ultimate result would be that real estate taxes and water rates and sewer rates of the poor and rich alike would undergo a substantial increase. And I can't emphasize too much, gentlemen, that instead of taxing the rich in this proposal by one of the phenomena of financing in this country, if this proposal goes through you are ending up increasing real estate taxes and the water rates and the sewer rates of the poor and the rich of this whole country.

Now, we are aware that a proposal has been made to temper this result by giving a subsidy by the Federal Government for the additional interest costs which would result from the taxation of municipal bond interest. This proposal does not appear to be sound. We feel that if the Federal Government starts paying some substantial share of the interest on municipal debt that the next step would be for the Federal Government to exercise control over the issuance of that debt. History tells us that the man who pays the fiddler calls the tune, and certainly it should not be unexpected for the Federal Government to step in and attempt to exercise some control over the amount, the purpose, and the type of debt instrument that might be issued by local government if the Federal Government were paying part of the interest cost. In addition, there is a question as to what the financial market might think of a debt instrument which had an interest coupon that was payable by two governments. A division of responsibility for the payment of interest on a debt instrument could create much additional expense and confusion in the administration in the issuance of this debt instrument and could create market confusion concerning the value of that interest.

At a time when the Federal Government has announced publicly that it is going to pursue a policy of decentralization, as has been evidenced by its action in establishing regional centers in various areas; and at a time when the Federal Government has announced that it is going to rely more and more on our Federal policies of separating responsibility for various areas of Government action, it would appear that this proposal to bring all of the interest of local debt instruments into the purview of the Federal Government flies in the face of these policies. This country has enjoyed a long tradition of a division of labor and responsibility, as between the National Government and local government. This tradition has led to well-defined areas of responsibility in the construction of capital facilities and has promoted well the financial markets in the sale of debt instruments. This proposed legislation would immediately place the Federal Government in a stance to exercise control over the issuance of any local debt instrument in the United States and would reduce the capacity of local government to meet its obligations in the construction of capital facilities.

It is with considerable irony that I note that while the Federal Government is ready to step in and levy taxes on the income of the debt instruments of local government and thereby increase substantially the cost of local government, that the National Government has said nothing about letting local government levy real estate taxes on facilities of the Federal Government so that additional money could be raised to meet the additional financial burdens. If we are to abandon the principle of separation of responsibility in the field of taxation, I say that it should be done on both sides and that local government should be permitted to levy the ordinary real estate taxes on the market value of the Federal Government property that enjoys all of the services now provided by local government without making any contribution therefor. Indeed the Congress might well consider the net financial results of such a breakdown in the laws and traditions that now exist before it proceeds further with this proposal.

No one has questioned the fact that if such legislation, as is proposed, were to be adopted, it would be immediately challenged in the courts on the basis of the Constitution and the case law that now exists on the books. Certainly, such litigation would take time to be considered and resolved, and in the meantime, there is no question but that the municipal bond market would be in a state of limbo due to the uncertainty of both the legal and the financial aspects of the taxation of municipal bond interest. This litigation would continue for many months at a period when there has never been a greater need for municipal and school facilities than there is today.

It is incredible that local government work, which is suffering from lack of understanding and operational support at the State level, should now find itself battered by the National Government in the field of its capital financing, to the point where such financing is now almost impossible. Here at the peak of the urban crisis, when the major population centers of this country are seething with unrest, part of which can be attributed to a lack of facilities to meet the needs of the times, the Congress has stepped in with a proposal which has completely disrupted the capacity of local government to undertake capital financing. This lack of understanding by the National Government on the practical functioning of local government at a time of crisis reflects no credit on this proposal. The continuation of discussions and hearings on this proposal will effect a moratorium on the construction of badly needed capital facilities by local government across this country. An immediate decision should be made to abandon the efforts to levy Federal income taxes on the interest of local government debt instruments so that local government from coast to coast can continue to meet and carry out its obligations.

Gentlemen, we thank you very much for the opportunity to appear before you.

The CHAIRMAN. Mayor Davis, you used a word that appeals to me. You used the word "incredible." To me it is absolutely incredible that the House of Representatives would send us something that is opposed by 50 Governors in 50 States, by every State legislature, by every mayor, by every county commissioner, by every little board of education, by every governing body in the entire United States other than the Federal Government itself. That to me is utterly incredible.

I suppose this is as good a time as any to put in communications we have received from State legislatures, cities, county governments, all over the whole country, and I will ask those be provided for the record and printed. It costs money but while we are dealing with this thing it ought to be made available. I am also going to ask we print a list of outstanding people from the width and breadth of this country, Governors, mayors, legislators, outstanding lawyers, port authorities, about everybody you can think of throughout the entire country who asked to testify and we just can't hear because we don't have time, we just can't hear all these fine people, and every one of them had the right to be heard, at least have their views presented, and some of these are outstanding people. Just to pick out a few of them, for example, some people we just can't hear, here is the mayor of Albany, N.Y., or here is the city comptroller of Chicago, here is a man speaking for the Michigan Association of Counties, just to pick off three in alphabetical order. It is utterly fantastic to this Senator to think the House would send us something that.*

Mayor BRILEY. Mr. Chairman, we who have been dealing with this problem for many years recognize the great importance of this and we were really amazed that this did get into the House version.

The CHAIRMAN. To me it is utterly fantastic that it got this far.

As I say, I will never be surprised again at what can happen in Washington. [Laughter.]

Senator ANDERSON. Wasn't there quite a substantial vote in the House?

Mayor BRILEY. Yes, sir; it was under the closed rule, and this question itself was never really put to the House, this particular point of

*The Communications received by the Committee expressing an interest in the subject of municipal bonds appears as appendix C of this volume, p. 3597. The list of persons requesting to testify before the Committee on this matter appear at p. 3602.

the question, because the House considered the bill under the closed rule.

The CHAIRMAN. Senator Williams?

Senator Hansen.

Senator HANSEN. Mr. Chairman, I don't have a question but I would like to associate myself with the remarks you just made. I think you are absolutely right. I have had communications from the Wyoming Association of County Assessors, and the county commissioners. Yesterday there were three representatives of my State here, the president of the Wyoming Stockgrowers Association, the vice president, and a representative of the county commissioners association were all on hand, and they agree with exactly the sentiments you express.

If I may, I would like to have this telegram put in the record.

The CHAIRMAN. By all means.

Thank you very much, gentlemen. We appreciate your testimony here today. It is a very fine presentation on behalf of the mayors of this entire Nation.

(The telegram referred to by Senator Hansen, Mayor Ilus W. Davis' prepared statement, and a statement of Rollin F. Agard, Financial Consultant, Aviation Department, city of Kansas City, Mo., follows:)

[Telegram]

WORLAND, WYO., *September 22, 1969.*

Hon. CLIFFORD P. HANSEN,
Senate Office Building,
Washington, D.C.

Be alerted that Wyoming County Assessors' Association as a group and individually go on record as opposed to the exemption being removed on local bonds as pending in Senate hearings scheduled to begin September 23.

FORD M. WELCH,
President, Wyoming County Assessors Association.

STATEMENT OF MAYOR ILUS W. DAVIS, KANSAS CITY, MO.

SUMMARY

1. I appear in opposition to the levying of a tax on income of municipal bonds on behalf of the City Council and the Board of Directors of Missouri Municipal League.

2. In hour of greatest financial need, this legislation could destroy ability of local government to finance capital programs.

3. This proposed legislation has now almost destroyed the municipal bond market. If municipal bond interest becomes taxable, there must be a complete reappraisal of these bonds as an instrument of financing.

4. The cost of debt financing for city government would exceed the cost of debt financing of private corporations, municipal interest costs would increase roughly 2 to 2½% resulting in 6-8% increase in real estate taxes and about 10% increase in water and sewer rates.

5. Instead of putting taxation on the rich (an appealing but unrealistic political basis). it would substantially increase taxes and water and sewer rates of the poor and the rich.

6. The proposed federal subsidy of a portion of interest costs provides opportunity for Federal Government to exercise control over amount, purpose, and type of debt issued by local government.

7. The subsidy would provide division of responsibility for payment of interest on these bonds creating much additional expense in administration.

8. The Federal Government has in recent months pursued policy of decentralization. This legislation flies in the face of such a policy.

9. This legislation levies taxes on income of local government bonds at substantial cost to those governments but is silent about letting local government levy real estate taxes on facilities of Federal Government to meet local financial burdens.

10. This proposed legislation would be immediately challenged in the Courts constitutionally and on basis of case law now existing. This would take time, thus further contributing to the state of limbo in the municipal bond market.

11. At peak of urban crisis, the Federal Government proposes to step in and completely disrupt capacity for local government to undertake capital financing.

Statement

Gentlemen: I appear here today as Mayor of Kansas City, Missouri and as President of the Missouri Municipal League. I have been authorized to appear here on behalf of the City of Kansas City by the City Council, and on behalf of the Missouri Municipal League by the Board of Directors of that organization. I am here to register a strong protest to any effort by the Congress of the United States to levy a tax on the income of municipal bonds.

At a time when local government is confronted with its hour of greatest financial need to provide not only essential public services but capital needs for various essential areas of local government responsibility, we are confronted with this proposed legislation, which in our opinion could destroy our ability to proceed with and plan any bond financed capital programs. The people of our areas are looking to local government for the development of streets, sewers and airports, the financing of urban renewal, development of pollution control facilities, as well as the construction of schools, hospitals, parks, water works and other basic facilities for expanding urban areas.

There is no doubt, as has been indicated by the bond market for the past several weeks, that due to the threat of taxation of municipal bonds, coupled with high interest rates, and the uncertainty which surrounds the purchase of those securities, the capital market for municipal facilities has almost been destroyed. If the interest from municipal bonds becomes taxable, there must be a complete reappraisal of the municipal bond as an instrument of financing by the market. There is little question that municipal bonds would then be competing directly with the vast requirements of private enterprise in its financing of corporate expansion. In view of the small size of most municipalities of this country, here is litle question that the cost of debt financing for city government would exceed the cost of debt financing of private corporations. This is especially true when we are in the period of history where the cities are confronted with monumental social, economic and political problems. The best estimate we can get in this area is that municipal bonds of good quality would require roughly 2% more interest rate than is being paid now, which if extended over a period of time to include all debts of Kansas City, would bring about a real estate tax increase of six to eight percent to finance the additional interest cost. In the field of revenue bond financing, which is the basic means of financing water works and pollution control facilities, there would be little doubt the net interest increase would amount to about 2½%. Over a period of time, if this increase were extended to the present debt of Kansis City for water and sewer facilities, the water and sewer rates of this City would need to be increased by 10% to accommodate additional interest costs. It is quite apparent that instead of putting the burden of taxation onto the rich (which is the appealing but unrealistic political basis for this change) the ultimate result would be that real estate taxes and water rates and sewer rates of the poor and rich alike would undergo a substantial increase.

We are aware that a proposal has been made to temper this result by giving a subsidy by the federal government for the additional interest costs which would result from the taxation of municipal bond interest. This proposal does not appear to be sound. We feel that if the federal government starts paying some substantial share of the interest on municipal debt that the next step would be for the federal government to exercise control over the issuance of that debt. History tells us that the man who pays the fiddler calls the tune, and certainly it should not be unexpected for the federal government to step in and attempt to exercise some control over the amount, the purpose, and the type of debt instrument that might be issued by local government if the federal government were paying part of the interest cost. In addition, there is a question as to what the financial market might think of a debt instrument which had an interest coupon that was payable by two governments. A division of responsibility

BEST AVAILABLE COPY

for the payment of interest on a debt instrument could create much additional expense in the administration in the issuance of the debt instrument and could create market confusion concerning the value of that interest.

At a time when the federal government has announced publicly that it is going to pursue a policy of decentralization, as has been evidenced by its action in establishing regional centers in various areas; and at a time when the federal government has announced that it is going to rely more and more on our federal policies of separating responsibility for various areas of governmental action, it would appear that this proposal to bring all of the interest of local debt instruments into the purview of the federal government flies in the face of these policies. This country has enjoyed a long tradition of a division of labor and responsibility, as between the national government and local government. This tradition has led to well-defined areas of responsibility in the construction of capital facilities and has promoted well the financial markets in the sale of debt instruments. This proposed legislation would immediately place the federal government in a stance to exercise control over the issuance of any local debt instrument in the United States and would reduce the capacity of local government to meet its obligations in the construction of capital facilities.

It is with considerable irony that I note that while the federal government is ready to step in and levy taxes on the income of the debt instruments of local government and thereby increase substantially the cost of local government, that the national government has said nothing about letting local government levy real estate taxes on facilities of the federal government so that additional money could be raised to meet the additional financial burdens. If we are to abandon the principal of separation of responsibility in the field of taxation, I say that it should be done on both sides and that local government should be permitted to levy the ordinary real estate taxes on the market value of the federal government property that enjoys all of the services now provided by local government without making any contribution therefor. Indeed the Congress might well consider the net financial results of such a breakdown in the laws and traditions that now exist before it proceeds further with this proposal.

No one has questioned the fact that if such legislation, as is proposed, were to be adopted, it would be immediately challenged in the Courts on the basis of the Constitution and the case law that now exists on the books. Certainly, such litigation would take time to be considered and resolved, and in the meantime, there is no question but that the municipal bond market would be in a state of limbo due to the uncertainty of both the legal and the financial aspects of the taxation of municipal bond interest. This litigation would continue for many months at a period when there has never been a greater need for municipal and school facilities than there is today. It is incredible that local government work which is suffering from lack of understanding and operational support at the State level, should now find itself battered by the national government in the field of its capital financing, to the point where such financing is now almost impossible. Here at the peak of the urban crisis, when the major population centers of this country are seething with unrest, part of which can be attributed to a lack of facilities to meet the needs of the times, the Congress has stepped in with a proposal which has completely disrupted the capacity of local government to undertake capital financing. This lack of understanding by the national government on the practical functioning of local government at a time of crisis reflects no credit on this proposal. The continuation of discussions and hearings on this proposal will effect a moratorium on the construction of badly needed capital facilities by local government across this country. An immediate decision should be made to abandon the efforts to levy federal income taxes on the interest of local government debt instruments so that local government from coast-to-coast can continue to meet and carry out its obligations.

Statement by Rollin F. Agard, Financial Consultant, Aviation Department, City of Kansas City, Mo.

SUMMARY

1. This legislation destroys the market for securities now tax-exempted.
2. Any subsidy granted by Federal Government must be tax supported from local residents and business.
3. Revenue derived from taxing this bond interest will not offset cost of subsidy and higher rate costs.

4. Raise serious question concerning claim that there will be no federal review of local projects financed by taxable bonds.

5. Subsidy could be, in effect, a blank check on U.S. Treasury and by controlling this, U.S. Government controls local financing.

6. Cost of administration federally and locally would be substantial.

7. Prospects of passage of this legislation has effectively destroyed the market, both primary and secondary.

8. Twenty-four states limit interest rates to 6% or below on General Obligation Bonds, six states limit interest to 7%, and twenty states limit interest to 6% on Revenue Bonds.

9. There is a question in some states whether taxable bonds can be legally issued.

10. No time to be tampering with the right of l :al government freedom to finance its needs.

Statement by Rollin F. Agard, Financial Consultant, Aviation Department, City of Kansas City, Mo.

While the bill before this committee permits states and municipalities to continue with the issuance of tax-exempt bonds, the same act practically destroys the market for a tax-exempt security. The alternative of a Federal interest subsidy holds no assurance that such a plan will continue to exist. It will only be a matter of time before the legislation is changed in the press of events that no further subsidies will be granted on future municipal issues.

I think it is well to point out that any subsidy granted by the Federal level for municipal bond interest must be supported from taxes which originate from local residents and business. I believe very strongly that the cost of financing under the proposed legislation will be substantially greater than before. The income to be derived by the Federal Government from the taxable securities will by no means offset the subsidy and the higher rates that the municipal portion of the bond package would require.

Proponents for this legislation have advocated that there would be no Federal review of local projects. I find it difficult to accept this viewpoint. This has the effect of writing a blank check on the Federal Treasury for the sum of the subsidy to be provided from that source. The Federal Treasury is not a bottomless pit, and each session of Congress must, if this legislation is passed, appropriate the needed sums for the subsidy payments. There is little question but that eventually all local initiative would be a thing of the past. The cost at the Federal level for administration of such a program will be substantial as well as less effective than now exists. Also, the administrative cost at the local level will be much greater.

Events of recent months reveal the seriousness of impairment of the municipal market resulting from congressional action to this date. Hundreds of municipal bond issues have been grounded because of interest rates which would exceed legal limits. For those issues which could be marketed, the cost to the taxpayers will run into many millions of additional dollars. Each week many bond isues have failed to obtain voter approval. Only recently the voters of Texas refused to approve an increase in the interest ceiling.

The August 25, 1969, issue of the Daily Bond Buyer published information showing that in twenty-four states, statutes set interest rate ceilings at 6% or below for general obligation bonds. Six other states have a limit of 7%. For revenue bonds twenty states have a 6% ceiling. Moreover, the charters of many cities establish interest rate ceilings as is the case in Kansas City. Ordinarily, charters can only be amended by a vote of the people.

The impact of this legislation has thrown the secondary market into a state of chaos. This phase of the municipal bond market has become increasingly important, with the municipal debt now at about $130 billion. Thousands of bond holders, many of whom do not fall in the wealthy levels of our society, are seeing their lifetime savings being depleted by as much as 25 to 30%. This is destroying the faith of investors for municipal bonds. It is one of the major factors that have caused the interest rates to spiral in recent months to levels never before experienced.

If this bill is approved in its present form the Federal Government may find itself in the bond business, thus destroying another phase of this nation's private enterprise system.

There could also be a question in some of the states as to whether any municipality has the authority under the constitution and laws of the state, to issue taxable bonds without an amendment of the state constitution and the bond laws of the state.

In light of the serious need for local improvements to provide essential facilities for an expanding nation, this should not be the time for tampering with the local financing systems. America is great because it has had local freedom. If this is traded for a powerful central government we are doomed for destruction. If the tax-exempt status of municipal bonds is removed, a long period of litigation is inevitable. This, too, will stifle progress at the local level and could endanger the National economy.

(The committee subsequently received the following telegram, re: Mayor Davis' statement:)

[Telegram]

LEES SUMMIT, MO., *September 19, 1969.*

Senator RUSSELL B. LONG,
Chairman, Senate Committee on Finance,
U.S. Senate Building,
Washington, D.C.:

Please consider Mayor Davis as representing the city of Lees Summit, Mo., when he appears before your committee concerning the taxing of municipal bonds. Mayor Davis and I have discussed this matter at great length and I am in full concurrence with him.

ALFRED C. JOHNSON,
Mayor of the city of Lees Summit.

The CHAIRMAN. Now we will call the Honorable Ivy Baker Priest, if you please, California State treasurer, and I believe she will be accompanied by George Harrington, bond consultant.

VOICE. Mrs. Priest understood she was to be last. She has left her hotel but she is not in the room at the moment.

The CHAIRMAN. All right, we will call the next witness, the Honorable Louie Welch, mayor of Houston, Tex.

STATEMENT OF HON. LOUIE WELCH, MAYOR OF HOUSTON, TEX.

Mayor WELCH. Mr. Chairman and gentlemen, you have before you what we conceive to be a well-written statement in the hope that it could be well read but we find upon our appearance that most of it is repetitious of what already has gone before.

I would like to join, with the concurrence of Governor Preston Smith of Texas, those who have preceded me in the testimony in urging the earliest possible indication from this committee in an official way what has been stated here so beautifully unofficially.

I would like also to point out what we consider to be one of the extreme fallacies of the subsidy program for tax-exempt bonds. This merely tells the man who is not paying any tax, "We will pay you a higher interest with which to pay the tax." You are just giving him money out of the Federal Treasury to pay you back a lesser amount, and to me this is absolutely inconceivable.

I am concerned because 5 years ago when I first became mayor, people in good faith bought bonds of the city of Houston, that they cannot today recover $70 for each $100 investment, because of the impact of this House legislation.

Senator ANDERSON. Is that the quotation?

Mayor WELCH. Yes, sir; between 65 and 70 percent of face value is all the 20-year bonds we sold are selling at today. If they become taxable under any guise, limitation of tax preference, or ADR, any way, they won't be worth 50 cents on the dollar.

Now, this will not be because the people of Houston have breached the faith with the people who bought these bonds. It will be because of the acts of this Congress.

We believe that instead of looking to a limiting factor as this legislation would do, on State and local bonds, that this body should consider the broadening of the market. There is an exhibit that you have before you included in my testimony which shows that the allocation of deduction requirement, which is already applicable to life insurance companies, has since 1960 reduced their percentage of investment in State and local bonds from 5.2 percent of their total outstanding to only 2.3. You just put them completely out of the market. They no longer buy our bonds, which means that that removal alone gives us a much more limited market than we previously had because they were holding 5.2 percent of all of our outstanding bonds and they are not buying any more.

There is also, I think, the most substantive suggestion for subsidy that I have seen anywhere, which was prepared by the Urban Institution and it is incorporated as a part of my testimony. If a subsidy must be paid, we suggest that it be paid only to the pension funds of State and local governments, and that would take them out of the A.T. & T. market and let them buy the bonds of the States and the local units of government and would free another $5 million a year for the purchase of tax-exempt securities.

Gentlemen, I have a 10-minute speech but I will just let you have it there.

Thank you.

The CHAIRMAN. Mayor, you made a fine statement. Of course, your entire statement will appear in the record and your addendum will be added to it.

Senator ANDERSON. I just think your market prices is probably pretty low. I was in the House when we started World War II and were told by a man from Treasury who came down and testified that if we do this with a $109 billion budget we would close every bank, every insurance company, and all these other people, and I didn't see any one of them close. I can't believe that this bond of 50 percent is accurate.

The CHAIRMAN. Would you mind giving us those quotations and making them available?

Mayor WELCH. We sold bonds slightly in excess of 3 percent.

Senator WILLIAMS. I think part of it is attributed to this action by the Congress and part of it would be attributed to the fact that interest rates in the last few years, and particularly the last 3 months, have advanced so much and has affected the price of the bonds and many AAA bonds are selling at 20, 30-percent discounts, and I am sure the same thing is true of long-term State bonds and municipal bonds.

Mayor WELCH. That is correct, sold all over.

Senator WILLIAMS. Sold a few years ago at a coupon rate, probably attributable to both problems.

Mayor WELCH. That is right but the fact the municipals have advanced more rapidly than the industrials is attributed to the loss.

The CHAIRMAN. Any further questions?

Thank you.

Mayor WELCH. Thank you.

The CHAIRMAN. You might, if you would, document the statement what your bonds sold for and what they are selling for now.

Mayor WELCH. I would be happy to.

The CHAIRMAN. We will then add that to your statement at a proper place in the record.

(Hon. Louie Welch's prepared statement follows:)

STATEMENT OF HON. LOUIE WELCH, MAYOR, CITY OF HOUSTON, TEX.

Senator Long and gentlemen: Thank you for the opportunity to appear before your committee. I shall attempt to be as brief as possible here, taking the time which you have granted to emphasize the significance of the legislation which you are considering. For your later contemplation I also am providing copies of detailed statistical and analytical studies which support these points.

Gentlement, the proposals now before you will directly and seriously increase the cost of living of your constituents. They will do this by adding measurably to the cost of public education and every state. They will do this by increasing significantly the cost of local government in every community of every state. Furthermore, they will irreparably damage the traditions of state and local government independence from federal control.

These effects, lest you hear in your minds the cry of "Wolf" from the imaginative shepherd, already have been felt. They are demonstrated currently by the serious problems of the bond market under only the threat of this bill.

Now, we are referring here specifically to the provisions which include interest from state and local bonds in the limited tax preference and the allocation of deductions rule.

To the taxpayer, the costs of these proposals will add up to some $1.32 billion *per year*. Details on this staggering impact are shown in Exhibits A and B to this presentation. What is not shown in these figures are the unpleasant facts which this must involve, as these unnecessary costs are incurred by cities and school systems in every state.

Reflect for a moment, if you will, on the problem to be faced by mayors and school system leaders each time they place new bonds on the market under this proposed system. It will be incumbent upon them to explain to their constituents—who are your constituents, too—the reason why local government is costing more. And that reason, as the public will be told time and time again, will be because this Congress passed the law which costs them more to borrow money for their school buildings, for their sewers, for their water, for their streets . . . for every essential item of local government.

Make no mistake about it. There will be no choice for local officials, for they must tell the public the facts. And in this case, they will find it necessary to tell them the facts often, for when $1.32 billion dollars are incurred in extra costs *each year*, scarcely a day will go by that does not see some community being reminded of the cause for its rising cost of living.

I refer you again to Exhibits A and B, the sources of this estimate. You will see that it is a low estimate, not a high one. It is based on facts already established. In particular, Exhibit B shows that since this legislation was proposed, the interest rates on state and local bonds—which are the cost to the public—have increased more than one-half of one percent beyond increases on comparable, taxable bonds. This one-half percent, translated into the extra dollars which this is costing the public, amounts to $1.32 billion per year. And this, I remind you again, is the impact from the mere *threat* of the law. Passage undoubtedly would make it more severe.

The interest subsidy proposal would have further dire effects. The tradition of our nation since its founding has preserved for the people the right to determine their own destiny in local matters. Imposing this new thinking on local governments now would severely restrict the right of a community to meet its own challenges on such strictly local matters as construction of school buildings and paving of streets. This, with the cities of the nation so much larger and so much more complex, with the tremendous shift of population to urban centers, would be a crippling blow to the very system of life which has made the United States what it is today.

And for what? What will really have been accomplished by this measure, intended for the much-needed purpose of tax reform?

The Committee already has received testimony which shows the answer. From the office of the Secretary of the Treasury you have been given the facts and figures which show that, at best, this bill would recapture some $80 million annually. And that "best" will not be achieved for ten full years—years during which the cost to local government and to the taxpayer will be more than 16 times as much *each year.*

Of course, it also should be recognized that the buyers of municipal bonds, from whom this money is to be taken, already have paid their taxes when they buy the bonds. This, after all, is the simple effect of accepting a lower return on their investments than would be available in fully taxable securities. They are, in effect, to be penalized by this legislation for supporting their local governments, and the psychological impact of this punishment can only further damage the market for municipal bonds.

Local governments have been pleased at the concern of this Congress with the need for lower, not higher, costs for local government. Attachments 1, 2 and 3 to this testimony, which have been prepared by the Urban Institute, Washington, D.C., are submitted as a more effective and acceptable alternative to the interest subsidy proposals thus far put forth.

The proposals of the Urban Institute should prove most attractive to this Committee because they accomplish the desirable purpose of broadening the market for state and local bonds through inducing new types of investors to purchase these securities. This approach, by offering a subsidy to state and local retirement funds for example, would lower local government borrowing costs by opening the door to a substantial, new and rapidly increasing source of funds. It would preserve the integrity of tax exempt bonds and the independence of local governments to finance capital improvements.

I urge the Committee to examine the Urban Institute proposals thoroughly, for they provide a method which will not require federal permission for state and local borrowing and will thereby preserve rather than diminish local autonomy.

I further urge this Committee to provide itself with adequate time to examine other alternate proposals which you will receive. In particular, we are told that the Treasury Department during these hearings will present an alternative plan and I am sure that you will agree that there is not adequate time for you to make an informed judgment prior to the end of your hearings in October.

Gentlemen, the discussions now under way before you in regard to HR 13270 cover far-reaching and decisive matters. Your actions can permanently alter the traditional sovereignty of the states and their political subdivisions. Indeed, it is within your power in these measures to make virtually every local government dependent upon the federal government for its capital improvements programs and, thereby, for its economic health and its very future.

As the representative of the citizens of Houston, and with the concurrence of the Governor of Texas, the Honorable Preston Smith, we urge you on behalf of all citizens of our state to drop all references to state and local bonds from this legislation.

Specifically, we urge the following changes in HR 13270:

Deletion on income from state and local bonds in

Section 301—Limit on tax preferences for individuals, estates, and trusts;
Section 302—Allocation of Deduction;

Deletion in entirety:

Section 601—Interest on certain governmental obligations;
Section 602—United States to pay fixed percentage on yield on taxable issues.

We further urge you to permit this subject to receive the proper time, attention and consideration which it deservies. We pledge to you our cooperation in this essential study.

An Analysis of the Tax Reform Bill of 1969 (H.R. 13270) as Passed by the House of Representatives of the United States on August 8, 1969, as It Pertains to Local Government Financing

(By Louie Welch, Mayor, City of Houston, Texas)

An Analysis of the Tax Reform Bill of 1969 (H.R. 13270) as passed by the House of Representatives of the United States on August 8, 1969, as it pertains to Local Government Financing.

By Louie Welch, Mayor, City of Houston, Texas.

Tax reform is vital and badly needed in our Nation today. Many facets of this legislation are important and necessary to the equality of taxation in our system of government. Portions of this legislation deal with State and Local government financing of capital improvements through municipal bonds.

As the Mayor of Houston, I have examined these portions of the legislation which affect our city (and all local government throughout the United States) and find some of them to be so costly to the average taxpayer that I feel that I must speak out in an effort to warn members of Congress and the people themselves of the consequences of this little understood portion of this legislation.

The portions of the legislation to which this paper is addressed will be discussed as two separate matters:

FIRST DISCUSSION

Section 301—Limit on tax preferences for individuals, estates and trusts.

Section 302—Allocation of deductions.

It is the inclusion of interest from local government bonds in these two sections to which these comments are directed.

SECOND DISCUSSION

Section 601—Interest on certain governmental obligations.

Section 602—United States to pay fixed percentage of yield on taxable issues.

I advocate total elimination of these provisions as being costly to taxpayers of both the Federal government and local governments, and because it adversely changes the traditional relationships between Federal, State and Local governments.

FIRST DISCUSSION

Section 301—Limit on tax preferences for individuals, estates and trusts (hereafter referred to as LTP).

Section 302—Allocation of deductions.

Both of these sections place a tax on previously tax-exempt obligations of local governments.

The basis for the inclusion of interest from state and local bonds in LTP and allocation of deductions is set forth on page 9 of *The Report of the Committee on Ways and Means* dated August 2, 1969. The Committee reported that it had examined 154 tax returns from the year 1966 of individuals who had adjusted gross income in excess of $200,000 and who paid no income tax. It continued:

Your Committee examined these 154 returns (along with other tax cases involving low effective rates) in detail in order to find out the reasons for their nontaxtable status.

The analysis showed that in most cases the nontaxtable status arose from a combination of several factors. The most important single cause of nontaxability for this group was itemized deductions which totaled over $130 million or 116 percent of adjusted gross income. Another group of these taxpayers benefited most from the unlimited charitable contribution deduction (49 cases). In fact the single most important itemized deduction for the nontaxable group was the charitable contribution deduction, amounting to nearly $79 million, of which $55 million or 70 percent was property, the bulk of which represented untaxed appreciation. Another group benefited primarily from the deduction of interest paid (72 cases), which was the second most important itemized deduction for the group as a whole. Most of this interest paid was on loans which were presumably for the purpose of acquiring appreciating investment assets held for capital gain purposes and was frequently deducted from earned income. Others benefited from such items as real estate depreciation, the excess of percentage over cost depletion and intangible drilling and development expenses, and farm losses. Many were nontaxable because they were able to exclude one-half of capital gains from their income and offset all their itemized deduction against the remaining income subject to tax.

Your committee also examined the returns of taxpayers who were taxable but paid low effective rates of tax. The most important reason for the low effective tax rate paid by these taxpayers was the combination of the excluded half of capital gains and itemized deductions which were offset against their income subject to tax.

Note that no mention is made of interest from state and local government bonds. In fact, there would be no economic justification for ownership of tax-exempt securities by those taxpayers because tax-exempt income does not have maximum net after tax benefit when a taxpayer's tax rate is 0%.

The next paragraph of the report continues:

> It is believed that still other high-income individuals paid no tax and did not even file tax returns since virtually their entire income was from tax-exempt State and municipal bonds.

No evidence is found in the report to support this statement. In fact, the word "believed" seems to speak for itself. We would support legislation that would require the reporting of interest on state and local bonds on federal income tax returns so that the Congress could know whether or not his statement is correct.

WHAT WILL BE TAXED UNDER LTP AND ALLOCATION OF DEDUCTIONS?

The only municipal bonds to be taxed as a result of this legislation would be those held by individuals, estates and trusts. The distribution of ownership of state and local bonds is set forth below.

Ownership of municipal bonds

	Percent
Individuals, estates and trusts	32
Banks	38
Insurance companies	17
Pension funds, sinking funds, and all others	13

Further, only those obligations held by individuals whose tax preferences are an amount greater than one-half of their adjusted gross income would be taxed in any manner by LTP.

The allocation of deductions formulas apply only to interest on local government bonds issued after July 12, 1969.

Under the transition rule, only one-tenth of such interest would be taken into consideration for allocation purposes in the first year, two-tenths in the second year and so on, until after 10 years, 100% of the interest on only new issues of tax-exempt bonds would be included.

It must be apparent to even the casual observer that the federal government is not in a position to tax any more than a minimal percentage of outstanding bonds as a result of these proposals. Indeed, under the formula it will be many years before any significant percentage of bonds can be affected.

It is my opinion that much of the damage which has occurred to the market for municipal bonds over the past sixty days is a result of fear—the fear of a subsequent extension of this formula.

I understand the attitude of those Senators on this Committee who commented in these hearings on September 4, 1969 to the effect that the impact of this legislation on the market for tax-exempt bonds over recent weeks is difficult to understand.

EFFECT ON U.S. TREASURY AND LOCAL GOVERNMENT

The Assistant Secretary of the Treasury, the Honorable Edwin S. Cohen, testified on September 4, 1969, to the effect that the total annual tax collected after the 10-year phase-in period as a result of State and Local Bond interest would be only $80,000,000. He estimated revenue of only $45,000,000 as a result of the inclusion of municipal bond interest in the Allocations of Deductions rule and only $35,000,000 as a result of the inclusion of this interest in LTP.

Exhibit A at the conclusion of this report demonstrates the additional cost to state and local government as a result of higher interest rates on their securities. The study reflects that an increase in local government borrowing next year, 1970, in the amount of ½% would cost states and local governments $1.32 billion over the life of those bonds.

Since Secretary Cohen has testified that the return of taxes to the U.S. Treasury after 1979 would only be $80 million, the vast difference in these two figures is difficult to understand.

However, fear, sentiment, opinion and attitudes are all important factors in a free market. Although it seems to be far out of proportion to reality, the facts are that average yields on state and local bonds have risen in excess of ½% more than yields on comparable Government and Corporate Bonds during the past sixty days. Exhibit B demonstrates these facts.

Stated in another manner, if the increased yields on state and local bonds remain at the higher level (½%) that has recently been attained, and the ultimate (1979) tax return to the U.S. Treasury is considered as a constant figure, a significant net loss to all taxpayers is the result.

Cost to local governments of ½% higher interest rates	$1,320,000,000
Return to Treasury from LTP and Allocation of Deductions	80,000,000
Net annual loss to all taxpayers	1,240,000,000

It is apparent from these calculations that the taxpayers would still suffer even if the increase in interest rate to local governments was reduced to as little as 1/20 of 1%.

Cost to local governments of 1/20% higher interest rates	$132,000,000
Return to Treasury from LTP and Allocation of Deductions	80,000,000
Net annual loss to all taxpayers	52,000,000

EXHIBIT A

DOLLARS LOST TO STATE AND LOCAL GOVERNMENT AS A RESULT OF HIGHER INTEREST RATES ON MUNICIPAL BONDS

	Volume of new new debt issued [1]	½ percent increase results in loss of—	1 percent increase results in loss of—
1970	$17,600,000,000	$1,320,000,000	$2,640,000,000
1971	18,600,000,000	1,385,000,000	2,790,000,000
1972	19,500,000,000	1,462,500,000	2,925,000,000

SECOND DISCUSSION

Section 601—Interest on certain governmental obligations.

Section 602—United States to pay fixed percentage of yield on taxable issues.

The Treasury Department in its testimony of September 4, 1969, before the Senate Finance Committee did not recommend the interest subsidy provisions set forth above and we presume that this decision was based upon an analysis of the cost of these provisions to the United States Treasury, and therefore, to all taxpayers. Several important considerations in this matter are discussed below.

The impact upon markets for taxable securities—The Investment Bankers Association reports that in 1968 their members underwrote and distributed approximately $33 billion in corporate, state and local bonds. Approximaely one-half or $16 billion was in tax-exempt state and local bonds. It would seem that any substantial infusion of more taxable securities into that market would trend interest rates on taxable securities higher thus increasing corporate and federal government interest rates on its direct borrowing as well as on Federal agency borrowing higher than those relative levels presently attained by taxable debt securities.

Changing ownership patterns of state and local bonds as a result of taxable interest rather than tax exempt interest—Taxable securities over the period 1966–67–68 (see Exhibits 3 and 4) were held by investors whose aggregate tax rate was only 13.4%. It is logical to conclude that this percentage would be reached on taxable federally subsidized local government bonds. In fact, purchase of their own securities by local governments at higher taxable yields would be a natural result and could easily cause the tax return to the federal government to drop below the 13.4% level which exists for other taxable securities.

Obviously, any federal interest subsidy of the magnitude of 30% to 40% would create a substantial drain on the United States Treasury and a heavier federal tax burden on all taxpayers.

STATISTICAL ANALYSIS OF OPTIONAL TAXABLE STATE AND LOCAL BONDS, 40-PERCENT INTEREST SUBSIDY

Annual increment	Interest rate	Annual interest cost in dollars
(A) $16,000,000,000	8 percent (taxable)	$1,280,000,000
(B) $16,000,000,000	3.2 percent (Federal subsidy)	512,000,000
(C) $16,000,000,000	4.8 percent (local participation)	768,000,000
(D) $16,000,000,000	5.6 percent (tax exempt)	896,000,000
Savings to local government (D)—(C)		128,000,000

Federal Government revenue gain (or loss):	
Taxable income (A)	$1,280,000,000
Tax recovery at 13.4 percent	171,520,000
Less Federal interest subsidy (B)	(512,000,000)
Loss to U.S. Treasury	(340,480,000)
Savings to local government	128,000,000
Annual net gain (loss) to all taxpayers	(212,480,000)

	30 percent interest subsidy		Annual interest cost
	Annual increment	Interest rate	
A	$16,000,000,000	8 percent (taxable)	$1,280,000,000
B	16,000,000,000	2.4 percent (Federal subsidy)	384,000,000
C	16,000,000,000	5.6 percent (local participation)	896,000,000
D	16,000,000,000	5.6 percent (tax exempt)	896,000,000

Note: Savings to local government (D) $896,000,000 minus (C) $896,000,000: None.

FEDERAL GOVERNMENT REVENUE GAIN (OR LOSS)

Taxable income (A)	$1,280,000,000
Tax recovery at 13.4 percent	171,520,000
Less federal interest (subsidy (B))	384,000,0000
Gain (loss) to U.S. Treasury	(212,480,000)
Savings to local government	
Annual net gain (loss) to all taxpayers	($212,480,000)

Keep in mind that these figures are for one year only. The average life of state and local bond issues approximates 15 years. The total cost on this basis for using this device, for just one year could thus approximate $3,187,200,000. In addition to the above figures one can mentally add the unestimated cost of administering such an undertaking. The basic principle underlying this discussion rests on the foundation that the Federal Government is likely to have a net drain on the Treasury as a result of this approach.

Since local citizens are also Federal Taxpayers it is the citizen who will suffer. The wealthy will merely seek another investment which will offer a better "after tax" return on investment dollars, than taxable state and local government securities.

NOTES ON THE URBAN INSTITUTE MUNICIPAL MARKET EXPANSION PROPOSALS

Briefly stated, the Urban Institute plans to seek to expand the supply of funds available to municipal borrowers by opening up State and local savings to support that sector's investment programs. To do this, the proposals circumvent the obstacle of tax-exemption that makes these investments now unprofitable for state and local pension funds by paying them a subsidy to neutralize the pretax yield differential between taxable and nontaxable securities. In the case of the Unemployment Trust Fund, it is proposed that State and local securities be made legal investments and also that this fund be paid a subsidy. These subsidies should be largely self-supporting since the taxable security incomes given up by these non taxpaying investors will be held by taxpaying investors. That is, the diminished supply of tax-exempts to taxpaying investors will channel their holdings into taxable investments and the tax revenues from these would approximate the subsidy required to induce the State and local pension funds to hold tax-exempts.

Altogether, the State and local funds could supply from $4 to $8 billion a year to the municipal bond new issue market. Moreover, these inflows would be largest in times of stringent monetary conditions when municipal yields soar above their traditional relationship to those on taxable instruments. The cost of such a subsidy scheme would be, for $4 billion in State and local securities with 5 percent coupons, $80 million dollars with a 40 per cent coupon subsidy. This compares to the $7.5 billion that the Federal government dispenses in grants to State and local facilities alone.

Some specific notes on the proposals:

1. The UI proposals do no violence to the principle of tax-exemption. They rather expand the supply of funds in such a way as (1) to increase the efficiency of tax-exemption *qua*-subsidy to State and local borrowers and (2) to reduce the extent of tax shelter available to high income-tax bracket investors.

2. Communities and states would continue to issue bonds in the same manner. Underwriting would still be in the hands of private investment bankers. The Federal government or any agency of it would have no interest in a control over the amount or timing or nature of any state and local borrowing. The market mechanism would remain the same in all mechanical details.

3. But a new investor group, that of the State and Local Pension Funds, would now be purchasing State and local bond issues. For example, if the subsidy rate were 40 per cent, pension funds would acquire municipals on the basis of a 40 per cent markup on coupon yields to be covered by a Federal government subsidy. Thus, if municipal bonds were selling at 6 per cent, a pension fund buying this bond would receive a post-subsidy yield of 8.40 per cent. Today, that would be above the yield available on the highest grade corporate issue.

4. The pension fund would receive the subsidy routinely on the presentation of a copy of the coupon to the Treasury. Although there might need to be some provisions to protect the Treasury against intra-governmental transactions and to insure "arms length" transactions, there would be no restriction as to the nature or maturity or purpose of the municipal bond. The buying decision is left strictly up to the pension fund.

5. State and local pension funds are growing at a rate of about 10 per cent or $4 billion a year. Their total assets are $45 billion, the majority of which are invested in corporate bonds. Given that the average investment life of their fixed income securities (93 per cent of the total) is 10 years, they have a rollover of $4 billion as well as net new funds of $4 billion to invest each year. If roughly one half (or $4 billion) of this were to be invested in State and local securities, it would be sufficient to absorb about 40 per cent of the $10 billion annual net increase in State and local securities. A 40 per cent expansion in net available funds would not only allow for more borrowing but would lower the cost of the borrowing done. And the market would be greatly stabilized. Addition of just the net growth in the Unemployment Trust Fund would add another $1.0 billion of support to the market. The selection process of which bond to buy for the Federally administered fund could be solved by tying their purchases to Federally guaranteed tax-exempt notes and bonds such as those emitted by HAA and UAA.

6. How does the subsidy pay for itself? The subsidy pays for itself by (1) keeping tax-paying investors from holding tax-exempt securities, and (2) keeping non taxpaying investors from holding taxable securities. Of course, this rearrangement is not brought about by fiat or purposeful exclusion, but is an outcome of removing the barrier which tax-exemption forms to the investment flow of certain non-taxpaying institutions—in this case, the State and local pension funds—into the tax-exempt market.

While the final outcome is a complicated thing, the essential idea can be expressed as follows: Given a fixed supply of tax-exempt bonds and investor resources, the pension funds would absorb part of the supply of tax-exempt bonds. High taxable income investors, that now demand a high discount to hold municipals, would acquire taxable investments instead. (A simple way of looking at it is that they would purchase the corporate bonds that otherwise would have been held by the pension funds.) Taxable investors would pay taxes where now taxes are avoided—both by their holding of tax-exempts and by the pension funds holding potentially taxable securities. These taxes would probably cover most if not all of the subsidy since the average marginal rate on tax-exempt investors is approximately 40 per cent.

There are other costs and savings to consider. Federal government borrowing costs might go up somewhat, but it is primarily a short-term market and State and local pension funds make only a small contribution in support. On the other hand—and this is very important—the broadened municipal market would be able to absorb a greater volume of financing and at a lower cost. This type of support would cheapen the borrowing of governments, especially in times of tightness when the taxable to non-taxable yield ratio drops off precipitously.

A Proposal To Allow the Unemployment Trust Fund To Invest in State and Local Securities

Over the past 12 years, the total volume of state and local obligations outstanding has grown by over 250% (Table 1). Yet, despite the substantial growth in this source of financing capital outlays, our society has not been able to keep pace with the increasing needs for educational facilities, sewage disposal plants, hospitals, and the like so as to maintain, let alone improve, the quality of public services in these areas. Therefore, we may reasonably expect the demand for capital funds to continue to grow at least as rapidly over the next decade, and the question arises: Who will be the leaders of these funds?

To provide a perspective, Table 2 presents the stocks of state and local securities held by various institutions for the years 1960 and 1965–68 as well as the percentage distributions in those years. Several facts emerge from this table. First, over the 8-year period, commercial banks have become the mainstay of the state and local securities market and have increased their holdings of the total stock from 26% in 1960 to 45% in 1968. (As will be seen below, this proportion is projected to rise to over 50% in 1975.) This development has been accompanied by a decline in the proportion of municipals held by households, which in 1960 were the most important suppliers of funds to states and localities. Fire and casualty insurance companies classified in Table 2 as "other insurance" are the other major lenders to state and local governments. State and local government holdings of their own securities through pension funds have fallen both relatively and absolutely since 1960. The expanding role of commercial banks in the municipal market may be demonstrated by the fact that 68% of the change in stocks from 1960 to 1968 were absorbed by these institutions.

Table 1.—State and local securities outstanding

[Dollars in billions]

End of year:	*Stock outstanding*
1956	49.4
1960	68.7
1965	101.2
1966	107.2
1967	117.3
1968	128.5

Other institutions	.4	.6	.5	.5	.5	.5	.6	.5	.6	.5

The dependence of municipalities upon commercial banks as a source of funds has at least two consequences. On the one hand, the considerable resources of commercial banks are increasingly available for financing much needed capital facilities in our urban areas. On the other hand, when financial markets tighten, commercial bank resources become severely squeezed, forcing states and municipalities either to look elsewhere for funds (usually to individual investors) at considerably higher interest rates or to revise their borrowing plans. Thus, commercial banks, while at times quite a large source of financing, are also an exceedingly volatile source. It is not coincidental that 1966 was both a year during which the net increase of municipals fell by about 20% relative to 1965, and also a year during which commercial banks absorbed only 40% of the net increase. We should be quite concerned, then, about the near-term outlook for the municipal market in view of the preliminary data for the first quarter of 1969 which shows commercial banks adding municipals to their portfolios at an annual rate of only $1.5 billion after averaging $8.5 billion the previous two years.

In terms of the longer-term prospects, unpublished financial forecasts at the Federal Reserve Board assume that commercial banks will be in a position to continue to absorb the bulk of future state and local borrowings. Table 3, which is based on these forecasts shows estimated holdings of the stocks of municipals and the percentage distributions for the years 1970 and 1975. The 1975 estimates of total stocks are quite close to those of Diamond in *State and Local Public Facility Needs and Financing* (U.S. Congress, Joint Economic Committee, 89th Cong., 2nd Sess., December 1966, p. 50). It should be noted that this is an equilibrium projection in the sense that the stocks represent a balancing of demands for and supplies of funds. The public facility needs of state and local government are not projected to be completely satisfied in this projection. Rather, the estimates represent what may be reasonably borrowed, given present institutions. In as much as the 70% growth in the outstanding stock over the 8-year period 1961–1968 failed to raise the quality of public services, it is unlikely that a 63% increase from 1968–1975 will do much more. Hence, it is desirable to broaden the market for state and local securities from two points of view:

(1) to develop new sources of financing beyond what present financial institutions can provide so as to allow a faster growth in the rate of public facility construction;

(2) to move away from the present heavy reliance on commercial bank resources which display a high volatility in response to changes in financial market conditions.

One possible source of additional financing has already been referred to—state and local pension funds—and they will be the subject of a later memorandum. Suffice it to say that the tax-exemption feature is of no value whatever to the pension funds, and the lower returns which result are the major reason for their declining role in the municipal market.

Our interest in this memorandum is in the federal trust funds of the original Social Security legislation, and specifically the Unemployment Trust Fund, which recommends itself as a possible source of state and local government financing on several grounds.

(1) The Unemployment Trust Fund (UTF) holds primarily the states' own funds. The federal government is merely the trustee on behalf of the beneficiaries within the individual states. Over the period fiscal 1960–68, 76% of the total receipts of the UTF (net of interest and profits on investments) consisted of deposits by the states. Therefore, the case can reasonably be made that what are essentially the state funds should be used for purchasing their own obligations.

TABLE 3.—ESTIMATES OF STATE AND LOCAL GOVERNMENT SECURITY HOLDINGS

[Dollar amounts in billions]

	1970		1975	
	Amount	Percent	Amount	Percent
Total	$146.9	100.0	$209.3	100.0
State and local governments	3.1	2.1	2.3	1.1
Other than State and local governments	143.8	97.9	207.0	93.9
Households	44.7	30.4	59.9	28.6
Corporate business	6.6	4.5	11.5	5.5
Commercial banks	70.7	48.1	106.4	50.8
Mutual savings banks	.1	.1	.3	.1
Life insurance	2.8	1.9	2.0	1.0
Other insurance	18.0	12.2	25.4	12.1
Other financial institutions	.8	.5	1.4	.7

(2) The UTF represents a large and growing source of investible funds. At the end of calendar 1968, its portfolio was over $12 billion and, if invested in state and local securities, it would have just equalled the combined holdings of state and local pension funds, business corporations, life insurance companies, and mutual savings banks. Furthermore, this portfolio has doubled from fiscal 1961–68 and may be expected to continue to grow.

(3) The rate of return on state and local obligations is not greatly different from that currently earned in the UTF portfolio. At the end of 1968, 78% of the UTF portfolio was invested in special issues at the average intrest rate of 4.397%. These special issues are non-negotiable obligations of the U.S. Treasury which are required to yield a return to the fund equal to the current average rate of interest on all interest-bearing securities of the United States (rounded to the nearest .125%).

Table 4 shows, for six-month intervals over the period 1960–68, the rate of return on the U.S. interest-bearing debt and the state and local rate as given by the *Bond Buyer* 20-bond index. The average divergence in rate over the period was only 6 basis points, and the maximum was 52 basis points in December 1964. In the last few years, the state and local rate has exceeded the rate on the debt and, in fact, as interest rates in general rise over time, the average rate on the debt tends to lag behind other market rates. Thus, investing in state and local securities rather than special issues will not significantly affect the return on the UTF portfolio.

We should not ignore the issues that are likely to arise in connection with a proposal to allow the UTF to invest its portfolio in state and local securities:

(1) The legal provisions governing the UTF's investments must be changed to make municipal securities eligible. Although the eligibility question has been a subject of some controversy (see *Temporary Income in Debt Ceiling*, Hearings, U.S. Congress, House of Representatives, Committee on Ways and Means, 90th Cong., 1st Sess., January 1967, pp. 31ff.), eligible investments are currently defined as direct obligations of the United States or securities which are guaranteed by the United States as to principal and interest. We would recommend a broadening of these provisions to include state and local obligations explicitly.

(2) Given the volume of municipal securities issued each year—$10–$11 billion in recent years—the UTF would face a decision as to which particular municipal securities to purchase. There are two ways out of this situation. First, if the proposal of this memorandum were adopted in connection with the pending URBANK proposal, the UTF could purchase URBANK obligations and pass the selection problem on to the bank. Secondly, and this would also satisfy the logic of the present eligibility requirements, the UTF could purchase PHA and URA securities which are now guaranteed by the federal government. The gross issues of these securities in 1968 were $5.4 billion. Also with the new federal guaranteed programs in the areas of college housing and water pollution, this type of security is likely to show substantial growth. Furthermore, if liquidity is still a consideration in the investment decisions of the UTF, there is available for purchase an outstanding stock of 3-month to one-year PHA and URA notes of $3.9 billion. It should be noted, however, that the guaranteed obligations are likely to carry yields somewhat below the *Bond Buyer* series of Table 4, perhaps by 25 basis points or more.

(3) This proposal is likely to have some impact on the present interest rate structure. Assuming in the first instance that the total volume of securities held by the public is unchanged, this proposal will result in more Treasury securities and fewer municipals in individual and institutional portfolios. This change in relative supplies would cause Government rates to rise somewhat and municipal rates to fall. The major impact on the Treasury, however, will result from the fact that the greater quantity of Governments held by the public (rather than the UTF) will be at market rates and not at the substantially lower special issue rates. Furthermore, if we drop our original assumption of no change in the volume of securities held by the public in favor of the more likely and desirable occurrence of some significant increase in municipal issues under this proposal, then the general level of interest rates will be forced up somewhat for all borrowers.

TABLE 4. RATES OF RETURN ON THE INTEREST-BEARING DEBT AND STATE AND LOCAL SECURITIES

Period	Interest rate on debt	State and local rate
June 1960	3.30	3.52
December 1960	3.14	3.39

Subsidy Proposal to Induce State and Local Retirement Funds to Invest in State and Local Securities

In our other memorandum on the Unemployment Trust Fund, we demonstrated the need for broadening the market for state and local securities in order to finance the large and growing demands for public facilities. Under present arrangements, the character of this market is determined by the tax-exempt status of municipal securities. Participants in the market are confined to those individuals and institutions for which the tax exemption privilege represents an economic gain relative to taxable securities. Thus, high-income individuals, fire and casualty insurance companies, and especially commercial banks constitute the principal lenders, and by year-end 1968, they together held 90 percent of the total stock of municipal securities outstanding. This situation affects the municipal market adversely in two respects. First, the market is unnecessarily narrow, and secondly, municipal borrowers, as residual claimants on commercial bank resources, and extremely vulnerable to changes in both monetary policy and business demands for funds.

It is against this backdrop that a series of proposals have been put forth which are designed to open up new sources of capital funds to state and local governments—proposals such as the Patman-Proxmire subsidy plan, URBANK, and the like. Our approach to the problems of municipal financing is of a somewhat less general nature and is based on the premise that, as a minimum, state and local own funds should become available to the state and local security market. This consideration led to our earlier recommendation that the state reserves in the unemployment trust fund be authorized to purchase municipal securities. In this present memorandum, the state and local retirement funds (SLRF's) will be examined.

In both cases, the issue of the determinants of the portfolio investment decision is paramount. Inasmuch as the returns on municipal securities are below those on taxable securities, institutions which are not subject to taxation themselves derive no benefit from the tax exemption feature of municipals. In the case of the unemployment trust fund, the rate of return on U.S. Treasury special issues, which compose the bulk of the portfolio, is sufficiently low that little or no net loss to the trust fund would result from investment in state and local securities. In the case of the SLRF's this is not the case. Some form of subsidy is, therefore, required to induce these retirement funds to acquire securities of state or local governments.

The dimensions of this potential source of demand for municipal issues are shown in Table 1. In June, 1968, the latest date for which these data are available, total asset holdings of SLRF's were $44.5 billion. Of this total, $38.0 billion (85 percent) was composed of U.S. Government securities, corporate bonds, and mortgages. Although corporate stock holdings are growing both absolutely and relatively, fixed interest market securities are clearly the major assets of these funds.

The rate of growth of the SLRF's has been substantial. Their portfolios have doubled since 1961 and have increased almost sevenfold since 1952. In recent years, the increment to their asset holdings have amounted to about $4.5 billion per year and have been increasing. Thus, the SLRF's seem ideally suited as a potential source of investment in public facility financing.

Moreover, these funds historically have held state and local securities, and through the late 1950's municipals consisted of over 25 percent of their total asset holdings. Since then, a combination of more flexible investment regulations and the desire of SLRF managers for higher yields has led to the declining position of municipals in SLRF portfolios. By June 1968, only 5.3 percent of total asset holdings consisted of state and local securities.

Table 2 demonstrates the extent to which an increase in earnings has paralleled the decline in state and local security holdings of the SLRF's. Since 1959 when the proportion of municipal security holdings fell below 25 percent of the total portfolio, the increment in portfolio earnings as a percentage of the increment in portfolio size has almost always been above 4.5 percent.

There is an obvious lack of economic incentive for the SLRF's to invest in municipal issues. The remainder of this memorandum is devoted to the presentation of a subsidy device which would provide this incentive.

A subsidy mechanism ideally should possess the following characteristics:

(1) It should provide a clear incentive for SLRF's to invest in municipal securities as opposed to their present asset holdings.

(2) It should be simple to administer and free from federal regulation and control.

(3) It should be relatively inexpensive in terms of cost to the U.S. Treasury.

The subsidy plan which we are proposing satisfies these criteria.

It is similar to suggestions that have been put forth for subsidizing the entire municipal market although we are applying it here only to SLRF's (and also to the unemployment trust fund as will be considerd later). Our proposal is that a subsidy be given to holdings of municipal securities by SLRF's on all such securities—general obligation bonds, revenue bonds, and short-term notes—issued after a predetermined date. The subsidy would be a fixed percentage of the coupon rate on the municipal securities issued after that date and would be paid by the U.S. Treasury upon receipt from the state and local retirement funds of a copy of the coupon. As a precaution against misuse of this subsidy, the individual state and local governments would certify to the Treasury that their respective retirement funds are bona fide institutions established for the purpose of providing retirement benefits to their employees. The Treasury would maintain a list of such certified funds. Under this plan, administrative work would be kept to a minimum. The subsidy would be paid automatically and would require no federal supervision.

To make the plan operational, decisions must be made concerning (1) the issuance date after which municipal securities acquired by the SLRF's would be eligible for the subsidy and (2) the amount of the subsidy as a percentage of the state and local interest rate.

To aid in this latter determination, Table 3 has been prepared. This table presents quarterly data on the municipal rate, the U.S. long term rate, and the corporate rate from 1960 to mid 1969 along with the ratios of the two other rates to the municipal rate. The table indicates that for much of the period, a subsidy equal to 25 percent of the municipal rate would be a sufficient incentive to retirement funds to acquire municipal as opposed to long term government securities, and a subsidy of 50 percent of the municipal rate would induce retirement funds to prefer municipals to corporate issues as well. Therefore, in this memorandum, we shall examine the consequences of four alternative subsidy percentages between these ranges—25 percent, 33⅓ percent, 40 percent(and 50 percent of the state and local rate. The higher the subsidy, of course, the greater the incentive to acquire municipal securities.

The cost to the Treasury will also vary with the subsidy percentage. This subsidy cost is a product of the percentage subsidy, the municipal interest rate, and the dollar volume of municipal securities acquired by the SLRF's. If S=the subsidy cost, s=the percentage of the municipal rate subsidized, r_m=the municipal rate, and D=the dollar volume of securities held, $S=sr_mD$.

The net cost to the Treasury is less than this subsidy outlay, however, since taxable securities that would otherwise be acquired by the SLRF's will, for the most part, now find a taxable investor and will, therefore, generate tax receipts for the Treasury. These receipts will be a product of the marginal income tax rate of the new holders of these securities, the interest rate on these securities, and the dollar volume involved. If R=tax receipts, t=the marginal income tax rate of the new holders, r_o=the interest rate on these securities, and D=the dollar volume.

$R = t\ r_o\ D.$

The net cost (NC) to the Treasury is $S-R = s\ r_m\ D - t\ r_o\ D.$

$NC = D(s\ r_m - t\ r_o) = D[s - t(r_o r_m)].$

Thus, the net cost varies directly with the dollar volume, D, and the subsidy percentage, s, and inversely with the marginal tax rate of the new holders, t, and the ratio of the rates on the securities sold by the SLRF's to the municipal rate, (r_o/r_m).

For the Treasury to break even under this plan, S=R, or
$s\ r_m\ D = t\ r_o\ D$, or $t = s/(r_o/r_m)$.
Thus, the higher the subsidy percentage and lower the ratio of the alternative interest rates to the municipal rate. the higher the marginal tax rate required for the subsidy to yield no net loss to the Treasury.

This information is summarized in Table 4. The left hand column lists the four alternative subsidies as a percentage of the municipal rate. The top row presents five r_o/r_m ratios which may be compared with those calculated in Table 3 for the U.S. long term rate and the corporate rate. Moving along a row for a given subsidy percentage, we see that the higher the r_o/r_m ratio, the lower the break-even tax rate. Similarly, for a given interest rate ratio, the higher the subsidy percentage, the higher the break-even tax rate.

The entries in the table marked with an asterisk are those combinations of subsidy and interest rate which would put the portfolio manager on the margin of indifference between acquiring the subsidized municipal securities and buying alternative assets such as corporate or Treasury bonds. Thus, if the subsidy is 40 percent of the municipal rate, retirement fund managers would be indifferent between buying municipals and another asset yielding 1.4 times as much as the current municipal rate. For this reason, all space to the right of the entries marked with an asterisk are left blank since they represent combinations that would be unattractive to the retirement funds. A subsidy of 40 percent of the municipal rate, for example, will not induce the retirement fund investors to buy state and local securities if rates on alternative forms of investment are 50 percent above the municipal rate.

As Table 3 indicates, from 1960 mid-1969 Treasury long term rates, on average, were approximately 20 percent above the municipal rate, and corporate rates were about 40 percent above the municipal rate. If a subsidy of 40 percent were put into effect, then a marginal tax rate of 33⅓ percent would be required from the new holders of Treasury long term securities and 28.6 percent from the new holders of corporates for the Treasury to break even. Since the insurance companies, that are the largest holders of corporate bonds, and the commercial banks and other financial institutions, that are the main holders of U.S. securities, pay tax rates above these levels, a 40 percent subsidy would not involve much if any net cost to the Treasury.

TABLE 4.—BREAK-EVEN MARGINAL TAX RATES, *t*

[In percent]

Alternative interest rate/municipal rate (r_o/r_m) ratios Subsidy as percent of municipal rate (r_m)	1.1	1.25	1.33	1.4	1.5
25	22.73	[1]20.00			
33⅓	30.30	26.67	[1]25.00		
40	36.36	32.00	30.00	[1]28.57	
50	45.45	40.00	37.50	35.71	[1]33.33

[1] Subsidy puts investor on margin if indifference between acquiring subsidized municipal securities and acquiring alternative assets.

Therefore, we would make the following recommendation as a miniumum position:

(1) A subsidy of 40 percent of the municipal coupon rate should be paid to state and local retirement funds on their holdings of such state and local securities issued after a specified date, e.g., January 1, 1970.

(2) This subsidy would be paid automatically by the U.S. Treasury to public retirement funds established and managed by public officials upon receipt from them of a copy of their coupons.

In this way, SLRF reserves could be made available to state and local governments for the financing of needed public facilities. As in the case of the unemployment trust fund proposal, benefits will accrue to the State and local governments in three important respects:

(1) To the extent that credit availability limits municipal borrowing, opening up an additional source of funds can ease this constraint somewhat.

(2) As a stable and growing source of funds, SLRF's can partially insulate state and local governments from the effects of changes in the available resources of commercial banks.

(3) Municipal rates may be expected to decline to some degree. This would occur because a smaller volume of municipal securities would have to be held by individual investors to absorb the total supply, and the municipal rate would no longer have to induce individuals in lower tax brackets to enter the market.

Several additional points should be made concerning the above analysis. First, the calculations of Table 3 on the ratios of municipal interest rates to the rates on alternative assets are only suggestive and do not reflect the relative returns on a specific municipal security as compared to a specific corporate or Treasury issue. The subsidy we have proposed would apply to all categories of state and local securities—short-term notes and revenue bonds as well as general obligations—and SLRF asset holdings also include a variety of Treasury and corporate obligations. Hence, after the subsidy had been put into effect, SLRF managers would still have to make portfolio decisions among competing assets to achieve their investment objectives.

Secondly, in addition to the gross subsidy cost (which as mentioned may be completely offset by additional tax receipts) the Treasury may incur somewhat higher interest cost to the extent that the subsidy succeeds in causing SLRF's to acquire municipal rather than federal government securities. A higher interest rate on governments would then be required to induce other investors to hold more of these issues.

On the other hand, this proposal could go some way towards achieving another Treasury objective, that of distributing more equitably the income tax burden. By reducing the volume of tax-exempt securities in the hands of the taxable public, this proposal would narrow this avenue of tax avoidance.

In terms of the administration of this subsidy plan, it may be desirable to restrict the subsidy to SLRF holding of securities issued by governments other than their own. Enforcing an arm's length transaction in this manner would avoid conflicts which may arise between the state or local government and its employee retirement system and would allow portfolio managers to make investment decisions solely on the basis of liquidity, yield, and other objectives.

One final matter remains for consideration. In the earlier memorandum on the unemployment trust fund (UTF) the point was made that the return on the trust fund portfolio was sufficiently low that trust fund investment in the tax-exempt state and local securities would not impair its earning position. It is, nonetheless, still true that investment of UTF reserves in municipal securities would not carry out the trust type obligation of the Treasury to the states whose funds are held in the UTF. Higher yielding market instruments consistent with the liquidity requirements of the UTF would appear more appropriate. Thus, in terms of the responsibility of the Treasury to the state, we would recommend consideration of a subsidy on state and local securities acquired. and that the plan outlined above be applied to UTF investments in municipal obligations.

The results of such a program would be the following:

(1) The Treasury would not be able to borrow from the UTF at below market rates and would borrow more from the general public instead.

(2) A smaller volume of state and local securities would be available to the public.

(3) The UTF would hold the state and local (subsidized) securities rather than the special Treasury issues.

The subsidy would involve some net cost to the Treasury. The increased tax receipts resulting from the public holdings of governments rather than tax-exempt municipals will not cover both the higher rates that the Treasury must pay for its own borrowing and subsidy on UTF holdings of municipals. But this situation results only from the fact that the states through the UTF have historically been subsidizing the Treasury. There appears little justification for continuing this practice.

The CHAIRMAN. The next witness will be Mr. Austin J. Tobin, executive director of the Port of New York Authority.

Be seated, sir.

STATEMENT OF AUSTIN J. TOBIN, EXECUTIVE DIRECTOR, THE PORT OF NEW YORK AUTHORITY

Mr. TOBIN. If the Senators please, in the limited time which we must all observe here, I will try not to be repetitious of the points that have been made by the witnesses who have preceded me, and I will talk about a different aspect of State and local government and that is the fact which we seldom think of, that the whole American transportation, public transportation system, in all of its elements, is built and financed by State and local government.

The port authority, a bistate instrumentality of the States of New York and New Jersey, has invested $2 billion raised through the sale of its revenue bonds to develop a comprehensive network of transportation and terminal facilities in the Port of New York. It is specifically denied the power to levy taxes or pledge the credit of either State to finance its capital programs. It is required and has been able to do so on the basis of its own credit.

The financial capability of the authority to develop this complex of transportation facilities has depended in large part upon the exemption of the interest on its bonds from Federal taxation. These public transportation facilities include three major airports, modern docks and marine container ship terminals, six interstate vehicular bridges and tunnels, bus and truck terminals, and a trans-Hudson commuter railroad.

We simply would have been unable to provide these vital public services for our area and to provide them without any burden to the general taxpayers of our two States if the bonds we issued to obtain the necessary capital funds had to be marketed at interest rates 40 percent higher to make them competitive with those offered by private industry.

But the issues precipitated by these attempts to tax State and municipal bonds are not restricted to their destructive economic consequences.

As the witnesses before me have emphasized and as the committee has emphasized they raise most serious constitutional questions.

As executive director of a bi-State agency I will focus principally on the consequences of these new proposals to our national and regional transportation programs. Last year some $2,800 million in municipal bonds were issued by State and local government solely for transportation, public transportation purposes.

The enactment of any of these proposals would mean at least a 1-percent increase in the interest rate on the bonds to be sold hereafter and would drastically curtain the ability of our States, counties, and cities to meet their transportation needs. On the basis of future annual bond issuances equal to the 1968 volume there will be at least $28 billion of transportation bonds issued during the decade from 1970 to 1980.

The additional interest cost imposed upon State and local government as a result of these borrowings, the additional costs would amount to the staggering total on these public transportation bonds throughout the country of $3,800 million over the life of those bonds. These amounts will have to be raised, as has been pointed out heretofore, largely from regressive State and local real estate property and sales taxes which would fall most heavily upon our already overtaxed middle income and poorer people.

The States of New York and New Jersey alone have committed themselves to issue $3,100 million in bonds for transportation improvements in our two States over the next few years.

If the new tax proposals are approved our two States will have to levy an additional $420 million in taxes to meet their increased borrowing costs on these issues.

Turning to the problem of capital financing requirements of airport development, and I will deal just with that and I will leave port development to my colleague of the Port of New Orleans who I think will follow me on the program, but just as to airport development it is estimated that more than $14 billion of public funds will be needed in the next 10 years to finance the absolutely esential expansion of our national airport system. Historically 80 percent of the funds expended on our Nation's airports have been derived from State and local sources. In the case of New York-New Jersey metropolitan airports, 96 percent of the cost has been borne by the two States through their agency, the port authority. Even assuming increased Federal assistance in the future, it probably will still be necessary for as much as $10 billion to be expended by the States and local government for essential airport construction, and this borrowing over the life of the bonds to be issued would involve more than $1,300 million in additional interest costs as a result of these new tax proposals if these plans and necessary aviation program are to be carried out.

The borrowing capacity of State and local government will also be severely tested by the Nation's mass transit needs.

Our present transit systems have projected capital needs of $20 billion over the next 10 years of which at least $10 billion will have to be raised by State and local governments also at a total additional borrowing cost if the tax proposals before you are enacted of $1,300 million over the life of those bonds.

So with respect to these two aspects of public transportation, our airports and our mass transit requirements, these tax proposals would impose upon State and local governments the frightful burden of raising more than $2,600 million of additional revenues with the regressive tax impact that the Governors and the mayors have been stressing here before me.

Lest I be accused of viewing with undue alarm, I need point only to the chaos that exists in the municipal bond market today. Even the threat of this attack on the immunity of municipal bonds has brought in its wake a market reaction which has required State and local governments in many cases to pay the highest borrowing costs in their history. Many units of government have been unable, because of constitutional and statutory interest rate limitations to borrow at all. Many municipalities have deferred borrowings, although the futility of postponements in anticipation of better days was demonstrated most forcefully on September 9 when the city of Newark was obliged to accept a 7.68 percent interest rate on its general obligation bonds after it had earlier rejected a 7.43 percent rate. Ironically, the earlier bid was rejected as excessive due to the uncertainty of the market attributable to these pending proposals to tax municipal bonds.

In the past few weeks the State of Hawaii and the cities of Chicago, Houston, and Jacksonville, among others, could not find a market for bonds valued in total at over $100 million.

There is no sign that the deterioration in the market is slackening. If these new proposals are enacted in any form, the result will be to insure the continuance of chaotic market conditions for years to come, until the constitutionality of these proposals is reviewed by the Supreme Court.

To summarize other points made in my full statement submitted to the committee, holders of municipal bonds pay very substantial taxes now since they agree to take an interest rate 30 percent lower than the rates they could obtain by investing in private obligations. I have also noted that many workers in the building and construction trades and the industries that will support them will be grievously affected by the cancellation or postponement of State or municipal bond issues.

In that statement, the longer statement, I have set forth my opposition, also expressed here by the Secretary of the Treasury, as I understand it, to the suggestion contained in H.R. 13270 that Federal payments be made to States and cities to soften the blow of increased interest costs.

Ironically, it appears that the ultimate result of these new tax proposals could be a reduction in the amount of revenues flowing into the Treasury itself. This loss would derive from the increased deductions for State and local taxes taken by Federal taxpayers who will have to pay [illegible] increased State and municipal borrowing costs and who would be permitted to deduct those increased taxes. Thus, the rather amazing results of these new proposals would ultimately be to produce losses for everyone concerned: for the Treasury, for State and local government, and for State and local taxpayers.

Thank you, Mr. Chairman.

The CHAIRMAN. Thank you very much, sir, for a very good statement. Any further questions?

Thank you, Mr. Tobin.

(Mr. Austin J. Tobin's prepared statement follows:)

STATEMENT OF AUSTIN J. TOBIN, EXECUTIVE DIRECTOR, THE PORT OF NEW YORK AUTHORITY

SUMMARY OF PRINCIPAL POINTS

I. The Port of New York Authority could not have developed its complex of terminal and transportation facilities in the Port of New York, in which it has invested $2 billion, if its bonds had been subject to federal taxation. And the Authority's contribution to current and future transportation requirements would, because of punitive borrowing costs, be substantially curtailed if the House or Treasury proposals were enacted.

II. These proposals squarely present a fundamental constitutional issue, for their effectuation would permit ultimate federal control of the powers reserved to the States under the Constitution.

III. Capital expenditures throughout the nation for essential transportation services and facilities, which are developed and financed primarily by state and local government, would be sharply cut back as a result of these new tax proposals.

IV. Based on future annual issuances for transportation purposes equal to the $2.8 billion borrowed by state and local government in 1968, these proposals would generate additional costs which would total $3.8 billion after ten years.

V. The States of New York and New Jersey have committed themselves by referendum to issue $3.1 billion in bonds for transportation. Their additional interest costs would total $420 million. These costs must be passed on principally in the form of regressive property, sales and other taxes.

VI. Even with increased federal assistance, state and local government must spend some $10 billion for airport capital requirements over the next 10 years. These new tax proposals would generate additional interest costs of more than $1.3 billion.

VII. The construction of the vitally-needed $600 million fourth jet airport for the New York/New Jersey metropolitan area on a self-supporting basis would be critically jeopardized if additional financing costs were to be added to the obstacles already delaying it.

VIII. State and local government also must contribute $10 billion in capital funds for mass transit in the next decade. An additional $1.3 billion in borrowing costs would be incurred should any of the new proposals be effectuated.

IX. Even the *threat* of impaired tax exemption has thrown the bond market into chaos. Many state and local governments have not been able to borrow at all, or have done so at punitive interest rates.

X. The enactment of any form of these proposals would ensure the continued disarray of the market for years to come, until their constitutionality was reviewed and conclusively determined by the U.S. Supreme Court.

XI. There is no reform in tax proposals that would impose staggering burdens on state and local government solely to capture a meager $45 or $80 million annually from wealthy taxpayers. Five years after the enactment of these proposals, state and local governments would be taxing in amounts of $540 million annually to pay increased borrowing costs.

XII. Inasmuch as these taxes are deductible from federal income tax returns, the Treasury will probably suffer a net *loss* if any of the new proposals are effectuated.

XIII. Muncipal bond holders have in fact paid substantial taxes to state and local government by accepting interest rates 30 to 35% less than those available on comparable corporation obligations. Based on the 1968 issuances of $16 billion alone, this represents "tax" income to state and local government averaging more than $200 million annually.

XIV. The provision in the House bill for a federal payment to recompense state and local bond issuers for additional interest costs is unacceptable both to the Treasury and to our states and cities. The Treasury is given too wide a discretion to fix the size of the payment, and the statutes authorizing this payment would be subject to amendment or repeal at any time.

XV. Banks, corporations and other institutional investors in municipals, although exempted from the operation of the present tax proposals, are on notice that they may be taxed in the future on their current holdings. The dismal state of the bond market now is attributable largely to the substantially higher returns demanded by those investors.

XVI. The Committee on Finance should therefore reject those provisions of H.R. 13270 and of the Treasury plan, and any other proposal which would tax, directly or indirectly, the interest on municipal bonds.

STATEMENT

I am Austin Tobin, Executive Director of The Port of New York Authority. I appreciate the courtesy of this Committee in affording me the opportunity today to submit my views on the proposals to tax municipal bond interest recommended in H.R. 13270 and again in the Treasury Department plan which was outlined to this Committee at the commencement of your hearings.

The Port of New York Authority is the bi-state instrumentality of the States of New York and New Jersey, created in 1921 to develop public terminal and transportation facilities in the Port of New York and to promote the commerce of the Port. It has no power to levy taxes or to pledge the credit of either State to finance its capital programs. Yet, over the past half century, it has been able to finance, construct and develop, at a cost of $2 billion, a comprehensive network of public airports, piers and docks, public bus and truck terminals, a commuter railroad and vehicular bridge and tunnel facilities, almost exclusively on the basis of its own credit, with Federal and state grants representing less than 3% of its total investment. Its outstanding bonded indebtedness at the end of 1968 was $1,180,000,000.

This complex of New York and New Jersey's public transportation facilities includes, among others, Kennedy, LaGuardia and Newark Airports, the modern docks and containership terminals at Ports Newark and Elizabeth and along the Brooklyn waterfront, the George Washington Bridge and the Holland and Lincoln Tunnels, the Manhattan Bus Terminal, and a trans-Hudson commuter railroad linking the Cities of New York and Newark.

It would have been quite impossible for us to have financed this complex of public terminal and transportation facilities if our bonds has been subject to federal taxation. Even with this advantage, we were practically bankrupt in the early 1930's. Practically every one of our facilities in their very nature, go through a development period of annual losses from five to ten years after they are opened. During this time they are rather marginal credit risks. This is the reason that under the laws of our two States, we are allowed to pool our revenues from all Port Authority projects and pledge these pooled revenues in support of our bonds. But we could never have financed these terminal and transportation facilities at interest rates which were economically practicable if our bonds had been taxable, which would have imposed a 40 per cent increase in our interest costs.

In other words, many of the public works which are so important to the basic economy of our region would not exist today if their financing had required the payment of interest rates which had to compete with those offered in the private sector. Not only would the residents of New York and Northern New Jersey be unable to construct the piers and docks, the airports, the terminals and other transportation services we have been able to provide over the past fifty years on a self-supporting basis (i.e., through revenue bond financing), but the prospects for financing the current and future transportation needs of the people of the Port of New York District would be gloomy indeed.

But the issue precipitated by these attempts to tax state and municipal bonds is not one of economics alone. The constitutional issue squarely raised by these proposals is of even greater consequence and importance, for these proposals are an attack on the basic structure of our government. When a similar proposal was advanced many years ago, Senator William E. Borah said that it would "wrench the Constitution from its harmonious proportions." Without any question, if the central government has the power to tax the financial operations of the States, it has the power to control every exercise of the governmental powers that were expressly reserved to the states under the Constitution. That would mean that the future form of our federal system of government will have been radically changed.

You have already heard extensive testimony from representatives of state and local government describing the destructive consequences of these proposals to the fiscal condition of our states, counties and cities. I understand that the Governors of some forty of our great states asked your Committee to be heard in opposition to the House bill and the Treasury's proposals, as did also some 200 elected and appointed state and local officials. While I fully share their shock and their forebodings of the incredible fiscal consequences of these proposals, I will try to avoid reiterating the points they have made. Rather, in my capacity as the Executive Director of a bi-state transportation agency, I would like to address myself to the consequences of the House bill and the Treasury recommendations to our national and regional transportation programs.

Under our federal system of government, our transportation services and facilities are in the main developed by our State, county and municipal governments. They are financed—for the most part—through those State, county and municipal governments. They are designed and financed and built to meet local and regional, as well as inter-regional transportation requirements. Yet the sum total of these locally and regionally developed facilities is a vast national transportation network that is not only vital to each region of our country, but also to the nation's whole economy, its defense, and its standing among nations.

The Port of New York typifies the dual stake which the people of the United States have in their transportation system. The primary purpose of the transportation facilities of the Port of New York is to meet the transportation needs of the civilian population during times of peace. At the same time, the existence of these facilities is an inherent part of our defense structure. And in time of war, their existence and operational efficiency is critical. During World War I, three-quarters of our overseas troop movements were through the Port of New York. And during World War II, one-half of all our armies overseas and one-third of all our material moved through New York.

As you may now be aware, state and local governments in 1968 issued more than $16 billion in municipal bonds. Of this total, some $2.8 billion were issued solely for transportation purposes. It has, I think, been amply demonstrated that the enactment of any of the tax proposals recommended in the House bill or by the Treasury Department would generate at the very least an average one per cent increase in the interest rate on municipal bonds, which is to say an increase of from 20 to 25 per cent over the historic levels of state and municipal interest rates. Even assuming no increase in the $2.8 billion of future annual financing for transportation purposes, the effect of the proposals under consideration by this Committee would be to increase interest payments by state and local government by a total of $380 million for the life of each year's borrowings for transportation purposes. In other words, after a ten-year period, the total liability for additional interest costs imposed by these Treasury proposals will have reached the staggering total of $3.8 billion and this final impact on state and local borrowing would relate only to public financing for transportation purposes.

Only recently, the Port Authority's parent States of New York and New Jersey have by referendum committed themselves to the issuance in the next few years of $3.1 billion in state bonds for the development and improvement of transportation facilities in both states. A one per cent increase in interest rates on these transportation bond issues alone would require the two states to levy an additional $420 million in taxes to pay increased borrowing costs.

The amounts the States of New York and New Jersey are committed to expend in capital funds for their transportation requirements, together with the Port Authority's capital requirements over the next few years, reach the formidable total of $4.85 billion. All of the projects on the drawing boards for which these funds are allocated are in some measure jeopardized by the new tax proposals. The financing and construction of these projects depend entirely upon the fiscal and political ability of the two States and their public transportation agencies to pay these tremendous increases in the cost of their financing. Unfortunately, these increased costs would have to be derived primarily from relatively regressive property, sales, and other taxes or charges assessed without respect to the ability to pay.

Turning to the problem of capital financing requirements for aviation development, it is estimated that more than $14 billion of public funds will be needed in the next ten years to finance the absolutely essential expansion of our national airport system. Historically, 80 per cent of the funds expended on our nation's airports have been derived from state and local sources. In the case of New York-New Jersey metropolitan airports, 96 per cent of the cost has been borne by the two States through their agency, the Port Authority. Even assuming increased federal assistance in the future, it probably will still be necessary for as much as $10 billion to be expended by the states and local government for essential airport construction; and this would involve more than $1.3 billion in additional interest costs if these planned and necessary aviation programs are to be carried out.

I am sure you are all aware of the critical necessity to upgrade the nation's air transportation system. In 1968, the American aviation industry transported over 150 million air passengers, representing an increase of 110 per cent over passenger volume just five years earlier. Those of you who regularly fly in and out of the New York metropolitan area have more reason than most to appreciate how essential it is that we provide additional airport capacity and reconstruct our existing airports. The new 360-passenger jumbo jets will be coming into service in a few months, and in New York, as in other urban areas, we are at work on the formidable problem of providing adequate mass transit (rail) connections between Kennedy Airport and Manhattan. The financing of these vital airport programs will be severely disrupted by these proposals—even by their consideration by the Congress.

One of the most critical needs of the metropolitan region of New York and Northern New Jersey is the provision of a fourth airport to meet the demands for air service to and from our area. Such an airport is not just a regional necessity; it is essential to the flow of air traffic across the nation. The cost of such an airport is now estimated at $600 million, and the assumption has validly been made that such an airport could, nevertheless, be developed on a self-supporting basis. However, the massive additional interest costs which would be incurred as a result of these proposals would most certainly jeopardize the prospect of constructing such an airport on a self-supporting basis. It would be nothing less than a tragedy, not only to New York and New Jersey, but also to our national air transport system, if these additional costs were to be piled on top of the formidable obstacles which are already delaying the construction of this vital facility.

The needs of the nation's mass transportation systems are equally impressive. These systems, which transport more than 8 billion passengers a year in our metropolitan areas, have projected capital needs of $20 billion over the next ten years.

Adequate mass transportation, by itself, will not solve the urban problem. However, without good public transportation, the urban problem cannot be solved. Workers must get to their jobs and back. Poverty pockets must have access to employment. Children must be able to get to school and people of all ages must have a means to get about.

With most urban rapid transit systems operating at heavy deficits even before considering capital costs, it is apparent that the $20 billion of capital needs must come from government sources. As you know, President Nixon has proposed a $10 billion federal aid program for mass transportation. If we assume that the proposal is enacted, there will still be the need of local and state governments to provide an additional $10 billion.

The proposal to tax state and municipal bond interest would increase the total borrowing cost of these bonds by another $1.3 billion. This increased cost would, of course, be reflected in higher fares to the users and increased taxes to the residents of the metropolitan areas. More importantly, the increased costs could very well cause the deferral or absolute abandonment of many urgently needed mass transit projects.

To recapitulate, just in these two vital areas alone—airports and mass transit—the additional fiscal burdens which these new tax proposals would impose on our states and cities would amount to the enormous total of $2.6 billion.

Lest I be accused of viewing with undue alarm, I need point only to the chaos that exists in the municipal bond market today. Even the *threat* of this attack on the immunity of municipal bonds has brought in its wake a market reaction which has required state and local governments in many cases to pay the highest borrowing costs in their history. Many units of government have been unable, because of constiutional and statutory interest rate limitations, to borrow at all. Many municipalities have deferred borrowings, although the futility of postponements in anticipation of better days was demonstrated most forcefully on September 9th when the City of Newark was obliged to accept a 7.68 per cent interest rate on its general obligation bonds after it had earlier rejected a 7.43 per cent rate. Ironically, the earlier bid was rejected as excessive due to the uncertainty of the market attributable to these proposals to tax municipal bonds. In the past few weeks, the State of Hawaii and the Cities of Chicago, Houston and Jacksonville, among others, could not find a market for bonds valued in total at over $100 million.

There is no sign that the deterioration in the market is slackening. If these new proposals are enacted in any form, the result will be to insure the continuance of chaotic market conditions for years to come, until the constiutionality of these proposals is reviewed by the Supreme Court. In the meantime, a market which has been developed over the years to the point where it can now readily absorb the capital requirements of our states, cities and counties approaching $20 billion annually is crumbling, and its rehabilitation—even if the Congress of the United States rejects these proposals—will be achieved only at great cost to the taxpayers of the nation.

I can perceive absolutely no "reform" in tax proposals designed to capture a few dollars from the rich which have as their primary consequence the imposition of debilitating economic burdens on state and local government—burdens which must be passed on to our already over-taxed middle-class and poorer people. Actually a large majority of outstanding municipal bonds are held by public and institutional investors and only a fraction are in the hands of the very wealthy. Moreover, the recovery by the Treasury of even the $45 million, which the Secretary of the Treasury estimated in his testimony a week or so ago before this Committee, is comparatively a very small sum when placed against the loss of hundreds of millions of dollars in increased interest costs that would be sustained by the states and cities. The ultimate fact is, however, that these proposals would probably result in a net loss for the Treasury itself. The municipalities' increased borrowing costs could only be met by increasing municipal real estate taxes or state income or sales taxes. These are deductible items on the federal tax returns of state and local taxpayers.

Assuming that the level of state and local borrowing remains constant at $16 billion a year, in but five years it would be necessary for state and local government to raise an additional $540 million annually. With deductions from federal income tax returns, it is apparent that the $45 million return to the Treasury estimated here by the Secretary of the Treasury from the allocation of deduction proposal, or the $35 million return estimated by the Treasury from the limited tax preference proposal, would be offset by the loss in revenues due to increased deductions. Just on the basis of economics alone, these proposals should be rejected.

Moreover, the Treasury and the proponents of the House bill apparently refuse to recognize that the holders of municipal bonds are now paying very substantial taxes indeed. Those taxes are being paid not to the federal government, but to state and local government whose financial situation is so desperate that the Administration is, under its "New Federalism" policy, now proposing to share federal revenues with them.

The holder of municipals has historically agreed to take an interest rate of 30 to 35 per cent lower than the rate he could obtain by investing in comparable private obligations. The difference in interest rates between these two types of obligations—municipal and corporate—now represents real "taxes" for the benefit of state and local government. For example, using the $16 billion issuances in 1968 alone, these "taxes" average well over $200 million a year. The new tax proposals would serve only to deprive state and local government of a very significant financial advantage and, instead, divert negligible gross revenues to the Treasury. The rather amazing result of these proposals will ultimately be to produce losses for everyone concerned: for the Treasury, for state and local government, and for taxpayers generally.

Also badly hurt would be workers in the building and construction trades and in the industries which support them. Higher borrowing costs must inevitably result in a sharp deceleration of public works programs, causing layoffs, reduced work opportuities and consequent economic hardship. In the last year alone, more than 300 bond issues valued close to $2 billion were cancelled or postponed in the face of soaring interest rates.

The House bill includes a provision for federal payments which would allegedly save state and local governments harmless from increases in interest costs if their bonds were to become fully taxable. The Secretary of the Treasury opposed this provision of the House bill when he appeared before your Committee. I also oppose it. The wide discretion afforded the Secretary of the Treasury in fixing the size of the payments would in itself make this proposal unacceptable to the states and cities. Moreover, the payment provisions may be amended or indeed repealed by any future Congress. The confidence of investors in municipals will be restored only as the result of a clear indication by this Congress that the immunity of state and local bond interest from federal taxation will not be invaded.

Although both the House bill and the Treasury would exempt banks and other corporate and institutional holders of municipal bonds from taxation, these corporations and institutions realize full well the implications of the proposals now before you. Both the Ways and Means Committee and the Treasury have put all investors on notice that the holders of municipals may be subject to some form of taxation even with respect to investments they have made prior to the enactment of new tax legislation. If this can happen to individual investors, corporate buyers would be apprehensive that it might happen to them. In fact, the amount of return corporate and institutional investors demand in the present market from invetsment in municipals clearly reflects their apprehension and concern.

Therefore, I respectfully urge rejection by this Committee of all the provisions of the House bill and the Treasury plan and of any other proposal which would, directly or indirectly, tax the interest on municipal bonds.

Thank you.

The CHAIRMAN. All right, now the next witness will be Mr. Eads Poitevent who will speak for the Port of New Orleans, Commissioner of the Port of New Orleans.

STATEMENT OF HON. EADS POITEVENT, COMMISSIONER, PORT OF NEW ORLEANS, LA.; ACCOMPANIED BY COL. WILLIAM LEWIS

Mr. POITEVENT. Thank you, Mr. Chairman.

The CHAIRMAN. I see you are accompanied by Col. Bill Lewis who did a very fine job for us at one time in protecting us from floods down there. So far as I know, nobody had the water come over the top while he was in charge.

Mr. POITEVENT. Bill is my gun bearer from New Orleans. I would like to add, before I start, one word. You seized on the word "incredible" that was used. I think another appropriate word in this situation is "appalling"—the appalling consequences of the possible action that could be taken with the approval of H.R. 13270 bill.

The CHAIRMAN. I think, the record should indicate that in addition to being a commissioner of the Port of New Orleans you are also president of one of the major banks——

Mr. POITEVENT. Right.

My name is Eads Poitevent, a member of the board of commissioners of the Port of New Orleans, and I am testifying in behalf of the board, an agency of the State of Louisiana.

The CHAIRMAN. But your other hat is that of a banker, you are the president of a bank.

Mr. POITEVENT. Yes; in private employment, and where I derive my income, I am president of the International City Bank & Trust Co., a New Orleans bank, and I live in New Orleans.

My testimony here is in opposition to certain provisions of H.R. 13270, specifically sections 301, 302, 601, and 602. Much of what we have prepared apparently has been done in concert with others who have testified, and I am going to attempt to telescope the repetitious part because I have heard much of this before.

However, we have a very good case in point as to what will happen, and is happening now, to the development of the agency of which I am a member.

The board of commissioners of the Port of New Orleans is charged with the responsibility of constructing and maintaining wharves and other public port facilities, and of administering the affairs of the port and the harbor of the Port of New Orleans. The board owns and operates public wharves for handling of cargo having a total frontage of over 54,000 lineal feet and affording an area of 10,845,000 square feet. In addition the facilities of the port include a public grain elevator, public commodity warehouse, Foreign Trade Zone No. 2, a public bulk terminal, and the Rivergate, an international exhibition and convention facility. The Port of New Orleans is a major world port handling foreign trade cargo valued at $2.7 billion annual and generating custom collections of $76 million annually.

The port is Louisiana's largest single industry and the mainstay of economy of the metropolitan area of New Orleans.

The port is directly responsible for 36,500 jobs and $201 million in annual wages. The total impact on the Louisiana economy is $1.6 billion. Earnings on cargo handling account for $6.7 million in city sales taxes and $18.9 million in State income and sales taxes.

In the past 15 years the board has spent over $130 million on major port improvements. These have been financed by direct reinvestment of operating revenues, and by bond issues secured by the full faith and credit of the State of Louisiana.

Extensive additional investments are now needed to upgrade existing port facilities, to construct new facilities to meet the demands of growth, and to accommodate revolutionary changes in the shipping industry.

This board has initiated a planned 4-year program for the rehabilitation and construction of needed public port facilities which program will require $60 million in capital funds to be obtained by the sale of State bonds. The prompt commencement and orderly prosecution of this rehabilitation and construction is absolutely essential if the Port of New Orleans is to meet the pressing needs of the Nation's world commerce and trade.

New construction is needed to accommodate new logical advances in the shipping industry, including containerization, LASH, CB vessels, and other new and efficient methods of cargo movement.

The Louisiana Legislature, in its 1969 regular session, authorized the State Bond Commission to issue $106 million in bonds, including $31 million to be applied to the facilities program of the Port of New Orleans in the next 2 years. The issuance and sale of the first phase of this issue, $15 million in principal amount of bonds, has been authorized by the bond commission with a limitation on the interest rate of 6 percent. Now, from the figures we have heard today, in going to the marketplace on September 30, you can imagine our apprehension and concern. We are apprehensive, to say the least. We are apprehensive that no bids will be offered at all; or, if those that are offered will allow us to sell our bonds at the maximum rate of 6 percent.

The CHAIRMAN. You just heard the city of Baton Rouge witness testify that they can't sell theirs at 6; didn't you?

Mr. POITEVENT. That is correct, and it is very realistic and reasonable to assume that we will not be able to.

The CHAIRMAN. That has the full faith and credit of the city of Baton Rouge behind it.

Mr. POITEVENT. Right.

The CHAIRMAN. And if the city of Baton Rouge can't sell.

Mr. PAITEVENT. There is very little reason to believe we can.

The CHAIRMAN. Is the Port of New Orleans in any better position to than the city of Baton Rouge?

Mr. POITEVENT. No; ours is full faith and credit of a State; theirs is a municipality; but the differential in the credit risk is not that great to justify a large differential in interest costs.

So we feel, in quick summation, that the provisions of sections 301, 302, 601, and 602, as have all been covered very ably by the gentlemen who preceded me, will have appalling consequences not only on the market as it is today, creating uncertainty and chaos, but they will also have tremendous consequences in the future. There is the question of the constitutionality of the entire proposal which will take years to litigate. There is the creation of an atmosphere of apprehension concerning the future of municipal bonds. If one step is taken it is logical to assume that others may be taken in the future to destroy the tax advantage of municipals.

Municipals themselves, and I am speaking more as a banker now than as a board commissioner, will be taken out of their hitherto private niche in investment thinking and will not receive the investment reception that they have had in the past. They will be thrown in direct competition with the mass of other issues having broader scope and possibly more glamour, as opposed to the individual consideration they had before.

Embedded deeply in this is the Federal subsidy question which implies that the approval or disapproval of each individual project will not necessarily be on the basis of local need but may be on other considerations.

In cutting through all of the statements and arguments I think we come to two bedrock inescapable facts: First, municipal bonds financing, as we have known it in the past, is the very lifeblood of public and capital improvement programs. Second, the lifeblood of municipals in turn and their real attraction in the investment market, is their tax exemption; and any legislative action changing this, these basic decisions, will court disaster, and must be judged against the rather minimal possible improvement in tax savings to the U.S. Government.

This completes our statement for the Board of Commissioners of the Port of New Orleans, and with your kind permission, I would like to file with the committee a statement from the American Association of Port Authorities indicating the dependency of the entire U.S. public port system upon tax-exempt bonds for investment capital. Any deterrent placed upon the marketability of such issues will have a serious effect upon the Nation's entire port industry. We thank you for allowing us to present this testimony, and the submission of the statements for record of hearing.

Thank you, gentleman.

(Statement of American Association of Port Authorities follows:)

Statement of the American Association of Port Authorities

(By Paul A. Amundsen, Executive Director)

Public marine terminals have never been attractive to private capital. With a few exceptions they have been developed by city or state governments or agencies thereof.

Local government has been able to provide such facilities at low investment rates because of the marketability of fully tax exempt general obligation or revenue bonds.

Historically, the total local public investment in marine terminals had reached $861,000,000 by 1941.

As attachments show, investment by city and state port agencies for 1964–65 has been $2,127,464,000. An additional $692,789,000 is being spent in the 1966–70 period, bringing all-time expenditures to almost $3.7 billion.

While minor portions of this total investment stem from direct appropriations by state and city governments, and from direct reinvestment of operating revenues, almost the entire dependency of the U.S. public port system is upon the fully tax exempt revenue bond or the general obligation bond for investment capital.

For this reason the member ports of The American Association of Port Authorities are opposed to any direct or indirect Federal taxation of interest on State and Municipal bonds. The effect of any such taxation on the bond market, already brought out by other witnesses, is, on the nation's seaport system, total and direct. Consider that system.

State port agencies apply in Maine, Massachusetts, New York and New Jersey (bi-state), Philadelphia, Pa.-Camden, N.J. (bi-state), Maryland, Virginia, North and South Carolina and Georgia as well as in Alabama. New York, Philadelphia, Norfolk, Savannah and others also have City agencies. Wilmington, Delaware is a city Port Commission. The Louisiana ports of New Orleans, Lake Charles and Baton Rouge are administered by agencies deriving their powers from the State. The Port Commissions of Mississippi are agencies of the State's Board of Agriculture and Industry. In Florida, a system of county port agencies applies (not unlike Navigation Districts). Well defined and more autonomous port authorities exist in Jacksonville and Tampa.

As the United States developed westward, from the Mississippi River, it is notable that port development began in local public hands and then remained so, there being very little private operation of commercial waterfront facilities in the West Gulf, and almost none in the states of California, Oregon, Washington. Texas ports are governed by Navigation Districts deriving their powers from the State. The port cities of California were given "commerce and navigation" responsibilities by the State and hence the California pattern has been one of City development primarily. San Diego has within the last several years changed from a City agency to a regional Port Authority. San Francisco, long the lone State agency, within recent months has become a City agency.

Oregon has City agencies generally and a State agency identified with the Columbia River and airport structure. Washington has a system much like that of Florida, involving districts and elected commissioners, emanating from State powers.

Turning to the Great Lakes, the City harbor departments there in many cases have been replaced by port authorities including Duluth, Toledo, Cleveland and Buffalo. In Chicago there is both a City port department and a Chicago Regional Port District under State auspices. Milwaukee remains a City department whereas Detroit is a port commission under County auspices.

Every one of the port agencies has developed in an atmosphere of local self-determination. As each port area evolved, protection of the public interest of that area, from the standpoint of waterborne commerce and harbor development has resulted in a port agency particularly tailored to that area's needs. As a result, no two of the agencies are alike as political structures. Nor are they alike as business entities.

Competing for a fair share of the nation's export-import tonnage is a large part of the job of protecting the local public interest, and this competition is very keen among ports in the cargo producing centers here and abroad.

Competing for industrial locations is likewise very keen, for this is "captive cargo" which is built into the port physical plant.

Seaport competition for cargo, given equal freight rates and frequency of sailings, really boils down to the provision of port facilities which offer efficiencies to the shipper and steamship line. This competition has resulted in the finest national port system on the globe.

It consists of 2,121 deepwater cargo terminals of all types (bulk as well as general cargo)' of which 1,254 were constructed since 1940. The average age of the total plant is 24.6 years, well under the typical amortization period of 35 years.

In general cargo terminals, where the competition is very keen, 720 of the above terminals were built since 1946, their average age being 11 years.

Of these, 49 are container terminals built since 1965, average age 4 years. Another 24 container terminals are under construction and another 45 are in the planning stage.

Almost the total investment in this system has been by local public agencies through fully tax exempt bond issues.

The Federal investment in ports has been mainly in the form of deepwater channels, the U.S. Engineers being responsible for navigable waterways.

The all-time Federal investment in channels since 1824 totals almost $1.5 billion, including maintenance. Comparing this to the historic local public investment in marine terminals ($3.7 billion) means that port authorities have invested more than $2.00 for every Federal dollar.

Customs collections at marine terminals for fiscal 1969 totalled $3 billion (excluding air cargo). The Federal deep channel appropriation for fiscal 1970 will probably be $35.5 million.

Thus on ports alone, the Federal Government has a very advantageous arrangement here. A 10,000% annual cash flow return on its dollar of annual investment as the minor partner in the joint venture.

The technology of world shipping is undergoing rapid change. Thanks to the competitive public port system of the United States, the nation's world gateways are keeping pace and indeed assumed an early leadership position in urging new technology.

The Senate Finance Committee should very carefully consider that a major national asset, totally dependent upon local tax exempt issues for its progress, is being destructively dealt with by those provisions of H.R. 13270 which directly or indirectly hamper marketability through taxation.

The CHAIRMAN. Thank you very much, Mr. Poitevent, and we are pleased to have Bill Lewis here with you. We are proud of what you have done to help Louisiana and in your community in particular.

Mr. POITEVENT. Thank you.

The CHAIRMAN. May I say just as one member of this committee I don't want to vote for anything that will defeat anything that you and Col. Bill Lewis are doing down there to help New Orleans.

Mr. POITEVENT. This is a very vital thing. We must change drastically and dramatically the tremendous revolution of cargo handling which is thrown on the top of normal maintenance and rehabilitation programs.

The CHAIRMAN. You are doing your best to try to modernize a port that had a lot of old docks and wharves that needed improving.

Mr. POITEVENT. Right.

The CHAIRMAN. And I hope you can find some money somewhere to build some facilities along that new tidewater channel that Bill Lewis built for you down there when he was with the Corps of Engineers.

Mr. POITEVENT. Yes.

The CHAIRMAN. But you are not going to be able to do that if you can't sell those bonds.

Mr. POITEVENT. That is right, without money we are dead.

(Mr. Eads Poitevent's prepared statement follows:)

STATEMENT OF EADS POITEVENT, COMMISSIONER, BOARD OF COMMISSIONERS OF THE PORT OF NEW ORLEANS

SUMMARY

The Board of Commissioners of the Port of New Orleans is charged with the responsibility of constructing and maintaining wharves and other public port facilities. The Port of New Orleans is a major world port, handling foreign trade cargo valued at $2.681 billion and generating customs collections of $76 million yearly.

The Port is the mainstay of New Orleans' economy, directly responsible for 86,500 jobs and $201 million in annual wages. The total impact on the Louisiana economy is $1.6 billion. Earnings on cargo handling account for $6.7 million in City sales taxes and $18.9 million in State income and sales taxes.

Capital investment is needed to upgrade existing port facilities, to construct new facilities to meet the demands of growth and to accommodate revolutionary changes in the shipping industry. The port facilities program calls for expenditure in the next four years of $60 million, to be financed by general obligation bonds of the State.

We oppose the provisions of H.R. 13270 which place taxation on municipal bonds and impair the tax-exempt bond market. The threat of taxation has already created chaos. Interest rates have increased sharply in the past four months. Passage of H.R. 13270 would cost the issuer two additional percentage points of interest, placing an additional burden on the local taxpayer. Construction of urgently needed port improvements are being delayed and may have to be abandoned.

We oppose the elimination of tax exemption on interest of "arbitrage bonds".

We oppose the provisions for the issuance of taxable bonds with an interest subsidy by the Federal Government. These place the polices and the programs for local development entirely under Federal control.

Taxation of municipal bonds violates the doctrine of intergovernmental immunity, raising substantial issues of constitutional law which will involve protected litigation.

We urge the Senate Finance Committee to defeat the provisions of H.R. 13270 which impair the marketability and increase the cost of tax-exempt municipal bonds, and other provisions which place the control of State and local investment capital under the Federal Government.

The Board of Commissioners of the Port of New Orleans, created by the constitution and statutory laws of the State of Louisiana, is empowered and charged with the responsibility of constructing and maintaining wharves and other public port facilities, of regulating the commerce and traffic of the port and harbor of New Orleans, and of administering the affairs thereof in such a manner as may, in the Board's judgment, be best for the maintenance and development of the port. The Board is composed of five members prominently identified with the commerce and business interests of the port. The Commissioners of the Board are appointed by the Governor of the State of Louisiana, each to serve a term of five years.

The jurisdiction of the Board of Commissioners of the Port of New Orleans embraces the Parishes (Counties) of Orleans, Jefferson and St. Bernard in Louisiana.

The facilities and activities of the Port of New Orleans are centered on the banks of the Mississippi River approximately 120 river miles from the Gulf of Mexico. Port facilities also extend along the Inner Harbor-Navigation Canal and the Mississippi River-Gulf Outlet, the latter being a Federal seaway project providing a deep-water link with the Gulf of Mexico over a distance of 70 miles. The extensive inland waterway system of the Mississippi River and its tributaries provides for a major transportation network connecting the Port of New Orleans with the mid-continent area of the Nation. The Gulf Intracoastal Waterway crosses the Mississippi River in the Port of New Orleans, extending east and west from Florida to Mexico.

The Board of Commissioners of the Port of New Orleans owns and controls public wharves for the handling of cargo having a total frontage of 54,525 lineal feet and affording an area of 10,845,000 square feet. In addition, the facilities of the port include a Public Commodity Warehouse, Foreign Trade Zone No. 2, a Public Bulk Terminal and the Rivergate, an international exhibition-convention facility.

The Port of New Orleans is a major world port, second largest in the Nation in the value of its foreign trade and in the volume of its total waterborne commerce. It is the largest port in the Gulf of Mexico area in all categories.

Within the reporting area covered by the statistics of the U.S. Army Corps of Engineers, the Port of New Orleans recorded 113,511,000 tons of waterborne commerce during 1968, shattering all previous tonnage records. This represents an increase of more than two million tons over the previous year. Foreign traffic in and out of New Orleans totaled 27.8 million tons, an increase of 400,000 tons over 1967, with exports accounting for 21 million tons and imports 6.7 million tons. Coastwise traffic was 28.1 million tons in 1968. Barge movements totaled 55 million tons, up about 5 million over 1967. Local traffic accounted for 2.7 million tons.

Within the reporting area of the U.S. Department of Commerce, the value of foreign trade cargo in the Port of New Orleans for 1968 was $2.681 billion, for an increase of 13% over 1967. Exports accounted for $1.615 billion and imports for $1.066 billion. Duty collected by U.S. Customs on cargoes passing through the Port of New Orleans in 1968 amounted to $75,960,000, an increase of 31% over 1967.

During the past 10 years the foreign waterborne commerce of the Port of New Orleans has shown an average annual gain of 7% per year, exceeding the average growth of foreign trade in the United States of 5%.

The Port of New Orleans is Louisiana's largest single industry and the mainstay of the economy of the Metropolitan Area of New Orleans. The Port is directly responsible for 36,500 jobs and more than $201 million in annual wages. It is indirectly responsible for 19,800 other jobs in Louisiana agriculture and 10,700 other jobs in Louisiana industry. The total impact on the Louisiana economy of this payroll money, earned directly by individuals from port activities, is a staggering $1.6 billion.

Earnings on cargo handling operations in the Port of New Orleans accounts for $6.7 million in City sales taxes and $18.9 million in State sales and income taxes.

For many years the Port of New Orleans has consistently plowed back gains from its operating revenue into construction and modernization of port facilities.

In the past 15 years alone the port has spent $130 million on major improvements, with $58 million of these funds coming from port earnings, $62 million from tax exempt bond issues supported by port income and $10 million from tax exempt bonds supported by a portion of the State gasoline tax.

The outstanding bonded debt of the Board of Commissioners of the Port of New Orleans on June 30, 1969, was $71,205,000. Maximum annual bond service requirements for payment of principal and interest, occurring in 1973, is $4,396,-000. All bonds issued by the Board are secured by the full faith and credit of the State of Louisiana, representing general obligations of the State, the interest on which, under present laws, are exempt from Federal taxation. As previously stated, the outstanding bonds of the Port of New Orleans are serviced largely from the net revenues of the Port, and additionally from the proceeds of a portion of the State gasoline tax.

Despite the huge sums spent on port improvements in recent years, the Port of New Orlenas today has great need for additional capital funds to upgrade its existing port facilities, to construct new facilities to meet the demand of growth in traffic and to accommodate technological changes in the shipping industry. In the history of the port the need for additional and improved facilities never have been more critical than it is today. This condition exists because of the advanced age and obsolescence of many of the port's cargo handling facilities, coupled with revolutionary changes in modes of port transportation and cargo handling techniques. The latter includes the growing practice of containerization and unitization of cargoes, intermodal concepts of transportation, the rapid development of containerships, barge carrying vessels and other innovations.

The containerization phenomenon is having a revolutionary effect on ocean transportation. Ports, as never before, find that they must quickly develop and adapt to reap the benefits of the "container revolution". Adaptation to containerized facilities presents unprecedented economic complications.

Special consideration must be given to the construction of highly sophisticated port facilities for the accommodation of LASH (Lighter Aboard Ship) and other barge carrying vessels which are now entering the shipping industry. Such requirements are highly important in the future development of the Port of New Orleans.

Two major steamship lines have announced the introduction at an early date of services operating between the Port of New Orlens and the North Atlantic Ports of Europe and the United Kingdom, utilizing such barge carrying vessels. Central Gulf Lines will initiate the LASH system with its vessel the "Acadia Forest" in October 1969, with a second vessel entering the service in early 1970. Lykes Bros. Steamship Company, Inc. has placed under construction three specially designed vessels for the SEABEE system, another version of the barge carrier. The first of these vessels will be placed in service late in 1971, with the other two vessels to be in service within six months thereafter. Holland-American Lines has invited tenders for two LASH ships, tailored for U.S. Gulf Ports service. Other steamship lines are also entering this field of transocean carrier.

Never has there been such a rapid change in ocean transportation as there has with the switch to containers, creating a massive requirement for new port facilities. Market researchers estimate that 1970 will be the year of the greatest growth with an estimated 70 new containerships delivered. As of April 1, 1969, there were 199 containerships under construction and on order in the United States and other shipyards. With the advent of the containership there are heavy pressures on the ports to construct new and improved facilities.

In addition, the Port of New Orleans, being a very old port, is faced with the problem of modernizing existing facilities. General cargo facilties which are deteriorated and obsolete and require replacement represent cargo handling capability 2½ million tons per year. The Port of New Orleans is confronted with the pressing need to replace these facilities, while at the same time adding capacity to accommodate gains in port traffic and to meet the technological changes. Keen competition from ports in the Atlantic, Pacific and elsewhere in the Gulf, where modern port facilities are going up at a rapid rate, emphasizes the urgent need for new and improved facilities in the Port of New Orleans if it is to survive as a viable force in the port industry and in the State's economy.

The facilities program of the port calls for the expenditure in the next four years of $60 million. Contrary to the past conditions, the Board of Commissioners of the Port of New Orleans does not have within its means the financing of such additional capital expenditures. Accordingly, the funds for this program must come from the State of Louisiana through the issuance of general obligation bonds supported by the entire resources of the State.

The Louisiana Legislature in its 1969 Regular Session authorized and directed the State Bond Commission to issue general obligation bonds of the State of Louisiana in an amount not to exceed $106,985,000, including $30,827,000 to be applied tó the facilities program of the Port of New Orleans.

At a meeting of the State Bond Commission held on August 12, 1969, resolutions were adopted to implement the bond issues as authorized by the legislature, and particularly authorized the issuance and sale of $15 million principal amount of bonds to mature within 30 days from the date of sale, at an average net interest rate not exceeding 6%. No bid will be accepted for a price less than par. The sale of said bonds is scheduled for September 30, 1969.

The prompt commencement and orderly prosecution of the rehabilitation and construction program, to be financed by the present and subsequent bond sales as authorized by the legislature for the benefit of the Port of New Orleans, is essential if the Port is to meet the needs of its commerce and trade.

H.R. 13270, if enacted into law, will be destructive to the ability of the Port of New Orleans to commence and prosecute its rehabilitation and construction program by placing in jeopardy the ability of the State of Louisiana to finance its capital programs.

Certain provisions of H.R. 13270, particularly Sections 301 and 302 thereof, directly and adversely affect the ability of the State to market tax-exempt bonds. It is apparent, in fact, that the threat of taxation of interest on State and local obligations by including the interest from these bonds in the limit on tax preference and allocation provisions of the bill has already created an extremely chaotic situation in the bond market. The potential financial impact on State and local government, should the provisions of the bill affecting tax exempt bonds be enacted into law, is appalling.

Analyses by the Conference on Intergovernmental Relations indicate that comparable municipal and corporate bonds historically have had a relationship as to yield in the vicinity of 70%; that is, municipal yields have been generally running at about 70% of those on comparable corporated (e.g., if a corporate bond was selling at 8%, a comparable municipal bond would yield about 5.60%). This 70% relationship has now increased to about 80%; or the municipal bond comparable to an 8% corporate bond is selling at a yield of 6.40% rather than 5.60%.

During 1967 and 1968 the differential between yields of taxable and tax exempt securities generally averaged in the range of 2%. The difference in July 1969 was 1.39%. Should H.R. 13270 be enacted into law, a substantial further narrowing, or even complete disappearance, of this differential could be expected. Accordingly, bond analysts are of the opinion that the provisions of the bill would cost the issue of tax-exempt bonds up to two additional percentage points of interest.

If the additional two percentage points is assumed the issuance of $60 million principal amount for needed port improvements involves additional interest cost of $24,840,000 over the assumed 30-year life of the bonds, thus adding 41.4% to the cost of the facilities. This is a small but typical example of the manner in which taxation of municipal bond interest will increase borrowing costs and wreak havoc with the capital improvement programs of the State and local governments.

Interest rates on municipal bonds have sharply increased since January. The increase in the past four months has been drastic. Bond Buyer's Index shows an average yield of 4.97% in January, 4.09% in April, 5.93% in July, 6.26% in August and 6.37% in September 5, 1969. Although there is reflected in these rates strong inflationary pressures and the monetary restraints imposed as counter-inflationary measures, a large portion of the increases are attributable to expectations respecting tax exemption of municipal bond interest. This apprehension has spread in the past four months.

State and local governments presently are unable to finance projects at reasonable interest levels, or at interest rates within legal limits, as demonstrated by the fact that tax exempt municipal bond issuances for 1969 are running at an annual rate 40% below that which would reasonably have been expected this year. This substantial forced reductions in bond issuances in 1969 are delaying the financing of essential public works at State and local levels. The provisions of H.R. 13270, if enacted into law, will compound the situation, further delaying urgently needed public works and creating a backlog of requirements which can be met in succeeding years only by adjustments in State and local tax measures to meet higher borrowing costs so that the crushing need for public facilities may be fulfilled despite the additional financial burden on the local taxpayer. Of necessity some meritorious capital improvements would be limited in scope, others abandoned altogether.

H.R. 13270 would deny tax exemption in certain cases to interest on State and local government "arbitrage bonds" issued for the purpose of purchasing U.S. Government obligations, the interest on which is used to pay debt service on municipal bonds. These provisions likewise are detrimental to the ability of the Port of New Orleans, the State of Louisiana and other public agencies to finance capital improvements.

Sections 601 and 602 of the bill provide for the issuance by a State or political subdivision to issue taxable bonds in exchange for an interest subsidy by the Federal Government. The Secretary of the Treasury would determine the subsidy percentage which would apply in the case of each bond issue. This is apparently designed to impair and ultimately eliminate the tax exemption of municipal bonds, to coerce State and local government to adopt a voluntary tax subsidy of their obligations, and to intrude the Federal Government into State and municipal financing.

Interest rates on municipal bonds issued without the benefit of the subsidy provisions will climb so drastically as to make the election of taxable subsidized bonds mandatory. It will only be a matter of time before the Federal Government would possess complete control of State and local financing.

The port industry of the United States is the product of competitive independent action by the various local and State port authorities without the interference of Federal control and regulations. The independent status of the State and local port industry would be destroyed in this process. The Federal government will inevitably exercise control over the funds. This will shift the decisions as to what is to be construed, when and how, from the local level to the Federal level.

The exemption of State and local bond interest from taxation stems from the constitutional mandated doctrine of inter-governmental immunity which is designed to permit the continued functioning of the Federal system of government. Because of diversity of legal opinion upon this point, no one could be certain of the outcome until a decision was reached by the U.S. Supreme Court. In the meantime, the municipal market would be in a state of apprehension and uncertainty, and the net effect would be to diminish sharply the acquisition of State and municipal bonds until this question was settled. Under these circumstances, banks and other institutional investors in tax-exempt bonds may assume that the next change in the tax law could directly reduce the value of the tax exemption to them. Any municipal financing that could be done at all will be at sharply higher interest rates, the cost of which would be borne by the local taxpayers. In the interim, needed port improvements and other public works will be at a standstill.

In the particular instance of the program for the Port of New Orleans as presently authorized by the legislature of Louisiana the issuance of bonds on September 30, 1969, is definitely compromised. The threat of taxation has created a sharp upturn in the yield of municipal bonds to the point that the sale of bonds at an interest rate of 6% or less is highly improbable. The Constitution and laws under which general obligations of the State may be issued makes no provisions for the issuance of taxable bonds with or without a Federal subsidy. New legislation enabling the issuance of taxable bonds must await an additional session of the legislature and possibly a referendum vote which may be scheduled at the earliest in November 1970.

The Board of Commissioners of the Port of New Orleans considers that the provisions of H.R. 13270 which impair tax exemption of State and municipal bonds as well as those which make allowances for the issuance of taxable bonds under Federal subsidy arrangements are highly prejudicial to the development and expansion of the Port of New Orleans. We urgently request that the Senate Finance Committee defeat the provisions of the bill which pertain to the taxation of State and local government bonds, as well as the provisions which tend to place the control of State and local financing under the Federal Government.

Presented herewith is a certified true copy of the Resolution adopted by the Board of Commissioners of the Port of New Orleans at its Regular Meeting held in New Orleans on September 11, 1969, setting forth the position of the Board in this matter and authorizing my appearance before the Senate Finance Committee to submit this testimony in opposition to the enactment of said provisions of H.R. 13270.

Attachment.

CERTIFICATION

I, Emero S. Stiegman, Assistant Secretary of the Board of Commissioners of the Port of New Orleans, do hereby certify that the following is a true and correct extract from the minutes of the Board adopted at a Regular Meeting held in the City of New Orleans, State of Louisiana, on September 11, 1969:

"Whereas the House of Representatives of the United States of America did, on August 8, 1969, pass H.R. 13270, a bill to reform the income tax laws, to be cited as the 'Tax Reform Act of 1969': and

"Whereas certain provisions of said bill will limit the income tax exemption on interest earned on state and municipal bonds, thereby conflicting with the long established decisions of the United States Supreme Court relating to the doctrine of intergovernmental immunity from taxation; and

"Whereas the limitation on preferences on minimum tax plan and the allocation of deductions as are set forth in Sections 301 and 302 of said bill would seriously prejudice the states and municipalities in exercising control over their financial resources and in the carrying out of their governmental functions; and

"Whereas the requirement to allocate deductions will have the effect of reducing other deductions which are otherwise allowable merely by reason of a taxpayer earning interest on state and municipal bond holdings and will further discourage the sale of such bonds and thereby make it impossible for a state to obtain the finances necessary to carry out its legal functions and purposes; and

"Whereas, Sections 601 and 602 of said bill provide for an election by states and municipalities to issue taxable bonds in exchange for an interest subsidy by the Federal Government, and would repeal the exemption from Federal income taxation of so-called arbitrage bonds, thus destroying the constitutionally tax exempt status of state and municipal bonds, as well as destroying the historically lower interest rates on state and municipal bonds; and

"Whereas, the purchaser of state and municipal bonds is actually paying a so-called 'minimum tax' by accepting a lower interest rate than if the bonds were taxable; and

"Whereas, the exemption of interest from federal taxation is the result of the constitutional right under the doctrine of intergovernmental immunity from such taxation, designed to permit states and municipalities to carry out their respective governmental functions; and

"Whereas, the provisions of said bill as they relate to the taxation of interest on state and municipal bonds will drive interest rates thereon to such exorbitant heights as to make mandatory the election by states and municipalities to issue taxable bonds in order to obtain such federal subsidies: and

"Whereas, it can be reasonably expected that legislation will follow to provide federal criteria for the granting of such subsidies in the future, thus placing complete control in the Federal Government of state and municipal government financing; and

"Whereas, notice to the public of said bill has already affected the sale of state and municipal bonds at the highest rates of interest ever made applicable to such bonds, and will continue to prejudice states and municipal governments from financing their governmental functions as the result of such tax-free bonds being made less attractive by the relatively high rates of interest being quoted; and

"Whereas, if many state goverments are compelled, by virtue of such increase in rates, to issue taxable bonds under provisions of Sections 601 and 602 aforesaid, interest rates will generally be forced upwards, to such extent that state and municipal governments will be forced into competition with private corporations and with the United States Government for available funds from investors; and

"Whereas, the demand from such source of funds becoming greater, from time to time, the higher the whole interest rate structure will become, thus making it impossible for state and municipal governments to finance their public obligations; and

"Whereas, the enactment of the aforesaid provisions of said bill will certainly bring about the institution of suits to establish the unconstitutionality of said provisions: Now, therefore, be it and it is hereby

"*Resolved* by Board of Commissioners of the Port of New Orleans that certain provisions of said bill, H.R. 13270, insofar as they relate to the taxation of the interest on state and municipal bonds, all as more particularly set forth in Sections 301 and 302 and in Sections 601 and 602 of the said bill are detrimental to the State of Louisiana, and to said Board as an agency thereof, in that they will seriously prejudice the ability of said Board to obtain the necessary finances for the construcion of required port terminal facilities and improvements for the obvious reasons aforesaid; and, that said Board is opposed to the enactment of the said certain provisions of said bill: "Be it and it is hereby further

"*Resolved*, That Eads Poitevent, Commissioner, of the Board of Commissioners of the Port of New Orleans, be and he is hereby empowered to present a copy of this resolution to the Finance Committee of the United States Senate, and to the members of the Congressional Delegation of the State of Louisiana, and the said Eads Poitevent, Commissioner, is further authorized and empowered, on behalf of said Board, to appear before said Senate Finance Committee for the purpose of offering testimony in opposition to the enactment of said certain provisions of H.R. 13270, at any hearing or hearings that may be called in the consideration of said bill, and to take such further steps and procedures as may be appropriate toward the end of procuring the ultimate defeat of the enactment of said provisions of said bill: be it and it is hereby further

"*Resolved*, That the Acting Director of the Port of said Board is hereby empowered and directed to take such additional steps and procedures, to attend such public hearings as may be called in consideration of said H.R. 13270, to offer testimony therein and take any and all other actions that may be appropriate and necessary, all in furtherance and in aid of the aforesaid efforts of said Commissioner Eads Poitevent, toward the end and purpose aforesaid."

Witness my hand and the seal of this Board, on this 12th day of September, 1969.

EMERO S. STIEGMAN, *Assistant Secretary*.

The CHAIRMAN. I have had a request for two additional witnesses. One was from Senator Stennis and one from a member of the committee. I would like to call Mr. Ed Khayat, if he is here. Will you come forward, Mr. Khayat. Mr. Khayat is secretary of the Mississippi Association of Supervisors. Senator Stennis requested he be heard today because I don't believe he could be in town tomorrow. Mr. Khayat, your other distinction is that you are the father of the defensive line coach of the New Orleans Saints.

STATEMENT OF ED KHAYAT, SECRETARY, MISSISSIPPI ASSOCIATION OF SUPERVISORS

Mr. KHAYAT. Yes.

The CHAIRMAN. What I want to know what was the matter with that secondary last Sunday?

Mr. KHAYAT. We are looking at that matter this week.

The CHAIRMAN. It was just that Jurgensen throws those passes so accurately.

Mr. KHAYAT. His accuracy was unfortunate for us. He threw a long bomb to Charley Taylor and that was the end of the day. But we are very happy to be with you, Senator, and we are very thankful for your allowing us to appear.

The CHAIRMAN. If you talk to your son, I would recommend they do something for the pass defense in the secondary.

Mr. KHAYAT. I will see that he gets the message. I will give it to him this afternoon.

Thank you very much, Senator. Thank you for the privilege of allowing me to appear before this distinguished committee. Much of what has been said already would be what I would say but I will not say it because I would be repetitive. All of these things the previous witnesses have mentioned, the Governors, the officials from the Port Authorities, and others, are all in my prepared testimony for the county supervisors of Mississippi. There are one or two points I would like to make, Senator, that have not been brought out.

The CHAIRMAN. May I say, Mr. Khayat, that is what we hope to get from witnesses, not just repetition of what has been said.

Mr. KHAYAT. Yes.

The CHAIRMAN. Because we know that, we have heard it before, we have read it before as well. We want to know what you are going to add to.

Mr. KHAYAT. Thank you, sir.

In addition to the information given, I would like to respectfully call to your attention the fact that millions of dollars in bonds issued by the State of Mississippi, city and county governments have built industries which cause the employment of several thousand people. We emphatically state that these buildings and equipment and this employment have created for the Federal Government a new broad tax base. Yet at the same time counties and cities grant 10-year ad valorem tax exemptions to industry on the assumption that other tax benefits come from these industries. And in order to serve the people who are employed at these new industries the counties and cities are called on to construct new schools, water and sewer systems, roads and bridges and recreation facilities as well as hospitals.

We, therefore, feel that we are sharing a burden with the Federal Government at the same time the Government is a direct recipient of tax income, 10 years prior to any income which may come to the State, county and city.

For example, the Standard Oil Co. of California merged into a company called Calky that has built in Pascagoula, Miss., a $130 million refinery. One of the major reasons they came to us is because we had a 40-foot channel built up the Pascagoula River financed a $2 million local bond issue. Now these people from California did not close their plant in California. They built a new one in Mississippi with an additional 700 employees plus the building and equipment which has created for the Federal Government, Senator, some additional tax money it didn't have.

Subsequently, the State of Mississippi issued $130 million in bonds to build a modern shipyard owned by the State of Mississippi, and operated by Litton Industries. But when this installation was built those bonds were bought because they were municipal bonds and we had that tax exempt feature which helped it, but consequently 12,000 people are at work in this shipyard. We are saying that the income that comes from these people, the income tax as well as the construction of buildings and the manufacture of equipment owned by Litton Industries brings to the government something new.

In addition to that, you all have been most compassionate with us in this hurricane thing. You have come across with help. We can build back most of the gulf coast and part of Louisiana and Alabama. You are putting up matching funds, you put up half and we are putting up the other half. The other half comes from bonds we have to issue, we have no funds in our Treasury, the only source of taxation for counties are ad valorum taxes and some others. Whatever we have to match comes from bonds issued. We have to sell bonds in this market, and they just have told us stay off the market. It is just as plain as that. That is my testimony and thank you very much for giving me this time.

The CHAIRMAN. May I wish you all the luck in the world in rebuilding after that hurricane hit Mississippi. We have had experiences like that in Louisiana. We had the full effect of Hurricane Betsy which did about a billion dollars damage. I don't wish you bad luck, but I am just as happy that it didn't go a little bit more to the west and hit us again. We have had about all we can take from those disastrous hurricanes. The previous time, when the disastrous hurricane destroyed all your sea walls and your front property improvements along that Mississippi gulf coast you did a magnificent job of rebuilding and by the time you were through what you had was better than what you had when the hurricane hit. I hope very much that the bill we pass will be of some help to you in doing as fine a job as you did the time before.

I hope by the time you are through with this disaster, poorer though you may be, you will have an even more beautiful gulf coast to show for it.

Mr. KHAYAT. I would also like to thank the Senator for the fine support you gave to Senators Eastland and Stennis and Congressman Colmer, the tremendous support, and we appreciate the compassionate support by good Americans as you are.

The CHAIRMAN. They helped us to pass the Betsy bill and——

Now, Mrs. Priest is here and we will call Mrs. Priest to present her statement. We are pleased to have you here.

STATEMENT OF MRS. IVY BAKER PRIEST, CALIFORNIA STATE TREASURER; ACCOMPANIED BY GEORGE HERRINGTON, BOND CONSULTANT

Mrs. PRIEST. Thank you, Senator Long, and Senator Bennett, Senator Curtis, well, Senator Williams, and Senators Anderson, it is so nice for me to be back here.

The CHAIRMAN. We are pleased to have you, and I think Senator Bennett would be pleased.

Mrs. PRIEST. Mr. Chairman, I would like to introduce George Herrington, our bond counsel for the State of California. He is a partner in the firm of Orrick, Herrington, Rowley and Sutcliff——

The CHAIRMAN. We are happy to have you.

Mrs. PRIEST (continuing). Who is here for any technical information you might need.

The CHAIRMAN. Senator Bennett.

Senator BENNETT. Mr. Chairman, Mrs. Priest is a product of my State of Utah. She was Treasurer of the United States during the Eisenhower administration, and the people of California know a good thing when they see one, so she is now treasurer of the State of California. Maybe she has more money out there than she had——

Mrs. PRIEST. Oh, Senator Long you still have money with my name on it. It is wonderful.

Senator BENNETT. Unfortunately it won't buy as much now as when you signed it. [Laughter.]

Senator BENNETT. That is one of the reasons we are meeting in this hearing to see what we can do about it. I am very happy to have the privilege of welcoming you to these hearings.

Mrs. PRIEST. Thank you, Senator Bennett, and I am most happy to be able to appear before this distinguished committee. You referred to how much money we might have out there, I understand that, in our bond operations, we are second only to the U.S. Government. So we do have a big setup and I would like to tell you a little about it, Senator Long and distinguished Senators.

The CHAIRMAN. We have a telegram, Mrs. Priest, from Governor Reagan saying that you are speaking for him. So you are speaking for the Governor of California.

Mrs. PRIEST. Well, I am very glad, because I like to feel that he thinks I could speak for him. He is doing a great job out there for us. We do have our problems, too, and the bond problem is one of the bigger ones. I would like to tell you a little of our problem for your consideration here today. In the interest of time, I think you Senators have a complete brief which we sent in, but in the interest of time I have some of the highlights of that I would like to review with you today.

The CHAIRMAN. We have your statement. It has been printed and it will appear in the hearings and in addition to that we will carry whatever summary you wish to add to that.

Mrs. PRIEST. Thank you, Senator.

Our State of California which I have the honor to represent before this committee opposes the provisions of H.R. 13270 which, as presently written, would tamper with the existing Federal-State relationship concerning tax-exempt municipal bonds. We contend that the so-called tax reform law would cause far more harm than good in attempting to solve some of the existing inequities, would jeopardize Federal-State relationships of all kinds and touch off a bitter round of litigation or bitter rounds of litigation might be better.

In this summary statement we seek to point out as concisely as possible what we believe would be some of the adverse effects on California of this proposed legislation. These, together with some of our views on the principles involved, are as follows:

1. We believe the proposal to tax State and local bonds, commonly referred to as "municipals," is unconstitutional, regardless of whether the Federal Government subsidizes all or only part of the increased interest costs resulting from State or local issuance of taxable bonds instead of the traditional nontaxable bonds.

2. Federal taxation of "municipals" will immediately and automatically increase market interest rates to compensate investors for the altered status of such bonds. The inevitable result must be increased State and local taxes to pay for the increased interest costs. The low- and middle-income taxpayer thus would bear an even larger share of the burden than he now does.

3. Once the principle is breached, there would be no fixed stopping point. Once Congress takes the first step away from tax exemption on municipal bonds, it can always take another step whenever circumstances make it expedient to do so. Federal subsidy of the extra interest costs involved in issuing taxable municipals can be withdrawn just as easily as it was first offered.

4. The very fact that Congress has been seriously considering legislation of this type already has had adverse effects upon the bond market. The fears and uncertainties surrounding current proposals to tax these bonds have led to (*a*) a shrinking of available money supply and demand for investments of this type because many would-be investors shy away entirely from the muncipal bond market until congressional intentions solidify, and (*b*) further increase in interest

rates on those municipal bonds which do manage to attract bidders in these unsettled times. Selling prices of stocks and bonds are affected by such intangibles as investor confidence and optimism, or the lack thereof, fully as much as they are by earnings records, credit ratings and the caliber of management. This is as true with municipal bonds as with corporate bonds. Investor buying patterns are influenced very markedly by any threat or suspicion of threat such as presented by current congressional actions toward State and local bonds.

5. Greater dependence upon the Federal Government as the source of major public works funding for State and local needs will be the inevitable result of any tampering with the historic status of tax-exempt bonds. If the States and their political subdivisions no longer can sell their bonds without having to pay extremely high interest, cannot find buyers at all because of Federal interference with the orderly marketing processes of the past, or can't raise taxes enough to fund a pay-as-you-go policy, then the only other major source of funds for State and local capital outlay projects has to be the Federal Government itself. That would be in direct contradiction to current efforts to bring about better working relationships between the National and State governments and would force the States to rely almost completely on Washington to solve their fiscal problems involving capital outlay projects. I doubt that any of us want that to occur.

6. California at present is unable to sell general obligation bonds in the normal manner or volume at the present time because inflation has boosted interest rates above the State's legal limit (5 percent). In June, 1970, with voter approval, the limit on interest may rise to 7 percent. However, even if this does occur, the entire matter may become moot if, through Federal taxation, national bond interest rates are forced to remain above the new ceiling. Our problems would be just as intense and just as severe.

Administration efforts to curb inflation's effects on the bond market may be nullified if the Congress through action which we consider most unwise, brings about a condition of permanent fear and uncertainty regarding investments of all types, including municipal bonds.

7. Those who will be most hurt in California if our bonds are made taxable will be the young people now reaching college age who will be denied the new buildings and facilities they need for their education. It will be the youngsters now in school or about to be enrolled in our public school system who will lack the classrooms they need. It will be the California veterans who depend on bond funds to provide the loans they deserve for buying farms and homes. It will be the growing millions of people who use and enjoy our State parks and historical sites made possible by bond financing. Perhaps most urgent of all at this point in time, those millions of Californians who are depending on the State water project to deliver to them the surplus waters of the north, as promised. In short, most of our 20 million population would be adversely affected by the taxation of State and local bonds as proposed under H.R. 13270.

We feel that all of these are very strong reasons for our belief that taxation of State municipal bonds is not only undesirable but perhaps even tragic for California.

Also you know, Senator, our State is second only to the U.S. Government itself in the annual bond sales. We have, in the complete brief, Senator Long, a record of our complete bonded indebtedness. There are something over $4 billion worth of bonds already sold outstanding. There is perhaps $1,300 million to be sold, authorized, but yet to be sold. I gave you in the summary a complete breakdown of our bond program and the various departments of State government using the bond financing so you would have that factual information.

We do urge you gentlemen to give this serious consideration, as I am sure you will, in your deliberations, because to our State of California it is of vital importance. Not to being able to sell our bonds in a market like today's is already posing many, many problems and we feel it would be disastrous.

The CHAIRMAN. You get hold of Governor Reagan and be sure that he makes sure your two Senators understand it. I believe Senator Cranston was the comptroller of your State, was he not, or some such thing?

Mrs. PRIEST. Who was that?

The CHAIRMAN. Wasn't Senator Cranston the comptroller or some such thing?

Mrs. PRIEST. Yes, he was, he was State comptroller. I had a letter——

The CHAIRMAN. He handled the money of California at that time and he knows what the problem is.

Mrs. PRIEST. Yes, he understands it thoroughly. I had a letter from Senator Cranston pledging his support and saying he would do what he could because he understands it as thoroughly——

The CHAIRMAN. I think you will make out as well with the two Louisiana Senators as the two California Senators because they understand the problem.

Mrs. PRIEST. I felt that way, Senator Long, because I knew all of you from years past and I knew it would be a pleasure to come here. Any questions you have to ask or any information you need I was sure if I couldn't supply it Mr. Herrington, our bond counsel, who has been, incidentally, the counsel for many years, and knows the history of our bonds, could do so.

The CHAIRMAN. Any further questions, Senator?

Thank you very much, Mrs. Priest.

Mrs. PRIEST. Thank you so much. May I say it has been a pleasure even though I am on this side of the table, to at least greet you again and wish you well.

The CHAIRMAN. Well, now that the Republicans occupy the White House we will be glad to have you again.

Mrs. PRIEST. Well, my family is living out there.

The CHAIRMAN. Washington hasn't improved since you left.

Mrs. PRIEST. Thank you again, Senator Long. If anything brings you to our great State please come up there to see us; we would be happy to see you. Give my regards also to Mrs. Bennett.

(Hon. Ivy Baker Priest's prepared statement follows:)

STATEMENT OF HON. IVY BAKER PRIEST, CALIFORNIA STATE TREASURER

The State of California, which I have the honor to represent before this committee, opposes those provisions of H.R. 13270 which, as presently written, would tamper with the existing federal-state relationship concerning tax-exempt municipal bonds.

We oppose also any changes in charitable trust provisions of tax law which would cause unintended but seriously adverse effects on California's and the entire nation's educational institutions. Any action which shuts off or diminishes the flow of gift funds to private schools will yield only added burdens to the public tax structure.

It is our contention that H.R. 13270, the so-called tax reform law, would cause far more harm than good in attempting to solve some of the existing inequities. It would open a Pandora's box of horrors, jeopardizing federal-state relationships of all kinds and touching off bitter rounds of litigation. For the most part, however, we will restrict our testimony to the proposed taxation of state and municipal bonds.

From this nation's earliest days these bonds have been considered as tax-exempt without serious question. We have not attempted here to present the full weight of data and expert opinion available to support our views, but instead seek to point out as concisely as possible what we believe would be some of the adverse effects of this proposed legislation.

This committee's goal of tax reform is a most desirable one. However, because California would be so seriously affected we must oppose H.R. 13270 in its present form on the following grounds:

1. We believe the proposal to tax state and local bonds, commonly referred to as "municipals", is unconstitutional, regardless of whether the federal government subsidizes all or any part of the increased interest costs resulting from state or local issuance of taxable bonds instead of the traditional non-taxable bonds. We believe that it really makes no difference whether the interference is direct or indirect on this point.

2. Federal taxation of municipals will immediately and automatically increase market interest rates to compensate investors for the altered status of such bonds. The inevitable result must be increased state and local taxes to pay for the increased interest costs. The low and middle income taxpayer thus would bear an even larger share of the burden than he now does.

3. Once the principle is breached, there would be no fixed stopping point. Once Congress takes the first step away from tax exemption on municipal bonds, it can always take another step and yet another whenever circumstances make it expedient to do so. Thus, a federal subsidy of the extra interest costs involved in issuing taxable municipals can be withdrawn just as easily as it was first ordered.

4. The very fact that Congress has been seriously considering legislation of this type already has had adverse effects upon the proposals to tax these bonds have led to (a) a shrinking of available money supply and demand for investments of this type because many would-be investors shy away entirely from the municipal bond market until congressional intentions solidify, and (b) further increase in interest rates on those municipal bonds which do manage to attract bidders in these unsettled times. It must be recognized that selling prices of stocks and bonds are affected by such intangible factors as investor confidence and optimism, or the lack thereof, fully as much as they are by earnings records, credit ratings and the caliber of management. This is as true with municipal bonds as with corporate bonds. Investor buying patterns are influenced very markedly by any threat *or suspicion of threat* such as presented by current congressional actions toward state and local bonds.

5. Greater dependence upon the federal government as the source of major public works funding for state and local needs will be the inevitable result of any tampering with the historic status of tax-exempt bonds. If the states and their political subdivisions no longer can sell their bonds without having to pay extremely high interest, or cannot find buyers at all because of federal interference with the orderly marketing processes of the past, then the only other major source of funds for state and local capital outlay projects has to be the federal government itself. That would be in direct contradiction to current efforts to bring about better working relationships between the national and state governments and would force the states to rely almost completely on Washington to solve their fiscal problems involving capital outlay projects. I doubt that any of us want that to occur!

6. California, along with other states, finds herself unable to sell general obligation bonds in the normal manner or volume at the present time because inflation has boosted interest rates above the state legal limit—in our case, five percent. Steps are under way to alleviate this situation through referendum in June, 1970, so that, with voter approval, the state's legal limit on interest may rise to seven percent. However, if and when this does occur, the entire

matter may already be or soon afterward become moot *if, through federal taxation of our bonds, inerest rates are forced to remain above even the new ceiling.* Administration efforts to curb inflation's effects on the bond market may be nullified if the Congress, through action which we consider most unwise, brings about a condition of permanent fear and uncertainty regarding investments of all types, including municipal bonds.

7. Those who will be most hurt in California if our bonds are made taxable to investors will be the young people now reaching college age who will be denied the new buildings and facilities they need for their education. It will be the youngsters now in school or about to be enrolled in our public school system who will lack the classrooms they need through 12 years of schooling. It will be the California veterans who depend on funds from the sale of state bonds to provide the loans they deserve for the purchase of farms and homes. It will be the growing millions of people who use and enjoy our state parks and historical sites made possible by bond financing. Perhaps most urgent of all at this point in time, those who will be hurt will be the farmers and cities of California who are depending on the State Water Project to deliver the surplus waters of the north, as promised, two years from now. All of these groups of people—probably most of the 20 million population—would be adversely affected by the taxation of state and local bonds as proposed under H.R. 13270.

At this point, I would like to present some specifics about California's population, geography, economy and state financing policies. These are germane to your understanding of why we believe so strongly that taxation of municipal bonds would be not only undesirable but perhaps even tragic in its effects on California.

FACTS ABOUT CALIFORNIA SCHOOLS AND COLLEGES

According to a researched feature article in the San Francisco Examiner and Chronicle for September 7, 1969, approximately six million of a population totaling approximately 20 million were expected to be in California schools this month. That's a school enrollment equal to an entire nation the size of Switzerland. Add to these students some 600,000 school employees and you have more Californians involved in some phase of education than in all other jobs and professions combined. As a state, we spend $4.5 billion a year to run our schools, about what it costs each year to put men on the moon. We are the most college-oriented political entity on earth: nearly one million of us, 50 out of every 1,000, now attend college, which is half again as many as in New York and three times as many as in Illinois.

Our investment in school property is more than $17 billion, according to a study by Crocker-Citizens National Bank economists. The biggest part of our tax dollar goes for education, a large share, of course, paying for the three million youngsters in elementary school and the 1.3 million in high school. We have had to build 150 new classrooms *each week* to house our growing public school population. We have the largest and most extensive adult education program in the nation; each year 1.8 million adult Californians take courses in some 500 locations around the state. Our extensive junior or community college system at last count totaled some 89 two-year colleges throughout California.

Between 1955–1967, California's population increased 47 percent—but at the same time, enrollment in all colleges and universities increased 160 percent and in the state college system 222 percent. The *increase* in college enrollment in our state has been averaging about 50,000 a year.

These facts and figures are cited to stress that education in California is, indeed, big business. To guarantee good schools for all of its people wherever they happen to live, the state provides its share of school support according to district need. For many years a state program of loan-grants has assisted local school districts with their building needs. These *state* funds are provided through the sale of bonds authorized by popular vote. In turn, local matching funds also are usually provided through *local* bond issues.

The University of California has an enrollment of about 100,000 on its nine campuses and the State College system has an enrollment of about 200,000. Buildings for these college and university campuses are financed largely through state general obligation bonds. Any action which would disturb California's ability to sell such bonds, or which would greatly increase the interest which state taxpayers would have to pay on such bonds, can only work to the detriment of higher education in California.

FACTS ON STATE WATER PROJECT

Planner, builder and operator of a $2.8–$3 billion project which will transfer surplus waters from northern California to thirsty lands and cities throughout the state, the State Department of Water Resources is at a crucial stage of construction in its timetable. Water already is flowing through the aqueduct system as far south as the Tehachapi Mountains, which separate the great San Joaquin Valley from southern California. Contract deliveries are being made to northern California, the San Francisco Bay area and to the San Joaquin Valley. However, getting the rest of the contracted supplies through and over the mountains to southern California by means of the world's greatest pump lift and difficult tunneling across earthquake faults still present a challenge before the end of the 600-mile water route is reached in 1972. Water is scheduled to reach Los Angeles County in 1971 and nearly to the Mexican border the following year.

Contracts for water service provide that costs of construction, operation and maintenance of the facilities will be paid tor by the users, with interest. Until completion of the project, however, the largest proportion of the revenue cannot start flowing back into the state treasury to meet principal and interest payments on the general obligation bonds which have been issued in series as needed to finance construction. Thus, it is imperative that no unnecessary and controllable factor intervene to disrupt the sale of California water bonds or to cause extra interest charges to be assessed against all contracting parties.

Approximately $600 million of the initial $1.75 billion in water bonds remain to be sold to complete the project as presently planned. Taking a long-range look, however, the project will have to be extended to tap new sources of surplus water from California's north coastal rivers, making further bond financing a necessity. It would be an unnecessary burden to carry on the back of California water users who pay for these projects if the federal government were to enact tax legislation which would increase the cost of bond financing, as would H.R. 13270 or any other similar bill.

FACTS ABOUT CALIFORNIA'S BOND SELLING PROGRAM

At the end of fiscal 1968–69. California's bonded indebtedness (general obligation bonds only) totaled $4.7 billion. Bonds already authorized by the voters but still unissued as of September 1, 1969, totaled $1.34 billion. The state ranks second only to the United States government itself in the dollar volume of bond sales. Under normal market conditions, our bond sales in recent years have been totaling $500–600 million per year.

There is a direct link between California's unusually rapid population growth and the need for public works on a large scale. There is no letup in sight. Because the need is so great (the population increase *each year* being comparable to adding a city of 500,000) bond financing has been the only feasible means of keeping up reasonably well. It is the fastest way to obtain large sums of money for capital outlay beyond the scope of pay-as-you-go financing. It also is a matter of principle and fiscal common sense that long range benefits should be paid for by future beneficiaries and future taxpayers as well as present ones.

California's general obligation bonds are used, for example, to finance capital outlay needs for:

1. *The Cal-Vet farm and home loan program.*—This has been successfully funded for decades in this manner. A total of $2.285 billion in bonds has been authorized during that period. Ending of the Viet Nam involvement will result in increased requests for loans from returning veterans.

2. *Public school construction.*—The public school system's building needs are aided by the state through bond sales. State aid is of a loan-grant type, partly repaid with interest. Since 1946 the state has approved applications for approximately $2 billion in state funds to help in constructing facilities for approximately two million students.

3. *Junior college construction.*—Authorized in 1968, the $65 million in bonds for this purpose is another type of bonding program in California which is directly affected by national bond market conditions. At the beginning of this year, there were 89 community colleges operated by 69 separate junior college districts. These are required to match state building construction funds. Last November, the first series of these bonds was sold; no more have been sold since then because of prevailing high interest rates.

4. *Park, recreational and historical site facilities.*—In 1964, California voters approved a $150 million bond issue for expanding the state park system, for local parks and for additions to Wildlife Conservation Board hunting and fishing improvement facilities. In a state of 20 million population, augmented in the summer by visitors numbering in the hundreds of thousands, at least, it has become imperative to provide more parks and recreational facilities. Bonds meet these capital outlay needs.

It should be noted that these have been examples, not an all-inclusive list.

Authorized but unissued state bonds as of September 1, 1969, include: $600 million for the water project, $60 million for construction of state buildings, $80 million for university and state college construction, $75 million for the state park system, $275 million for public school system building aid, and $50 million for junior college construction.

VIEWS ON TAX IMMUNITY UNDER THE CONSTITUTION

The question of tax exemption of municipal bonds may be phrased as follows:

Does the right of states and their political subdivisions to borrow by means of bonds whose interest is exempt from federal taxation stem from the permissiveness of a beneficient central government, or is this right a part of the very nature of our republic's political partnerships?

California contends that Congress by itself cannot abolish by statutory enactment that which has been recognized as a constitutional right by the U.S. Supreme Court and which, therefore, can be changed only by amending the Constitution. This principle has been reiterated by the Supreme Court since adoption of the Sixteenth Amendment (the income tax amendment). Since California's presentation here today is not intended to be a legal brief, we will not set forth the citations in case history which substantiate our position. In our view, they are solidly based.

We contend that the federal government has no right to tax municipal bonds even indirectly, or by offsetting such taxes through the device of interest subsidy. To extend this point, if the states are to be required to yield *their* immunity in this matter, the *federal government should reciprocally give up its own immunity,* thus opening the way for counter taxation of its bonds by the states. It should work both ways if it is going to be brought into the picture at all. No one would gain by such a chaotic scheme. We merely suggest that a cutting sword usually has two edges!

California contends that any alteration of the principle of reciprocal immunity from taxation could pull down the entire framework of federal-state relationships and would destroy the principal means open to the states to finance their major capital outlay projects. Once any exception is made to the principle of immunity, immunity no longer exists!

VIEWS ON CHARITABLE CONTRIBUTIONS

The proposed changes in the treatment of charitable contributions suffer from the same weaknesses as those dealing with tax-exempt bonds. The House Ways and Means Committee, in trying to eliminate abuses of present regulations, has proposed changes which in our opinion will lessen the flow of charitable contributions.

Although California would not be affected as much as her sister states by such changes because our private institutions carry only about 11 percent of the total enrollment in higher education, we nevertheless are concerned about the negative impact that this proposal would have on gifts to private educational institutions. They already are at a competitive disadvantage relative to public institutions. This move to tighten regulations on charitable contributions would heighten that disadvantage at a time when private schools need all the help they can get if they are to remain a viable part of our educational framework.

Every enrollment gain by private institutions lessens the burden which otherwise would fall on our taxpayers. Moreover, we feel that the increased competition between public and private schools helps to achieve our goal of excellence in higher education.

For these reasons, therefore, only summarized here, the State of California respectfully urges the Congress to take no action in developing a tax reform bill which would tend to diminish the ability and willingness of contributors to support private colleges as in the past.

NEWS CLIPS: LOCAL COMMENTS ON AND EFFECTS OF TAXING MUNICIPAL BONDS, SACRAMENTO BEE, SEPT. 4, 1969

From a story describing a meeting of the Los Rios Junior College District board of education:

"The board rescinded its action of two weeks earlier, awarding a $1,875,400 contract to Harbison and Mahoney for construction of the American River College library. Assistant Superintendent George Rice explained the district had been unable, in the current confused bond market, to sell the bonds needed to finance the project. Rice said *proposals in Congress, to remove the tax-exempt status from such bonds and to alter the capital gains tax, have combined with high interest rates to dry up the bond market* . . ." (emphasis added).

Sacramento Bee, Sept. 5, 1969

From a story reporting proceedings of a Sacramento City Council meeting:

". . . Christensen (City Councilman Walter Christensen, former Mayor) warned that 'the community center is down the drain' if Congress passes a tax reform bill which eliminates or reduces the tax-free status of municipal bonds, thus making some or all interest on such bonds taxable to investors."

SAN FRANCISCO CHRONICLE, SEPT. 4, 1969, FINANCIAL EDITOR SIDNEY P. ALLEN'S COLUMN

". . . Bonds go begging, more than ever.

"Here's fresh evidence of it. The Bond Buyer Index, the major gauge for the tax-exempt bond sector, topped six per cent 10 days ago, and currently has shot up to a new high record at 6.26 per cent.

"Right here at home, to be more specific, the California Municipal Bond Index of Glore Forgan, Wm. R. Staats Inc. topped 6.21 per cent. That, too, was up a whopping 21–100ths in one week!

"Obviously investor confusion and fear regarding possible tax reform that might eliminate or reduce state and municipal bond tax exemption has knocked the final prop from that sector. It's a punch to the solar-plexis (sic) for California . . ."

SACRAMENTO BEE, SEPT. 7, 1969

"DAVIS—Failure of the Davis Joint Unified School District to market $330,000 in bonds has prompted a warning that taxpayers may face increased taxes because of the current condition of the money market.

"The Davis bonds, authorized by voters in 1963, failed to attract any bidders at the legal maximum interest rate of 5 per cent.

"The business manager of Davis district, Melvin H. Keubnhold, said, 'The money market is like a yo-yo at the moment. No one's buying bonds—particularly at the interest rate of 5 per cent.

'*One of the major problems is the tax reform discussions in Washington* (emphasis added). At present interest earnings on bonds are tax-free. But the indications are that they will become taxable—with taxes being applied retroactively. So no one is buying.'

". . . The Davis bonds were to finance a new gymnasium and shop at Holmes Junior High School, a project considered 'top priority' by officials."

The CHAIRMAN. We will next call Mr. Lanford Jorgensen of North Platte, Nebr.

Senator CURTIS. Mr. Chairman, Mr. Jorgensen is city administrator at North Platte. There are here in Washington, many of them in this room, 20 officials or attorneys from Nebraska representing various municipalities that, for whom, Mr. Jorgensen is speaking, many of whom have already submitted their statement, isn't that correct?

Mr. JORGENSEN. That is correct.

Senator CURTIS. Mr. Chairman, I ask that entire list of the delegation be printed in the record.

(The list referred to follows:)

NEBRASKA REPRESENTATIVES TO SENATE FINANCE COMMITTEE HEARING ON H.R. 13270

City	Representative	Title
Millard	Harry P. Anderson	Mayor—MAPA (Metropolitan Area Planning Commission of Douglas, Sarpy Counties in Nebraska and Pottawattamie County, Iowa).
Fremont	Bill Buch	Mayor.
Hastings	Bill Gettman	Mayor and school district.
South Sioux City	Ernest Albertson	Mayor (chairman of the Siouxland Area Planning Commission, Sargent Bluff, Iowa; Sioux City, Iowa; South Sioux City, Dakota City, North Sioux City, S. Dak.; Woodbury County, Iowa, Dakota County, Nebr.; Union County, S. Dak.).
Ogallala	Paul Cassel	Mayor.
Grand Island	John Ditter	Do.
Do	John Carpenter	City manager.
Bellvue	John Rice	City attorney.
Lincoln	Ralph Nelsonp	City corporation counsel.
North Platte	Lanford Jorgensen	City administrator.
Do	Patrick H. Rensch	(Special counsel) North Platte schools—North Platte Vocational Technical schools and member State School Board Association.
Kimball	Don DeBoot	Mayor.
Gering	Bill Hackman	President school board and also representative city of Gering.
Norfolk	Paul Harm	City administrator.
Do	Bob Otte	City attorney, Norfolk city schools.

The Chairman. I would like to ask that they stand so we can recognize them. I am happy to see Nebraska is so well represented here today.

Senator Curtis. Now you know where the cheering came from.

STATEMENT OF LANFORD L. JORGENSEN, ADMINISTRATIVE ASSISTANT TO MAYOR OF NORTH PLATTE, NEBR.

Mr. Jorgensen. Chairman Long and our distinguished Senator Curtis and other Senators, I represent the city and school district of North Platte, the junior college of North Platte, and the Mid-Plains Vocational and Technical College.

First of all I would thank you for allowing me to speak to you. We were set for a hearing on Thursday, and because we were in town you have been gracious to allow me to appear here today. I thank you very much.

You have our official statement. To save time, I will not read our statement as I am sure the distinguished Governors and mayors have covered the points far better than I could.

I would only like to bring out two points that I think have not been mentioned before.

Most of the people you have heard so far represent our great States across the country and our major cities. I have the responsibility and the privilege of representing the smaller cities and towns, and often they are the backbone of our country. This brings me to my first point. You were very courteous in allowing these men to stand up but I believe this is a point that should be brought out, and I am sure you are aware from the testimony brought out today of the general concern of those officials who are responsible for taxation in our municipalities. These gentlemen, on their own, and without any chance of any hearing, took the time out of their busy schedules, many of them mayors and councilmen on a part-time basis, to come back to Washington D.C., just to have this chance to stand up and be counted. I think this is an important point for you gentlemen to consider—that they thought enough, and are concerned enough, to come back here.

I would like to make a second point. I am sure many of you Senators get the feeling many times that cities large and small have their hands out for grants in aid programs. Maybe this is so. There is only so much money to go around. At times we have to come to you to get certain things done. But nothing has been said about self-help and pride in our cities, whether it is the city of New York or the city of North Platte, and I would bring this out as an example only gentlemen, to make my point.

In the city of North Platte we have organized a steering committee composed of a member of each of the governmental units in that region, and the sole purpose of the steering committee is to organize our community completely, down to the block level, for one thing—for a self-help program. In other words, we realize that even a community of 20,000 has its slums, has its poor, has its needs to be fulfilled, and we would like to see what we could do on a self-help basis. As one of the Governors pointed out, the markets for municipal bonds, even at their very best, are slim, and believe me, when you get down to a town of 20,000 competing with even our major cities in Nebraska, Lincoln, and Omaha, it is difficult. I am sure you can see what will happen if our municipal bonds are taxed.

When we come out of a study that shows the priorities in our communities in the area of North Platte, I am sure there will be minimum housing for the elderly, there will be a new civic center to help promote the tourist industry, there will be many other things. Our town is growing and we will have to have new schools and new roads, and the only place we can turn to have new schools and new roads, and the only place we can turn is to bonds. For 1 minute, if you could put yourself in our position in the smaller community, and there are many towns that are smaller than North Platte, I am sure you can appreciate in what position we will be if this bill is allowed to be passed. I have heard many words to describe it, such as incredible. But, gentlemen, we will just be out, that is it. I can't appeal to you too much.

So, on behalf of the smaller towns, without this privilege of having tax immunity on municipal bonds we stand little or no chance.

I thank you very much for the privilege of appearing before you here. I have a lot of talent backing me up in the audience here. If there are any questions you might wish to ask I would be very happy to find the answers.

Senator ANDERSON. We appreciate your testimony and we would be glad to——

Senator CURTIS. I want to express my gratitude not only to Mr. Jorgensen but to these men of the delegation who have come here. I mentioned to them earlier today that we have a very systematic way of getting their testimony before the members at the actual time that they vote. We feel very strongly that you are right in this, and for the record and for the benefit of the committee, I want to say something about North Platte.

During World War II a great portion of the troop trains carrying members of our Armed Forces from the East to the West passed through North Platte. The people of North Platte had a program. Their slogan was that no servicemen would go through North Platte without being greeted and given something. And, night or day, 24 hours a day, for the 5 long years of the war, every member of the Armed Forces who went through North Platte was awakened, offered some refreshments, some homemade cookies, writing material or anything else he wanted. If it wasn't late, I could make a nice speech about the communities these other gentlemen represent but I could not fail to say this about your fine city Mr. Jorgensen. We still receive letters from veterans across the country on the North Platte canteen.

Mr. JORGENSEN. I appreciate your comment, Senator.

Senator CURTIS. I believe that the statement you presented and those of the Governors, and others, have made a very good case.

Senator ANDERSON. Thank you very much.

Mr. JORGENSEN. Thank you very much.

(Prepared statement submitted by Mr. Jorgensen follows:)

STATEMENT BY PATRICK H. RENSCH, SPECIAL COUNSEL FOR THE MAYOR AND COUNCIL OF NORTH PLATTE, NEBRASKA; AND LANGFORD L. JORGENSEN, ADMINISTRATIVE ASSISTANT TO THE MAYOR OF NORTH PLATTE, NEBRASKA

All provisions of H.R. 13270 relating to taxation, direct or indirect, or under subsidy and tax waiver agreement are opposed. Results will be increased financing costs, loss of local governmental interest and economical operation; local taxes and the costs of utilities paid by most tax-payers will be increased; confusion caused by threat of taxation; lack of confidence due to taxation of outstanding bonds and anticipation of court litigation pose long-term uncertainties compounding the results of anticipated tax; and taxation of bonds is not tax reform but political, social and Constitutional reform. The subsidy provision is part of this reform, and unwise and costly.

We believe in the principal of the sovereign state as a partner with the Federal Government, not its tool, and the taxation of municipal bonds is the key to this independent action. We ask you to strike all references to tax and subsidy.

STATEMENT

Mr. Chairman and Members of the Committee:

The Mayor and Council of the City of North Platte, Nebraska, have gone on record as strongly opposed in principal to any language in H.R. 13270 or any other Bill which would in any way directly or indirectly tax the income of any bonds or obligations of any State, or any governmental subdivision of any State. They also have gone on record opposing any language in H.R. 13270 or other legislation which would in any way establish voluntary relinquishment by a State or subdivision thereof of the tax exemption for any reason, whether it be subsidy, aid grant or control. They have also gone on record as being opposed to any language in H.R. 13270 which might relate to the subject called arbitrage which in any way would give the federal government a right to question legitimate financing plans or programs, whether required to be in the form of advance refunding or other programs where the only logical investments, or the only legal investment, might be an interim investment in United States government bonds. This written statement is a brief summary of these objections and some of the reasons for the objections.

This statement is made not only on behalf of the City of North Platte, but is authorized to be and is presented as the official expression of the School District of North Platte and of the Mid-Plains Area Vocational Technical School, a multi-county vocational technical school district is Western Nebraska, and that reference hereafter to the official body of North Platte, we refer also to the other political subdivisions above mentioned.

First let us say that we do not believe that the inclusion of the taxation of the income of municipal bonds in H.R. 13270 is tax reform. We consider it to be more in the nature of the political or constitutional reform under the guise of tax legislation. We feel it is unconstitutional and we feel that it is politically and fiscally unwise in that its consequences, in addition to being a more costly method of financing municipal improvements, involves a threat to the whole concept of the separation of the powers of the federal government and the States and their subdivisions.

We believe in the principal of the separation of the powers between the Federal Government and the States as provided for in our constitution and as they have developed under the laws of the United States Government and the decisions of the United States Supreme Court. We recognize that the present ability of States to sell bonds at a rate which is competitive with the cost of financing of the federal government is probably the biggest single factor today in retaining the principal of the separation of the powers of the federal government for those of the state local government. We feel that any change in the nature of this relationship will only lead to more and stronger centralized federal control over matters which are rightly within the prerogative and the concern of the State and local governments. We feel that the right of taxation of municipals is politically and financially unsound and will ultimately lead to chaos in the municipal bond market, will lead to higher financing cost and ultimately to the assumption by the Federal Government of the function of financing of the local improvements resulting in the loss of local control and decision making.

We feel that the passage by the House of Representatives of H.R. 13270 shows a lack of understanding of this concept not an intent to change our constitutional birthright which is subject to ultimate termination by the logical extension of this legislation. We know that the impression which has been given by publicity in the national news media from statements made by those espousing the taxation of municipals are misleading and that the true picture of the problems involved has not been recognized, possibly because of this. You should recognize that our bonds are purchased by those in an income tax bracket which makes the purchase of our bonds advantageous to them—the margin is thin. To say that the purchaser of a municipal bond does not pay a tax is grossly in error. When an investor buys a North Platte bond with a tax free rate of 4%, whereas he could buy a taxable bond of similar quality for 6%, he pays directly to the city whose bond he purchases a tax of 33% since his return is one-third less. The treasury department in their proposals acknowledge that this difference may be between 30% and 40%.

We have here an ingenious system for the return of tax dollars to municipalities which preceeds and complements announced plans for returning tax dollars to cities and states. In one sense the city whose bond is purchased receives a tax from the purchaser in the form of reduced interest. Without developing a bureaucracy or creating other problems we have one solution, the return to the local government of federal income taxes, which should be expanded, not curtailed. The publicity concerning about 150 to 200 millionaires who do not pay taxes was unfortunate and inaccurate as it relates to municipal income.

Title III, Section 301 of H.R. 13270 makes possible a direct income tax on the income from municipal bonds owned by individuals, estates and trusts in that tax preference income will not be permitted to exceed one half of the total income and the taxpayer will be required to pay tax on the remaining half (in case of taxpayers with total tax preferences in excess of $10,000). This applies equally to outstanding bonds as well as new bonds and is hereafter referred to as "*limited tax preference*".

Title III, Section 302 H.R. 13270 would in certain instances deprive taxpayers of their present ability to deduct fully the amount of personal income tax deductible against their taxable income. This does not apply to bonds issued prior to the specified date. This will hereafter be referred to as "*allocations of deductions*".

Title VI, Sections 601 and 602 H.R. 13270—There is provision for a State or political subdivision to elect to issue bonds the interest from which will be taxable, and the United States will pay an interest subsidy so as to reduce the interest payments made by the State or a local subdivision. This will be referred to as the *"interest subsidy provision"*.

Ample testimony will be presented to show the fiscal impact on municipal financing and to support our feelings as set out above; that no need for a federal subsidy will be shown by those involved and objections come from all levels of government of the States and subdivisions as well as citizens (other than those attempting to justify their political, social and constitutional reform program); to show the wiseness in our present system; to show that the actual result of such a tax will be an increase in the tax of those with lower incomes; to show the legislation will complicate unduly the income tax provisions relating to bonds; to show the extent to which such legislation will be resisted in court causing additional continued market uncertainty and therefore higher costs to municipalities; that feasible projects will not be financeable thus increasing the demand for grants and aids and federal expenditures and be an impetus to further inflationary trends.

We feel the Federal Government is physically unable to fill the void. Consider the multi-agencies involved with grants and attempts to aid smaller communities in financing improvements for water, sewer and recreation. The lack of success of the loan program is indicative of the general lack of needs of governmental involvement in financing. Where costs exceed ability to repay, grant in aid programs have been useful to obtain desired results.

Public housing financed by municipal corporations has been successful because the United States Government is willing to guarantee payment of bonds and pay all deficiencies of rentals set low for income groups. This would not work where bonds are payable from taxes or from assessments on a local level. Tax legislation will take municipalities out of federal housing or raise financing costs. For the United States Government to have all States and local municipalities as a partner in this program independently financing, planning and executing is one of our Federal Government's major assets and this is one sane approach not to be tampered with.

We feel the Subsidy Provision is absolutely unnecessary and is as conducive to higher costs and uncertainty as is taxation of the bonds themselves. We do not agree that a compromise enactment of these provisions is possible. The confusion created by conflicting interpretations and controls which would develop together with governmental promotion of their program would be costly, cause delay and increase costs.

Our Governor, before the Ways & Means Committee proposed a detailed study of the problems. In this we concur. We do not concur in any inference in his other testimony or any testimony before this committee, that a subsidy system for higher interest on bonds incurred where taxation immunity is waived by States would be useful in any way—but rather harmful as outlined above.

Senator ANDERSON. Is Mayor Tate here? We will be here at 9:30 tomorrow at this place.

(Whereupon at 12:35 p.m., the hearing was recessed to reconvene, Wednesday, September 24, 1969, at 9:30 a.m.)

TAX REFORM ACT OF 1969

WEDNESDAY, SEPTEMBER 24, 1969

U.S. Senate,
Committee on Finance,
Washington, D.C.

The committee met, pursuant to recess, at 9:15 a.m., in room G-308, New Senate Office Building, Senator Clinton P. Anderson, presiding.

Present: Senators Long (chairman), Anderson, Talmadge, McCarthy, Harris, Byrd Jr. of Virginia, Williams of Delaware, Jordan of Idaho, and Fannin.

Senator Anderson. The first witness this morning is Mr. William Simon, who is the municipal director, Investment Bankers Association.

STATEMENT OF WILLIAM E. SIMON, MUNICIPAL SECURITIES COMMITTEE, INVESTMENT BANKERS ASSOCIATION OF AMERICA

Mr. Simon. I am chairman of the Municipal Securities Committee of the Investment Bankers Association, Senator Anderson, and we are deeply concerned about the implications of the current proposals for indirect taxation of the interest on State and local government securities. The complete text of our testimony has been submitted and, with your permission, I would very briefly like to summarize this testimony.

We expect to continue to serve as bankers for these States and municipalities, whether their bonds are wholly exempt from income taxation, wholly taxable or partially taxable. Accordingly, we can be objective in appraising the effects of the dispute about tax exemption and tax equity.

Nevertheless, we feel a heavy responsibility to offer you our opinion as to the market effect of the proposed infringement of the existing tax exemption. This market effect is vitally important to the States, because they must have the continued confidence and support of investors in order to obtain the huge sums of capital needed for public projects.

To the degree that investment interest is alienated, State and local governments will pay more than necessary for their future borrowing. That added cost can be met only by raising the rates of income and sales and local property taxes. Thus the Federal tax aimed at investors in municipal bonds will be passed along to the average taxpayer and especially to homeowners.

In our testimony before the House Ways and Means Committee on March 11, we warned that any impairment of the income tax exemption of State and municipal bonds would drastically increase the cost of future local government financing.

This prediction has been fully realized in the cumulative reaction of investors to H.R. 13270, and specifically to section 301 (the limit on tax preferences) and section 302 (allocation of deductions). By late August, the market for municipal bonds had become almost completely demoralized. Many local governments were unable to issue their bonds at rates within the maximum limits fixed by their controlling State finance laws. It was difficult to get realistic bids for municipal bonds which investors wanted to sell.

For many years new issues of municipal and local government bonds had commanded interest rates about one-third lower than the rates on comparable quality corporate bonds. This favorable ratio held through the credit crunch of 1966. However, by late August of 1969, States and municipalities were paying 80 to 85 percent of corporate rates. The increase in relative cost is at least 1 percent at today's interest rate levels; and we believe that at least a half of 1 percent of this is attributable to the threat that municipal bond interest will be partially taxed. And this higher cost relationship is obviously only anticipatory. The actual enactment of legislation assessing Federal income tax in relation to ownership of State and municipal bonds, in our opinion would further increase the interest penalty on local government.

We believe that if the treatment of municipal bond interest proposed in H.R. 13270 is enacted into law, investors will want "tax exempt" rates closer to taxable rates than anything we have seen to date. From the minimum of one-half of 1 percent already indicated, we fear that the resulting penalty on municipal bond costs could easily rise to a full 1 percent or more, at current levels of long-term interest rates.

Even if the threat is limited to allocation of deductions, investors must conclude that the wall of reciprocal sovereignty has been breached, and their psychological reaction would surely exceed the actual reduction in the income value of tax exemption. If the rules of the game can be changed in relation to outstanding bonds, investors will demand a margin of protection against further deterioration.

The allocation of deductions would affect many more taxpayers than would the limit on tax preferences, and the definition recommended by the Treasury is much harsher than that in H.R. 13270, in that the full amount of interest on municipal bonds, both outstanding and future issues, would immediately be a factor in the allocation of deductions.

Furthermore, commercial banks and other institutional investors would have to infer that the allocation formula with some modification could easily be extended to them; and that prospect would be absolutely catastrophic to the market for municipal bond issues, because of its prime dependence on bank support. Hundreds of small commercial banks, heavily invested in municipal bonds, should not be subjected to the possibly serious capital consequences of tax-imposed further depreciation of their portfolio with subsequent economic effects.

In testifying before the committee on September 4, the Treasury disclosed the estimate that the inclusion of municipal bond interest in the base for allocation of deductions, according to its proposed formula, would yield revenue of only about $45 million a year. In contrast, the minimum increase of one-half of 1 percent would add $75 million in additional interest cost burden on State and local governments. Where is the saving?

Furthermore, within 5 years, the cost to the State and local governments would be in excess of $300 million or about five times the Treasury's annual revenue estimated by projecting the $45 million figure.

The initial reaction of investors to the tax proposals affecting State and municipal debt was one of incredulity that Congress would or could legislate such a drastic change in the mutually soverign relations of the State governments and the Federal Government, established by the Constitution as hitherto interpreted by the Supreme Court of the United States. Particularly incredible was the proposal that the interest on outstanding bonds be included in the computation of tax liability; because investors had believed that the interest rate advantage obtained by offering tax exemption was in effect a contract consideration assuring them of exemption throughout the terms of their loans. Putting it another way, the investor who accepted an interest rate which was 70 percent of a comparable taxable rate, in effect is paying a 30-percent tax on the higher gross income which he might have had.

The sudden breaching of this longstanding exemption, even though it is indirect, has caused a major reduction in the market value of all outstanding bonds by an amount we estimate to be $5 billion.

More serious from the viewpoint of the State and local governments, this breach of what was believed to be a constitutional exemption will permanently deter many investors from buying municipal bonds. The acceptance of Stato and local government bonds is based on beliet in the good faith of government at all levels.

The Treasury understandably opposes the House plan for a Federal subsidy to compensate the States for their added cost if they will voluntarily convert their financing to fully taxable form. Such a conversion, if comprehensive, would put State and local borrowing into direct competition with bonds of the Federal Government and its agencies, with private industry borrowing, and with mortgages. In sum, the effect of the carrot and stick campaign to drive local government out of the tax exempt form of financing would be a general rise in the level of interest rates on taxable securities, both those of Federal Government and those of private industry.

A comprehensive study of institutional investors conducted by Dr. Sally S. Ronk, well known as an authority on the flows of funds in the capital markets, shows that the participants in the study expect an across-the-board increase of three-quarters of 1 percent on all long-term fixed income investments, and it could well be more. The resulting annual cost to the Treasury is estimated at $121 million.

The mortgage market especially would be further diminished, as State and local pension funds diverted their buying power from mortgages to the bonds of their own municipalities.

To us it is inconceivable that at a moment of unprecedented restraint on money supply, when the bond markets are already close to disorder, an attempt is made to revolutionize the status of municipal bonds for the sake of getting at a handful of presumed tax avoiders, who if they ever did invest in municipal bonds must wish most heartily that they had not.

We respectfully urge upon this committee that interest paid on State and municipal bonds should be exempted from both the limit on tax preferences and the allocation of deductions. In our opinion, the indirect taxation proposed in H.R. 13270 would cost the States much more than it would yield in revenue to the Treasury. This would mean a heavier tax burden falling mainly on the middle-income homeowner. The efficiency of the municipal bond market must be preserved if we are to supply the capital requirements of the States and their political subdivisions. That market cannot function efficiently if it is to be harassed by complex applications of indirect taxation of municipal bond interest.

Mr. Chairman, I thank you for the opportunity of presenting our case. It is a very complex subject, and I hope we have genuinely helped you in your thinking on this matter. We would be delighted to spend whatever time you could spare to answer any questions either from this witness table or in another area. We are at your disposal, sir. Thank you.

Senator WILLIAMS. Mr. Simon, would you agree with some previous witnesses that the problem confronting the market today is not so much the adverse effect as proposed under the House bill or the Treasury recommendations but rather the uncertainty that is created in the minds of the investors as to what this Congress or some other Congress may do once we take this step in the direction of taxing municipal securities?

Mr. SIMON. I agree with that; yes sir.

Once Congress directly or indirectly taxes municipal securities, however small, it has put doubt in the investors' mind and it sows the seed of the ultimate destruction of the municipal market.

Senator WILLIAMS. And it is this element of doubt that causes problems in the market. And as soon as we can answer this question and get it settled once and for all the better it will be for all concerned?

Mr. SIMON. Senator Williams, this doubt is already in the market as expressed in the minimum of one-half of 1 percent of additional interest costs that all States and municipalities are paying today. It is not the tight money and the commercial banks being per se out of our market as some officials have said. In 1966, during the credit crunch, the interest spread between "tax exempt" and taxable bond issues was maintained at the historic ratio of 65 to 70 percent. Today municipal securities bear interest rates close to 85 percent of comparable quality taxable securities of private corporations and this is only anticipatory.

Senator WILLIAMS. And that those who have bought these bonds heretofore have already paid a sizable tax as a result of the depreciated prices?

Mr. SIMON. They most certainly have.

Senator WILLIAMS. Mr. Chairman, I have no other questions but I would like to make this observation both to this witness and to prospective witnesses who are coming, who will be appearing here a little later this morning. I am going to have to leave, and it will be noticed that the Republican membership of this committee will not be here this morning. We are having a caucus for the purpose of selecting a leader, and we have to be there in person to vote. The fact that the minority members will not be present this morning should not be interpreted as lack of interest on our part in your problem, and I am sure you understand why we will not be able to be with you for a short period.

Mr. SIMON. Yes, sir.

The CHAIRMAN. Thank you very much, sir.

Let me just ask a question about one item which does concern me and which has become a serious problem. When we talk about some 154 people who made a large amount of money and paid no Federal income tax one of the big tax evasion routes is through the purchase of tax exempt securities. Now, some have suggested that we ought to have a very modest tax on municipals for individuals who make a large amount of money and have no tax liability.

Suppose we left out the banks and the insurance companies and simply applied to individuals some type of a municipal tax concept in the event that a person made more than $100,000 and paid the Federal Government no income tax, do you think that would work havoc on the municipals market?

Mr. SIMON. It already has, Senator Long. Our commercial banking system is now well aware of the fact that if you tax individuals holding municipal bonds, however modestly, that they could be and probably would be next in future Congresses and, as a result, they are not buying our commodity.

The CHAIRMAN. Senator Talmadge.

Senator TALMADGE. No questions.

Senator ANDERSON. I had a letter announcing the transference of some bonds and the offering of 8-percent notes, 7-percent notes, and 7½-percent notes. Those are unheard of yields, I would think, especially for tax exempt securities.

Mr. SIMON. Yes, sir; they certainly are.

Senator ANDERSON. You will see the effects for a long, long time, would you not?

Mr. SIMON. Not since the Civil War have we had interest rates this high.

Senator ANDERSON. I was absolutely amazed.

Mr. SIMON. This is a major point about the tax reform bill. If it passed with these encroachments on municipal bonds you are legislating higher interest rates right down the line.

Senator ANDERSON. It will affect the schools and everything else.

Mr. SIMON. Everything, sir.

The CHAIRMAN. Well, there is just no escaping the fact that no matter how small a tax you put on these municipal bonds if we are going to put a Federal tax on them at all the interest rate must go up. There is just no way around it. That just has to happen, we can't avoid that because making them subject to a Federal income tax in whatever respect whatever means the interest rate on those securities will have to go up, and people would have less confidence in buying them.

Mr. SIMON. That has already happened, Senator.

The CHAIRMAN. Thank you very much, gentlemen.

Mr. SIMON. Thank you.

(William E. Simon's prepared statement, and a supplemental letter from Paul S. Tracy, follow:)

STATEMENT BY THE INVESTMENT BANKERS ASSOCIATION

My name is William E. Simon, and I am Chairman of the Municipal Securities Committee of the Investment Bankers Association of America. In order to answer any questions you may have, I am accompanied by several associates experienced in this area.

I am authorized to represent the more than 600 investment firms and banks, members of our Association, who underwrite and make secondary markets for bonds of the fifty states and their counties, municipalities and special districts.

Many of our member firms have participated in this financing for fifty years. In light of that experience, we are deeply concerned about the wider implications of the current proposals for indirect taxation of the interest paid on bonds of state and local governments.

We expect to continue to serve as bankers for these states and municipalities, whether the interest on their bonds is wholly exempt from income taxation, wholly taxable or partially taxable. Accordingly, we can be reasonably objectives in appraising the capital market and economic effects of the tax reform proposals embodied in H.R. 13270 insofar as they relate to state and municipal bonds. These comprise (1) the limited tax preferences proposal, (2) the allocation of deductions proposal, and (3) a Federal subsidy in aid of municipal borrowing in taxable form.

This proposed alternative financing method, which provides for the issuance of taxable state and municipal bonds with a Federal subsidy to the issuer of between 25% and 40% of the interest, represents an attempt to induce state and local governments to convert their financing to taxable form, voluntarily surrendering tax exemption.

We shall deal in detail with the wider economic and market implications of all three of these proposals today.

THE CONSTITUTIONAL QUESTION

Differing opinions are expressed as to whether tax exemption is implied by the Constitution as a part of reciprocal immunity in the Federal-state relationship. There is no doubt, however, that the origin of tax exemption is Constitutional, and that it was placed in the first Revenue Act following the adoption of the 16th Amendment because the Congress then believed that the Constitution required this provision.

Because of this history and background it is improper to bracket consideration of tax-exempt bond interest with those other exclusions and deductions which Congress has adopted from time to time in order to stimulate certain types of economic or social activity, or with those provisions of the Code which have inadvertently created "loopholes." Nevertheless, much of this year's discussion has linked municipal bond financing in the public's mind with these other devices, and we believe quite unfairly.

RECENT MARKET DEVELOPMENTS: THE IMPACT OF TAX REFORM

The year 1969 has been a difficult one for the municipal market. Measured by Moody's Aa municipals, the average yield has risen from 4.60% in January to 5.93% at the end of August.

During the twenty-five years 1944–1968, state and local governments had been able to borrow capital funds at tax exempt rates averaging about two-thirds of the interest cost of long term taxable bonds issued by private corporations of comparable security quality. This initerest cost relationship held at about 70% despite the rapid increase of total state and local borrowing from $11 billion in 1966 to more than $16 billion in 1968.

In the first eight months of 1969, the amount of new municipal bond issues was 25% less than in the same months of 1968; this meant that the underwriting and distribution load was $2.5 billion lighter. Yet, the interest rate spread between "tax exempt" and taxable bond issues has narrowed significantly. Instead of the long-prevailing 65–70% of taxable rates, bond issues offered in late August by state and local governments bore interest rates approximating 80–85% of those on comparable quality new issues of private corporations. Some part of this rise in the exempt/taxable ratio has been caused by the progressive increase in the intensity of credit restraint affecting especially the commercial banks' ability to buy municipals. But let us look at very similar monetary conditions governing banking in the Summer and Fall of 1966. At that time, commercial banks sold municipal bonds out of their portfolios in greater volume than in 1969. New issue volume was comparable. Yet the ratio of tax exempt to taxable borrowing costs, using the same indices for comparison, in 1966 did not rise above 75%, and then only for a single month. In 1969's higher ratio, by 7 or more percentage points, easily represents, at today's level of interest rates, a half of 1 per cent per annum of added local government borrowing cost attributable to the threat that municipal bond interest will be partially taxed.

As a result of the disclosure in late July by the House Ways and Means Committee of its intention to apply both the limit on tax preferences and the allocation formula to tax exempt bonds, it was necessary to restructure and reword notice of sale, underwriting agreements, and legal opinions in order to put prospective investors on notice that tax exemption is threatened. Both individual and institutional investors have shown sharply diminished confidence in the municipal market because of these changes and the uncertainty thus created.

Some dealers and at least one bank announced their intention to withdraw from bidding on new municipal issues until their tax status was clarified. The new issue bidding on Tuesday, July 29th revealed unmistakably that the municipal market was on the brink of chaos. The $65.0 million "Aaa" rated State of Ohio issue was sold to the winning bidders at 5.94% net interest cost, an increase of nearly ½ of 1% over that which would have prevailed only two weeks earlier. The second bid represented nearly ½ of 1% higher net interest cost over the first bid, an unthinkable bidding spread in any normal market. On that same day two cities, Chicago, Illinois, and Newark, New Jersey, were able to secure only one bid each. No bid at all was received for the $7.4 million Eastern Kentucky University issue. The municipal market, which has continued to function, although with understandably reduced efficiency under the tightest money conditions ever witnessed in modern times, was on the verge of collapse directly owing to the tax proposals under construction by the House Ways and Means Committee.

We think it likely that these proposals, if enacted into law, could cost states and local governments a minimum of 1% per year additional interest on their "tax-exempt" financing. That means an increased financing cost of at least $150 million per year, all of which hard pressed states and municipalities will be forced to raise from taxpayers already groaning under the burden of state, local, and Federal taxation.

LIMITED TAX PREFERENCES (MINIMUM INDIVIDUAL INCOME TAX) PROPOSAL

As we stated before the House Ways and Means Committee on March 11th, the inclusion of the interest on state and local government obligations in gross income, for purposes of computing a limit on tax preferences or a minimum income tax, would do significant and lasting damage to existing and future state and local government bond markets, without achieving any appreciable increase in tax equity. In view of the demonstrated gravity of the market consequences, we feel compelled to draw to the attention of your Committee the following considerations.

Our confidence in the capability of the tax-exempt market to provide for growing state and local capital needs is predicated on continuance of the present unqualified tax exemption provided in Section 103 of the Revenue Code, for obligations of the states and their political subdivisions. The proposal for a minimum income tax comes to you under the name of "equity" and "fairness" in the application of the individual income tax. Equity and fairness in taxation are standards which we all support. In looking at tax exemptions, weight must be given, however, to the policy and historical considerations upon which a particular exemption is based. Furthermore, the question of the presumed greater equity resulting from inclusion of interest on state and local bonds in the expanded base for this proposed alternative tax computation must be weighed against its adverse effect on the value of tax exemption to state and local governments in maintaining a preferred market for state and local borrowing.

Individuals, together with trust departments of banks, and investment counsel acting on their behalf, are important factors in the municipal market, although annual additions to their holdings vary widely in amount. (See Exhibit 2.) The role of individual investors on the municipal market increases in relative importance when the buying by banks and casualty insurance companies is reduced. This phenomenon occurred in 1966 when individuals purchased 40% of net new issues. There is no doubt that inclusion of tax-exempt interest in the alternative minimum tax would significantly reduce municipal bond purchases on behalf of individuals. Those unaffected by the initial minimum tax would only wonder how soon the next step in this direction would affect them.

Undoubtedly there would be a legal test as to whether a law taxing interest on state and municipal bonds would be Constitutional. Because of diversity of legal opinion upon this point, no one could be certain of the outcome until a decision was reached by the U.S. Supreme Court. If the Atlas Life Insurance Company case is any precedent, at least three years could elapse before a decision by the U.S. Supreme Court. During that period, tax-exempt bonds through sheer uncertainty and apprehension would sell at only slightly lower yields than taxable securities of comparable quality, because the intermediate and long term market would in effect have become a game of chance in which the few remaining buyers were merely betting on the outcome of the litigation. Furthermore, some individuals would undoubtedly sell their holdings in fear of an unfavorable decision.

Banks and other institutional investors in tax exempts are fully aware that a minimum tax applying to them was weighed by the House Ways and Means Committee and eliminated at the last moment. Under these circumstances, they could only assume that the next change in the tax law would directly attack the value of tax exemption to them. Their natural reaction would be to reduce their purchases sharply, and, if they bought at all, to confine their buying to the shortest maturities. Any municipal financing that could be done would probably be at sharply higher interest rates, the cost of which would be borne by the general taxpayers in the borrowing states and municipalities.

Putting this matter in proper perspective, tax exemption is not simply a gift from the Federal Government to certain investors. It is a *quid pro quo* for the acceptance of lower rates of return than the investor could obtain on alternative investments. An investor in tax-exempt bonds has accepted close to one-third less income than he could receive from taxable obligations—this is what he has paid for the tax exemption. Thus in a very real sense, and certainly in terms of equity, the investor in tax-exempt bonds has *already paid* the equivalent of a minimum income tax and has paid it in advance.

For this reason especially, the application of either the limit on tax preferences or the allocation of deductions to interest derived from *outstanding* municipal bonds, creates a real shock wave for investor confidence.

In our opinion, there is no such thing as a *limited* exposure of municipal bonds to Federal taxation. Either the interest is exempt or it is taxable to the same degree as private corporation securities. If the U.S. Supreme Court rules that Congress can impose a conditional tax based on the circumstances of the bondholders, then investors must assume that some future Congress may go all the way to direct taxation. See Appendix A for a detailed discussion of the effects of the limit on tax preferences (minimum income tax) treatment of tax exempt interest.

THE ALLOCATION OF DEDUCTIONS PROPOSAL

The proposal for allocation of deductions, in theory would increase the taxes collected from taxable income rather than collect a tax on tax-exempt bond interest. But as it would reduce the net income value of such interest, its effect actually would be that of an indirect tax on tax-exempt interest. The allocation of deductions would hit many more taxpayers than would the limit on tax preferences. Section 302 of H.R. 13270 provides that only tax-exempt interest income received from obligations issued after July 12, 1969, be included, and this inclusion is phased in over a ten-year period. In testimony before this Committee, the Treasury has advocated that allocation be applied retroactively to outstanding issues as well as future, and that the full amount of interest received on municipal bonds would immediately be a factor in the determination of tax liability.

For either concept, the extent of the effect of allocation depends upon the relationship of certain defined preference income to total income, applied to the aggregate of allocable non-business deductions. The larger the relative amount of such deductions, the greater the impact. A study of the effect of allocation on typical investors (attached hereto as Appendix B) suggests that allocation would reduce the net yield of tax-exempt income by ¼ to ¾ of 1%, the averaging being about ½ of 1%. This would mean that a 5½% tax-exempt yield would be worth only about 5% to the investor.

If tax-exempt income is made less attractive, more individual investors will be persuaded to follow the present trend toward heavier concentration in common stocks or other investments. With substantial losses already suffered in his bond portfolio, an individual investor is certainly in no mood to absorb this added blow. As a result individual investors would require substantial leeway in the form of greater yield on tax-exempts, as protection against changes in his individual exposure to allocation.

The application of allocation to individuals would raise serious questions for institutional investors, particularly commercial banks, who must fear that they might be next in line for an extension of this proposal. It is well known that H.R. 13270 at one point contained an extremely harsh provision applying this proposal to commercial banks; and that this provision was deleted only at the last moment. Given the banks' important position as buyers of tax-exempt bonds, their warranted fears can be absolutely catastrophic to the market.

The municipal market has already experienced the results of an allocation arrangement, contained in the Life Insurance Tax Act of 1959. The Atlas Life Insurance Company contested these provisions in litigation which lasted from May 1962 until May 1965. There was one victory along the way in the Circuit Court of Appeals, but the Company finally lost in the U.S. Supreme Court.

The attached Exhibit 3 shows what actually happened to the life insurance companies' share of the tax-exempt market during this period as the result of the allocation of income formula. In 1961, state and local holdings of life insurance companies were $3.9 billion or 3.07% of total assets, and acquisitions were $506 million or 2.01% of total acquisitions. By 1968, municipal holdings were down to $3.2 billion or 1.69% of total assets, and acquisitions were down to $278 million or 0.58% of total acquisitions. The results speak for themselves. The life insurance companies' sector of the municipal market was severely constricted. Since 1962, life insurance companies have been net sellers of state and local bonds in every single year, as shown in Exhibit 2.

Furthermore, many life insurance company acqusitions of state and local securities are motivated by other than purely investment considerations such as yield and quality. For example, insurance companies derive important advantages from the purchase of municipal bonds of certain states in order to reduce the rates of taxation on their premium income from those states. Although other assets within the states may be similarly used, municipal bonds are satisfactory for this purpose in all of such states. Also, it should be noted that a considerable share of life insurance company municipal bond acquisit'ons are of discount bonds at low percentage of par value with coupons as low as 1/4, 1/10, and 1/20 of 1%.

As far as these bonds are concerned, the tax-exempt interest feature is of minimal significance, and attention is focused on the capital gain aspects of the transaction.

As we look at this precedent and contemplate the possible application of allocation of deductions to individuals, we should note that individual investors are a factor in the tax-exempt market some ten times as large as were the life companies at their peak.

THE FINANCIAL EFFECTS OF THE LIMITED TAX PREFERENCES AND ALLOCATION OF DEDUCTIONS PROPOSAL

In testifying before this Committee on September 4th, the Treasury disclosed the estimate that the inclusion of municipal bond interest in the base for allocation of deductions, according to its proposed formula, would yield revenue of about $45 million a year.

We submit that this estimate proves our contention that if this indirect tax is imposed, the states and their municipalities will pay far more in interest costs than the Treasury will ever gain in revenue. On the basis of a presently indicated bond rate increase of at least ½ of 1% per annum, impairment of the tax immunity of municipal bond interest would impose an added cost of $75,000,000 a year on the $15 billion of state and local borrowing which is the minimum annual amount necessary to maintain the present rate of construction of public projects. Whereas the tax yield to the Treasury would grow very slowly at the rate of a few million dollars a year, the cost to the states and their agencies would mount rapidly. Within five years, their cost would be in excess of $300 million a year, or about five times the Treasury's annual revenue estimated by projecting the $45 million figure.

In our opinion, this estimate of added cost to state and local governments is conservative in that it measures only the already demonstrated harm to the municipal market. We believe that if the treatment of municipal bond interest proposed in H.R. 13270 is enacted into law, investors will want "tax exempt" rates closer to taxable rates than anything we have seen to date. From the ½ of

1% already indicated, we fear that the resulting penalty on municipal borrowing costs could easily rise to a full 1% or more, at current levels of long-terms interest rates. This would double the estimate of annual cost increase, to $600 million, without yielding any significant addition of revenue to the Treasury.

On these comparisons, any fiscal purpose of the proposed tax law amendments appears to be self-defeating. There remains the question whether tax equity is improved. On this score we assume that the purpose is to discourage a very small number of individuals in high income brackets from minimizing their taxable income through ownership of municipal bonds.

There is reliable evidence that most wealthy persons do not invest heavily in tax exempts; (see page 12) and that an extremely low percentage of taxable estates was invested in state and municipal bonds. Finally, the Treasury has never demonstrated that the famous 154 individuals having incomes in excess of $200,000 on which they paid no Federal tax, ever relied to any significant degree on investment in tax exempt bonds.

PUTTING STATE AND LOCAL GOVERNMENT FINANCING IN PERSPECTIVE

In order to establish the basic facts related to the financing of state and local government, we offer brief discussions of the distribution of municipal bond ownership, the cost of tax exemption to the Federal Government, the recent growth and projected growth in state and municipal bond issues, and the size and composition of the new issues of long-term fixed-income obligations.

Outstanding State and Local Debt and its Ownership

Outstanding state and local debt, and the interest paid on it is as follows:

TABLE I

	1966	1967	1968
Beginning	$104,700,000,000	$111,600,000,000	$122,000,000,000
End	111,600,000,000	122,000,000,000	132,300,000,000
Total	216,300,000,000	233,600,000,000	254,300,000,000
Average outstanding debt	108,150,000,000	116,800,000,000	127,150,000,000
Interest paid	3,451,000,000	3,813,000,0C0	4,437,000,000
Interest cost (percent)	3.19	3.26	3.49

Exhibit 4 shows the total outstanding debt each year since 1946, who owned it, and in what proportions:

Looking at the principal classes of ownership, it is readily observable that the holdings of commercial banks increased from 25% of the total in 1945 to 44% in 1968, and that the holdings of fire and casualty insurance companies increased from 1.5% in 1945 to 11% in 1958 and have since stabilized at that level. The holdings of individuals declined from 46% in 1945 to 32% in 1968.

Since the current hearings have emphasized individual ownership, it is of especial interest to examine the relationship of municipal bond ownership to income brackets. Contrary to popular belief, a survey made by Professor Benjamin Okner, using results gathered by the Michigan Survey Research Center[1] from a sample of high income persons, concluded that most wealthy persons do not invest heavily in municipals. Based on 1964 data, he estimated that only 10 per cent of the persons with incomes of over $10,000 owned any municipals and that only 1 per cent of them derived as much as 25 per cent of their income from such securities. While 65 per cent of those persons in the highest category, those with incomes of $315,000 or more, held *some* municipals, only 18 per cent of them derived as much as 10 per cent of their income from this source, and only 6 per cent derived as much as 25 per cent from this source. (See Exhibit 5)

Affording corroboration of this survey, the estate returns filed in 1966 with the Internal Revenue Service (the most recent year for which a report is available) demonstrated that an extremely low percentage of taxable estates was invested in state and municipal bonds. Investments in corporate stocks were 17 times as large as investments in municipal bonds.

[1] *Income Distribution and the Federal Income Tax,* Michigan Governmental Studies No. 47, Institute of Public Administration, University of Michigan, 1966, Appendix A.

Only 4 brackets of decedents' total estates held more than 5 per cent of their assets in municipal bonds. These were the $2 to $10 million estates in which almost 800 estates held an aggregate of $234.1 million of such bonds which constituted 7.3 per cent of the assets of such estates. The percentage of assets invested in municipal bonds reached no higher than 8.63 per cent, which was recorded for the $5 to $10 million estate bracket. Estates of the larger and smaller size brackets held a smaller part of their assets in municipal bonds. The average of the municipal bond holdings of all taxable estates reported on a total estate basis was 2.7 per cent of total assets. (See Exhibit 6) *Recent Growth in State and Municipal Financing Volume and Project Growth.*

As can be seen from Column 1 of the following table, municipal bond financing has been growing at a compounded growth rate of 8.7% in the period from 1960 through 1968, after deleting the industrial revenue financing which was an extraneous and foreign element in the market and which has been terminated for all practical purposes by the provisions of the Revenue Control and Expenditures Act of 1968.

TABLE I

[In millions]

	Growth at 8.7 percent	Actual	Joint Economic Committee estimate [1]
1960	7,230	7,230	
1961	7,859	8,360	
1962	8,543	8,558	
1963	9,286	10,107	
1964	10,094	10,544	
1965	10,972	11,084	
1966	11,927	[2] 10,589	14,200
1967	12,965	[3] 12,088	14,900
1968	14,093	[4] 14,044	15,700
1969	15,319		16,600
1970	16,652		17.600
1971	18,101		18.600
1972	19,676		19,500
1973	21,388		20,800
1974	23,249		21,800
1975	25,272		22,700

[1] "State and Local Public Facility Needs and Financing," a study prepared for the Joint Economic Committee of the Congress of the United States, December 1966. The National League of Cities, in conjunction with the Urban Institute is currently engaged in updating data on anticipated capital outlays of States and municipalities through 1975. Data from this study are not yet available.

[2] Excludes $500,000,000 industrial aid financing.

[3] Excludes $1,300,000,000 industrial aid financing.

[4] Excludes $1,600,000,000 industrial aid financing, and $730,000,000 anticipatory financing to avoid provisions of Revenue Control and Expenditures Act of 1968, Watson amendment in California and similar measure in Oregon.

Furthermore, in its December 1966 study, the Joint Economic Committee indicated that capital outlays through 1975 could be handled by the present market mechanism. The Joint Economic Study estimates at present are well ahead of actual financing volume, considering that much of 1968 new issue municipal borrowing can be attributed to anticipatory borrowing (California, Oregon and Port of New York Authority) and industrial development financing. Other studies of the fiscal outlook of state and local government financing through 1975 [3] came to a similar conclusion.

Size and Composition of the Capital Market

Tables A and B show the gross acquisitions of long-term fixed-income obligations, averaged for the period 1965–1968 by categories of borrowers, also a percentage distribution of such acquisitions by investor groups. This study for the first time gives a comprehensive picture of the new-issue market. It was constructed by Dr. Sally S. Ronk, Vice President of Bankers Trust Company, New York. This demonstrates how state and municipal bonds fit into the total market of fixed income obligations.

[3] *Fiscal Outlook for State and Local Government to 1975*, Tax Foundation, Inc. *1966 Fiscal Issues in the Future of Federalism*, a CED Supplementary Paper, Committee for Economic Development *1968*.

Inflation and the Capital Markets

The major difficulty experienced by state and local governments in raising long-term money in the capital market today is part of a general problem faced by borrowers in all sectors of the market for fixed-income obligations in an inflationary environment.

The bear market trend in bonds since 1946 and the severe decline in bond prices over the past four years have left many investors disillusioned with fixed-income obligations. In many cases, declining bond prices and the erosion in the purchasing power of the dollar have resulted in a negative return on an investor's funds in recent years. In the face of this experience, the financing of many essential social programs at supportable interest rates depends critically on investors' expectations about the future course of inflation.

Appendix C depicts the comparative performance of investments in (a) municipal bonds of 20-years maturity, average quality, (b) high grade corporate bonds, and (c) common stocks represented by Standard & Poor's 500-stock average.

The appendix demonstrates that investment in municipal bonds has been anything but profitable over the past 10 years, despite the complete exemption of income from Federal taxation. In view of this record, it is easy to understand why investors prefer stocks. The comparatively poorer showing for taxable corporate bonds indicates why individual investors of upper income brackets would be unlikely to invest in taxable municipal bonds.

Inflationary expectations are already reflected in the portfolio decisions of institutional investors. This is shown by the preference for common stocks. Net purchases of common stocks by non-bank financial institutions gained momentum only gradually in the past 20 years, but have sharply accelerated during the last four. In the period from 1948 through the early 1960's, whenever non-bank financial institutions occasionally stepped up their purchases of stocks, they also increased their net investment in bonds. Since 1963, net acquisitions of mortgages and bonds have been on a plateau of around $27 billion annually, with the exception of the credit crunch year of 1966 when net new bond investments fell sharply. Thus, in contrast to earlier years, in which annual net new investments in both bonds and stocks increased irregularly, the annual commitment in bonds has been held in check lately while the acquisition of stocks has increased significantly. (See Exhibit 1)

If inflationary expectations are not retarded, this trend may well persist. Public retirement funds are continuing to liberalize their portfolio policies in favor of equities, although a large percentage of net funds is still invested in bonds. Corporate pension funds are allocating an increasing proportion of new money to equities. Life insurance companies are stepping up their equity purchases.

During the next decade, much of the cost of new capital facilities will have to be financed by flotation of debt securities, which will be made much more difficult if inflation does not abate.

ECONOMIC COSTS OF ISSUANCE OF TAXABLE MUNICIPAL BONDS WITH A FEDERAL SUBSIDY

The proposal that the Federal Government subsidize state and local government borrowings by paying the differential between the tax-exempt and taxable interest rate is based partly on the assumption that the Federal government could recoup the subsidy through taxing all of the interest on municipal bonds. This would be true, of course, if purchasers of taxable municipal bonds had an average effective tax rate equal to or higher than the percentage required for the subsidy.

The contention that the Federal government would end up without loss under this proposal appears to reflect the belief that the buyers of taxable municipal bonds would be the same as the buyers of tax-exempt municipal bonds. Since the marginal tax rate of the buyers of the average volume of new issues of tax-exempt municipal bonds, 1965–68, was 44.7 per cent, the subsidy could be quite high, if this were so. However, the assumption that taxable municipal bonds could continue to be sold to the previous buyers of tax-exempts is not valid.

In order to ascertain what the shifts in the flows of funds through the credit markets might be if only taxable municipal bonds were issued, the Investment Bankers Association sent out a questionnaire to 1,500 leading institutional investors and investment advisers. The results of 350 replies have been tabulated, and turned out to represent past experience for each investor group very satisfactory.

New issues of tax-exempt bonds in 1965–68 averaged $13.3 billion annually. This was 13½ per cent of total new issues of long-term fixed-income obligations including mortgages (Tables A and B). The average yield on high-grade municipal bonds over the same four years was 3.87 pre cent, so the interest cost to state and local governments of this borrowing at that average yield would be $515 million each year. The average yield on high-grade corporate bonds was 5.68 per cent, so that state and local governments were able to save 181 basis points, or about 32 per cent of the corporate rate, because of tax exemption; this amounted to about $241 million a year.

The actual averages for 1965–68 of the net flows of funds through the credit and equity markets, by major type of fund—long-term fixed income investments, short-term obligations and corporate stock—are shown in Table C. In Table D, the breakdown of long-term fixed-income obligations into mortgages, corporate bonds, etc. is given.

On the basis of the questionnaire results, we have taken what investors said they would do with their funds, if only taxable municipal bonds were issued, as the best method of showing how the flow of funds would be redirected. The results are shown in Tables E and F. Finally, we have translated the net flows of long-term fixed-income obligations shown in Table F to gross acquisitions (Table G). The changes from the actual 1965–68 averages are dramatic and would involve greatly increased upward pressures on long-term interest rates.

In the case of municipal bonds, not enough interest was expressed on the part of buyers to take up the same volume of taxable issues as was issued in tax-exempt form in 1965–68. The assumption was made, therefore, that $2½ billion of former bond financing by state and local governments would be shifted to the short-term market.

Since savings institutions, with fairly low tax rates, indicated that they would be somewhat more interested in taxable municipal bonds that they have been in tax exempts, and since commercial banks, fire and casualty insurance companies and individuals indicated that they would be less interested, the average marginal tax rate on gross new issues of taxable municipal bonds would fall to 33⅓ per cent, as shown in Table H.

However, changes in the flows of funds and shifts among buyers in various tax brackets would also affect the average marginal tax rate on the gross volume of all new long-term taxable obligations. This rate averaged 23.2 per cent in each year 1965–68. The average marginal tax rate of buyers of tax-exempt bonds in 1965–68 was 44.7 per cent, so that if the same buyers should buy taxable municipal bonds, the average marginal rate on all new long-term issues of fixed-income obligations would rise to 26.1 per cent, an increase of 2.9 percentage points. Because of the interest of lower tax-bracket buyers in taxable municipal bonds, however, the marginal tax rate on the redirected gross flow of long-term fixed income obligations would rise only to 25.1 per cent, an increase of 1.9 percentage points. Thus, it is erroneous to compute a gain to the Treasury as arising from the excess of tax revenues on municipal bonds over subsidy costs which is based on current buyers of tax exempts.

When the redirected flows of funds and a minimum subsidy are accounted for, the Treasury would actually come out with only a minimal net gain; a more realistic subsidy at the 40 per cent rate contemplated in HR 13270 would change this to a loss, and, in either event, as noted below, other indirect results would produce an even larger loss. The figures are as follows:

	Millions
New issues of taxable municipal bonds under assumed conditions (Table G)	$10, 700
Interest at average high-grade corporate rate, 1965–68, of 5.68%	608
Interest at average high-grade municipal rate, 1965–68, of 3.87%	414
Taxes returned on interest of $608,000,000 at marginal tax rate of 25.1%	153
Taxes returned on interest on other taxable obligations for which marginal tax rate rises from 23.2% to 25.1%	60
Total taxes returned	213
(a) Minimum subsidy required (1.81%, or 32% of corporate rate)	194
Net Gain to Treasury with 32% Subsidy	19
(b) Subsidy at 40% of corporate rate	243
Net Loss to Treasury with 40% Subsidy	30

Incidentally, the subsidy might have to average substantially higher than 40 per cent. Many municipal bond issues are relatively small and in order to be marketed would, in the judgment of many observers, need to carry higher interest rates than the generally larger corporate issues of comparable quality. Furthermore, since any loss to the Treasury reflects only one year's bond financing, the Treasury's losses would mount year after year.

In addition to the above loss, the Treasury, as well as state and local governments and all borrowers, would lose as a result of the permanent rise in long-term interest rates above what they would otherwise be caused by the shifting of municipal bonds to the taxable market.

The Investment Bankers Association included a question in its questionnaire regarding the anticipated change in interest rates if only taxable municipal bonds were issued. The answers from 329 respondents in the financial community—portfolio managers and investment advisers—indicated that the average rise expected was in the neighborhood of 75 basis points. (Table I)

Such a rise would mean an additional cost to the Federal government on its $7.1 billion of gross new long-term issues (Table G) of $53 million, making a total loss to the Treasury of $83 million a year.

In addition, the Treasury would have to pay more because its 40 per cent subsidy on taxable municipal bonds would have to rise; this would amount to $32 million. Thus, the total cost to the Treasury would be $115 million, while state and local governments would incur additional costs of $48 million (60 per cent of 75 basis points higher interest on $10.7 billion of new issues).

Not only would costs to all levels of government rise, but homeowners and business too would be required to bear higher interest costs on mortgages and corporate bonds. A 75 basis points rise in interest rates on gross new mortgages alone would be $434 million.

These more or less direct costs of shifting municipal bonds to the taxable market (including higher interest on corporate bonds of $129 million) total $726 million, a not inconsiderable figure.

Not all of the costs would be direct, however; there would be side effects because business would attempt to pass along its increased interest costs in higher prices. The inflationary effects would be enhanced if the rise in long-term interest rates were transmitted to the short-term credit markets, where we have already assumed increased pressure from larger state and local government borrowings.

Finally, the average marginal tax rate of borrowers in the credit markets is higher than that of lenders. Since borrowers may deduct their interest cost and this lowers their taxes, while lenders who receive this interest pay taxes at varying rates on it, this means that, when interest rates rise, the Treasury loses money. Business, with high marginal tax rates, accounts for a large proportion of total net funds raised, while savings institutions, with relatively low marginal tax rates, loom fairly large in the total of net funds supplied. The average marginal tax rate of borrowers, at 32 per cent (Table J), exceeds that of lenders, at 28.9 per cent (Table K), by 3.1 percentage points. Because short-term funds, included in these totals, may turn over several times a year, it is not possible to calculate accurately the loss to the Treasury on this score, but it could be significant.

CONCLUSION

Therefore, our studies indicate strongly that the issuance of taxable municipal bonds will involve an across-the-board interest rate increase of about ¾ of one per cent. When all of the economic and capital market side effects are taken into account, the U.S. Treasury will be poorer by $115 million. At the same time, homeowners, states and municipalities and business together with the Treasury will suffer increased interest costs amounting to $726 million. These results do not bear out previous contentions that the issuance of taxable municipal bonds is cost free.

Furthermore, we respectfully urge upon this Committee that interest paid on state and municipal bonds should be exempted from both the limit on tax preferences and the allocation of deductions. In our opinion, the indirect taxation proposed in H.R. 13270 would cost state and local governments much more than it would yield in revenue to the Treasury. This would mean a heavier tax burden falling mainly on the middle-income homeowner. The efficiency of the municipal bond market must be preserved if we are to supply the capital requirements of the states and their political subdivisions. That market cannot function efficiently if it is to be harassed by complex applications of indirect taxation of municipal bond interest.

NET NEW INVESTMENTS OF NONBANK FINANCIAL INSTITUTIONS IN BONDS AND STOCKS

[Dollar amounts in billions]

Years	Total	Bonds[1]	Stocks	Stocks as percent of total
1949	$8.8	$7.7	$1.1	12.5

APPENDIX A

ADDITIONAL COMMENT ON LIMITED TAX PREFERENCE (MINIMUM INDIVIDUAL INCOME TAX) TREATMENT OF TAX-EXEMPT INTEREST

In the arithmetic used in discussions of tax reform there is generally a failure to consider one major point. This point is that a substantial price has been paid by the investor for tax exemption in the form of acceptance of a lesser interest rate.

(1) One way to look at this is in terms of capitalizing it in price. The following table shows this by indicating the value of 25-year bonds with a coupon based on the level of the tax-exempt market at a yield based on the corporate market. The relation between yields in the two markets is computed at 70%, the approximate level which has held over a number of years. Given stability in this relationship it will be seen that the price paid by the investor for tax exemption goes up as yields rise. The outgoing Treasury minimum tax plan overlooks this factor.

Tax-exempt coupon	Corporate bond yields (percent)	Dollar price at corporate yield	Price paid for tax exemption[1]
5¼ percent, at	7½	74.76	25.24
4.90's, at	7	75.37	24.63
4.20's, at	6	76.84	23.16
3½'s, at	5	78.72	21.28
3.15's, at	4½	79.86	20.14

[1] It is assumed that the investor paid 100 for the tax-exempt bonds in each case.

The inclusion of percentage depletion in oil and other minerals is "in excess of capital investment". Equal treatment for tax-exempt income would require consideration of the price paid for it as above.

(2) One of the questions Congressman Byrnes posed to witnesses during the House Ways and Means Committee hearings was "doesn't the individual taxpayer get much more out of the tax exemption than the borrowing municipality?" One of the answers given him at the time was that the investor has to estimate what his advantage will be because he cannot know his prospective tax bracket 10, 20, 30 years hence (and in the intervening years). Thus he needs a margin solely to assure that he will come out even.

Computations of relative advantage must make some assumption as to future tax rates and income brackets, and usually assume a continuance of the present situation. Those which follow make this assumption. Statements of the most extreme cases of tax sheltered income are based on instances where adjusted gross income is large, but no tax is paid. Tax-exempt interest on municipal bonds is not included in these instances, because it is not a part of adjusted gross income. Because the minimum tax is designed to reach such persons, and because some of them may also have tax-exempt interest income, we have prepared some examples to show (1) relative benefit to the taxpayer and to the borrowing municipality in such instances and (2) the impact of the proposed minimum tax. A later example shows this comparison for a taxpayer with at least $200,000 of *taxable* income.

Each example shows the alternative result if, instead of an investment in tax-exempt bonds, the individual had purchased taxable bonds and was paying annual income tax on the interest from them. The 70% ratio of tax-exempt income to taxable income is again used in these comparisons. The income tax rates used are those for joint husband and wife returns. The surtax is not included as it seems inappropriate to apply this temporary measure over the life of a long-term bond. In computing the impact of the minimum tax it is assumed that tax-exempt bond interest amounts to only about a quarter of total income. This is in line with investment proportions recommended by professional investment advisers, and very few investors have a much larger concentration in tax-exempt bonds.

In the first example (Exhibit 4) $50,000 tax-exempt interest income is received, and any other income is protected by various exclusions and deductions. If the investor had purchased taxable bonds instead, he would have received $71,400 in taxable income (100 over 70 times $50,000). The tax on $71.400 would be $28,490 (an average rate of 40%), and there would remain $42,910 after tax. By having tax-exempt income the taxpayer has benefited $7,090 ($50,000—$42,910). The borrowing municipality—assuming for simplicity that only one is involved—has saved $21,400 ($71,400—$50,000) by being able to do its financing in the tax-exempt market instead of having to sell taxable bonds. If the minimum tax as proposed were applied to the $50,000 tax-exempt income and it became taxable at as much as a 30% rate, the $15,000 tax would wipe out the taxpayers' benefit in having bought tax-exempts, and in fact he would be penalized $7,910 net.

Three other examples with larger amounts of tax-exempt income are shown in Exhibits 4. 5 and 6. These computations are based on approximate relationships, but they do help to answer the question of who gets the larger benefit from tax exemption, the borrowing municipality or the investor. It is not until we get to a holding of tax-exempt producing $200,000 of tax-exempt income that a taxpayer's advantage begins to equal the advantage to the municipality. Even with holdings producing one-quarter of a million dollars of tax-exempt income the advantage to the taxpayer is only nominally more than the advantage to the municipality.

Interestingly enough, when the minimum tax proposal is applied it would wipe out the taxpayer's benefit in the first two examples and would take away most of his advantage in the last two. The maximum advantage of tax-exempt interest to the individul taxpayer occurs when it is on top of at least $200,000 of *taxable* income Exhibit 8 shows how this works out. Here the taxpayer does gain more than the municipality, but only one-third more. If it applied, the minimum tax would leave him some benefit, but less than 40%; it would probably *not* apply because of the large amount of income presently taxable.

What do these figures say about the minimum tax idea? They seem to say that it would have no impact where the advantage to the taxpayer is greatest (Exhibit 8), and that its impact on present non-taxpayers (Exhibit 4–7) would be so severe, as to reflect not *equity*, but a kind of retaliation. A fuller realization of this would further alienate individual investors, who would doubtless diminish their purchases of tax-exempt bonds, with the resulting adverse effect on the municipal market stressed in our previous testimony. Local government borrowing would then cost more, and the ultimate burden would fall on local taxpayers.

EXHIBIT 1

BENEFIT FROM TAX-EXEMPT INTERESTS IMPACT OF LIMITED TAX PREFERENCES

(Minimum tax)

$50,000 from tax-exempts.
$50M × 100 over 70 equals $71,400 alternative taxable income.

Alternative taxable income	$71,400
Less tax (40 percent)	28,490
Total	42,910

Distribution of benefit

Municipality ($71,400 less $50,000)	$21,400
Taxpayer ($50,000 less $24,910)	7,090
Total	28,490

Should the $50,000 tax-exempt income become taxable at as much as 30% i.e., $15,000, the taxpayer's benefit would be wiped out and he would be penalized $7,910 net.

EXHIBIT 2

BENEFIT FROM TAX-EXEMPT INTEREST IMPACT OF LIMITED TAX PREFERENCES (MINIMUM TAX)

$125,000 from tax-exempts.
$125M × 100 over 70 equals $178,500 alternative taxable income.

Alternative taxable income	$178,500
Less tax (46 percent)	82,560
Total	95,940

Distribution of benefits

Municipality ($178,000 less $125,000)	$53,500
Taxpayer ($125,000 less $95,940)	29,060
Total	82,560

* * * * * * *

A 30 percent minmum tax on $125,000 equals $37,500, more than wiping out taxpayer's gain of $29,060. (In this case 35 percent minimum tax is possible, which would be $43,750.)

EXHIBIT 3

BENEFIT FROM TAX-EXEMPT INTEREST IMPACT OF LIMITED TAX PREFERENCES (MINIMUM TAX)

$200,000 from tax-exempts.
$200M×100 over 70 equals $285,700 alternative taxable income.

Alternative taxable income	$285,700
Less tax (60 percent)	170,970
Total	114,730

Distribution of benefit

Municipality ($285,700 less $200,000)	$85,700
Taxpayer ($200,000 less $114,730)	85,270
Total	170,970

* * * * * * *

Minimum tax of 30 percent on $200,000 equals $60,000, takes most of taxpayer's advantage. At 35 percent, which is likely, it would be $70,000.

EXHIBIT 4

BENEFIT FROM TAX-EXEMPT INTEREST IMPACT OF LIMITED TAX PREFERENCES (MINIMUM TAX)

$250,000 from tax-exempts.
$250M×100 over 70 equals $357,100 alternative taxable income.

Alternative taxable income	$357,100
Less tax (62 percent)	220,950
Total	136,150

Distribution of benefit

Municipality ($357,100 less $250,000)	$107,100
Taxpayer ($250,000 less $136,150)	113,850
Total	220,950

* * * * * * *

Minimum tax of 35 percent on $250,000 equals $87,500, which would take most of taxpayer's advantage.

EXHIBIT 5

BENEFIT FROM TAX-EXEMPT INTEREST IMPACT OF LIMITED TAX PREFERENCES (MINIMUM TAX)

Gross income includes over $200,000 *taxable.*
$70,000 tax-exempt income.
$100,000 alternative taxable income.

Distribution of benefit

Municipality ($100,000 less $70,000)	$30,000
Taxpayer (70 percent) ($70,000 less $30,000)	40,000
Total	70,000

*   *   *   *   *   *   *

A 35 percent tax on $70,000 equals $24,500 which would leave some 39 percent of the taxpayer advantage.

But here the minimum tax would probably not apply because of larger amount of income presently taxable.

APPENDIX B

ADDITIONAL COMMENT ON PROPOSAL FOR ALLOCATION OF DEDUCTIONS

Further study of the allocation of deductions proposal indicates that this would affect many more taxpayers and thus might have even greater adverse market impact than the minimum income tax.[1] Investment in municipal bonds by individuals would be made less attractive, and more individuals would find in this another reason to shift their investment programs even more heavily toward the common stock area. This would risk a drastic reduction in the support for State and local financing supplied by individual investors, particularly during periods when buying by banks is reduced owing to credit restraint such as that now being applied by the Federal Reserve System. Furthermore, institutional investors might well anticipate a growing risk that the principle of allocation would in time be applied to them, to the detriment of their programs for investment in tax-exempts. Accordingly, we believe that this allocation proposal would also have a very serious effect on the municipal market.

The three principal categories of deductions which would be involved in this allocation are (1) contributions (2) State and local taxes, and (3) interest paid. The allocation proposal might have an adverse effect on charitable giving as well as on individual investment in the municipal market, risking major hardships in both of these areas in return for an uncertain minor gain in tax equity.

With current revenue needs of State and local governments at an all-time high, it would be unfortunate to downgrade in any way the present deductibility of State and local taxes. To do so would make it even more difficult for States and cities to raise taxes and hence tend to widen the gap between the taxing power of the Federal government on the one hand and that of State and local governments on the other; the need today is for moves in the opposite direction.

With respect to the question of interest deductions we note that this is not a problem for the Treasury in relation to tax-exempt interest on State and local bonds. Section 265 of the Internal Revenue Code and the regulations thereunder already forbid the deduction of interest on loans to purchase or carry an investment in tax-exempt securities. Similarly disallowed are expenditures for investment management, or for custody or safe deposit box facilities insofar as they are incurred in the production of tax-exempt income.

[1] Attached are some computations (Exhibits 1, 2 and 3) which indicate the reduction in the value of tax-exempt interest to an individual investor if all of the resulting increase in tax is charged against the tax-exempt income. In each case tax-exempt interest is assumed at ¼ of total income including taxable income. It is assumed that there are no other excluded items in order to highlight the impact on tax-exempt interest. It will be noted that the impact rises as the ratio of deductions to income rises.

EXHIBIT 1

EFFECT OF ALLOCATION OF DEDUCTIONS

$60,000 Taxable Income—before Deductions
$20,000 Tax-exempt Interest

A. $10,00 Deductions

	Subject to Tax	*Tax (joint return)*
$60,000−$10,000=	$50,000	$17,060
$60,000−($60,000×$10,000)=	$52,500	18,325
($80,000)		+1,265

$20,000 Exempt Interest effectively reduced to $18,735—
5% rate reduced to 4.68%
4½% rate reduced to 4.22%
4% rate reduced to 3.75%

B. $20,000 Deductions

$60,000−$20,000=	$40,000	$12,140
$60,000−($60,000×$20,000)=	45,000	14,560
($200,000)		+2,420

$20,000 Exempt Interest effectively reduced to $17,580—
5% rate reduced to 4.39%
4½% rate reduced to 3.95%
4% rate reduced to 3.51%

Note referring to *A.* above: Using the method of computing benefits to borrower and taxpayer used in the attached discussion of the minimum income tax, benefit to the borrower was $8,570.00 and to the taxpayer was $6,880.00. Allocation of deductions would reduce the taxpayer benefit by $1,265.00 to $5,615.00.

EXHIBIT 2

EFFECT OF ALLOCATION OF DEDUCTIONS

$150,000 Taxable Income—before Deductions
$50,000 Tax-exempt Interest

A. $15,000 Deductions

	Subject to Tax	*Tax (joint return)*
$150,000−$15,000=	$135,000	$67,180
$150,000−($150,000×$15,000)=	138,750	69.580
($200,000)		+2,400

$50,000 Exempt Interest effectively reduced to $47,600—
5% rate reduced to 4.76%
4½% rate reduced to 4.27%
4% rate reduced to 3.80%

B. $60,000 Deductions

$150,000−$60,000=	$ 90,000	$39,180
$150,000−($150,000×$60,000)=	105,000	48,280
($80,000)		+9,100

$50,000 Exempt Interest effectively reduced to $40,900—
5% rate reduced to 4.09%
4½% rate reduced to 3.67%
4% rate reduced to 3.27%

Exhibit 3

Effect of Allocation of Deductions

Taxable income before deductions	$300,000
Tax-exempt interest	100,000

A. $30,000 dcductions

	Tax (joint return)
Subject to tax:	
$300,000 less $30,000 equals $270,000	$159,980
$300,000 over $400,000 times $30,000 equals $277,500	165,230
Total	+5,250

$100,000 exempt interest effectively reduced to $94,750:
5-percent rate reduced to 4.73 percent
4½-percent rate reduced to 4.62 percent
4-percent rate reduced to 3.79 percent

B. $100,000 deductions

	Tax (joint return)
Subject to tax:	
$300,000 less $100,000 equals $200,000	$100,980
$300,000 over $400,000 times $100,000 equals $225,000	128,480
Total	17,500

$100,000 exempt interest effectively reduced to $82,500:
5-percent rate reduced to 4.13 percent
4½-percent rate reduced to 3.71 percent

Note.—Referring to B. above: Using the method of computing benefits to borrower and taxpayer used in the attached discussion of the minimum income tax, benefit to the borrower was $43,000.00 and to the taxpayer was $57,100.00. Allocation of deductions would reduce the taxpayer benefit by $17,500.00 to $39,600.00.

Methodology

Two different investment procedures were used for two different periods of time. Roman numerals I and II represent investments made in the past ten years and Roman numerals III and IV represent investments made in the past five years. In I and III the full investment of $1,000,000 was made at the beginning of the respective 10- or 5-year period. In II and IV an equal proportion of the total $1,000,000 was invested at the beginning of each year.

For municipals, it was assumed that the bonds were 20-year bonds roughly equivalent to a Moody A and they were purchased at par.

Column A is the Total Capital Worth (market value) of the municipal bonds as of the end of 1968. For II and IV this figure is a total of the market values of the bonds purchased in successive years.

Column B is the coupon rate for each of the bonds. It is based on a rounded Bond Buyer 20 bond average for the first of each year. Column C is the total interest received per bond at the appropriate coupon rate.

There is no tax on the interest income because municipal bonds are tax-exempt as to interest income, and no attempt was made to calculate the effect of state and local tax consequences.

Column D is a calculation of the tax credit that would be applicable if the bonds were sold. If these bonds were sold they would represent a capital loss. Assuming other capital gains, these capital losses would act to offset the capital gain. In a sense, there would be a tax credit at the same tax rate of 25%, to be subtracted from any taxes on capital gains, and this would reduce the capital loss on municipals.

Column P is Net Profit (+) or Loss (—) and is calculated by summing Columns C and D.

APPENDIX C

TABLE I.—MUNICIPAL BONDS

	Total capital worth (as of Dec. 31, 1969)	Coupon rate (percent)	Total interest earned	Tax credit	Net profit (+) or loss (−)[1]
	(A)	(B)	(C)	(D)	
10 YEARS					
I. Investing $1,000,000 at 1 time, Dec. 31, 1958	$790,000	3.40	$340,000	[2] $−210,000 [3] +52,500	+$182,500
Total				[4] −157,000	
II. Investing $100,000 each year, 1959-68:					
1959	79,000	3.40	34,000	[2] −165,000	+63,750
1960	80,000	3.75	33,750	[3] +41,250	
1961	81,000	3.40	27,200		
1962	82,000	3.37	23,500		
1963	83,000	3.00	18,000		
1964	84,000	3.25	16,250		
1965	85,000	3.10	12,400		
1966	86,000	3.50	10,500		
1967	87,000	3.75	7,500		
1968	88,000	4.40	4,400		
Total	835,000		187,500	[4] −123.750	
	5 YEARS				
III. Investing $1,000,000 at 1 time, Dec. 31, 1963	840,000	3.25	162,500	[2] −160,000 [3] +40.000	+42,500
Total				[4] −120.000	
IV. Investing $200,000 each year, 1964-68:					
1964	168,000	3.25	32,500	[2] −140,000	−2,900
1965	170,000	3.10	24,800	[3] +35,000	
1966	172,000	3.50	21,000		
1967	174,000	3.75	15,000		
1968	176,000	4.40	88.000		
Total	860,000		102,100	[4] −105,000	

[1] P=C+D.
[2] Capitol loss
[3] Tax credit.
[4] Net loss

This table is similar in many respects to Table I. It was assumed that the following bonds were purchased:

1. 1958: Aaa Philadelphia Electric, 4⅜'s issued December 1958; due, 1986.
2. 1959: Aa Conn. Light & Power, 4⅞'s issued January 1960; due, 1990.
3. 1960: Aa Georgia Power, 4⅞'s issued November 1960; due, 1990.
4. 1961: Aa Commonwealth Edison, 4¾'s issued December 1961; Due 2011.
5. 1962: Aaa Ches. & Pot. Tel., 4⅜'s issued January 1963; due, 2002.
6. 1963: Aa New England Power, 4½'s issued November 1963; due, 1993.
7. 1964: Aa Texas Electric Service, 4½'s issued February 1965; due 1995.
8. 1965: Aaa Dallas Power & Light, 4⅞'s issued January 1966; due 1996.
9. 1966: Aaa American Tel. & Tel., 5½'s issued January 1967; due, 1997.
10. 1967: Aa Central Power & Light, 6⅝'s issued January 1968; due, 1998.

For I, $1,000,000 was invested in the Aaa Philadelphia Electric bond; for II, $100,000 was invested yearly in successive bonds (bonds nos. 1–10); for III, $1,000,000 was invested in the Aa New England Power bond, for IV, $200,000 was invested yearly in five successive bonds (bonds nos. 6–10).

Columns A through D are similar to the columns in Municipal Bonds, Table I. Column E is the income taxes payable annually on the dividend income. The tax rate was assumed to be a constant 50% over the period. The $100 deduction allowable on dividend income was disregarded, and no attempt was made to calculate the effect of state and local taxation.

Column P is the Net Profit (+) or Loss (—) and is calculated by adding Columns C and D and subtracting Column E.

TABLE II.—CORPORATE BONDS

10 YEARS	Total capital worth (as of Dec. 31, 1968) (A)	Coupon rate (B)	Total interest earned (C)	Tax credit (D)	50 percent income tax on interest (E)	Net profit (+) or (−)[1]
I. Investing $1,000,000 at 1 time, Dec. 31, 1958	$737,500	4.375	$437,500	[2] −$262,500 [3] +65,625	$218,750	+$21,875
Total				[4] −196,875		
II. Investing $100,000 each year 1959-68:						
1959	73,750	4.375	43,750	[2] −242,641	21,875	−52,694

Total	757,359		258,575		129,288	
5 YEARS						
III. Investing $1,000,000 at 1 time, Dec. 31, 1963	703,380	4.5	225,000	[2] −296,620 [3] +74,155	112,500	−109,965
Total				[4] −222,465		
IV. Investing $200,000 each year, 1964-68:						
1964	140,676	4.5	45,000	[2] −220,712	22,500	−92,784
1965	139,116	4.5	36,000	[3] +55,178	18,000	
1966	148,586	4.875	29,250	[4] −165,534	14,625	
1967	162,008	5.5	22,000		11,000	
1968	188,902	6.625	13,250		6,625	
Total	779,288		145,500		72,750	

[1] P=C+D−E.
[2] Capital loss.
[3] Tax credit.
[4] Net loss.

The same investment procedures were used here, again for the 10- and 5-year period. Prices were based on Standard & Poor's indices for 500 common stocks, while dividends represent the Standard & Poor's average yearly dividend for this same group of stocks.

Column A is the Total Capital Worth (market value) when the stocks were sold at the end of 1968. Column B is the Gross Profit, or Column A minus the initial investment of $1,000,000. Column C is calculated at the highest tax rate, 25% of gross profit for long-term capital gains. Column D is the additional 7.5% surtax necessary because the capital gains were realized in 1968.

Column E is cash dividends. The dividends paid varied each year as did the number of shares owned. The total dividend income (dividends per share times the number of shares owned) is shown for each year.

Column F is yearly income taxes paid on dividend income. As in Table II, the rate was assumed to be constant at 50%.

Column P is Net Profit (+) or Loss (−) and is figured by adding Columns B and E and subtracting Columns C, D, and F from this total.

TABLE III.—STANDARD & POOR'S AVERAGE OF 500 STOCKS

	Total capital worth (as of Dec. 31,1968)	Gross profit	25 percent capital gains tax	1968 surtax (7.5 percent)	Cash dividends		50 percent income tax on dividends	Net profit (+) or loss (−)[1]

INVESTMENT BANKERS ASSOCIATION OF AMERICA,
Washington, D.C.

COMMITTEE ON FINANCE,
U.S. Senate,
Washington, D.C.

GENTLEMEN: We are filing this supplementary statement to emphasize certain major points made in our testimony on September 24, 1969, and to challenge directly certain contrary assertions made before your committee the following day by former Assistant Secretary Stanley S. Surrey. These assertions deal largely with the market and investment impact of those sections of H.R. 13270 which concern the tax treatment of State and local bond interest. Mr. Surrey's statements, which we believe to be in error, include: (1) An insistence on the claim that the Treasury would gain if State and local financing was shifted to the taxable market, and (2) An attempt to downgrade the adverse effect, both actual and potential, of H.R. 13270 on the municipal bond market.

Concerning the first point, Mr. Surrey claims: "Now the Secretary of the Treasury could pay close to 50% of the interest on State and local bonds and the Federal Government would not lose anything on the matter." On questioning, he admitted that this statement was based on calculations by "others more expert on this than I." We are familiar with the studies to which he refers, and note for the record that they were made several years ago, and also that they were deficient in that they did not deal with the resulting major shifts in all capital markets and major economic side effects such as across-the-board rises in long-term interest rates.

In our initial testimony, we described the up-to-the-minute study of this matter made under the direction of Dr. Sally S. Ronk, well known as an authority on the flow of funds in the capital markets, and based on the results of a questionnaire which the Investment Bankers Association directed to portfolio managers and investment advisors of major financial institutions in late August.

Mr. Surrey's statement that the Treasury could afford to subsidize the State and local goverenments up to 45 per cent or even 50 per cent of the interest cost on their taxable bond issues and still not lose any money, assumes that the present buyers of tax-exempt bonds would be forced to buy taxable obligations (or the equivalent) to the same degree they previously bought tax-exempt. This assumption is not realistic.

The Investment Bankers Association study makes a number of points:

(1) Investors will probably not acquire taxable municipal bonds to the same extent as formerly. They will surely place some funds in other categories of investment.

(2) Furthermore the investors likely to be most interested in the proposed new taxable municipal bonds are pension funds and savings institutions, who either pay no taxes or are in relatively low brackets and individuals in the lower income brackets. Business corporations and commercial banks, on the other hand, are more heavily taxed; they and high-income individuals would surely be attracted much less to the new bonds than they are today to the tax exempts.

(3) The resultant shifts in acquisitions and new issues among holders in various tax brackets would lower the average marginal tax rate on all fixed-income issues acquired. This means that the increase in tax rates to the Treasury would be substantially less than the 45–50 per cent Federal Government subsidy, and indeed would be less than the 40% subsidy permitted by H.R. 13270. The Treasury would be a net loser.

(4) Thus, it would become more difficult to place the new taxable municipal bonds and since they would compete with corporate bonds, Treasury and Federal agency bonds, and mortgages, the result would be to drive interest rates higher and interest costs would rise for all borrowers, the Treasury, Federal Agencies, Corporations, and home owner mortgages.

In sum, after taking into account *all* capital market shifts and economic side effects, the IBA concluded that, even if the Treasury were to subsidize the interest cost of States and municipalities by no more than 32 per cent, the net loss to the Treasury would be $66 million, and to all governments $114 million, on each year's financing. And if the Treasury should subsidize at 40 per cent of the interest cost as permitted in H.R. 13270, the net loss would be $115 million for the Treasury and $163 million for all governments. These figures are for each year's financing and would accumulate year after year.

With respect to market impact, Mr. Surrey argues that inclusion of tax-exempt bond interest in the limit on tax preferences and the allocation of deductions will have only a modest impact on the holders of tax-exempt bonds, and from this concludes that the eventual market impact should also be modest. He is either unaware or unwilling to admit that the market regards a small encroachment on tax exemption as only a first step rather than the final step. In our initial testimony we pointed out that there is no such thing as a *limited* exposure of municipal bonds Federal Taxation, and we indicated the reasons why. The market has already reflected this in a substantial rise in the cost of local borrowing. There has been a corresponding decline in the market value of outstanding municipals, and we now present additional information on this point.

THE IMPACT OF TAX REFORM PROPOSALS ON OUTSTANDING BONDS

In order to estimate the impact of tax reform proposals on outstanding state and municipal bonds, it was necessary to reconstruct a model amortization schedule based on assumptions derived from recent research. From Dr. Reuben Kessel's studies,* it was known that the general obligations have an average life of 14 years and the revenue bonds an average life of 21 years, that the quality of general obligation bonds' averages out to approximately a Moody's "A-1" and the quality of revenue bonds to about a Moody's "A", that revenue bonds yield approximately 10 basis points more than general obligation bonds of the same quality and maturity. From Bond Buyer data it was known that outstanding bonds consist of approximately 60% general obligation bonds and 40% revenue bonds. On the assumption that all such bonds were being amortized on a level debt service basis (an assumption which tends to over extend somewhat the retirement of general obligation bonds), a model amortization schedule was developed which corresponds with all the other known characteristics of the outstanding bonds. (See Exhibit A attached.) The two separate portions of the outstanding market, i.e. an average 14-year Moody's A-1 3.45% general obligation bond and an average 21-year Moody's "A" 3.55% revenue bond were valued as of early-January 1969 and again as of October 1, 1969 to determine the price deterioration during this period. The results are as follows:

OUTSTANDING AMOUNT, AVERAGE 1968

[In billions of dollars]

Par value	Value Jan. 1, 1969	Value Oct. 1, 1969	Market value decline
$76.3 G.O. 3.45 percent	63.2	52.6	10.6
$50.9 revenue 3.55 percent	38.2	31.2	7.0
$127.2 Total	101.4	83.8	17.6

During the period January 1 to October 1, 1969, yields generally increased, as measured by representative indexes—the Bond Buyer's 20-bond index, White's Value of 100 and Moody's "Aa" average—about 150 basis points, of which we ascribe between ⅓ and ½ to the negative effects of tax reform proposals and the remainder to the effects of inflation and Federal Reserve tight money policies. On this basis, outstanding State and local bonds are estimated to have suffered overall market damage of between $5.9 billion and $8.8 billion as the result of tax reform proposals.

Bank Underwriting of Revenue Bonds. Hearings before the Subcommittee on Financial Institutions of the Committee on Banking and Currency, United States Senate, Ninetieth Congress, First Session, on S. 1306. U.S. Government Printing Office; Washington, 1967, pp. 192, 195.

DAMAGE NOW, WINDFALL (?) LATER

Mr. Surrey justifies subjecting existing securities to the limit on tax preference and the allocation of deductions proposals, because this is "only a mild offset to the windfall gains that are involved if tax-exempt securities tend to be smaller and smaller in proportion to the volume of taxables outstandings." Translated, this means that the Federal Government is justified in inflicting a sure loss on existing bondholders *now* because they might be benefitted at some distant date in the future *if* a highly controversial scheme for issuing taxable municipals is adopted, *if* it turns out to be workable, and *if* interest rates do not further deteriorate. With over $130 billion now outstanding, and with nearly $75 billion of these due to remain outstanding fifteen years from now, as shown in Exhibit A, "windfall gains" owing to scarcity seem a long way off.

LEBENTHAL & CO. INC., SURVEY

We have important new evidence as to the reaction of the individual investor to the direct and indirect taxes imposed by the limited tax preference proposal and allocation of deductions proposal embodied in H.R. 13270. On September 5, 1969, Lebenthal & Co., Inc., of New York City, a municipal dealer firm specializing in municipal bonds for the individual investor, mailed its own questionnaire to 6,500 individual owners and prospective owners of municipal bonds. 770 replies were received by Lebenthal in the one week September 9th through September 16th. Lebenthal's questionnaire and its analysis of the results are set forth in Appendix A.

Among the more important conclusions of the Lebenthal survey are the following: 1. The answer to Question 6 of the survey indicates that 72% of the sample received less than $10,000 per year in tax-preference items and hence would be unaffected by either the limit on tax preferences or the allocation of deductions. 28% would presumably be affected by the allocation of deductions proposal. As indicated in our previous testimony to the Committee, this is a substantial portion of individuals who would be affected by the allocation of deductions proposal and a much greater portion than would be affected by the limited tax preferences proposal. The Lebenthal survey indicates that only 5% of the sample would be hit by the limited tax preferences proposal.

2. H.R. 13270 would severely damage the individual share of the present market for tax-exempt bonds. 56% of those answering yes or no to Question 7 (42% of the total sample) indicated they would not be willing to invest in municipal bonds even though they were not personally affected by the bill, i.e., their total tax-free income did not exceed $10,000. This was further substantiated by the answers to Question 6, which demonstrated that the *tax-free* feature of municipal bonds was far and away from their most attractive feature.

3. The answers to Question 9 indicate clearly that substantially higher interest rates will be required on taxable municipals than are presently available on comparable corporate bonds. Furthermore, the response to Question 11 indicates that the smaller non-rated communities and the big cities with difficult social and economic problems will suffer the most severely. Although investors are willing to buy such bonds as tax-exempt, they are unwilling to buy them as taxable securities except at prohibitive rates. Incidentally, preliminary results of an extensive IBA research study presently being conducted by Robert King, Research Director of IBA, indicate that smaller non-rated communities receive satisfactory treatment as to interest costs under the present system. and apparently have few borrowing problems.

Respectfully submitted on behalf of Municipal Securities Committee, Investment Bankers Association.

PAUL S. TRACY, Jr.,
Chairman, Municipal Special Committee on Basic Research, Investment Bankers Association.

*The Lebenthal Survey appears elsewhere in this hearing.

[1] $127,200,000,000 represents the average gross outstanding State and local government long-term debt in 1968.

The CHAIRMAN. Now, I would like to call Hon. Jack Williams, Governor of Arizona.

Governor, we are pleased to have you here. Senator Fannin is a member of this committee and, as Senator Williams pointed out, he is engaged with the other Republicans and in a caucus they are holding today in order to elect their Republican leader of the Senate. It might be a close vote so I am sure he would want to be there, and you can understand his absence at this particular moment, I am sure.

STATEMENT OF HON. JACK WILLIAMS, GOVERNOR, STATE OF ARIZONA; ACCOMPANIED BY THOMAS F. ALLT, MAYOR, YUMA, ARIZ.; AND BUD TIMS, MAYOR, SCOTTSDALE, ARIZ.

Governor WILLIAMS. Thank you very much, Senator Long. I have with me two mayors of the towns of Arizona for very brief statements, and I will brief mine. One is Mr. Bud Tims, of Scottsdale, Ariz. The other is Mayor Thomas Allt, of Yuma, Ariz. Also in the audience I have Joe Refsnes, Jr., and Fred Rosenfeld for any technical matters I might run into.

My name is Jack Williams and I am Governor of the State of Arizona. As a Governor I am most concerned with the impact of certain provisions of the Tax Reform Act of 1969.

Arizona is one of the fastest growing States in the Nation in terms of population. Many new families move into the State every day. Additionally, new businesses are developing within the State and many manufacturers have seen fit to locate additional facilities in Arizona. We welcome these individuals and firms to share our vision of the good life and the future of our State. However, their arrival creates a demand for additional public facilities and services.

In Arizona, as in many States, such major public facilities cannot be constructed on a "pay as you go" basis. Existing operating revenues of the school districts, the cities, the counties and the State are not sufficient to permit this. Nor, if the example of major private enterprise may be taken as a guide, would this be sound management practice. Good financial management seems to involve the option in certain instances of borrowing to construct facilities as needs arise, and amortization of construction costs over a period of years. Governments in Arizona can become indebted—can borrow money—only through the issuance of bonds. The provisions of H.R. 13270 will have a substantial impact on the marketability and costs of municipal bonds. The interest subsidy program proposed under this legislation, in our view, is "Too little, too late" an poses a number of problems, some of which go to the very heart of our federal system.

Two provisions of H.R. 13270, the allocation of deductions rule, and the limit on tax preference, will have the net effect of placing a tax on municipal bond interest. We are advised that there are some constitutional questions surrounding this matter. It may be assumed that the constitutionality of this measure will be challenged in the court, resulting in lengthy litigation.

During this time, the tax status of municipal bonds will be unclear and investors will be either unwilling to invest in these bonds, or will demand high enough interest rates to protect themselves against taxation. Turning aside for the moment from the question of the cost and marketability of municipal bonds, legislation of this nature could create an inequitable situation in which bond investors may reap a substantial windfall at the expense of local property taxpayers. If investors demand interest rates sufficient to offset possible taxation, and such taxation is later declared unconstitutional, those individuals who purchase municipal bonds will be receiving interest payments at a rate which would normally apply to taxable securities. Yet those payments will be nontaxable, thus resulting in a substantial gain for the investor. Needless to say, this windfall will be subsidized by local taxpayers across the Nation.

As I indicated a moment ago, there are serious questions about the marketability of a taxable municipal bond. This is, in effect, a new form of security, and certainly will be in competition with corporate bonds. In the case of States, larger cities, and some urban counties and large school districts, the competition will be between municipal securities and top-rated corporate bonds. In our smaller cities, counties, and school districts, however, and we have many of them in a small State, the competition will be between municipal bonds and second-ranking corporate securities. Few public agencies have a credit rating and repayment ability approaching that of major American corporations. The point here is that a taxable municipal bond is a new and strange entity in the marketplace, and will be in competition with bonds of a well-known character issued by large corporations with excellent credit ratings and established borrowing histories. We may find that under these circumstances investors are unwilling to purchase municipal bonds or will demand a very substantial premium for such investments.

The cost of borrowing by State and local governments is already high. In Arizona and in most Western States, there are statutory limits on the maximum interest rate at which municipal bonds may be sold. In my State, we have now passed those limits in many cases, and certainly, if municipal bonds become taxable, our statutory limits will have to be revised. At best, this will result in the delay of needed public improvements until such time as the various State legislatures may act on the matter. And apropos I might mention we have a jail that is falling down in Graham County which must be replaced. This cannot be done without borrowing some money to do it.

Such legislative action can be delayed and will delay such action.

In any case it is obvious that the cost of borrowing at the State and local level will be increased. Anticipation of future taxation has already had its effect. The bond buyer's index has shot up 70 points since July 18 when the House Ways and Means Committee made known its intention to tax municipal bond interest. These increased costs have very significant and practical results for State and local governments. Let me give you just two brief examples:

1. The city of Phoenix recently initiated a street improvement district in the inner-city area. In the few months between the time of initiation of the district and the final call for bids, estimaed costs of the project increased 35 percent.

2. Maricopa County Junior College provides another example of this problem. On April 1, 1969, the college sold $5 million of bonds at an effective interest rate of 5.037 percent. A second issue was scheduled for sale on September 22; however, this sale could not be made because of increased interest rates.

This increase in borrowing costs is recognized in H.R. 13270 and an attempt is made to offset it through an interest subsidy program. In order "to encourage States and their political subdivisions to voluntarily relinquish the privilege of tax exemption." H.R. 13270 provides for the subsidy payable either to the issuing jurisdiction or to its paying agent, ultimately ranging from 25 to 40 percent with the exact percentage to be determined by the Secretary of the Treasury on a quarterly basis. Although we understand that no review of the advisability of local projects or the ability of the issuing jurisdiction to repay is contemplated, we feel that such an element of review at the Federal level is almost inevitable. Action of this nature strikes at the very heart of our federal system.

The matter is no less significant than that. Under our federal system of government, the States and their political subdivisions exist as a matter of right, and not for the administrative convenience of the National Government. Any action which weakens these entities—which limits their ability to discharge their proper and legitimate functions—weakens the federal system. Under the interest subsidy program, States and their political subdivisions would be wholly dependent upon the whim of the Federal Government in a number of ways:

1. State and local indebtedness is on the increase and as the demands for new services and facilities increase, this indebtedness will increase. Local bond issues are now coming onto the market at the rate of $15 billion per year and, as I have indicated, this rate is likely to increase. There is no assurance that appropriations will be adequate to subsidize all bonds issued.

2. When the demands for subsidy payments exceed the available appropriations, someone somewhere will have to make a decision as to which bond issues are to be subsidized and which are to be unsupported. All of our experience with Federal aid programs, and the logic inherent in this system, lead us to believe that the determinations will be made by Federal employees, whose value judgments will supersede the decisions of local citizens who, through the ballot box, authorize the issuance of the bonds in question.

3. Given the above, the entire history of Federal-aid programs leads us to the conclusion that a broad range of considerations and criteria, certainly including national social policy, will be employed in making such determinations. Thus, we foresee that ultimately the interest subsidy program will become as hedged with restrictions as are the various functional grant programs at the present time.

4. We have been told that the operation of the interest subsidy program will be "automatic." Assuming that this is true, and given the best of circumstances; that is, adequate appropriations by Congress to fund all State and local bond issues subsidy payments, it will still be necessary to instigate certain administrative procedures to obtain these subsidies. Such procedures will, of necessity, be an added burden over and above the present procedures necessary for bonds sales. This additional cost will be borne, in large part if not totally, by the State and localities.

5. As I have indicated previously, State and local bond issues will be in competition with corporate bonds, and will be viewed as less desirable in many cases than corporate bonds. We are advised by persons of considerable competence in this field that a normal spread between the prime interest rate and the interest rate of nontaxable securities should be approximately 50 percent. H.R. 13270, however, provides interest subsidy ranging between 25 and 40 percent. Thus, the interest subsidy will range from the marginally adequate to the inadequate.

In summation then, we are seriously concerned about the marketability of municipal bonds if H.R. 13270 becomes law, and about the cost of such bonds if, in fact, they are marketable. Additionally, we feel that the interest subsidy program, because of its implications for modification of the federal system, is an unacceptable solution to this problem. The cure, in fact, may well be worse than the disease.

My statement, and the concerns it expresses, have the agreement and endorsement of the Arizona School Board Association, the supervisors of Arizona's 14 counties, the irrigation districts, and municipalities.

In support of the latter I have two of our prominent majors here. I would like to introduce Mayor Thomas Allt who heads the Arizona League of Cities and Towns. Mayor Allt.

Mayor ALLT. Thank you, Governor Williams.

Senator Long, Mr. Chairman, and gentlemen. My name is Thomas F. Allt and I am the mayor for the city of Yuma, Ariz., and president of the League of Arizona Cities and Towns.

The cost and marketability of municipal bonds is a matter of vital concern to the cities of Arizona. Cities in our State, like those in just about every other State, are faced with the problem of increasing demands for services and facilities in a time when the buying power of revenues available is static or in some cases actually declining.
1mutlltlqoiest

The CHAIRMAN. May I just say this, we have a total of 18 witnesses we are going to have to hear today. We will be glad to print your statement, Mr. Mayor, in the record, but we are not going to be able to hear others than those we scheduled. We did have the Governor here and at Senator Fannin's request. Yesterday we had five Governors who were speaking for all the Governors. We will be glad to have the entire statement and read it and we will have to get on with the next witnesses unless we have some questions we want to ask the Governor. Senator Anderson.

Governor, thank you very much. I may say that on yesterday, there were five Governors here, Governor Love, Governor McKeithen of my State, and three others. What they are saying is basically what you are saying and they made a magnificent presentation. You have honored them and they have honored you. They made a very fine presentation on behalf of all 50 sovereign States of the Union.

We also had a number of mayors speaking for the mayors' conference. Mayor Tate was planning to be in on the afternoon meeting, but we did not meet in the afternoon because we finished up the morning. I will be glad to see your entire statement is included in the record.

Governor WILLIAMS. Thank you very much, Senator.

(Mayors B. L. Tims and Thomas F. Allt's prepared statements follow:)

STATEMENT OF THE HONORABLE B. L. TIMS

Mr. Chairman, gentlemen, my name is Bud Tims and I am the Mayor of Scottsdale and Chairman of the Regional Council of the Maricopa Association of Governments (MAG).

The Maricopa Association of Governments (MAG) is a council of governments in the Phoenix metropolitan area. Our member jurisdictions account for two-thirds of the population of the State, and we are undergoing very rapid growth. The ability to issue bonds at a reasonable cost is vital if we are to continue to meet the needs of our citizens.

I want you to know that on the behalf of Scottsdale and the Maricopa Association of Governments, I concur wholeheartedly in what Governor Williams and Mayor Allt have told you.

STATEMENT OF MAYOR THOMAS F. ALLT, YUMA, ARIZ.

Mr. Chairman, Gentlemen: My name is Thomas F. Allt and I am the Mayor for the City of Yuma, Arizona, and President of the League of Arizona Cities and Towns.

The cost and marketability of municipal bonds is a matter of vital concern to the cities of Arizona. Cities in our state, like those in just about every state, are faced with the problem of increasing demand for services and facilities in a time when the buying power of revenues available is static, or in some cases, actually declining. Major capital improvements can only be provided through long-term borrowing, and in our state, bonding is a city's only means of borrowing.

A tax, even an indirect tax, on the interest of municipal bonds poses two very real problems for our cities. First, is the question of marketability of the bonds. The second problem concerns the cost of bonds if they are, in fact, marketable.

I am not an attorney and certainly not an authority on constitutional law. However, a number of persons who are knowledgeable in this field have raised questions concerning the constitutionality of a tax on municipal bond interest. If constitutional questions do exist, almost certainly we will face a law suit on this matter at some point in the future. When this occurs, we may well find that investors are unwilling to buy municipal bonds at reasonable rates. Certainly, the investor will demand an interest rate high enough to provide an adequate return on his investment. This rate could well be prohibitive for many cities and towns. My point is that this legislation will create an uncertain situation with regard to municipal bonds. Investors want, and have a right to demand, security for their investment. When taxable municipal bonds—a new entity—are placed in competition with corporate bonds of well-known quality, why should an investor purchase municipal bonds?

If municipal bonds are saleable, our next concern is their cost. Municipal bonds are a good investment. They are usually paid promptly, and the interest they earn is tax-free. If this interest is taxed, the investor will have to demand a higher interest rate in order to recover the same return on his investment. Higher interest rates will, of course, lead directly to higher costs of borrowing and a higher cost to the taxpayer for needed public facilities. It is entirely possible that this increased cost will place some needed public improvements out of the range of many cities and towns.

In my City, for example, the cost of construction of a downtown mall has risen 24 percent in the past two years, due in part to rising interest costs. The City Council has recently had to increase the maximum interest rate payable on bonds for this purpose from 5½ to 8 percent. We are advised by investment bankers that our bonds cannot be sold at lower rates. The cost of borrowing is now very high—further increases, such as would result from this legislation, would place needed public improvements beyond our ability to pay.

I realize that an Interest Subsidy Program is proposed to offset the increased cost of municipal bonds, and that this program is intended to be automatic, in nature, without review of the program for which bonds are to be issued. My experience as a Mayor and as President of the League leads me to believe that Federal programs just do not work that way. The Interest Subsidy Program will be expensive in the beginning and will become more expensive every year. At some time we will find that the costs of the subsidy are greater than appropriations. Who then will decide which bond issues will be subsidized, and on what basis will this decision be made?

If history is any guide, someone will establish "standards" for funding, and we will have to "qualify" for subsidies. We will undoubtedly find ourselves in the same red tape jungle that now surrounds all Federal assistance programs. Even if adequate money is available, we will certainly have to go through a great deal of effort to obtain subsidy payments, and this in itself, will increase our costs.

In summary then, we are concerned about a period in which we would not be able to sell bonds at all, pending a decision on the constitutionality of the legislation now being contemplated; and secondly, that the cost of bond sales would be increased by this legislation; and thirdly, that the Interest Subsidy Program is not an effective answer to the problem.

Gentlemen, we urge you not to tamper with the tax-exempt status of municipal bonds.

The CHAIRMAN. Thank you. The Governor and the mayors have made a very fine presentation on this issue.

We expect to have a panel now for the National Association of Counties. That will include the Honorable Conrad Fowler of Shelby

County, Ala.; the Honorable William Conner, county executive of Newcastle County, Del.; Hon. Dale Anderson, Baltimore County, Towson, Md.; Hon. John Brewer, Kent County, Mich.; Hon. George R. Long, executive director, Virginia Association of Counties and chairman of the Conference of Executives of State Associations of Counties; Hill Healan, executive director, Georgia Association of County Commissioners; and Arthur Sypek, first vice president of the New Jersey Association of Chosen Freeholders.

Gentlemen, we have your statement here, and we hope you say here to more or less summarize what you said in your statements.

Senator Williams explained why he couldn't be here this morning, and he particularly wanted me to address myself to you, Mr. Conner, and explain that because the Republicans are holding their conference to elect their minority leader, who they hope some day will be a majority leader—we have some doubts about that on our side of the aisle—they couldn't be here. Go right ahead.

STATEMENT OF HON. CONRAD FOWLER, COUNTY PROBATE JUDGE, SHELBY COUNTY, ALA., PRESIDENT, NATIONAL ASSOCIATION OF COUNTIES

Judge Fowler. Thank you, Mr. Chairman, and members of the committee. I am Conrad Fowler, county chairman of the governing board of Shelby County, and I also appear here as the president of the National Association of Counties.

We wish to express a firm belief before this committee that the House-passed bill, H.R. 13270, which would tax the interest on municipal bonds would be extremely harmful to local government. It has, in fact, already posed a tragic blow.

We have recently concluded our annual conference which was attended by some 3,000 county officials throughout the land and this conference adopted, sir, in unequivocal terms the offices, a statement in opposition to any direct or indirect taxation on the interest on municipal bonds.

We have for years argued with reference to intergovernmental relation matters that bonds of this nature should not be taxed by Congress and in the past our pleas have been respected and heard, sir.

We feel that this latest effort of a quickly enacted House proposal that would drastically affect local programs and projects throughout the land depending upon municipal bonds such as schools, hospitals, public housing, and other public facilities should be put to rest.

We believe the imposition of the proposed tax would precipitate an irreparable damage to the local bond market. We have some 3,049 counties throughout the land, and their 70,000 elected officials join a host of other organizations, States, cities, towns, authorities, special districts, in expressing concern over the proposed tax on municipal bond interest.

The Governors' Conference this past summer affirmed the basic belief that "neither the Federal nor the State Governments, without mutual agreement, have the authority to tax the other." I will explore this a bit further, sir.

The Governors also strongly oppose the provisions of H.R. 13270 which impair the marketability of State and municipal bonds.

Hon. Bev Briley, sir, he is the mayor of Davidson County, Tenn., former president of the National Association of Counties, had this to say recently in an appearance before the House Ways and Means Committee:

> The issues go to the heart of the ability of the three levels of government to coexist and function effectively in our Federal system." So we have statements from State and local governments in opposition to that which we consider today.

The impact of these proposals is already significantly affecting efforts to borrow money and that, in turn, affects critically numerous local projects throughout the land. Interest rates on new bond issues are exorbitantly high. Bids from investors have not been forthcoming on many issues. We feel strongly that action which directly or indirectly taxes interest on local government bonds would precipitate fiscal disaster for a county government. The size of the new issue market available to local government is shrinking. Many county officials are postponing or canceling bond sales because of the progressive deterioration of the market. This has become to local governments, sir, a very serious situation.

As long as this bill is before Congress, foreshadowing a possible tax on the bond interest with a possible constitutional battle in the courts, the market for municipal securities will remain uncertain. One reliable bond counsel has stated that a rise of about $300 million in the borrowing costs to State and local governments over the past 4 months is traceable to a large extent, perhaps 60 percent, to the adverse effect upon the market resulting from the treatment of this issue in the House of Representatives.

In my home State, Alabama, and in many other States, local construction of schools, hospitals, bridges, airports, and other vitally needed public projects are vastly more difficult. In some States it has become impossible to commence construction or continue construction of these type facilities.

Our association receives information from our members indicating that areas with local credit ratings or with unrated credit or with statutory or constitutional interest limits are not able now to borrow at all. Legal public financing is dead in those States.

In the final analysis then it will be the local property tax paying citizen who will have to bear the significanty increased cost of local projects or such citizen will be deprived of needed public facilities, canceled because of financing problems resulting from H.R. 13270.

It is particularly necessary to insure the continued rate of State and local public works construction in view of the announced 75-percent cutback in Federal construction projects, sir. The inevitable result of taxing municipal bond interest will be a substantial curtailment in scheduled construction on the State and local level. New and higher taxes will be required and, unfortunately, because of the relative regressive nature of such taxes, for example, the real property and, the real property taxes and, the sales taxes, this increased tax burden on the local level will fall most heavily upon the average workingman.

Chances are that many who are employed in the construction industries and related trades will be without work in consequence of the passage of the pending tax legislation and the Federal cutback in construction.

We suggest that the House-imposed taxes on State and local bonds are wrong on other counts as well. They are economically unsound. They would obtain for the Federal Government a comparatively insignificant tax return amounting at most to, we are told, $80 million a year, and in so doing they threaten the fiscal integrity of local government. We cannot overemphasize this danger. The financial independence of local government to us is the key issue in this matter.

Also at issue is the hope of decentralization, bringing government closer to the people. This committee well knows that the President and this administration are seeking to bolster the responsiveness and responsibilities of State and local government. If the States, counties and cities are to have the real capacity to experiment, to innovate, and to provide leadership, they must have adequate methods of financing, especially the effective use of tax-exempt municipal bonds. This must be kept available.

There is a need to strengthen, not weaken, the fiscal process by which local government responds to the needs of their citizens.

The demand for physical facilities at the State and local level is overwhelming and unprecedented. There is a backlog of—on the books over the Nation of—almost $8 billion in demand for water-sewage construction alone. The public housing programs and the administration's plans for 500,000 units of low-cost housing are placing an additional burden on our tax-exempt market.

Other federally stimulated programs, including such other expensive areas as mass transit, airport development, and health and mental health facilities construction, these also require a substantial outlay of local funds. This is in addition to the expanding needs that we experience in the more traditional local functions such as city streets, county roads, schools, hospitals, recreation facilities and so forth.

May I comment briefly, sir, on the constitutional aspects relating, related, to the proposal to tax interest on municipal securities. As one who has had a long interest in this issue, I believe that the proposed tax, as enacted by the House, is unconstitutional. The body of our law supports this now, as does the thinking of many outstanding legal minds in our Nation. Under the Constitution the doctrine of reciprocal tax immunity is implicit, it is a bulwark of our Federal system dating back to the old decision *McCulloch* vs. *Maryland*.

If the benefits of tax exemption are abrogated and disaster follows, we may have to deliver to the Federal Government full control over the determination of vital public projects in our home localities. This is totally against what we need to do in the country at this time in our history.

Let us not forget that everyone purchasing an exempt security pays a tax to the issuing government since he accepts a lower interest rate compared to more lucrative securities available to the investor.

In conclusion, I would like to reaffirm that the very heart of our democratic process lies in how well we, the local governments of this Nation, function as responsive servants of our citizens.

We have been criticized for years for not doing enough and now with the consent of new federalism perhaps forthcoming, we find ourselves stymied. That is the prime issue, and its resolution will not be helped by these new tax proposals.

The magnitude of our local financing requirements in the years ahead will be tremendous. Some estimate $400 billion cf debt for State and local government by 1975.

Living as we do in a society which demands more and better local services the financial crisis confronting local government becomes enormous.

The proposals to tax the municipal bonds are a major obstacle to our continuing efforts to serve the local community, the State and the Nation.

In sum, the tax on municipal-bond interest produces more problems than solutions for the Federal as well as the local government.

Mr. Chairman, our organization has had research done relating to the experience in other countries where there has been a degree of control of the Central Government on the power of the local government to borrow. We ask permission of the chairman and the committee to include in the record the result of the study which has been made by our organization, sir.

The CHAIRMAN. Very well.

(The study referred to and Mr. Fowler's prepared statement follow:)

THE EXPENSE OF CENTRAL GOVERNMENT CONTROL OVER LOCAL BORROWINGS FOR THE UNITED KINGDOM, FRANCE, ITALY, NEW ZEALAND AND THE NETHERLANDS

SUBMITTED BY THE NATIONAL ASSOCIATION OF COUNTIES AS A SUPPLEMENT REPORT TO ITS TESTIMONY ON THE TAX REFORM ACT OF 1969; H.R. 13270

Many leading State and local public officials agree that one of the local government's great strengths is its relative independence, especially financial independence, of which the tax exempt privilege is a part. It is believed that the taxation of municipal bond interest will have a devastating effect on local government financing.

To understand, in more concrete terms, the possible repercussions on local government financing, a review has been prepared of five other countries describing their central government control over local financing. The review should clearly show that, in light of foreign expense, the American local government's fiscal integrity should be preserved. One way to preserve local government financial independence is to retain tax free municipal bond interest.

The United Kingdom

Because the present Great Britain was formed during the course of history from a number of independent kingdoms, its internal legal structure is somewhat complicated. It is not possible to generalize about practices for the entire Kingdom. Therefore, the following discussion will confine itself to the history of local government in England. Since England includes London and most of the other major urban centers, the major local administration problems are found within this area.

The system of local government financing in Great Britain has been beset with ever-changing rules and regulations imposed upon it by the central government. Continually facing restrictions, reforms, limitations, re-phasing or re-funding, the local governments have competed with the Bank of England and the nationalised industries in the long-dated gilt-edged market—a market managed by the Bank of England also has direct control over all financing of local government, the Bank of England. As the arm of the central government, the Bank of England also has direct control over all financing of local governments in either new bond issues, through the mortgage market, from Public Works Loan Board, or when borrowing short-term in the Euro-currency markets.

Since 1945, the local authorities' techniques of obtaining capital have changed a number of times, as a result of changes in central government policy. From 1945–1953 local authorities mainly financed their capital needs through Public

Works Loan Board (PWLB) which borrows from the Exchequer (the central cash account of the government, kept by the Treasury at the Bank of England). The rates for these PWLB loans were equal to "gilt-edged" or government security rates for the same maturities. From 1953 to 1955 they had the option of borrowing either through PWLB or through issuing securities and mortgages, but still tended to rely heavily on PWLB. Beginning in 1955, they were permitted to borrow from PWLB (at rates equal to an average or prevailing market rates for local authority securities of the same maturity) *only* if they could not raise the money in the stock or mortgage markets.

The difficulties, however, of local governments raising money in the securities market are described in a report written by the Radcliffe Committee in 1959:

"While somewhat more money has been raised by local authority stock issues since October, 1955, than in the previous period, given the conditions prevailing in the gilt-edged market, it has only been possible for a very small part of the funds required to be raised by this method. Local authorities who wished to make an issue have had to wait for a period of years before being allowed to go on to the market; a long queue of would-be borrowers developed, despite the monetary authorities decision in May, 1956, to shorten the queue by putting a minimum of 3 million on the size of issues. Authorities whose issues were postponed or frustrated by this difficulty of access to the stock market were forced to turn extensively to the mortgage market, despite the higher rates ruling in that market."

Thus, the local authorities begin to be major users of Eurodollars; they borrowed short and invested long, presumably on the expectation that long-term interest rates would be lower or at least not higher in the future, and on the belief that the Exchequer would come to their relief if for some reason they were required to pay off the Eurodollar borrowings on short notice.

The tendency for local authorities borrowing to become too heavily weighted on the short side became a source of concern to the market and to the government. After a period of discussions between the government and the local authorities on possible changes in financing arrangements, a government white paper proposing new limitations and privileges for local authorities was issued in October, 1963. The new procedures came into effect the following April placing restrictions on temporary borrowing by local authorities, but giving them greater access to the PWLB at government lending rates plus a small service charge.

According to the August, 1966, issue of the Midland Bank Review, new regulations were effected in July of 1964. In order to ensure orderly marketing of bonds, the terms and timing of bonds issued "to or through the agency of any bank, discount house, issuing house or broker" *were made subject to approval by the Bank of England.*

Most of the bonds received a Stock Exchange quotation, and were placed in the market by stock brokers, but a few were issued without quotation. Some were distributed by merchant banks among discount houses, thus providing them with a new form of asset; but the Bank of England does not accept local government bonds as security for loans, and the clearing banks do so only to a limited extent. However, for both quoted and unquoted local issues a small market does exist.

In 1965 the year's total for local government borrowing reached a new record level due to market conditions and changes in official policy. The queue of potential borrowers had been long in previous years so that presumably the larger totals reflect the view of the local governments that the market could absorb the increased volume. It also followed upon the changes in the channels for local authority borrowing that came into effect in 1964 when short-term borrowing by local governments was restricted but they were given readier access to the Public Works Loan Board. But by the middle of 1965, local authorities were borrowing heavily from the PWLB, and so considerable was the rate of drawing that the Chancellor imposed some "re-phasing" when introducing further measures of general restraint in July. *Local governments were required to spread the remainder of their permitted borrowing from the PWLB evenly throughout the rest of the year, and those which had used more than half of their quota before July were required to wait until October before they could make any further loans.*

In the bank of England *Report for the Year ended 28th February 1966*, these measures are reported in the context of the national situation and illustrate precisely how the local government's finances are an instrument of fiscal and monetary adjustment of the central government:

"Despite the measures taken in the budget, the pressures of demand remained uncomfortably high and overseas confidence in sterling weak. Accordingly, the Chancellor acted on 27th July to reinforce his Budget. Further steps were taken to limit the growth of home demand. Public authorities were required to contain their expenditure on building houses, schools and hospitals within existing programs; and to defer many other non-industrial capital projects for six months. Local authorities (governments) were asked to limit their lending on mortgage for house purchase to L 180 million in 1965/66. *Loan sanction and grants would be refused for non-essential local projects, and local authorities would be required to phase their borrowing from the Public Works Loan Board more evenly during the remainder of the financial year.* Public authorities were to review their staff position, defer current purchases, and especially look closely at expenditures overseas.

This central control of local financing is brought into sharp focus in a report issued by the Committee on the Management of Local Government (printed by Her Majesty's Stationery Office, 1967). The following quotation reflects the essential points made in the study concerning local finance and borrowing:

"Local authorities are heavily dependent for their income on the central government . . . local authorities in England and Wales were dependent on grants from the central government for over 52% of their revenue in the financial years 1962/63, 1963/64, 1964/65 and 1966/67. It was intended that the general grant (which replaced many, but not all, specific grants) should increase the independence of local authorities in the spending of their money, but there was little change in the position. *It is significant that the new rate support grant which replaces the general grant on 1 April 1967, has been designed to allow the central government for the first time to influence tne expenditure on all local authority services.*"

The study goes on to verify what has been alluded to above—that it is in the sphere of borrowed money that the greatest control is exercised. Under an act passed in 1933, local governments have a general power to borrow for acquiring land, erecting buildings, executing any permanent work or any other purpose for which they are authorized under any enactment to borrow, but permission to borrow is required from the Minister of Housing and local government (and as we have seen, subject to the monetary controls of the Bank of England.) *This takes the form of a loan sanction which is issued only after detailed scrutiny.* Even the largest municipalities have to submit applications for individual projects.

Control of borrowing was originally instituted to prevent local governments from entering into commitments beyond their means. Today, however, it is used for the purpose of economic control: *to keep local investment programs in step with national programs and current financial situations.* The National and Local Government Officers Association (NALGO) considers that if municipalities in England are to have a large measure of independence from the central government they must either have a larger degree of financial autonomy, or the arrangements under which grants from central funds are made must be designed to preserve or strengthen the independence of local governments should not be regarded as necessitating a further whittling away of local independence. "There is a need for partnership with the central government—not overlordship by it," NALGO insists.

Professor Marshall's study commission concludes its report with this observation:

"Central government control should be used only for fiscal and economic purposes and not to hamper the direction of local authorities in the development of their services, nor to impose the will of the (central government) Department on designs and technical or administrative considerations in schemes or projects."

(It is our contention that central control of local finances for fiscal and economic purposes is also wrong. There are ample tools at the disposal of the Federal government to control the national economy without interfering with the financial programs of State and local governments. Later we shall illustrate the adverse effects central control of local finances for fiscal and economic purposes can have on local governments when we discuss the situation in New Zealand.)

Two conclusions are justified by the above discussion of the central control exercised by England over its local sub-divisions. First, local government in England has suffered significantly through its lack of financial independence;

and, second, despite good intentions, central government has proved insensitive to local problems under the pressure of other concerns. It should be noted that, as the comments on borrowing indicate, London attempts to watch local government activities closely through auditing procedures and that local governments are also generally held subject to *ultra vires* doctrines which tend to discourage innovation. In the following discussion, we will note the same situation existing in France.

France

More than either Britain or the United States, France has had a strong centralized administration dominated by Paris. Under the French Kings royal appointees governed the provinces. The current governmental form dates from Napoleon's time when the original provinces were redivided into 91 departments. Each department is governed by a Prefect, a high level central government official actually located in Paris. This central control of local governments (the 91 departments and their 37,000 communes) through the authoritative powers of the Prefects have, in the words of John Ardagh in *The New French Revolution*, led to an uneasy balance of power between State and commune.

There are over 37,000 communes including numerous small villages and towns as well as cities such as Lyon and Marseille. Unlike the departments, they are real traditional entities, often with strong local pride. Each has a mayor and council, local men locally elected as in this country; but the mayor, once elected becomes a servant of the State, responsible to the Prefect. *The council's own budget, and many of its decisions, require formal approval by the Prefect*, who also has the right to suspend Mayor or councilors from office or take over some of their duties. The council derives its modest budget from local taxes and State subsidies, and spends it on local services and public works. This system depends on good relations between mayor and Prefect and there is no doubt that a wealthy commune with a good mayor can initiate a great deal if he has the Prefect's backing. But a great many local services, for which in Britain the council is autonomous, in France require the collaboration and aid of the relevant Ministry in Paris or of its local officials acting in liaison with the Prefect. For instance, the council has to pay for building new schools, *but the State runs them*. The same situation appears to be true of hospitals. Housing, highways and bridges, and larger civic projects are usually built or maintained jointly by the commune and the State, and though the commune can in some cases go ahead on its own, *it will rarely feel it has the money for the luxury of forgoing State aid*. Thus, according to Mr. Ardagh, the local governments are dependent on the endless delays and muddles of the bureaucratic Ministries, or on arbitrary last-minute budget cuts by the Ministry of Finance. Even worse, if a local government has demonstrated a political antagonism toward the central government, it may even face Government vengeance or blackmail.

Indeed, this practice is true to some degree in this nation as evidenced by the Federal government's ability to curtail grants and loans to states or municipalities who fail to observe certain sections of the Civil Rights Bill and as further evidenced by current threats to cut off Federal aid to universities and colleges who fail to prevent student disorders. Under recent urban bank and subsidy-in-lieu-of-tax exemption proposals, similar sanctions could be brought against local governments for a number of political and quasi-political reasons. Similarly, as is presently the case in France, states and local governments whose potential value to the party in power is significant might receive preferred treatment, particularly during a tight money situation when long queues for Federal assistance prevailed. In terms of the LTP and Allocation of Deductions provisions of the tax reform bill being studied by this Committee, the same danger exists since many communities, unable to pay inevitably higher interest rates on new bond issues, would find themselves at the mercy of the Federal government for grants and subsidies.

Under the French system described above, many local governments, continually under pressure from Paris, feel either powerless or resentful, and often will in turn block State projects for their area. In this country, states and municipalities feeling equally resentful at having their local bonds taxed, might well retaliate by invoking heavy local income taxes on Federal government paper and oppressive local property taxes on government installations located in their respective sub-divisions—if the "power to tax is the power to destroy," it can work both ways.

Turning again to the French situation, John Ardagh who we have referred to previously, makes these observations:

"On the level of the department, a locally elected council generally acts as a kind of enfeebled country council, with its own little budget for some services such as secondary roads, public assistance and drainage. It meets only twice a year, its budget has to be approved by the Ministry of the Interior, and in practice, it usually does what the Prefect tells it. It is elected on a 'rotten borough' basis, heavily weighted in favor of villages rather than towns, and its members are usually elderly. If rejuvenated, it would have the constitutional power to wield more influence than it does. As it is, people tend to forget about it.

"In terms of practical results, no less than of ideology, it is extremely hard to draw up a fair balance sheet of the present French system. Though a town with a vigorous mayor, like Rennes or Marseille, could certainly benefit from more autonomy on the English model, yet in an area like Caen or the Languedoc all the driving force and ideas seem to have come from the State; or rather, they come mainly from a few dynamic individuals, prefects or others, who are serving the State without necessarily sharing the Government's views. Though the Prefect is still the political servant of the Minister of the Interior, under modern conditions his daily functions are inevitably becoming more economic than political. Often his working relations even with anti-government mayors and communes are perfectly good whenever they share the same aims of progress and expansion."

We are told that the Prefects and mayors in fact are frequently victims of the same common enemy—a centralized State machine that despite some recent reforms is still too slow and bureaucratic for modern needs. This is one of today's two main problems of local government in France. The other is much more fundamental—a century and a half of State control over local affairs has sapped the spirit of civic initiative. Mr. Ardagh sums it up this way, "So long as the State nanny holds its children tight, they will not break their legs—but they will not learn to walk either, and they will not feel any incentive to try."

Time and space will not permit us to comprehensively evaluate the circumstances in numerous other foreign countries where the central government controls the financing of local government projects. We will, however, briefly summarize a few such situations wherein, in every case, a central bank or central grants and subsidies are employed in lieu of the tax-free bond concept that exists in this country.

Italy

Local government financing is virtually completely controlled by the central government in Italy. For example, in 1963, bonds of local authorities represented only 0.5 billion lire out of the 1,340 billion lire total net new securities. The most important source of credit for local governments' capital expenditures are the Treasury and the Cassa Depositi e Prestiti (Deposit and Loan Fund), a Treasury agency.

Recently, literally billions of lire have been appropriated by the Italian government for local schools, roads, hospitals and other public improvement purposes, but owing to an almost unbelievably complicated network of bureaucratic processes and red tape, it is doubtful that the first school will be constructed in the near future. Emilio Colombo, Minister of the Treasury, explains it this way:

"The intense expansion momentum that has taken place in our productive sector has made it possible to place a large and growing portion of resources at the State's disposition for the undertaking of the task of satisfying the demand, which is increasing continuously, in the vast sector of special services: schools, housing, hospitals, etc.

But while the political choices of expenditures have followed these indications, the technical capacity for spreading has not grown in the same proportion as that which we have succeeded in placing appropriations at the disposition of the various agencies. This is caused by the long itinerary that the Government's decision to spend must follow before it becomes effective. Along this itinerary there are the parliamentary discussions, the preparation of programs and the relative technical projects by the agency involved, the complex administrative procedures, continually more complicated, which become adopted through the laws, despite all the declarations in favor of simplification. A few examples: the law on school building was approved by the Government on December 22, 1965—it became law through publication in the Official Gazette on August 28, 1967. As yet nothing or practically nothing has been spent due to the length of time needed for parliamentary approval and due to the complex procedure that had been introduced into the law: the series of consultations and opinions by the peripheral and central committees have resulted in the fact that the abundant financial means appropriated for this purpose has still not been transformed into classrooms and school equipment."

New Zealand

New Zealand has an urbank facility known as the National Provident Fund. An article in the "New Zealand Herald" dated February 5, 1969, reads as follows:

"The New Zealand Minister of Finance, Mr. Muldoon, recently wrote to local authorities informing them that the availability of loan finance for the current financial year may be reduced. The Minister explained that the National Provident Fund might be able to finance only $NZ 52 million (US $58.2 million) of the nearly $NZ 93 million requested by local authorities for financing. This compares with estimates for the previous financial year, when requests amounted to $NZ 78 million and available funds to $NZ 50 million. The Minister explained that it was imperative that local authorities were aware of the tighter financial position. He explained that the relative ease of financing in the previous year was brought about by the improvement in the fluidity in the economy caused partly by the improvement in the balance of payments. An expected increase in economic activity in the current year would result in some tightening of the supply of loan finance, which would undoubtedly make raising loans difficult."

Netherlands

Because there was a shortage of funds on the capital market, the central government organized a system of centralized finance through the Bank for the Netherlands Municipalities (similar in concept to the proposed Urbank) which was begun to *supplement* municipalities' borrowing on the capital market but quickly evolved into one to *prevent* their borrowing on the capital market.

In addition to the ceiling which the central government placed on local government borrowing at times of cyclical pressures, local governments as of December, 1965, were forbidden to borrow on the market and were only allowed to go to the Bank for the Netherlands Municipalities for their capital expansion and improvements. This specialized credit institution acts as an intermediary to centralize demand from local government and satisfies it by refinancing on the capital market. The cost of the Bank's borrowing need not be reflected in the interest rates charged the municipalities—market factors determining the cost of financing have been replaced by central political decisions.

In short, the central government can control expenditures of the municipalities not only by limiting their overall borrowing and by dictating the terms of their financing, but by directly controlling individual projects. This, I suppose we could label "the foot in the door approach" wherein the central government, at a time when money was tight, offered the municipalities access to a central bank, then later demanded that they use *only* the central bank for *all* of their capital needs.

Conclusion

Because of the speed with which the House acted on the highly complex and comprehensive tax reform bill, little time was made available to us to prepare a more thorough discussion of centralized government financing as it relates to local independence and autonomy. Certain conclusions do appear to be valid, however: The growth of local government is associated in time with the development of the urban, industrial economy in the west. Serious observers of the European situation in recent years have related the strength of local government to economic potential in a very direct way and moreover have tended to equate strong local administrations with financial independence. Obviously, the existence of more than one sophisticated decisionmaking organization causes conflicts of interest, but these observers are advocating increasing the real independence of non-central governments as a means of helping reduce internal economic differentials.

The United States already has a system of local government with a tradition of independent action. Except when the system is having difficulty, many citizens are not fully aware of the complexities of local government operations. Nevertheless, if the recommendations of these foreign observers have merit, it may be that this system is among our significant national assets.

The tax exempt market as it now exists is an integral part of local government's financial independence. Any proposal to change the present state of affairs should be carefully evaluated in the light of foreign experience with other ways of doing things.

PREPARED STATEMENT OF JUDGE CONRAD FOWLER

GENERAL ASPECTS—NACO'S POSITION ON HR 13270

Mr. Chairman, Members of the Senate Finance Committee: My name is Judge Conrad Fowler, and I am here today as President of the National Association of Counties. I come before you on behalf of the National Association of Counties to formally express its firm belief that the House-passed bill, HR 13270, which would tax the interest on municipal bonds, would be extremely harmful, and, in fact, has already posed a tragic blow to effective local government. A resolution recently passed by 3,000 members of the Association at our annual meeting in July opposes, in unequivocal terms, *any* direct or indirect taxation of the interest on municipal bonds. The Congress has heard our very strong arguments on this "intergovernmental" subject before, and through the years, has for very good reasons rejected the various attempts to remove the tax exemption from municipal bonds. We urge you now to reject this latest, ill-conceived, quickly-enacted House proposal, so we can continue to proceed with the multitude of desperately needed and essential local programs and projects which depend on financing through municipal bonds—schools, hospitals, public housing, etc.

The National Association of Counties, after lengthy discussion and review of the problems growing out of the proposed tax on bond interest, believes that inclusion of the proposed tax has, and would, precipitate irreparable damage to the present municipal bond market.

The nation's 3,049 county governments and their 70,000 elected officials join a host of other organizations—states, cities, towns, authorities, special districts—in expressing their concern over the proposed tax on municipal bond interest. At its national conference last summer, the Governors' Conference affirmed the basic principle that "neither the Federal or State governments without mutual agreement have the authority to tax the other"—a subject which I will explore further. The Governors have already strongly opposed those aspects of the tentative House Ways and Means proposal which would impair the marketability of state and local securities and thus retard the provision of needed public services and facilities.

In our joint statement before the House Ways and Means Committee with the Mayors and Cities, Mayor Briley, our past president, referring to what is at stake for all of us at the local level, said, "The issues go to the heart of the ability of the three levels of government to co-exist and function effectively in our federal system."

The impact of these tax proposals is already significantly affecting efforts to borrow necessary monies for critical local projects across the nation. Interest rates on new obnd issues are exorbitantly high on many issues, and bids from investors have just not been forthcoming. We feel strongly that new action which, directly or indirectly, taxes interest on local government bonds would precipitate fiscal disaster for county government. The size of the new issue market in local government financing is shrinking as officials postpone or cancel bond sales because of the progressive deterioration of the market. Senators, this is really a most serious situation for us.

As long as the tax bill remains a matter of debate in Congress, foreshadowing a possible tax on the bond interest, which if enacted would precipitate an extensive constitutional battle in the courts, the market for municipal securities remains uncertain. The problem is more costly for us than for you. One reliable bond counsel argues strongly that a rise of about $300 million in the borrowing costs to State and local governments over the past four months is traceable to a large extent, perhaps as much as 60%, to the adverse market implications due to the House of Representatives discussion and treatment of this issue.

In Alabama, and I know in many other states, local government construction of schools, hospitals, streets, bridges, airports, and other vitally needed public projects is already vastly more difficult. In some states, it is impossible. The information our Association is now receiving from its membership indicates that areas with local credit ratings, or with unrated credit, or with statutory or constitutional interest limits are not able to borrow at all. Local public financing is dead in those states. In the final analysis, then, it will be the local property taxpaying public which will have to bear a significantly increased burden for local projects with increased or new tax programs, or suffer without needed public facilities.

It is particularly crucial at this time to sustain at least a moderate level of public services and facilities. The inevitable result of taxing municipal bond interest will be a substantial curtailment in scheduled public construction of projects vitally needed on the State and local level. New and higher taxes will be required. Unfortunately, because of the relatively regressive nature of such taxes, particularly real property and sales taxes, they will fall most heavily on the average working man. Chances are most probable that many who are employed in construction industries—and related trades—will be without work if there is a cutback in scheduled public construction due to the higher interest rate which could result from passage of the pending tax legislation as well as the federal cutback in construction.

Gentlemen, it seems clear to us that the House taxes on state and local bonds are wrong on many other counts as well. We feel that they are economically unsound, and they would obtain for the Federal government a comparatively insignificant tax return—amounting at most to $80 million a year. In doing so, they further threaten the fiscal integrity of local government. We cannot overemphasize this enough. The key issue largely remains the financial independence of local government.

As this Committee well knows, the President and this Administration are seeking to bolster, where possible, the responsiveness and responsibility of the states and local governments. If the states, counties, and cities are to have the real capacity to experiment and innovate, sufficient methods of financing, especially the effective use of tax exempt municipal bonds, must be kept available.

There is, then, a need to strengthen, not weaken, the fiscal process by which local governments respond to the needs of their citizens in finding a better, fuller way of life.

The demand for physical facilities at the state and local level is overwhelming and unprecedented. There is a backlog on the books over the nation of almost $8 billion in demand for water-sewer construction alone. The public housing programs and the Administration's plans for 500,000 units of low-cost housing are placing an additional burden on our tax-exempt market. Other federally stimulated programs include such other expensive areas as mass transit, airport development, pure waters, and health and mental health facilities construction. These, too, require a substantial outlay of local funds. This is in addition to the unprecedented need for more traditional local functions—city streets, schools, hospitals, correction facilities, etc.

I want, as others will do or have done, to comment in broad terms briefly on the constitutional aspects related to the proposal to tax interest on municipal securities. As one who has had a long interest in this issue, I believe that the proposed tax, as proposed by the House or the Treasury, is clearly unconstitutional. The body of our law supports this now, as does the thinking of many outstanding legal minds in our nation. Under the Constitution, the doctrine of reciprocal tax immunity is implicity, and is a bulwark of our federal system dating back to *McCullouch* v. *Maryland*. If the benefits of tax exemption are abrogated, and disaster follows, we might as well deliver to the Federal government full control over the determination of vital public projects in our home localities. This is totally against what we need to do in this country at this time in our history.

Let us also not forget that everyone purchasing an exempt security pays a tax to the issuing government, since he accepts a lower interest rate compared to other more lucrative securities available to the investor.

In conclusion, Gentlemen, I would like to reaffirm that the very heart of our democratic process lies in how well we—the local governments of this nation—function as responsive servants of our citizens. We have been criticized for years for not doing enough, and now with the concept of new federalism perhaps forthcoming, we find ourselves stymied. This is the prime issue, and its resolution will not be helped by these new tax proposals. The magnitude of our local financial requirements in the years ahead will be tremendous. Living as we do in a society which demands more and better local services, the financial crisis confronting local governmental units becomes enormous. It becomes discouraging to those elected local officials who carry the burden of providing the wherewithal for necessary local public programs. Every year record levels of expenditure by local governments are reached, and the end is not in sight.

The proposals to tax the municipal bonds are major obstacles to our continuing effort to serve the local community, the State, and our Nation. In sum, the tax on municipal bond interest produces more problems than solutions for the Federal as well as the local governments.

Judge FOWLER. Now then, may I present, sir, Mr. William Conner? He is a county executive of New Castle County, Del. He is an officer in the National Association of Counties. Thank you.

STATEMENT OF WILLIAM CONNER, COUNTY EXECUTIVE, NEW CASTLE COUNTY, DEL.

Mr. CONNER. Mr. Chairman, and members of the committee, I am appearing today as vice president of the National Association of Counties and on behalf of Delaware local government. I can't overemphasize the importance that county officials across the country attach to this issue or the concern that all local officials of my State feel with regard to these provisions of H.R. 13270 that would tax the interest on municipal bonds.

Clearly, taxation of this interest, while initially beguiling to would-be tax reformers, will inevitably expose our Nation to a series of traumatic economic shocks during the years ahead. In brief, it is our considered opinion that taxing the interest on local bonds through limited tax preference and allocation of deductions strikes at the very keystone of financing State, county, and municipal government; it poses serious challenges to our federal system; it will adversely affect construction employment through the stoppage of essential public works; and most importantly, and unemphasized by many, if this same tax had been applied to the $16 billion of State and local bonds issued in 1968, those governments' local taxpayers would have a liability to pay over $12 billion of additional interest costs during the life of 20-year bonds.

That is figuring it, Mr. Chairman, at the rate of 1 percent, and if the increase in interest costs had been 2 percent the increased costs of the interest on those bonds would have been almost $4½ billion.

This would raise local taxes and rents for millions of citizens throughout our land.

These are estimates that we would like to report to you.

Our National Association of Counties has consistently opposed taxation on local bond interest, for its members across this land know only too well that such a tax would do more than clog county finances; it might completely stop us from capital financing as has already occurred in some States. Our counties are a key element in the overall pattern of local government finance. They account for one-fifth of all government expenditures in the United States and participate importantly in the $16 billion issued annually in the municipal bond market. This market had been growing steadily; the 1968 issuances were 60 percent higher than 1963's, 10 percent a year average. Counties have a current outstanding debt of $16 billion themselves, and the rate of increase even exceeds that of our Nation's cities.

Unfortunately for counties across the Nation, since "tax reform" became a popular byword in 1968, the municipal bond market has been under a cloud, the turbulence of which is gathering force as each day passes. The possibility of lost tax exemption has increased interest rates to the point where many local government bond issues have been rejected, postponed, or have not received bids on going to market. During the past 11 months, throughout the Nation, some 316 bond issues bearing a valuation of nearly $2 billion have struck out with investors as unremunerative, or have been placed in abeyance by the various potential issuing agencies, and this tempo is increasing.

My prepared testimony shows you how this has worked out in Lousiana which has fallen off by two-thirds. In Tennessee where only one-sixth as many bonds have been issued this year as opposed to last. In Iowa, sales are off by one-third. Counties, joined by the States and cities, are having great difficulty in funding rising capital costs. Interest rates are now in the neighborhood of 6½ percent, two full points higher than offered as recently as a year ago. We are having to have emergency legislation to allow the interest rates to rise in some States, and in some States they can't even do that until the constitution is amended, it is even tougher.

This bleak outlook for county government comes at a time when counties are faced with an expansion into functions and service areas once cnsidered the exclusive province of municipalities—such fields as hospitals, health services, utility systems, airports, libraries, and so on.

We have been called upon by Members of Congress and many others to awaken to the urban challenge in our county governments and now we find ourselves being discouraged from acting to meet this challenge by the proposal that stands before you today.

Let me speak just a moment about my home State of Delaware. In my own county of New Castle, Del., bond financing for capital projects between 1968 and 1975 will exceed $56 million. If the interest rate should rise 2 percent because bonds are made taxable, New Castle County will pay an additional $15 million over the life of these $56 million worth of bonds and we need them for all kinds of purposes for varying lengths of time and we just can't afford that kind of an increase in cost.

Let's take a brief look on the impact on the State of Delaware and its finances. A 5-year projection of its capital requirements indicates that it will need to sell approximately $300 million worth of bonds. As a result of the rise in interest rates since the beginning of the year in the neighborhood of 1 percent the taxpayers of Delaware will have to pay $47 million more to support this debt than if this cloud had not been placed on the market. If the differential in the rates reaches 2 percent then the added cost to Delaware taxpayers becomes $86,003,000 worth of bonds.

So we are certainly in sympathy with the widespread desire to see nontaxpayers in the higher brackets pay their fair share. However, tax reformers make a big mistake when they try to establish a direct relationship between tax-exempt bonds issued by local governments and the few rich men who pay little or no Federal income tax. I cannot overemphasize this. No no has told me or you how many of our bonds are held by these so-called millionaires.

The taxing of interest on government bonds issued not only in the future, but in the past as well, is unwise and imprudent at any time, but I submit the fall of 1969 is a particularly inappropriate time to tamper with traditional Federal-State tax relationships. High-interest rates and inflation are twin problems of all our constituencies across the Nation. Clearly, a so-called tax reform measure that exacerbates the average person's fight against the high cost of living is certain to be a most unpopular one, to say the least.

I would like to close by saying that it seems to me that in the name of tax reform and an attempt to close loopholes affecting a few hundred people, we are imposing increased financial burdens on millions of small taxpayers and seriously impairing the efforts that have been made in intergovernmental relationships to increase local responsibility and ability to finance local projects.

I would like to call the committee's attention to the lead article in this morning's Wall Street Journal which certainly spells out very clearly the nature of our concern, and also on the editorial page of that publication a very interesting article by Harry Lutz, professor emeritus of public finance at Princeton, who makes this very brief comment on our subject:

> Final treatment of state and municipal bond interest to be neat and tidy should await Supreme Court determination. The split level approach in the House bill is neither neat nor tidy.

(William Conner's prepared statement follows:)

Prepared Statement of William Conner

IMPACT OF LTP AND ADR ON COUNTY GOVERNMENT

Mr. Chairman, Members of the Senate Finance Committee: I am William Conner, County Executive of New Castle County, Delaware. I appear today as a Vice President of the National Association of Counties, and on behalf of Delaware local government. I cannot over-emphasize the importance that county officials across the country attach to this issue or the concern that all local officials of my state feel with regard to these provisions of HR 13270 that would tax the interest on municipal bonds.

Clearly, taxation of this interest, while initially beguiling to would-be tax reformers, will inevitably expose our nation to a series of traumatic economic shocks during the years ahead. In brief, it is our considered opinion that taxing the interest on local bonds through limited tax preference and allocation of deductions strikes at the very keystone of financing state, county, and municipal government; it poses serious challenges to our federal system; it will adversely affect construction employment through the stoppage of essential public works; and most importantly, and unemphasized by many, if this same tax had been applied to the $16 billion of State and local bonds issued in 1968, those governments' local taxpayers would have a liability to pay over $2 *Billion* of additional interest costs during the life of 20 years BONDS! This is startling but conservative. It will raise local taxes and rents for millions of citizens throughout our land. These are estimates that we are reporting to you.

We hope you will consider the thinking of Mr. Justice Cardozo, who said in interpreting the landmark decision in the Federal-State tax field, the *Pollack* case of 1894, "an income tax, if made to cover the interest on government bonds, is a clog upon the borrowing power such as was condemned in *McCulloch v. Maryland*." Also see *Hale v. Iowa State Board*, 302 U.S. 95, 107 (1937).

The National Association of Counties has consistently opposed taxation on local bond interest, for its members across this land know only too well that such a tax would do more than clog county finances; it might completely stop us from capital financing as has already occurred in some states.

Storm warnings are already up in the listening posts of the municipal bond market. Ever since the House began consideration of this package, the interest rate has moved steadily up at a frightful cost to county and other local governmental units throughout the 50 states, and is now almost one full percentage point over the level which would normally be expected at this time.

Counties are a key element in the over-all pattern of local government finance. They account for one-fifth of all government expenditures in the United States and participate importantly in the $16 billion issued *annually* in the municipal bond market. This market had been growing steadily; the 1968 issuances were 60% higher than 1963's (10% a year average). Counties have a current outstanding debt of $16 billion themselves, and the rate of increase even exceeds that of our Nation's cities.

Unfortunately for counties across the nation, since "tax reform" became a popular by-word in 1968, the municipal bond market has been under a cloud, the turbulence of which is gathering force as each day passes. The possibility of lost tax exemption has increased interest rates to the point where many local government bond issues have been rejected, postponed, or have not received bids on going to market. During the past eleven months, throughout the nation, some 316 bond issues bearing a valuation of nearly $2 billion have struck out with investors as unremunerative, or have been placed in abeyance by the various potential issuing agencies. That the tempo of such rejections is increasing can be seen from the January through August attrition in sales of local bonds. During the first two-thirds of 1969, there was a sharp fall-off of $2½ billion, representing a drop from $10½ billion to slightly less than $8 billion.

In Louisiana, bond sales this year are only 35% of those a year ago, recording a fall-off from $75 million to $26 million. Tennessee also has been having a difficult time with its bonds. So far during 1969, that state has marketed only one-sixth of the value of bonds it sold last year—a reduction from $85 million to $14 million. Iowa has also felt the impact of rising interest and investor disenchantment, since its sales are off by one-third. With but few exceptions, the story is the same throughout the country. The national financial outlook at the state, county, and city level is bleak, indeed, with the various implications of HR 13270 largely responsible.

Counties, joined by the states and cities, are having great difficulty in funding rising capital costs. Interest rates are now in the neighborhood of 6½%, two full points higher than offered as recently as a year ago. Emergency legislation is being enacted in many of these states to keep borrowing capability abreast of the surging rates. Obviously, those states where the ceiling was as low as 5% have not floated an issue for some time, and even those with new 7% levels may have to resort to still another increase. In some states, it is impossible to finance new facilities until the state constitution is amended.

This bleak outlook for county government comes at a time when counties are faced with an expansion into functions and service areas once considered the exclusive province of municipalities—such fields as hospitals, health services, utility systems, airports, libraries, and outdoor recreation. Entirely new areas of county governmental responsibility, engendered by new federal and state statutory programs, present further fiscal difficulties. Such pressing problems as water and air pollution control, waste disposal, and highway safety are very much county problems. Counties have been awakened to the urban challenge, only to find themselves being discouraged from acting to meet it by the same Congress which promised to help.

In my own County of New Castle, Delaware, bond financing for capital projects between 1968 and 1975 will exceed $56 million. With an expected increase in the interest rate, New Castle will pay an additional $7 million in interest over the life of just these $56 million of bonds. We need over $16 million for sewer construction during this seven-year period, and over $9 million to solve overflooding problems by storm water drainage projects. Also included in the $56 million is $12 million for an addition to our water supply through the construction of a reservoir. So you can see, Gentlemen, the impact on even a smaller county can be and will be great.

A significantly increased tax burden is going to hit local taxpayers as a result of these proposed measures. In fact, by the fifth year after enactment of the application of the allocation of deductions rule, local taxpayers would be paying about ten times the sum garnered by the U.S. Treasury.

The widespread desire to see non-taxpayers in the highest brackets pay their fair share is understandable. However, the tax reformers are making a big mistake when they attempt to establish a direct relationship between the tax-exempt bonds issued by local governments, and a few rich men who pay little or no federal income tax. I cannot over-emphasize this. No one has told me, or you, how many of our bonds are held by the so-called millionaires.

Taxing interest of local bonds issued not only in the future, but in the past as well, is unwise and imprudent at any time, but I submit the fall of 1969 is an exceedingly untimely period to tamper with traditional federal-state tax relationships. High interest rates and inflation are twin problems of all our constituencies across the nation. Clearly, a so-called tax reform measure that exacerbates the average person's fight against the high cost of living is certain to be a most unpopular one, to say the least.

With regard to the proposed alternative to the current method of capital financing, our citizens will be greatly concerned over the increased power granted the Federal government under the proposed subsidy plan. It is wholly unrealistic to expect the Federal government to make substantial subsidies available to local governments to finance, on a taxable basis, all kinds of local capital improvements, without exercising some control over which subjects warrant the subsidies. I cannot conceive that this Congress would approve a blanket authority to all local governments to authorize projects at their own discretion if it involves substantial sums of money.

It seems to me that in the name of tax reform and an attempt to close loopholes affecting a few hundred people, we are imposing increased financial burdens on millions of small taxpayers and seriously impairing the efforts that have been made in intergovernmental relationships to increase local responsibility and ability to finance local projects.

The CHAIRMAN. I thank you for your courtesy, and I would like to introduce our next witness, Mr. Brewer, the chairman of the Board of Supervisors, Kent County, Mich.

STATEMENT OF JOHN BREWER, CHAIRMAN, BOARD OF SUPERVISORS, KENT COUNTY, MICH.

Mr. BREWER. Thank you.

Mr. Chairman, and members of the Senate committee, I appear here today speaking as chairman of the Taxation and Finance Committee for the National Association of Counties for the Michigan Association of Counties.

The State of Michigan and its subordinate units of government—cities, counties, and school districts—issued in 1968, $694 million in municipal bonds and in 1970, they expect to issue $839 million. The county of Kent and its subordinate units of government within the county has a State equalized valuation of one and a half billion dollars and a total bonded indebtedness of approximately $121 billion.

The citizens of Kent County, Mich., have already been adversely affected by the bill before you. At this moment our county has some very real requirements for increased water lines, storm drains and expanded sewerage disposal systems. This is rather typical of the counties across the country. However, when Kent County, whose bonds have been rated double A and triple A, wished to sell bonds recently to finance these projects, we were turned down. There were no buyers, despite stated interest rates of 5½ percent to 6 percent—the highest permitted by our constitution. These projects are now being held in abeyance while we consider the next move. The citizens are waiting—not happy.

For those who have no maximum ceiling on bond interest as we do in Michigan, the interest on tax-exempt bonds has already jumped to record levels merely since this legislation was proposed. Like Kent County, many States and local governments cannot even attract bids for their bond issues—and their projects are at a standstill, unable to move ahead. Houston, Tex.; Jefferson Parish, La.; Hawaii; Jacksonville, Fla.; New London, Conn., are only a few unable to sell their bonds.

I will now try to contain my remarks to talk briefly about the alternative so-called subsidy approaches which have been proposed in this legislation.

The House-passed bill provides alternative capital financing approaches which would provide a somewhat automatic, but variable, Federal interest payment to those local governments which waive their tax exemption. State and local governments that voluntarily elect to issue taxable bonds could automatically become eligible for an interest payment, the amount of which would be governed by the difference between the yields on outstanding tax-exempt bonds and comparable taxable issues.

Several problems exist with the legislation before you. The first of these problems revolves around who will determine the difference in taxable versus tax-exempt yields. The bill gives the authority directly to the Treasury Department and, in addition to having wide discretion with respect to setting regulations and conditions for the payments, the Treasury also has the authority to vary their amount.

In fact, the "subsidy" plan gives State and local government no real options. The choice is to issue partially taxed bonds without a "subsidy" or fully taxable bonds with it, when the bonds are now fully exempt from tax.

Moreover, municipalities cannot exercise the "option" to issue taxable bonds since they have no power to trade away their immunity from taxation which inheres in the sovereignty of their parent States. Certainly Congress cannot grant them this power.

The crucial flow in the "subsidy" is, of course, its ephemerality. There is simply nothing to prevent Congress from curtailing, or indeed eliminating it at any time. The program would be a tool for further Federal fiscal control over internal State and local affairs.

None of these "subsidy" proposals present any real alternative to the present tax-exempt system. Certainly none of them can be accepted when offered in tandem with "limited tax preference" or "allocation of deductions" proposals, which, in effect, destroy any option to disregard them.

We should like to make this point very clear. If any form of a subsidy is ever to be acceptable to county government, it must be allowed to operate as an optional alternative and not under the pressures of present tax reform proposals upon our present market.

Once Congress acts to tax the interest on our bonds, either by an allocation of deductions rule or by the limit on tax preference formula, and with the resulting chaos expected from a constitutional test, there is a danger we might very well be forced economically into accepting a subsidy. Our bonds would be competing with high grade corporates and this very competition alone in a presently rising market would raise the yield that would have to be paid on taxable municipals to about 9 or 9½ percent. And the rising interest would, of course, increase the amount of Federal subsidy required to attract municipalities, counties, and States into the taxable bond field.

A word of caution would be appropriate at this point. If Congress did provide a permanent and unrestricted appropriation to subsidize through taxable bonds——

Senator ANDERSON. Will you repeat that 9 and 9½ percent?

Mr. BREWER. Yes, sir.

Our bonds would be competing with high grade corporates and this very competition alone in a presently rising market would raise the yield that would have to be paid on taxable municipals to about 9 or 9½ percent.

What I was saying, Senator, is if the bonds were taxable the rate would go to 9 and 9½ percent in today's market.

The CHAIRMAN. Proceed.

Mr. BREWER. If Congress did provide a permanent and unrestricted appropriation to subsidize through taxable bonds the projects of state and local governments throughout the Nation, the level of subsidy would be immense.

For example, if we assume that one-half of last year's $16 billion bond market were financed by taxable securities rather than the tax-exempt securities, and taking into account a conservative subsidy of say the difference between 6 percent tax-exempt and 9 percent taxable bonds, it has been estimated the Treasury would be paying out $250 million worth of interest subsidy cost every year. This could generate a possible revenue loss (not a tax gain) to the Federal Government in the subsidy process, and if this were so, we fear that it would not be long before restrictions and further Federal control would be imposed to somehow restrict the amount of projects qualifying for subsidy.

If any capital financing alternatives are to meet the test, they must be justified by their value to State and local governments, as well as their effect on Federal programs. The climate created by tax reform is definitely no place to scrutinize the immense impact of any capital financing proposal on our markets, particularly the ill-considered House-passed subsidy. Capital financing alternatives should not be developed as an instrument of tax reform.

We therefore urge that the question of subsidy be removed from the emotional context of the tax reform, and be the subject of further hearings, including awaiting the results of the very significant study being conducted by the Advisory Commission on Intergovernmental Relations.

(Hon. John Brewer's prepared statement follows:)

PREPARED STATEMENT OF JOHN BREWER

ALTERNATIVE FINANCING METHODS—THE "SUBSIDY" PROPOSAL IN HB 13270

My name is John Brewer and I am Chairman of the Board of Supervisors, Kent County, Michigan. I am speaking here today as Chairman of the Taxation and Finance Committee of the National Association of Counties and for the Michigan Association of Counties.

This is a critical hearing because, as my colleagues who preceeded me have demonstrated, unless the sections jeopardizing tax-exempt bonds are deleted from the proposed act, the financial capabilities of states, counties and municipalities throughout the country will be permanently damaged, essential projects necessary for the welfare of our citizens will be delayed or cancelled, and the already staggering tax burden placed on our citizens will be further increased.

The State of Michigan and its subordinate units of government: cities, counties and school districts, issued in 1968 $694 million in municipal bonds and in 1970 they expect to issue $839 million. The County of Kent and its subordinate units of government within the County has a state equalized valuation of one and a half billion dollars and a total bonded indebtedness of approximately $121,000,000,000.

The citizens of Kent County, Michigan have already been adversely affected by the bill before you. At this moment our county has some very real requirements for increased water lines, storm drains and expanded sewerage disposal systems. This is rather typical of the counties across the country. However, when Kent County, whose bonds have been rated double A and triple A, wished to sell bonds recently to finance these projects, we were turned down. There were no buyers, despite stated interest rate of 5½% to 6%—the highest permitted by our Constitution. These projects are now being held in abeyance while we consider the next move. The citizens are waiting—not happy.

For those who have no maximum ceiling on bond interest as we do in Michigan, the interest on tax-exempt bonds has already jumped to record levels merely since this legislation was proposed. Like Kent County, many states and local governments cannot even attract bids for their bond issues—and their projects are at a standstill, unable to move ahead. Houston, Texas; Jefferson Parish, Louisiana; Hawaii; Jacksonville, Florida; New London, Connecticut, are only a few unable to sell their bonds.

We have head here today numerous adverse impacts that the "limit on tax preference" and "allocation of deductions" proposals have had and will have on the citizens of state and local governments alike. I should like to talk briefly about alternative so-called "subsidy" approaches which have been proposed.

The House-passed bill provides alternative capital financing approaches which would provide a somewhat automatic, but variable, federal interest payment to those local governments which waive their tax exemption. State and local governments that voluntarily elect to issue taxable bonds could automatically become eligible for an interest payment, the amount of which would be governed by the difference between the yields on outstanding tax-exempt bonds and comparable taxable issues.

Several fatal problems exist with the legislation before you. The first of these problems revolves around who will determine the difference in taxable versus tax-exempt yields. The bill gives the authority directly to the Treasury Department and, in addition, allows it to vary the "subsidy" from 25% to 40%. Thus, in addition to having wide discretion with respect to setting regulations and conditions for the payments, the Treasury also has the authority to vary their amount.

In fact the "subsidy" plan gives state and local government no real options. The choice is to issue partially taxed bonds without a "subsidy" or fully taxable bonds with it, when the bonds are now fully exempt from tax.

Moreover, municipalities cannot exercise the "option" to issue taxable bonds since they have no power to trade away their immunity from taxation which inheres in the sovereignty of their parent states. Certainly Congress cannot grant them this power.

The crucial flaw in the "subsidy" is, of course, its ephemerality. There is simply nothing to prevent Congress from curtailing, or indeed eliminating it at any time. The program would be a tool for further federal fiscal control over internal state and local affairs.

None of these "subsidy" proposals present any real alternative to the present tax-exempt system. Certainly, none of them can be when offered in tandem with "limited tax preference" or "allocation of deductions" proposals, which, in effect, destroy any option to disregard them.

We should like to make this point very clear. If any form of a subsidy is ever to be acceptable to county government, it must be allowed to operate as an *optional* alternative and not under the pressures of present tax reform proposals upon our present market.

Once Congress acts to tax the interest on our bonds, either by an allocation of deductions rule or by the limit on tax preference formula, and with the resulting chaos expected from a constitutional test, there is a danger we might very well be forced economically into accepting a subsidy. Our bonds would be competing with high grade corporates and this very competition alone in a presently rising market would raise the yield that would have to be paid on taxable municipals to about 9%or 9½%. And the rising interest would, of course, increase the amount of federal subsidy required to attract municipalities, counties and states into the taxable bond field.

A word of caution would be appropriate at this point. If Congress did provide a permanent and unrestricted appropriation to subsidize through taxable bonds the projects of states and local governments throughout the nation, the level of subsidy would be immense.

For example, if we assume that one-half of last year's $16 billion bond market were financed by taxable securities rather than the tax-exempt securities, and taking into account a conservative subsidy of say the difference between 6% tax-exempt and 9% taxable bonds, it has been estimated the Treasury would be paying out $250 million worth of interest subsidy cost every year. This could generate a possible revenue *loss* (not a tax gain) to the Federal government in the subsidy process, and if this were so, we fear that it would not be long before restrictions and further federal control would be imposed to somehow restrict the amount of projects qualifying for subsidy.

Obviously, there are serious disadvantages to the proposals on tax-exempt bonds as set forth in the bill. We are talking here about a $130 billion bond market growing, until last February, at a rate of more than 10% a year. Yet there has been very little substantive review of the potential impact the bill has on so sizable and important a market. The present lack of information as to the marketability of a taxable municipal and its effect on the tax-exempt and taxable markets requires that this matter be given far more study.

If any capital financing alternatives are to meet the test, they must be justified by their value to state and local governments, as well as ther effect on federal programs. The climate created by tax reform is definitely no place to scrutinize the immense impact of any capital financing proposal on our markets, particularly the ill-considered House-passed subsidy. Capital financing alternatives should *not* be developed as an instrument of tax reform. We therefore urge that the question of subsidy be removed from the emotional context of the tax reform, and be the subject of further hearings, including awaiting the results of the very significant study being conducted by the Advisory Commission on Intergovernmental Relations.

Mr. Brewer. I thank you for the privilege of being here and I would like to now introduce George Long, from the Virginia Association of Counties and chairman of the National Conference of Executives of State Associations of Counties.

Thank you.

STATEMENT OF GEORGE R. LONG, EXECUTIVE DIRECTOR, VIRGINIA ASSOCIATION OF COUNTIES

Mr. Long. Mr. Chairman, and members of the committee, I am George R. Long, and I am the executive director of the Virginia Association of Counties whose membership embraces 93 of the 96 counties of Virginia. I am also chairman of the National Conference of Executives of State Associations of Counties whose members are the executives of associations of counties in 46 of the 50 States of the United States and, may I say, Mr. Chairman, I am happy to be here to see the Longs doing so well.

The Chairman. I suspect that you might find somewhere a couple of hundred years ago we might have some kinship. There was a Dr. Long, I think he was sort of a sawdust preacher who operated in southern Maryland and Virginia about a couple of hundred years ago, and after a while he moved on. Some people in the family seem to have thought he got into some sort of a controversy with some of the congregation and he finally wound up in Louisiana and I think you may find we are some 50th yet cousins or some such thing.

Mr. Long. I think that is correct, sir. I appreciate the opportunity to appear before you and to present the critical position of Virginia and other county governments in the bond market as a result of the consideration by the Congress to tax interest accruing on local government bonds. Please note that the discussion pertains primarily to what has already occurred and does not treat what is likely to occur if the proposal for such taxation is enacted into law. Virginia's position is described here because it is that State with which I am most familiar; however, the position of Virginia is parallel to the position of every other State.

To set the State, Virginia's Public Finance Act of 1958, is typical of legislation of other States in providing that any county may issue bonds to obtain revenues for capital construction projects. The statute establishes a Commission on Local Debt to aid and assist local governments in the issuance and sale of bonds, and it sets certain standards and specifications with which the issuing jurisdiction must comply. One of the specifications is that the bonds shall not bear an interest rate of more than 6 percent per annum. Such ceilings on interest rates as you know, are set by legislatures the local taxpayers from the additional costs of higher interest rates. Until very recently such limitations have served Virginia and other States quite effectively in obtaining the most advantageous financing of State and local public construction.

In order to allow local governments to let contracts and commence construction on capital projects without delay, Virginia's Public Finance Act also provides for the negotiation of temporary loans in anticipation of revenues from bond issues. Three restrictions are placed on the county government in negotiating such loans: (1) the revenues obtained from the temporary loan must be used for the purpose for which the bonds were issued; (2) the amount of the loan may not exceed the maximum authorized amount of the bond issue; and (3) such loans shall mature and be paid within 2 years from the date of issue of the original loan.

Against this background of standards and arrangements, your attention is directed to the position of Virginia local governments in the bond market. When the Ways and Means Committee of the U.S. House of Representatives began seriously to consider the proposal to tax State and local government bond interest, interest rates in the bond market rose immediately. The competitive position of Virginia's local government in the bond market began to deteriorate and has continued to deteriorate to this date. When the interest rate on local government bonds soared about 6 percent, even before the passage or enactment of the proposal, Virginia local governments were barred from the bond market.

We made remarkable construction progress in Virginia county government in recent years. Note that 3 years ago we floated some $19 million worth of bonds. The following year we floated $40 million worth of bonds, the year following that, the last year for which information is available, we floated $56 million worth of bonds, of the $441,131,000 amount of bonded indebtedness, $295,396,000 of it was for public school construction.

I want to point out I have in my hand here a copy of the minutes of Montgomery County's Board of Supervisors in which they propose $7,500,000 worth of bonds to construct two high schools and two elementary schools and make additions for other schools badly in need which they will not be able to sell on September 30, the date for which the bids were invited.

Now, the Virginia Association of Counties in view of this situation canvassed all 96 Virginia counties to determine precisely what the impact of the increase of the interest rate on general obligation and revenue bonds had been on each county. Returns were received from 80 counties of which 35 revealed plans for issuing bonds during a period beginning 6 months ago and extending into the future.

Attached as table I herewith is a summary of the information received from the canvass of the Virginia counties. Note that due to Virginia's city-county separation none of the data applies to any city in Virginia and the bonded indebtedness and the rate at which we issue bonds is about equal between cities and counties.

Thus the data pertains only to counties, only that part of Virginia which lies outside the boundaries of a Virginia city.

The canvass shows in the past 6 months Virginia counties have issued $25,200,000 in county bonds. Of this amount, $17,200,000 was issued by the rapidly growing, most populous Fairfax County just across the Potomac River in Virginia. And not only has difficulty been encountered in marketing this $25,200,000 but during the period preceding the last 6 months $19,280,000 were all sold for a total of $44,480,000 with which there has been difficulty in marketing and some have not been sold.

Now, further, there are outstanding temporary loans in anticipation of bond revenues of $14 million, some of which have matured, payment is due, and the county has defaulted on the loan and those which are not in that position soon will be because the 2-year period contained in the statute will soon be up and there is no possibility of the county selling the bonds in order to pay the loans negotiated in anticipation of revenue. One county has been in default for some 3 months now on a similar type of arrangement, and in recent weeks only two bond issues have been sold and they have been sold wholly with interest rates of 5.9 and 5.99, and in one of these the loan was spread among several banks in order to share the risk.

Now, the canvass reveals that Virginia counties continue to progress and had plans for issuing $139,310,000 in bonds in the immediate future. A majority of these bond revenues were to be used to construct and replace needed school buildings and facilities in Virginia counties. The second large portion of the bond funds was planned for construction of water and sewer facilities to stem the pollution of Virginia's streams and provide adequate, safe facilities for growth and development in the State and to cooperate with the Federal Government in cleaning up the streams of the Nation.

In summary, the impact of the consideration let me repeat, just the consideration, not the enactment, to tax the interest accruing from State and Government bonds along with the statutory interest rate has worked to remove local government bonds of Virginia, and nearly all States, from the bond market. The removal of such bonds from the market resulting in the reduction in volume offered is reflected in the slight decline in average interest rates in the past 3 weeks. The latest advice is that new issues are selling at the highest rate.

The counties across the country agree with the Virginia counties that it is not the intent of this Congress to stem progress in county government across the Nation. But, in effect, this is what has occurred. Nor do the counties believe that the Congress intends to increase State and local taxes upon those taxpayers whom it is seeking to relieve. But that is what the enactment of the proposal to tax the interest of State and local bonds would do.

Thus, the counties urge that action be taken by the committee to delete promptly the proposal to tax State and local government bond interest in House Bill 13270 known as the tax reform bill. Gentlemen, if it is at all possible that the provision could be separated from the bill and defeat it immediately this is what we would recommend, and return the bond market in a condition of stability. Let progress not be hindered further. Let us resume the task of solving the problems before us. Let us not compromise the obligations of local governments to pay their debts as they have contracted to do in good faith in their bonds. And, gentlemen, we say we are against LTP, we are against ADR, we are against any tampering with the bond situation as it exists at the present time.

I thank you.

(George Long's prepared statement follows:)

Prepared Statement of George Long

ADVERSE EFFECTS OF H.R. 13270 ON THE COUNTIES OF VIRGINIA

Mr. Chairman and Members of the Senate Finance Committee: My name is George R. Long, and I am the Executive Director of the Virginia Association of Counties whose membership embraces 93 of the 96 counties of Virginia. I am also Chairman of the National Conference of Executives of State Associations of Counties whose members are the excutives of associations of counties in 46 of the 50 states of the United States.

I appreciate the opportunity to appear before you and to present the critical position of Virginia and other county governments in the bond market as a result of the *consideration* by the Congress to tax interest accruing on local government bonds. Please note that the discussion pertains primarily *to what has already occurred* and does not treat what is likely to occur if the proposal for such taxation is enacted into law. Virginia's position is described here because it is that state with which I am most familiar; however, the position of Virginia is parallel to the position of every other state.

To set the stage, Virginia's Public Finance Act of 1958, is typical of legislation of other states in providing that any county may issue bonds to obtain revenues for capital construction projects. The statute establishes a Commission on Local Debt to aid and assist local governments in the issuance and sale of bond, and it sets certain standards and specifications with which the issuing jurisdiction must comply. One of the specifications is that the *bonds shall not bear an interest rate of more than 6% per annum.* (Code of Virginia (1950), Sec. 15.1-200.) Such ceilings on interest rates are set by state legislatures to protect the local taxpayers from the additional costs of higher interest rates. Until very recently such limitations have served Virginia and other states quite effectively in obtaining the most advantageous financing of state and local public construction.

In order to allow local governments to let contracts and commence construction on capital projects without delay, Virginia's Public Finance Act also provides for the negotiation of temporary loans in anticipation of revenues from bond issues. Three restrictions are placed on the county government in negotiating such loans: (1) the revenues obtained from the temporary loan must be used for the purpose for which the bonds were issued; (2) the amount of the loan may not exceed the maximum authorized amount of the bond issue; and (3) *such loans shall mature and be paid within two years from the date of issue of the original loan.*

Against this background of standards and arrangements, your attention is directed to the position of Virginia local governments in the bond market. When the Ways and Means Committee of the United States House of Representatives began seriously to consider the proposal to tax state and local government bond interest, interest rates in the bond market rose immediately. The competitive position of Virginia's local government in the bond market began to deteriorate and has continued to deteriorate to this date. When the interest rate on local government bonds soared above 6%, *even before the enactment of the proposal*, Virginia local governments were barred from the bond market.

Now, Virginia counties marketed $19,715,544.01 in bonds in the Fiscal Year 1964–65; they marketed $40,938,722.67 in FY 1965–66; they marketed $56,096,033.32 in FY 1966–67. The total outstanding bonded indebtedness of Virginia counties at the end FY 1966–67 was $444,131,000.00. Of this amount $285,396,000 was issued for public school construction and equipment. (Virginia, Reports of the Auditor of Public Accounts for FY 1964–65, FY 1965–66, and FY 1966–67.)

The Virginia Association of Counties canvassed all 96 Virginia counties to determine precisely what the impact of the increase of the interest rate on general obligation and revenue bonds had been on each county. Returns have been received from 80 counties of which 35 revealed plans for issuing bonds during a period beginning six months ago and extending into the future.

Attached as Table I herewith is a summary of the information received from the canvass of the Virginia counties. (Note that due to Virginia's city-county separation none of the data contained herein includes any statistics which relate to Virginia's 38 cities. This data pertains only to those parts of Virginia lying outside the boundaries of Virginia cities.)

The canvass shows that in the past six months Virginia counties have issued $25,200,000 in county bonds. Of this amount, $17,200,000 was issued by the rapidly growing, most populace Fairfax County just across the Potomac River. Not only has difficulty been encountered in marketing the $25,200,000 issued in the past six months, but a similar difficulty has been found in marketing some $19,280,000 issued in previous months.

REPORT ON BOND ISSUES IN VIRGINIA COUNTIES

[In dollars]

	Bonds issued past 6 months	Difficulty in marketing	Temporary loans in anticipation of bond revenues	Amount of bond issues anticipated
Accomack		300,000		300,000
Albemarle			700,000	5,000,000
Amherst				1,000,000
Augusta		3,500,000	3,000,000	
Buchanan				11,000,000
Campbell				525,000
Chesterfield	4,000,000			
Dinwiddie				1,300,000
Essex		1,000,000	250,000	1,000,000
Fairfax	17,200,000			13,000,000
Fauquier		3,000,000	3,000,000	3,000,000
Frederick		180,000		250,000
Gloucester		350,000	300,000	350,000
Hanover	1,000,000	1,600,000	300,000	1,000,000
Henrico				20,035,000
Isle of Wight				1,500,000
Loudoun		11,250,000	2,100,000	11,250,000
Louisa				2,000,000
Montgomery			75,000	2,500,000
Northumberland				500,000
Patrick	1,000,000			
Powhatan				2,250,000
Prince George		750,000		750,000
Prince William		13,000,000		21,000,000
Pulaski				6,000,000
Roanoke				15,800,000
Rockbridge			1,900,000	1,900,000
Scott				2,000,000
Spotsylvania			500,000	2,500,000
Stafford	2,000,000	2,000,000	1,000,000	5,000,000
Westmoreland				700,000
Wise				1,000,000
Wythe		950,000		950,000
York		6,500,000	400,000	3,750,000
Washington		100,000	475,000	200,000
Total	25,200,000	44,480,000	14,000,000	139,310,000

Further, there are outstanding temporary loans in anticipation of bond revenues of $14,000,000, some of which have matured, payment is due, and the county has defaulted on the loan. In recent weeks, only two counties have been able to negotiate temporary loans and these were negotiated with local banks with interest rates of 5.90% and 5.99%. One of these loans was spread among several banks in order to share the risk.

The canvass reveals that there were plans by Virginia counties to issue and market $139,310,000 in bonds in the immediate future. A majority of these bond revenues were to be used to construct and replace needed school buildings and facilities in Virginia counties. The second large portion of the bond funds was planned for construction of water and sewer facilities to stem the pollution of Virginia's streams and provide adequate, safe facilities for growth and development in the state.

In summary, the impact of the consideration of the proposal to tax the interest accruing from local and state government bonds along with the statutory interest rate has worked to remove local government bonds of Virginia, and nearly all states, from the bond market. The removal of such bonds from the market resulting in the reduction in volume offered is reflected in the slight decline in average interest rates in the past three weeks. The latest advice is that new issues are selling at the highest rate.

The counties across the country agree with the Virignia counties that it is not the intent of this Congress to stem progress in county government across the Nation. But, in effect, this is what has occurred! Nor do the counties believe that the Congress intends to increase state and local taxes upon those taxpayers whom it is seeking to relieve. But that is what the enactment of the proposal to tax the interest of state and local bonds would do.

Thus, the counties urge that action be taken by the Committee to delete promptly the proposal to tax state and local government bond interest in House Bill 13270 known as the Tax Reform Bill, and return the bond market to a condition of stability. Let progress not be hindered further. Let us resume the task of solving the problems before us. Let us not compromise the obligation of local governments to pay their debts as they have contracted in good faith to do.

Mr. Long. I should like to introduce my counterpart, Mr. Hill Healan, who is executive director of the Association of County Commissioners of Georgia.

Senator Talmadge. Mr. Chairman, it is a privilege for me to welcome an old friend and constituent, Hill Healan, executive director of the Georgia Association of County Commissioners, whom I have known a long time and he has performed outstanding service.

STATEMENT OF HILL HEALAN, EXECUTIVE SECRETARY, ASSOCIATION OF COUNTY COMMISSIONERS OF GEORGIA

Mr. Healan. Thank you, Mr. Chairman. I will take the chairman's suggestion, if I may, and ad lib from my prepared presentation, so my remarks will be brief and I will attempt to merely highlight some of the things I think are important in the paper.

First of all, as all of you know without my stating it, that the tools with which local government, in fact State government, have to work for the development of this country are through the securities, that is your general obligation bonds or revenue certificates, that is particularly true of local governments.

Now, in our State, we have attempted as a State association of counties to determine whether or not the proposed legislation under consideration has an adverse impact upon local government as it relates to the bond market, and it has. Fulton County, for instance, needs to sell $150 million in bonds for badly needed improvements in water and sewage facilities. They are of the opinion it is impossible to do so because of the current situation in the bond market.

Now, for instance, in 1966 Fulton County had a substantial bond issue, the credit rating, the interest on those bonds were somewhere in the neighborhood of 3 percent. It is estimated now that it will be in excess of 6 on a similar type issue.

Now, we hear a lot, and we read a lot, in this country today about so-called, as the news media put it, revolution of the taxpayers. I don't know how it is in other parts of the country but in our State it is a very serious situation, meaning, of course, that local governments have to use the ad valorem tax as the basis for taxing most of the improvement. You know what they are. We are talking about building school buildings, we are talking about building roads, we are talking about building city streets and a lot of times it is even bond issues, general obligation bond issues, for water improvements. However, municipal issues usually are revenue certificates. But in any event if you tax the interest rates on these securities, on so-called municipal bonds, in the end what will happen will be simply this: Providing local governments will have an opportunity to market these issues, that will simply mean that the ad valorem taxpayer, if it is a general obligation bond, will have to come across once again on higher ta..es.

Now, if we are talking about a revenue certificate, of course, it merely means that the utility rates will be up. In the end the taxpayer will get it.

So we are merely saying to you gentlemen this morning that look at the problem that local governments have. I want to reiterate something I have already said, the tools we have to work with at local government are through general obligation bonds and revenue certificates.

Now, particularly county governments which we represent, because there is very little other types of revenue available to them use that tool. So then if any kind of legislation is enacted which will make the increased—will increase the costs of financing this kind of work, then you are faced with two issues. One, that you either will do it at a considerable increase in cost to the local taxpayers, the citizens, or you will just absolutely not get your bonds sold.

Now, in that case it is a catastrophe because if we develop America, if we develop our States, if we develop our county and city governments it has got to be done through bond issues and programs that for which you issue revenue certificates.

Now, in conclusion, let me state this, that over the years, I think the records will show, that the credit rating of most municipal bonds in Georgia, county bonds, city bonds, what have you, have had a good credit rating. Now, we know that in the last few months that the credit rating supposedly will have gone up, has gone up, and its effect had the number of issues. Comparing 1969 to a comparable period, 69 to 68 quarter, you had last year about $88 million in volume of issues sold. Now about $45 million in 1969, and the total number of issues have been compared for 68 where you had about 21 you have about 11. So I am saying that the amount of issues and the volume have decreased.

And then finally, in conclusion once again, we have this happening. We have people, individuals who heretofore have purchased municipal bonds, and I am sure this has already been told to you before, you have a lot of them trying desperately to unload. Well then, of course, that affects the morale of the entire market buyers, and I think that has an adverse effect.

I thank you sincerely for the opportunity of making my presentation.

(Hill Healan's prepared statement follows:)

Expected Adverse Impacts of HR 13270 on the Counties of Georgia

My name is Hill Healan and I am the Executive Secretary of the Association of County Commissioners of Georgia. I come before you today as representative of all the 159 counties in the State of Georgia whose membership within the Association is unanimously and unalterably opposed to the legislation now being considered by this Committee which adversely affects the principle of immunity of municipal bonds from federal taxation.

The counties of our state, like so many others throughout our land, have outstanding general obligation bonds. In addition, because the Constitution and statutes of Georgia are relatively liberal in the type of service and revenue which may form the basis of revenue certificates, many counties have revenue bonds for which certain revenues of the county are pledged.

It is a matter of common knowledge that many of the rural counties of Georgia are sadly lacking in public improvements such as streets, libraries, schools, water and sewer systems, and many other needed public improvements which can be obtained only through the issue and sale of bonds. Furthermore, the thickly populated areas, including the larger municipalities, have gigantic problems of sewage disposal, insufficient water supplies, and solid waste disposal which will require billions of dollars of financing if they are to be solved. For example, Fulton County, which includes the City of Atlanta, and has a population of over 550,000 people has a real and continuous need for sanitary sewerage and surface water drainage, requiring a minimum outlay of $150,000,000. The local government is prefectly willing to assume this burden and solve its problem in its own way. But, it is literally beyond the power of local governments in our State to finance these much-needed projects involving enormous sums of money if the principal source of financing, namely, generally obligation and revenue bonds, do not find a ready market at reasonable rates of interest.

Due to the limitations imposed by the Constitution of Georgia, most of the counties of Georgia have heretofore enjoyed excellent credit ratings, and as a result, have paid remarkably low interest rates on their borrowings. Many of the older outstanding bonds in our State bear very low interest rates. And why is this interest so low compared with comparable private credits? Not because of their high rating; not becouse of the assurance of prompt payment—but primarily because the interest coupons are exempt from income tax. The prime factor in the advantage over private bonds is always the exemption of interest on municipal bonds from Federal income tax.

As important as is the willingness of the individual taxpayer to buy and hold until redemption a tax-exempt municipal bond, it is equally important that these bonds be made attractive to the big investors, such as local trust banks and other institutions which, of necessity and partially as a gesture of civic pride, invest a substantial part of their assets in state and local securities. The tax exempt status of a bond is a controlling factor in its purchase by such institutions.

Normally, there has been a great deal of trading among financial institutions in municipal bonds, as they constantly seek to upgrade the income from their securities. This created a steady and active market until the present time.

Both attorneys and advisors who serve the counties of Georgia, and especially the smaller counties who do not have fiscal officers trained and skilled in the management of securities, have advised me not only that the imposition of income tax upon the interest of municipal bonds will effectively impair their market; but they have also told me that the mere threat of future taxation possibly applied even to commercial banks has caused wide-spread alarm. Small individual investors, in many cases, are trying to unload their municipal holdings at this time for fear the Congress will persist in the House bill's plan to levy income taxes upon the outstanding issues. This "unloading" revenue is killing our market for new issues because what is done for individuals today, can be done tomorrow for banks and institutions which hold ⅔ of the municipal bonds.

The threat of this proposed legislation has already adversely affected the sale of millions of dollars of municipal bonds which would have financed desperately needed schools, hospitals, sewage plants, and dozens of other vital projects. These were not projects that were casually decided upon, for communities of people throughout the country do not saddle themselves and, in many cases, their children, with a financial burden to build marginal facilities. On the contrary, they were the subject of lengthy discussion, duly voted for and repayment provided for by a majority of the people. Local public improvements are needed everywhere, and unless the people are permitted to decide and provide for their needs on a local level, as they traditionally have, then only atrophy or stagnation will result, and initiative of local elected officials will be destroyed.

In Georgia, this year's sale of issues in the first quarter alone, are only half of the volume of last year, from $88 million to $45 million, and the number of issues has dropped from 21 to 11. The pace of these financing failures has quickened in recent months as interest rates on local government bonds have risen to their highest levels in American financial history. As long as this "tax reform" bill remains a matter of Congressional debate, the market will naturally remain extremely worried and chaotic. This will naturally keep interest rates at abnormally high levels. For communities in desperate need of a new project, there is no alternative but to pay the added cost and wallow in what one bank referred to as the "disaster area in the financial world."

It is most unfortunate that obligations of such stable, high credit-rated governments as Fulton County and the City of Atlanta are being offered at substantial discount for early maturity because of the psychological effect of the pending tax measure.

Thus we are confronted not only with the real fact that a tax upon municipal bonds will weaken or destroy the market, but we are also faced with the fact that the threat of such taxation has had a bad psychological effect on the market even before a tax has actually been imposed.

One does not have to be a financial wizard to come to the conclusion that this measure does not provide "tax reform" as its title implies. Rather, the elimination of the Federal tax immunity, as it applies to municipal and state bond interest, would force the demand for higher interest rates on these bonds—and higher interest rates mean higher local taxes, including property and sales taxes whose burden rests primarily on those with the least ability to pay. Congress would be merely shifting a considerable burden to local taxpayers, in the name of tax reform.

In conclusion, let me urge the Committee to continue to seek and to study alternatives to supply needed revenue, but to honor our plea to exclude the bonds of local government from any form of federal taxation, whether by way of a "limit on tax preferences" or "allocation of deductions" or otherwise.

The Chairman. At this time I would like to introduce Mr. Arthur Sypek, who is the first vice president of the New Jersey Association of Chosen Freeholders, Mr. Sypek.

STATEMENT OF ARTHUR R. SYPEK, FIRST VICE PRESIDENT, NEW JERSEY ASSOCIATION OF CHOSEN FREEHOLDERS

Mr. Sypek. Chairman Long, and members of the committee, you have heard the presentation of the NACO position by various representatives. You do have my statement in the record, and I will simply briefly summarize additional points, and, specifically, the impact of this type of law on the counties of New Jersey.

The State association of the counties of New Jersey has unanimously passed a resolution opposing the taxing of municipal bonds. New Jersey is a population-growing State, and must provide through its counties the best level of government for regional solution of problems, various services, and I would like to enumerate a few.

The large counties, such as Bergen County and Essex County, where services of our community colleges call for expenditures of $40 million, county administrative building in Essex County of $20 million, and in my own county, Mercer, where a community college total expenditure is in the area of $20 million which was simply begun in the last few years, the effect on the municipal bonds will be of such magnitude that it will simply increase the cost to the local taxpayer, and our greatest source of income are real estate taxes; 80 percent of our income in the counties of New Jersey are derived from local taxation.

Senator Anderson. Will you tell us what a chosen freeholder is?

Mr. Sypek. It is a county commissioner, sir. We are the only State, I understand, in the Union that designates the nomenclature of the county supervisor, county commissioner, as a freeholder, and we have not changed that nomenclature. Although some of our younger members of the county boards would like to change it to a more modern name we have not done it to date, sir.

We are elected officials. I am in my 10th year as a county supervisor, if you will, freeholder, and also head of the Mercer County government, the capital county of New Jersey.

In the area of education, if you will, I covered vocational education, the community colleges are called upon in all the counties of New Jersey, and the great impact if the interest is increased if the moneys for these projects are dried up because of the taxation of municipals.

In the area of transportation, we in New Jersey have found many of our transportation systems are going under and the counties are called upon to salvage the transportation, bus transportation, if you will, and will call for additional funds.

The growth of airports, the need for airports in New Jersey. In my own particular county we have the largest county airport in New Jersey, but other counties are beginning to build airports, these demand great amounts of money for expansion, acquisition of land, if you will.

In recreation, the counties of New Jersey have taken advantage of open space moneys provided by the Federal Government as well as our own program of greenacres moneys, and before lands are acquired the costs have risen as much as 6 to 10 percent a year. In my particular county, our program called for $6 million, $3 million open space funds and $3 million from greenacres from New Jersey. Today we may have to raise an additional $2 million because of increase in cost of lands. This is simply the acquisition of the land for recreational purposes.

We are a small State, our counties are small. We must set aside lands now for future generations. Within the next decade or 15 years we must provide millions of dollars for projects such as golf courses, tennis centers, swimming pools and things of this nature.

We are thinking not only of today but the impact of this type of legislation, gentlemen, and just in short, summarizes the impact on the State of New Jersey.

I thank you for the privilege of appearing before you.

(Arthur R. Sypek's prepared statement follows:)

Prepared Statement of Arthur R. Sypek

EXPECTED ADVERSE IMPACT OF H.R. 13270 ON THE COUNTIES OF NEW JERSEY

Mr. Chairman and gentlemen of the Committee, my name is Arthur R. Sypek, and I am appearing today as the First Vice President of the New Jersey Association of Chosen Freeholders. I am also the elected Director of the Mercer County Board of Chosen Freeholders, the governing body of the capital county of New Jersey.

You have heard statements of the National Association of Counties' position against certain provisions contained in the proposed Tax Reform Act of 1969, and the decidedly adverse impact which these proposals could have on an already high interest rate bond market. I would like, however, to point out to the Committee the specific dollar impact of such changes on certain counties of New Jersey, as well as the deleterious effect on many essential capital improvement projects which could be placed in serious jeopardy if HR 13270 becomes law.

In my own county of Mercer, it is agreed among municipal financial experts that the elimination of tax-exempt status of municipal bonds will result in increasing the interest of municipal bonds by approximately 1.5–2% per year. Its effect, for example, on Mercer County's recent temporary financing of $9.6 million for Community College and general county improvements will be to cost the hard-pressed county taxpayers an additional 1.6–2.1 million dollars in interest costs over a twenty-year period. In addition, any future increase in interest rates of municipal bonds, as a result of eliminating their tax-exempt status, could well jeopardize the contemplated construction of $4 million areawide county vocational school system and the new Mercer County Administration Building.

One of Mercer County's newest and boldest innovations—the proposed regional solid waste disposal system, which would involve bond financing of incinerators and/or regional sanitary land-fill projects—could also be jeopardized by sharp increases in the interest rates, thus hampering the very kinds of regional development projects to which the Federal government itself has been committed for at least a decade.

In Essex County—the major urban county of northern New Jersey—capital projects requiring municipal bonds will exceed $5 million for 1969 and will be well over $7 million in 1970 and 1971. Included in the 1969 capital projects is over $860,000 for construction of the Essex County College Urban Campus. The same project will require over $3½ million in 1970 and over $4 million in 1971. In Newark, we are erecting a new county building including a new jail adjacent to the Hall of Records, at an estimated cost of $2 million. From 1969 through 1973, approximately $1½ million has been allocated for the construction or reconstruction of county highways.

Bergen County—one of the most populace counties in our state—needs about $4 million in capital projects in 1969 and for 1970 and 1971, over $3 million and $4½ million, respectively. In Bergen County, they anticipate county needs of $20 million starting in 1974 for construction of a community college. An additional $20 million needed for that $40 million project would be financed by the State of New Jersey, presumably by municipal bonds. The county also needs between $1 and $2 million from 1969 through 1972 for roads and bridge construction.

If the tax status of municipal bonds is changed, the county colleges, hospitals, bridges, highways, vocational schools, court houses, welfare institutions, jails, youth shelters and other projects and services could be seriously curtailed and additional new tax burdens would fall on already over-burdened New Jersey property taxpayers—the heaviest taxed of any group of home or property owners of any state in the country.

The counties of New Jersey, and the counties of all the states, ask you to maintain the status quo of municipal bonds. To alter the status quo—regardless of the sincere desire to improve the over-all tax structure—would severely hamper the ability of county government in New Jersey to rsepond to the growing needs of its citizens.

Thank you for hearing me.

Mr. Long. At this time, I wish to introduce the Honorable Dale Anderson, county executive, Baltimore County, Md.

STATEMENT OF DALE ANDERSON, COUNTY EXECUTIVE, BALTIMORE COUNTY, MD.

Mr. ANDERSON. Mr. Chairman, and members of the Senate Finance Committee, since I am here to summarize some very pertinent fac' ; I will do so but I will try to do so as rapidly as possible.

I am Dale Anderson, county executive of Baltimore County, Md., and a director of the National Association of Counties. I appreciate this opportunity to summarize the drastic impact which the pending taxation of municipal bonds is having and will continue to have on county government finances.

As my fellow county officials have related, county governments all across the country have been stretched to the complete end of their fiscal capability and are reaching a point where revolt against ever-increasing rates of local taxation is not only possible but highly probable: County expenditures have increased almost 50 percent since 1962, rising from $8.9 billion in that year, to $12.9 billion in 1967. The financial plight of cities is well known, and amply demonstrated in the halls of Congress, but it is not generally known that county expenditures have outstripped even those of the beleaguered cities in the last 5 years. To finance these expenditures, we must depend on a tax which is one of the most regressive and one of the most inelastic in the entire lexicon of painful taxes. According to the Advisory Commission on Intergovernmental Relations, some 93 percent of total county expenditures is funded by the proceeds of property taxes. For every increased dollar of county expenditures, 93 cents has to come out of some local taxpayer's pocket in the form of property taxes.

In the 21 years from 1946 to 1967, State, county, and local property levies increased sharply from $8 billion to $47 billion. As an example of how these tax increases strike most cruelly at those with the least ability to pay, the Advisory Commission on Intergovernmental Relations has estimated that more than one-half of this tremendous increase is directly attributable to new and increased taxes, with less than half due to the response of old taxes to economic growth. I hope you will pardon us, therefore, if we become somewhat frenzied at the prospect of "reforming" the tax system by measures which will lead directly to further increases of property taxes. You must do more to help us. The Nation's domestic priorities cannot afford the injury the House has proposed.

There is no question in our minds that this assault on the historic immunity of State and local government bonds from Federal taxation represents a direct and frontal assault on the local homeowner. Just the discussion alone of the possibility of Federal taxation has shaken the entire municipal bond market to its core. The amount of debt floated so far in 1969 is 40 percent lower than the equivalent amount in 1968, even though requirements for local capital improvements are continuing to increase tremendously. Right now, in September 1969, it has been estimated that a county government floating a bond issue will incur over 100 additional basis points in interests over the amount it would have incurred to market the issue prior to House hearings on this so-called tax reform legislation. It has been suggested that soaring municipal bond interest rates are due principally to the current climate of inflation and only secondarily to possible Federal taxation of municipal bonds. I cannot accept that, since, if this were so, yields on similarly rated corporate and taxable bonds would have increased at the same rate, but they did nothing of the sort. In fact, the increase for similarly rated corporate bonds was only 10 basis points since July.

There is a limit to these rising municipal bond interest rates, but I am not sure it is a limit which people in my county can afford. The limit will be reached when local governments all over the country postpone or cancel many vital public improvement projects which have been anticipated and nurtured for years because they are unable or unwilling to accept impossibly high interest rates. This is not an issue which is going to be centered in one section of the country rather than another. Rather, it has the capabilities of swelling into a public protest the likes of which, I predict, has seldom been seen in this Nation's history. In the name of tax reform, you are considering legislation now which will be felt unfavorably by every person no matter how modest his means. If he owns a house, he will feel it in increased property taxes. If he rents his home, the owner's increased taxes will be reflected in the tenant's rent rise.

When one considers the relative pittance in increased Federal revenues which will emerge from these tax proposals, it is almost impossible to understand how these plans were successfully passed by the House. For example, the Secretary of the Treasury estimates that the allocation of deduction provisions would result in an annual increment of $45 million to the U.S. Treasury. This number is miniscule in comparison to the additional interest costs which State and local governments will incur if the Federal Government is permitted to tax the interest on their obligations.

We have estimated that as a result of inclusion in the allocation of deduction rule alone, State and local taxpayers will have to pay amounts almost 10 times more than the money returned to the Treasury in the 5th year of enactment. This provision seems even more questionable when you consider that all of the increased State and local taxes will be subject to deduction from Federal income tax returns.

What is particularly objectionable to elected county officials like myself about this current legislation is the fact that it is included part and parcel in a package entitled "Tax Reform." This is a wonderful catchword to build widespread public support since it conveys the idea somehow or other, the end result of the legislation will be a lower tax bill for the average citizen of this country. But the provision relating to municipal bonds cannot and will not work that way, and this is patently clear to every local government official if not the local taxpayer at this time.

If our cost for selling bonds increases, our major source of funds is in regressive property taxes and sales tax, the rates of which have to go up accordingly. Throughout the history of this country, we have preserved under the Constitution, the immunity of the sovereign States and their instrumentalities from Federal taxation. It is particularly repugnant to those of us who are struggling with terrible financial burdens on the local level where the domestic ills of our Nation are gathered to have our major revenue source jeopardized in the name of tax reform which promises to correct inequities. This is not tax reform; it is more like tax paralysis which will restrict the fiscal capabilities of local governments.

When we raise the property tax, it doesn't mean the homeowner is earning more income as it usually does when his income taxes go up. It doesn't mean either that he makes a conscious effort to purchase something and pays a sales tax. Nor even that he drives his automobile and pays a gasoline tax. All of these taxes, of course, would have the threat of being increased. The property tax is as high as it can go. We must have some help, from the U.S. Senate particularly.

I don't have to tell you that the property taxes don't work with such a direct relationship between the payer and the beneficiary. I can cite case after case where a homeowner in Baltimore County has an income today about the same as he had 5 years ago, and his property taxes have gone up almost 40 percent. This increase in property taxes has absolutely no relationship to his ability to pay. If I can cite cases in Baltimore County, I'm sure every county official across the country can do likewise. So, when people who are for raising the interest on municipal bonds talk about inequities, I'd like to know inequities to whom. In Baltimore County alone, I could probably match every millionaire who already may be avoiding Federal taxes because of his municipal bond holdings with thousands of hapless and irate homeowners who can't and shouldn't pay a dollar more in local property taxes.

Just last month, this Federal administration announced a sweeping package of welfare, revenue-sharing, mass transit, and housing proposals which promises for the first time to increase substantially Federal assistance to the hardpressed State and local governments. The potential of a hopeful new federalism is particularly appealing to those of us whose citizens and resources have reached the end of the line. President Nixon said:

> After a third of a century of power flowing from the people and the States to Washington, it is time for a new Federalism in which power, funds and responsibility will flow from Washington to the States and the peoples.

How this kind of philosophy can be advanced at the same time that the Federal Government is threatening to destroy the municipal bond market is a puzzle for the future historians to decipher. The rhetoric of the administration and many Members of Congress implies a commitment to decentralization of government, while at one and the same time, the Federal Government is seriously jeopardizing the ability of State and local governments to meet their responsibiilities. You can't have it both ways.

Gentlemen, let me close for NACO by simply stating our overall position. There must be no inclusion of municipal bond interest in the limit on tax preference proposal or in the allocation of deductions rule in any manner whatsoever. Further there must be separate hearings on alternative methods of financing subject to further study. I thank you very much.

The CHAIRMAN. Gentlemen, you have made a very fine presentation here today. If you saw a broad grin on my face during part of your presentation it wasn't because of anything you said. I saw one of my old friends, Robert Kennon, who was my opponent when I ran for

Senator. If there were a change of ½ to 1 percent of the votes he would have been here rather than me.

Since that day he served with distinction as Governor of Louisiana and also as chairman of the Governors' conference. He became so alarmed at the dangerous trend toward federalism that he supported the Republican candidate for President since that date, and finally his conscience required him to leave the Democratic Party and join the Republican Party and I know he would be very much dismayed to find that the Republican Secretary of Treasury is now advocating a Federal tax on State and local bonds because Governor Kennon has always been a great States righter and he found it necessary to leave the Democratic Party because the Democratic Party, once having been the party of States rights, left him. So I know he would speak for a great number of others with that philosophy.

Now, one thing that, a point, Senator Talmadge made on yesterday, I think, is worth noting. This year it looks as though we are going to have 6-percent inflation or 6½ percent, to be more exact, which would be more than these State or local bonds outstanding are presently yielding, so in real terms whoever is getting the interest on these State and local bonds will really be making zero. He will actually be losing money because the depreciation in the value of his investment will offset any interest that he might make.

Now, at the same time one of the things, one of the big items, causing this inflation will be negotiation of these new wage contracts where organized labor is in position, and I applaud them for doing all they can for their members, but they are in position to demand and get major increases which will outstrip productivity, and we have here a revenue bill which undertakes to tax this fellow who in real terms has made nothing, so we can redistribute his income to people who are going to get a tax cut on balance by taxing the other fellow.

Now, in some respects it is very clear that this will impose a very heavy burden on State and local government.

Your testimony in general strikes me as indicating that most of your revenue comes from property taxes, is that correct?

Judge Fowler. That is correct.

Mr. Anderson. Ninety-three percent.

The Chairman. With taxes being as high as they are, it would be impossible to get people to vote for increased taxes on themselves. That is what would have to be done, they would have to vote it on themselves. In some cases you can impose it but in most instances the people have to vote on it. That is how it is in Louisiana and that is how it is in most States.

And furthermore any assessor who goes out here and tries to raise everybody's assessment will be voted out at the next election, isn't that correct? If he goes out and raises everybody's assessment by 6 or 7 percent to try to keep up with the increase in the cost of living he won't be back after the next election, so you just can't very well do that.

So the counties are pretty well frozen where they are in the income that they have available to them, and what we have been recommending here will simply raise their expense so that we will be requiring them either to reduce services or to try to raise taxes on their own people. Isn't that about the size of it?

Judge FOWLER. That is right.

The CHAIRMAN. Rather than to do that it seems to me we would be better advised to consider some, at least one, suggestion that was made yesterday; this is, if the Federal Government really wants to help the States—and this proposal would hurt the States and counties and the cities—if we want to do something about this interest subsidy we might just try to out by simply making up the difference to these State and county trust funds that are set up for the retirement of their own employees so that they could afford to buy their own bonds or their own State and county bonds and make up the difference in interest to them if they borrowed their own trust funds and held some of their own bonds.

That would be a better proposal, I would think, than what we have here where you are going to increase the expense, on the one hand, and hope to give it back, on the other.

Now, with regard to all these ceilings that exist on what can be paid in States and counties, would not that require a great deal of legislation both at the State and local level to change all these ceilings so that one could pay more and, hopefully, get some Federal subsidy out of it?

Mr. CONNER. Not only legislation, Mr. Chairman, but even constitutional amendment in many cases which is even more difficult.

The CHAIRMAN. If we are going to try these things then it would seem to me we should try to do one more thing, see if we can amend the State constitutions by an act of Congress by stating, notwithstanding anything in the State constitution, you go ahead and borrow money at 10 percent if need be to finance a project, but I can't see any State could honor it except by an act of Congress that we have a right to amend the State constitutions. You wouldn't advocate that and I doubt if you would.

Mr. ANDERSON. I would think, Mr. Chairman, it would be just as dangerous as that assessor raising the assessments.

Mr. CONNER. In New Jersey it would make you an unchosen freeholder.

The CHAIRMAN. Senator Harris.

Senator HARRIS. Mr. Chairman, I think you have expressed some of the concerns that are in all of our minds. I just want to say that I am impressed by the persuasive appearance here of all these gentlemen, and particularly I am glad to see my old friend, Dale Anderson, of Baltimore County.

Mr. ANDERSON. Thank you, sir.

The CHAIRMAN. Senator Byrd.

Senator BYRD. Thank you, Mr. Chairman.

This has been an interesting and informative discussion this morning. I see one old friend on the panel I have known a long time, George Long. I know him to be an able and knowledgeable citizen of Virginia, but he has also been recognized throughout the Nation by having been elected chairman of the Conference of Executives of State Associations of Counties.

I want to ask Mr. Long this question: In your capacity as Chairman of this conference have you found the local officials to be rather unanimous in their view that it would be a mistake to change the status of State and municipal bonds?

Mr. LONG. Senator, this is precisely the situation. I found no comment favorable to making this change whatsoever across the Nation.

Senator BYRD. The feeling is then that this would be detrimental to the localities and would increase the cost to the localities and the citizens of those localities?

Mr. LONG. In every State and every locality of the Nation.

Senator BYRD. May I ask Mr. Brewer a question? Mr. Brewer is, I noticed, chairman of the Taxation and Finance Committee, National Association of Counties.

In your capacity as chairman of the finance and taxation committee you have studied, I assume, what you anticipate the interest the localities would have to pay if the tax-exempt status were removed. Did you indicate that that would be 9 to 9½ percent?

Mr. BREWER. Yes, sir.

Senator BYRD. And that would be about 50 percent greater than it is now?

Mr. BREWER. That is right, Senator. This would be on a taxable basis.

Senator BYRD. It would be on a taxable basis?

Mr. BREWER. Yes, sir; this information is drawn from the rates on high-grade corporate bonds today and the fact that counties, municipalities, and the States would be in the taxable bond market. This would reduce the base of the market forcing up even the rates as we know them today on corporate issues which are running around 8½ to 8¾ percent.

Senator BYRD. So instead of the localities paying roughly what would it be, 6 percent now?

Mr. BREWER. Six percent now.

Senator BYRD. Six percent now, they would pay 50 percent more or maybe more than 50 percent additional?

Mr. BREWER. Yes, sir.

Senator BYRD. Of course, the proposal has been made that the Federal Government subsidize part of the interest. I think in considering that proposal we want to be aware of the fact that the Federal Government in this budget that the Congress is now considering is paying $17 billion, the taxpayers are now paying $17 billion, in interest, and so far as I am concerned I am not very anxious to keep increasing the amount of interest that the Federal Government is paying, the Federal taxpayers are paying, above that gigantic figure of $17 billion.

Thank you, Mr. Brewer and Mr. Long and gentlemen.

Thank you, Mr. Chairman.

The CHAIRMAN. I am somewhat concerned that the House bill seems to take the approach that anything that the Federal Government has not yet taxed must be taxed. After this bill I understand the House then hopes to go to work on inheritance taxes, gift taxes and matters of that sort.

This bill reminds me of the statement by one of my favorite Louisiana orators who used to campaign with my Uncle Earl. He would get up there and make the statement that the opposition went down to the State Capitol and he said they taxed everything from bedbugs to billygoats and would have had old nanny next if they hadn't stopped them.

(Laughter.)

Mr. ANDERSON. Mr. Chairman, it seems to me that you are probably in the best position to prevent such a thing as that from happening than anyone else.

The CHAIRMAN. Well, I think we will stop some of it anyway. We will consider your problems, gentlemen. Thank you very much.

Do you have any further comment?

Mr. CONNER. Mr. Chairman, I just wanted to say: sitting here and hearing all this confusing mass of facts, and reading yesterday's testimony and knowing that you have heard the testimony from the other side, which was equally confusing, I have great sympathy for the members of the committee.

The Wall Street Journal says today that whatever else you think about the facts of the municipal bond issue, uncertainty is the real key to this problem. So long as we have that uncertainty, we are going to pay more interest on municipal bonds, whether you gentlemen legislate or whether you don't. We must have certainty.

The CHAIRMAN. Thank you very much, gentlemen.

Now, Mayor Tate was to be on the panel yesterday, and he was not able to be with us in the morning session. He was counting on us to hold an afternoon session but I think the chairman intimidated members not to ask any questions during the morning session so we got through in the morning.

Mayor Tate, we are happy to have you back and we will be pleased to hear your views on this problem.

Senator HARRIS. Mr. Chairman, if I could first say, Mayor Tate is an old friend of mine. I don't think we could have a better spokesman on this issue than he is, being vice president of the U.S. Conference of Mayors and immediate past president of the National League of Cities.

Jim is a sincere and plainspoken man. He says what he believes and believes what he says, and I think we are fortunate to have him here this morning.

The CHAIRMAN. Mayor Tate, I hope you understand the Republicans this morning are holding their Republican caucus to elect their new minority leader, and for that reason they are not with us at this moment but they will all undertake to read your statement in due course.

STATEMENT OF JAMES H. J. TATE, MAYOR OF PHILADELPHIA

Mayor TATE. Thank you, Mr. Chairman.

I want to say to the chairman and especially my friend the national chairman, the great Senator from Oklahoma, all of you have been most kind to allow me to come back before you this morning after the unfortunate set of circumstances yesterday which prevented my appearing before this committee. I looked forward to it for so long because I believe sincerely in my message.

I know that you have listened to this repetitious recitation of problems, but we feel it so strongly.

As you know, Senator Harris was very kind, and I wanted the Senator to know I always enjoy going back to his hometown in Lawton where I have some friends as well as in Oklahoma City.

Yesterday the chairman was very kind to listen to my plea over the telephone and that is the reason I am here and for that reason I am going to be very brief.

As you know, I am the mayor of the city of Philadelphia and have been since 1962. I am now the vice president of the U.S. Conference of Mayors and the immediate past president of the National League of Cities and I do come with some experience with these problems.

We saw this in the offing 5 or 6 years ago. It is not something that happened just yesterday.

On behalf not only of the cities but also of the States and the counties and school districts and all local authorities, I do want to express my own firm opposition to the proposals to tax the interest on municipal bonds as contained in H.R. 1372 and the Treasury Department's recommendation to this committee.

I very strongly appreciate the fact that the Senate committee, the Senate Finance Committee, under your leadership has given us the opportunity to develop this dialog and real understanding of the problem. Unfortunately we did not have that opportunity in the House.

Although there is an understandable desire by the Congress to close all of the loopholes by which individuals escape taxation, I should warn the members of this committee, as others have, that taxing the income from municipal bonds to any extent or by any device at all will create catastrophic conditions in America.

First, I do believe it will fatally undermine further the doctrine of intergovernmental immunity, which protects the State and local governments by subjecting them to coercive financial controls through Federal taxing power.

Second, I do believe it will bring about sharp increases in local real estate taxes, sales taxes, which fall most heavily on low- and moderate-income people. This will generate a "taxpayers' revolt" vastly more serious than anything prevailing today.

I was very much interested in your remarks about assessors. At one time I was an assessor and perhaps that is what happens to old assessors, they become mayors.

Third, I do believe it will result in litigation, long-term litigation, which will go all the way to the Supreme Court, causing utter chaos in the municipal bond market while some $16 million of capital construction projects grind to a halt throughout the country until a judicial determination is made.

I can assure you I am not overstating the effect that these proposals would have on the fiscal condition of our States, counties, and cities. Even the threat of Federal taxation has already thrown the bond market, the local bond market, into a state of chaos.

I want to relate what appears in the issue of September 16, and submit it for the record, of the Municipal Finance Officers Association bulletin newsletter where they state:

> Bond index again registers new high. For the third successive week the Bond Buyers' Index of 20 municipal bonds reached a record high level. On September 4, it was 6.347 percent, up 11 basis points from the previous week. The higher grade 11 bond index also was at a new record high registering an increase of 12 basis points to that it was 6.270 September 4. The lowest level touched by the 20 bond index, 1969 was 4.82 percent recorded on January 23. The chaotic condi-

tion of the municipal bond market is reflected in the Bond Buyers tabulation of displacements. That is no bids received, bids rejected or issues postponed. Since September 3, 1968 to September 5, 1969, 316 issues amounting to $1,800,000,000 have been displaced. Of these no bids were received on 153 issues totaling $816 million. Bids were rejected on 60 issues totaling $158 million, and 109 issues amounting to $950 million were postponed. This period covers the tight money span which began in the last quarter of 1968 and is highlighted by the discount rate change made on December 8 of last year.

Prime rate increase occurred on June 9 of 1969 and reflect the market reaction to the 1969 tax reform act approved by the House unfortunately.

I can go on and on and state this but only yesterday the esteemed mayor of the city of Pittsburgh, which is undergoing a great deal of problems, Mayor Joseph Barr——

The CHAIRMAN. Might I just interrupt you for 1 minute?

Mayor TATE. Yes.

The CHAIRMAN. Does that article itself make the statement that that reflects what the House did?

Mayor TATE. Yes, sir.

The CHAIRMAN. That is both your opinion and also the publication from which you are reading?

Mayor TATE. That is correct. That is correct, sir. Thank you very much.

Mayor Barr of Pittsburgh told me they had a $9 million authorized bond issue on which he could get no takers. He is in a status quo and cannot move ahead, he is undergoing the trials and experiences of a construction strike because of this particular problem. I would say this is the experience of most cities in the country today because of the uncertainty and it certainly reflects what appears officially in this publication.

Even in July of this year Philadelphia, for instance, incurred interest charges of 6.43 percent. We were fortunate because we could go a little high on issues aggregating $60,625,000. We didn't have this opportunity on the school bond issue which has been rejected by the taxpayers in a campaign in the spring of this year but the city government on municipal issues were all right. But this is the highest rate in our history which runs back almost 200 years.

Incidentally, Senator Byrd, we had a very interesting presentation before the Bicentennial Commission. We are very glad to have your support. I am very proud of what Philadelphia did for the Bicentennial Commission when you were in New York.

Senator BYRD of Virginia. I wish I could be with you there.

Mayor TATE. It was very good and I wanted to tell you that.

In the last year there have been a total of 396 bond issues valued at over $1.9 billion rejected or postponed throughout the Nation, depriving our citizens of much-needed services and affecting workers in many industries.

The city of Philadelphia and the Philadelphia School Board's current program for the development of airports, piers, mass transit, health, recreation, public safety, and school facilities will cost $1.4 billion and we can handle it if we don't have this restriction. But the restrictions on our tax exemption will result in at least a 2-percent increase in interest rates, and in order to absorb, of course, an increase of that magnitude, it will require an increase of 25 percent in the city's real estate tax, and in Philadelphia we have the advantage of what we call a wage or income tax which helps us to keep that rate down. But we can't hold the line much longer if we have to go through with this kind of a program.

State and local governments have bonds outstanding in the magnitude of $130 billion today, and a 2-percent reduction in interest charges which the exemption provides would save the local governments about $2½ billion annually. If they do lose this income they will have no recourse but to tax locally to obtain it, and in such formidable amounts as to cause real public outrage at the grassroots levels.

The final irony is that, while these proposals will impose a crushing burden on local government, the Treasury will actually lose money as a result of this particular program.

The U.S. Treasury Department estimates a meager $45 million gain on the allocation-of-deductions plan and only $35 million under the minimum tax proposal. Very heroic proposals but they don't produce anything. It is like a lion producing a mouse.

However, breaching the historic immunity of State and local governments from local taxation, and shattering the confidence of investors, will result in at least a 2-percent increase in interest rates on the bonds. Of course, it is showing already.

Assuming that no increase in the current $16 billion annually of municipal issues, State and local governments would be required to levy an additional $320 million in taxes for the first year to offset a gain of $80 million in the Treasury. After the post-1969 issues reach the present level of $130 billion the local costs would jump to an additional $2.6 billion a year.

However, the final absurdity really is this: All of these taxes levied by the State and local governments are deductible on the Federal return. The amounts gained by the Treasury, U.S. Treasury Department, on the one hand, would be offset by a loss due to increased Federal deductions, on the other. The net result of imposing crushing tax burden on local government taxes which fall most heavily on low-income people would really be a loss to the Federal Treasury.

I don't think we should be taken in by the bond interest subsidy offer in H.R. 13270. Not only is the Secretary of the Treasury given wide latitude in determining the subsidy but we would be completely at the mercy of the House and Senate Appropriations Committees, which could curtail or eliminate the subsidy at any time.
